Coffee berries readily imbibe exhalations from other bodies, and thereby acquire an adventitious and disagreeable flavour. Sugar placed near coffee will, in a short time, so impregnate the berries and in-

jure their flavour, as to lower its value 10 or 20 per cent. Dr. Moseley mentions, that a few bags of pepper, on board a ship from India, spoiled a whole cargo of coffee.

"The roasting of the berry to a proper degree requires great nicety: the virtue and agreeableness of the drink depend upon it; and both are often injured by the ordinary method. Bernier says, when he was at Cairo, where coffee is so much used, he was assured by the best judges, that there were only two people in that great city who understood how to prepare it in perfection. If it be under-done, its virtues will not be imparted, and, in use, it will load and oppress the stomach; if it be over-done, it will yield a flat, burnt, and bitter taste, its virtues will be destroyed, and, in use, it will heat the body, and act as an astringent."—(*Moseley*, p. 39.)

Regulations with respect to Sale, Importation, &c.—Roasted beans and rye, reduced to powder, have frequently been used to adulterate ground coffee: and the possession of such substitutes for coffee was formerly an offence punishable by the forfeiture of the articles, and a penalty of 100*l.* But by the act 3 Geo. 4. c. 53., persons who are *not dealers in coffee* may take a licence for roasting and selling corn, peas, beans, or parsneps, labelling the parcels with the names, and conforming to the various regulations prescribed in the act.

Dealers in coffee must take out a licence, renewable annually, which, at present, costs 11*s.*

No coffee can be imported in packages of less than 100 lbs. *nett* weight.

No abatement of duties is made on account of any damage coffee may have received.

Coffee cannot be entered as being the produce of any British possession in America or of the Mauritius, until the master of the ship in which the coffee is imported deliver to the collector or comptroller a certificate of its origin, and declare that the coffee is the produce of such place.—(8 & 9 *Vict.* cap. 86. § 38.)

COINS, pieces of metal, most commonly gold, silver, or copper, impressed with a public stamp, and frequently made legal tender in payment of debts, either to a limited or an unlimited extent.

1. *Circumstances which led to the Introduction and Use of Coins.* — When the precious metals first began to be used as money, or as standards by which to measure the value of different articles, and the equivalents for which they were most commonly exchanged, they were in an unfashioned state, in bars or ingots. The parties having agreed upon the quantity of metal to be given for a commodity, the exact amount was then ascertained by weight. But it is obvious that a practice of this sort must have been attended with a great deal of trouble and inconvenience. There can, however, be little doubt that the greatest obstacle to the use of unfashioned metals as money would be found in the difficulty of determining their quality, or the degree of their purity, with sufficient precision. The operation of assaying is one of great nicety and difficulty; and could not be performed in the early ages otherwise than in a clumsy, tedious, and inaccurate manner. It is, indeed, most probable, that when the precious metals were first used as money, their quality would be appreciated only by their weight and colour. A very short experience would, however, be sufficient to show the extreme inexactness of conclusions derived from such loose and unsatisfactory criteria; and the devising of some method, by which the fineness of the metal might be easily and correctly ascertained, would very soon be felt as indispensable to the general use of gold and silver as money. Such a method was not long in presenting itself: it was early discovered, that, to ascertain the purity of the metal, and also to avoid the trouble and expense of weighing it, no more was necessary than to mark each piece with a *stamp*, declaring its weight and fineness. This invention was made at a very early period. According to Herodotus, the Lydians were the first who coined money. — (Lib. i. c. 94.) Other ancient authors say that the art of coining was invented during the period when Saturn and Janus reigned in Italy; that is, in a period antecedent to authentic history. — (*Goguet, de l'Origine des Loix, &c.* tom. i. p. 267.)

2. *Metal used in the Manufacture of Coins.* — Before the art of metallurgy was well understood, the baser metals were frequently used as money. Iron was the primitive money of the Lacedæmonians, and copper of the Romans. But both iron and copper deteriorate by being kept; and besides this defect, the rapid improvement of the arts, by lowering their price, rendered their bulk too great in proportion to their value to permit of their continuing to be used as money. Copper, indeed, is still used in the form of tokens, convertible into silver in very small payments. In this country, copper pence and halfpence are rated at about 72 per cent. above their real value; but as their issue is exclusively in the hands of government, and as they are only legal tender to the extent of one *shilling* in any one payment, this over-valuation is not productive of any bad effect. The use of copper in other countries is limited in much the same way; gold and silver being every where the only metals made use of in the manufacture of the coins used in considerable payments.

3. *Standard of Coins.* — By the standard of a coin, is meant the degree of its purity, and its weight; that is, the fineness of the metal of which it is made, and the quantity of metal contained in it.

(1.) *Silver Coins.* — A pound Troy, or 12 ounces, of the metal of which English silver coins are made, contains 11 oz. 2 dwts. pure silver, and 18 dwts. alloy. This pound is coined into 66 shillings; so that each shilling contains 80·727 grains fine silver, and 87·27 grains standard silver; and the *money pound*, consisting of 20 shillings, contains 1614·545 grains pure silver, and 1745·454 grains standard silver. From 1600 down to 1816, the pound weight of standard silver bullion was coined into 62 shillings. All the English silver coins have been coined out of silver of 11 oz. 2 dwts. fine, from the Conquest to this moment, except for the short period of 16 years, from the 34th Henry VIII. to the 2d Elizabeth.

(2.) *Gold Coins.* — The purity of gold is not estimated by the weights commonly in use, but by an Abyssinian weight called a *carat*. The carats are subdivided into four parts, called grains, and these again into quarters; so that a *carat grain*, with respect to the common divisions of a pound Troy, is equivalent to 2¼ dwts. Gold of the highest degree of fineness, or pure, is said to be 24 carats fine. When gold coins were first made at the English mint, the standard of the gold put in them was of 23 carats 3½ grains fine and ½ grain alloy; and so it continued, without any variation, to the 18th of Henry VIII., who, in that year, first introduced a new standard of gold of 22 carats fine, and 2 carats alloy. The first of these standards was called the old; and the second the new standard, or crown gold; because crowns, or pieces of the value of 5*s.*, were first coined of this new standard. Henry VIII. made his gold coins of both these standards under different denominations; and this practice was continued by his successors until 1633. From that period to the present, the gold of which the coins of this kingdom have been made has been invariably of the *new* standard, or

crown gold; though some of the coins made of the old standard, previously to 1633, continued to circulate till 1732, when they were forbidden to be any longer current. — (*Liverpool on Coins*, p. 27.)

The purity of our present gold coins is, therefore, 11 parts fine gold and 1 part alloy. The sovereign, or 20 shilling piece, contains 113·001 grains fine gold, and 123·274 grains standard gold. The pound Troy of standard gold is coined into 46 $\frac{89}{129}$ sovereigns, or into 46*l.* 14*s.* 6*d.* The mint, or standard price of gold is, therefore, said to be 46*l* 14*s.* 6*d.* per lb. Troy, or 3*l.* 17*s.* 10½*d.* an ounce.

The alloy in coins is reckoned of no value. It is allowed, in order to save the trouble and expense that would be incurred in refining the metals, so as to bring them to the highest degree of purity; and, because, when its quantity is small, it has a tendency to render the coins harder, and less liable to be worn or rubbed. If the quantity of alloy were considerable, it would lessen the splendour and ductility of the metals, and would add too much to the weight of the coins.

The standard of the coins of foreign countries may be learned at a glance, by inspecting the *Table of Coins* subjoined to this article.

4. *Variations of the Standard.* — The value of all sorts of property being estimated, and the stipulations in almost all contracts for its purchase, sale, or hire, being made in money or coins, it is plain that no change can take place in the value of such money or coins, without virtually subverting these estimates and contracts, and enriching the debtor portion of society at the expense of the creditor portion, or *vice versâ*. As the cost of producing all commodities is liable to vary from improvements in the arts, the exhaustion of the present or the discovery of new sources of supply, none can be selected to serve as money or coin that may not vary in its real value. It is believed, however, that the precious metals vary less than any material that could be suggested. And with the exception of the extraordinary fall in their value caused by the discovery of the American mines, it seems to have been remarkably constant at other periods.

But in addition to the fluctuations naturally inherent in the value of coins, arising from variations in the cost of the metal of which they are made, their standard has been repeatedly changed. Notwithstanding that money or coin, from its being universally used as a scale by which to compute the value of all commodities, and as the equivalent for which they are commonly exchanged, is by far the most important of all the measures used in society; and should, consequently, be preserved as invariable as possible; there is none that has been so frequently altered. The necessities or extravagance of governments have forced them to borrow; and to relieve themselves of the incumbrances thus contracted, they have almost universally had recourse to the disgraceful expedient of degrading the coin; that is, of *cheating* those who lent them money, to the extent of the degradation, and of enabling every other debtor in their dominions to do the same.

The ignorance of the public in remote ages facilitated this species of fraud. Had the names of the coins been changed when the quantity of metal contained in them was diminished, there would have been no room for misapprehension. But, although the weight of the coins was undergoing perpetual, and their purity occasional, reductions, their ancient denominations were almost uniformly preserved: and the people who saw the same names still remaining after the substance was diminished; who saw coins of a certain weight and fineness circulate under the names of florins, livres, dollars, and pounds; and who saw them continue to circulate as such, after both their weight and the degree of their fineness had been lessened; began to think that they derived their value more from the *stamp* affixed to them by authority of government, than from the quantity of the precious metals they contained. This was long a very prevalent opinion. But the rise of prices which invariably followed every reduction of the standard, and the derangement that was thereby occasioned in every pecuniary transaction, undeceived the public, and taught them, and their rulers, the expediency of preserving the standard of money inviolate.

The standard may be reduced by simply raising the denomination of the coin; by ordering, for example, that a half-sovereign should pass for a sovereign, and the latter for a double sovereign, &c. If injustice be resolved upon, this is the least mischievous way in which it can be perpetrated, inasmuch as it saves all the trouble and expense of a recoinage. But as it renders the fraud obvious and glaring, it has rarely been resorted to; and most reductions have been effected either by diminishing the weight of the coins, or by increasing the proportion of alloy in the metal of which they are made, or both.

Originally the coins of all countries seem to have had the same denomination as the weights commonly used in them; and contained the exact quantity of the precious metals indicated by their name. Thus, the *talent* was a weight used in the earliest period by the Greeks, the *as* or *pondo* by the Romans, the *livre* by the French, and the *pound* by the English and Scotch; and the coins originally in use in Greece, Italy,

France, and England, bore the same names, and weighed precisely a talent, a pondo, a livre, and a pound. The standard has not, however, been preserved inviolate, either in modern or ancient times. It has been less degraded in England than any where else; but even here the quantity of silver in a pound sterling is less than the *third* part of a pound weight, — the quantity it contained in 1300. In France, the livre current in 1789 contained less than *one sixty-sixth* part of the silver implied in its name, and which it had actually contained previously to 1103. In Spain, and some other countries, the degradation has been carried still further.*

From 1296 to 1355, the coins of England and Scotland were of the same weight and purity; but at the last mentioned epoch the standard of Scotch money was, for the first time, sunk below that of England; and by successive degradations, the value of Scotch money, at the union of the crowns in 1600, was only a *twelfth* part of the value of the English money of the same denomination. It remained at this point till the union of the kingdoms cancelled the separate coinage of Scotland.

The gold and silver coins of Ireland have been for a considerable period the same as those of Great Britain; but, until 1825, they were nominally rated 8⅓ per cent. higher. This difference of valuation, which was attended with considerable inconveniences, was put an end to by the act 6 Geo. 4. c. 79., which assimilated the currency throughout the empire.

The Tables annexed to this article contain all the information that can be desired by mercantile men with respect to the weight, fineness, &c. of English and Scotch gold and silver coins, from the earliest periods to the present moment.

5. Mint, or Government Valuation of Gold and Silver Coins. — If both gold and silver coins be made legal tenders, it is obviously indispensable that their value with respect to each other should be fixed by authority; or that it should be declared, that individuals shall be entitled to discharge the claims upon them by payments, either of gold or silver coins, according to some regulated proportion. The practice of making both metals legal tenders was long adopted in England. From 1257 till 1664, the value of gold coins was regulated by proclamation; or, which is the same thing, it was ordered that the gold coins, then current, should be taken as equivalent to certain specified sums of silver. — (*Liverpool on Coins*, p. 128.) From 1664, down to 1717, the relation of gold to silver was not fixed by authority; and silver being then the only legal tender, the value of gold coins fluctuated, according to the fluctations in the relative worth of the metals in the market. But, in 1717, the ancient practice was again reverted to; and it was fixed that the guinea should be taken as the equivalent of 21 shillings, and conversely.

But the value of each of the precious metals is liable to perpetual changes. And hence, how accurately soever their proportional value, as fixed by the mint regulations, may correspond with the proportion which they actually bear to each other in the market when the regulation is made, the chances are 10 to 1 that it will speedily cease to express their relation to each other. But the moment that such a change takes place, it becomes the obvious interest of every one who has a payment to make, to make it in the *overvalued* metal; which, consequently, becomes the sole, or nearly the sole, currency of the country. Hence the reason why the coins of some countries are almost wholly of silver, and others almost wholly of gold. It is estimated, for example, that when it was fixed, in 1717, that the guinea should exchange for 21 shillings, gold was overvalued as compared with silver to the extent of $1\frac{10}{31}$ per cent. — (*Liverpool on Coins*, p. 85.); and as the real value of silver with respect to gold continued to increase during the greater part of last century, the advantage of paying in gold in preference to silver became more decided, and ultimately led to the universal use of gold in all large payments, and to the fusion or exportation of all silver coins of full weig ıt. — (*Liverpool, loco cit.*)

In France, a different valuation of the metals has had a different effect. Previously to the recoinage in 1785, the *Louis d'or* was rated in the mint proportion at only 24 livres, when it was really worth 25 livres 10 sols. Those, therefore, who should have discharged the obligations they had contracted by payments of gold coin instead of silver, would plainly have lost 1 livre 10 sols on every sum of 24 livres. In consequence, very few such payments were made; gold was almost entirely banished from circulation, and silver became almost the only species of metallic money used in France. — (*Say, Traité d'Economie Politique*, tom. i. p. 393.)

In 1816, however, a new system was adopted in this country; it being then enacted (56 Geo. 3, c. 68.), *that gold coins only should be legal tender in all payments of more than 40 shillings.* The pound of silver bullion, that had previously been coined into 62 shillings, was then also coined into 66 shillings, the additional *four* shillings being retained by government as a *seignorage* or duty (amounting to $6\frac{1}{4}$ per cent.) upon the

* For an account of the degradation of the coins of the ancient and modern Continental nations, see the article *Money*, in the Supplement to the old, or in the new edition of the *Encyclopædia Britannica*.

coinage. To prevent the silver coins from becoming redundant, government nas retained the power to issue them in its own hands. Under these regulations, silver has ceased to be a standard of value, and forms merely a subordinate or subsidiary species of currency, or change, occupying the same place in relation to gold that copper occupies in relation to itself. This system has been found to answer exceedingly well.

A good deal of difference of opinion has existed as to whether gold or silver coins are best fitted for being made legal tender. It does not seem that the one possesses any very striking advantage over the other; none, certainly, that would justify a change, after a selection has been made, and acted upon for any considerable period.

Down to 1626, a seignorage or duty upon the coinage was usually charged upon the gold and silver coins issued by the mint; and it may be easily shown that the imposition of such a duty, when it is not carried to an undue height, is advantageous. A coin is more useful than a piece of uncoined bullion of the same weight and purity; the coinage fitting it for being used as money, while it does not unfit it for being used for any other purpose. When, therefore, a duty or seignorage is laid upon coin equal to the expense of coinage, it circulates at its real value; but when this charge is defrayed by the public, it circulates at *less* than its real value, and is consequently either melted down or exported whenever there is any demand for bullion in the arts, or any fall in the exchange. It is, indeed, true, that were a seignorage to be laid on gold coins, it would be necessary, to prevent an enhancement of the value of the currency, that their weight should be proportionally reduced; and it is on this account better, perhaps, to let them remain on the present footing. But when a seignorage was laid on the silver coins, in 1816, it was not necessary to take the circumstance now alluded to into consideration; for as they were made subordinate to gold, and were intended to serve as change merely, its imposition had no tendency to raise the value of the currency, at the same time that it was calculated effectually to prevent the fusion of the coins, and to yield a small revenue to government.

6. *Coinage since* 1790. *Amount of Coin in Circulation.*— No. V. of the subjoined Tables shows the amount of the gold and silver coinage at the British mint, each year, from 1790 downwards.

It will be seen from this account, that gold coin to the amount of 60,126,047*l.* has been coined at the mint between 1817 and 1841, both inclusive. It is not, however, possible to form any very precise estimate of the portion of this immense sum now in circulation. In consequence of the exemption of gold coin from any seignorage, large quantities of the coins carried abroad during an unfavourable exchange find their way to the foreign mints, where they are melted and recoined. Large quantities are also conveyed away by emigrants, of which no account is or can be taken; and it is neither possible to estimate the sums in the coffers of the different banks or of individuals. On the whole, however, we shall not perhaps be far wrong if we estimate the stock of coin at present (1843) in possession of the public and of the different private and joint stock banks (ex. Bank of England) at 30,000,000*l.*

7. *The Exportation and Importation of Gold and Silver Coins* was formerly prohibited: but in 1819 it was enacted (59 Geo. 3. c. 49.), that they might be freely exported and imported, without being liable to any charge or duty whatever; and they may be imported without being either reported or entered at the Custom-house. This regulation has rendered it next to impossible to ascertain the value of the bullion imported.

8. *Forgery of Coin. Issue of forged or spurious Coins.* — The forgery of coin is an offence that is practised more or less at all periods. The most effectual means of preventing it is to improve the fabric of the genuine coins, to cut the dies with great delicacy, and occasionally to vary the form of the coins. During the lengthened period from 1770 down to 1816, the genuine silver coins in circulation were so much worn and defaced, that it was very difficult to distinguish between them and counterfeits, which, in despite of the severest penalties, were thrown into circulation in immense quantities. But since the issue of the new coins, in 1816, forgery has been comparatively rare. Sufficient time has not yet been afforded for determining the influence of the law exempting the offence of counterfeiting from the punishment of death.

9. *Law as to the counterfeiting, &c. of Coin.* — The acts as to this were consolidated and amended by the 2 & 3 Will. 4. c. 34., of which the following is a brief abstract: —

Counterfeiting the gold or silver coin of the realm, transportation for life, or for not less than 7 years, or imprisonment for not exceeding 4 years; and every such offence shall be deemed to be complete, although the counterfeiting be not finished. — § 3.

Colouring counterfeit coin, or any pieces of metal, with intent to make them pass for gold or silver coin; colouring or altering genuine coin, with intent to make it pass for higher coin; transportation for life, or for any term not less than 7 years, or imprisonment for any term not exceeding 4 years. — § 4.

Impairing the gold or silver coin, with intent to make the coin so impaired pass for gold or silver coin of full weight, transportation for not exceeding 14, nor less than 7 years, or imprisonment for not exceeding 3 years. — § 5.

Buying or selling, &c. counterfeit gold or silver coin for lower value than its denomination, importing counterfeit coin from beyond seas, transportation for life, or for not less than 7 years, or imprisonment for not exceeding 4 years. — § 6.

Uttering counterfeit gold or silver coin, imprisonment for not exceeding 1 year; and uttering, accompanied by possession of other counterfeit coin, or followed by a second uttering within 10 days, imprisonment for not exceeding 2 years; every second offence of uttering after a previous conviction, shall

be felony: transportation for life, or for not less than 7 years, or imprisonment for not exceeding 4 years.—§ 7.

Having 3 or more pieces of counterfeit gold or silver coin in possession, with intent to utter the same, imprisonment for not exceeding 3 years; second offence, transportation for life, or for not less than 7 years, or imprisonment for not exceeding 4 years.—§ 8.

Making, mending, having possession of, or selling any mould, &c., or coining tools, or any press or engine, conveying tools or monies out of the mint without authority, felony: transportation for life, or for not less than 7 years, or imprisonment for not exceeding 4 years.—§ 10, 11.

Counterfeiting any current copper coin, or making, mending, or having in his possession any coining tool, or buying, selling, &c. any counterfeit copper coin for lower value than its denomination, transportation for not exceeding 7 years, or imprisonment for not exceeding 2 years; and uttering any counterfeit copper coin, or having in his possession 3 or more pieces of counterfeit copper coin, imprisonment for not exceeding 1 year.—§ 12.

Gold or silver coin tendered to any person suspecting any piece to be counterfeit, may be broken by such person; and if it shall appear to be counterfeit, the person tendering shall bear the loss; but if it shall be of due weight, and appear to be of lawful coin, the person breaking it is to receive it at the rate it was coined for, and any dispute shall be finally determined by any justice; and the tellers of the Exchequer and the receivers-general of the revenue are to break or deface every piece of counterfeit coin tendered for payment.—§ 13.

Any person discovering any counterfeit coin, gold, silver, or copper, or any coining tool, is to carry the same forthwith before some justice, and on reasonable cause to suspect any person of counterfeiting, or having such coin, or any tool, &c., such justice may cause any place under the control of such suspected person to be searched, either in the day or night, and if any such coin or tool shall be found, to cause the same to be seized forthwith, and carried before a justice, who is to secure the same for the purpose of being produced in evidence, and afterwards of being delivered up to the mint.—§ 14.

The necessity of the evidence of any officer of the mint to prove counterfeit coin dispensed with.—§ 17.

The court may order hard labour or solitary confinement.—§ 19.

The words "king's coin" include all coin lawfully current in the United Kingdom; and wilfully having, in any dwelling-house or other building, lodging, apartment, field, or other place, open or inclosed, whether belonging to or occupied by himself or not, and whether for his own use or benefit, or for that of another, shall be deemed having in his possession within this act.—§ 21.

Persons acting in the execution of this act, protected in the usual manner, by requiring notice of action, &c., and allowing tender of amends, &c.—§ 22.

10. *Convictions for Coining and Uttering.*—In the 7 years ending with 1818, 63 persons were convicted in England and Wales of the offence of counterfeiting the coin of the realm, of whom 1 was executed. In the next 7 years the convictions for coining were reduced to 14, but of these 5 were executed. In the last septennial period, ending with 1832, the convictions were 34, and the executions 7. The convictions for issuing forged coins in the first of the above periods were 21, in the second, 9, and in the third, 32.

Tables relative to the Coins of Great Britain and other Countries.

No. I. English Coins.—Account of the Quantity of *Fine* Silver coined into 20*s.* or the Pound Sterling; the Quantity of *Standard* Silver, of 11 oz. 2 dwts. Fine and 18 dwts. †1816	56 George III.					

* 1551 — 5 Edward VI.] The coinage of debased silver money in the 5th year of Edward VI. of 3 oz. fine, ought more properly to be considered as Tokens. The sum of 120,000*l.* only was so coined.—(See *James's Essays*, chap. iv.)

† 1816—56 George III.] The government having taken the coinage of silver into its own hands, there is at present no fixed price paid to the public, by the mint, for standard silver. And supposing the present mint regulations, and to keep gold at 77*s.* 10½*d.* an ounce, as the government to continue relative value of gold to silver will vary in like proportion. price of silver varies, the

* 1527—Henry VIII.] The Saxon or Tower pound was used at the mint up to this time, when the pound Troy was substituted in its stead. The Tower pound was but 11 oz. 5 dwts. Troy; so that, from the Conquest to the 28th of Edward I., 20 shillings in tale were exactly a pound in weight.

† 1666—18 Charles II.] The seignorage on the coinage was at this time given up, and the gold bullion brought to the mint has ever since been coined free of expense. A seignorage of 6¼ per cent. was imposed on the coinage of silver by 56 Geo 3.

No. VI. Gold Coins of different Countries. — A Table containing the Assays, Weights, and Values of the principal Gold Coins of all Countries, computed according to the Mint Price of Gold in England, and from Assays made both at London and Paris, which have been found to verify each other.*

*** The publishers of this work purchased the right to publish this Table from Dr. Kelly, in the second edition of whose *Cambist* it originally appeared.

* The London Assays in this Table were made by Robert Bingley, Esq. F.R.S., the King's Assay Master of the Mint, and those at Paris by Pierre Frédéric Bonneville, Essayer du Commerce, as published in his elaborate work on the coins of all nations.

Specimens of all the foreign coins brought to London for commercial purposes have been supplied for this Table from the Bullion-office, Bank of England, by order of the Bank Directors, and have been selected by John Humble, Esq., the chief clerk of that office, who also examined the Tables in their progress. It may likewise be added, that the Mint Reports of these commercial coins are chiefly from average assays; and that all the computations have been carefully verified by different calculators. — (Note by Dr. Kelly, to second edition of the *Cambist*, published in 1821.)

* This statement refers to the American eagle coined previously to 1834. Its weight was then reduced from 246 gr. pure gold to 232 do.; and hence, as the eagle is the equivalent of 10 dollars, the sovereign, which was previously worth 4 doll. 57 cents, has since been worth 4 doll. 87 cents. The reader will find in the Art. NEW YORK, in this work, full details in regard to the coins of the U. States, with the values of other coins rated in them.

† By one of the articles of the Zollverein, or Customs-union of Germany, *it was stipulated that the* settlements for the duties should be made either in Prussian dollars or in florins, at the rate of 7 florins

for four Prussian dollars. There were, however, no florins in existence exactly of this value; but as the nearest approach to it was a valuation called the 24½ guldenfuss, or florin-foot, these Zollverein florins were nominally reckoned to be in this rate, though the difference amounts to more than 2 per cent.

"The term 24 guldenfuss implies that the mark weight of fine silver is rated at 24 gulden or florins. It was formed by giving to the coins minted or valued in 20 guldenfuss an increased value of one-fifth, as rating the 20 kreutzer piece at 24 kreutzers. At 60*d.* per ounce standard, the value of this mark of fine silver is worth 40*s.* 7½*d.* sterling, from which the value of the different German monetary integers is readily obtained; as reckoning 27⅔ marks banco or 34 marks current of Hamburg, 14 dollars of Prussia, 24½ florins of South Germany, 20 florins of Austria, and also 60 lire Austriache of Lombardy, to be of this amount.

"In order, therefore, to prevent the loss or inconvenience which would attend their adhering to this mode of valuation, a money convention was entered into on the 25th of August, 1837, among the states forming the union, by which it was agreed upon that a new basis of valuation should be adopted for their coins, under the term of Süddeutscher Währung, or South German valuation, at the rate of 24½ guiden or florins from the mark's weight of fine silver.

"Bavaria, Wirtemberg, Baden, and Saxony have since issued their coins at this rate, and the other states of the confederation are doing or preparing to do the same. Among them Frankfort, in 1840, began the mintage of coins of this value; and by a regulation of the Chamber of Commerce of this free city, all the rates of exchange, as well as the values of bullion and foreign coins, were ordered to be expressed in this Süddeutscher Währung from the beginning of this present year (1843). One of these new and very exactly-minted florins was assayed by Messrs. Johnson and Cock, of Hatton Garden, who reported it to be, full weight, 6 dwts. 19¾ grains, worse 6 dwts., gold under 2 grains; from which the value, at 60*d.* per ounce standard, is very exactly 19¾*d.* sterling, making the par of exchange with London 120⅔ florins in S. D. W. for 10*l.* sterling.

"I have been thus particular in these explanations, partly because several persons imagine that the late alteration in the rate of exchange with Frankfort was made in compliance with the wishes, or to suit the convenience, of one or more of our leading houses in exchange negotiations, but more particularly because it is maintained by many that the valuation of this rate is not merely nominally, but really, in 24 guldenfuss. This is a point of no small importance to the commercial world, for had it been so, the par of exchange with London would have been only 118 florins for 10*l.* sterling, and the difference between this and the present price of sight bills on Frankfort would have exceeded 2¾ per cent.; a variation which every practical cambist well knows could not exist, except under very extraordinary circumstances, and with nearly corresponding differences in the other rates of exchange: neither of which causes is now in operation."—(*Letter of William Tate, Esq., cambist to the Times.*)

N. B. It was ordered by a ukase, dated the 1st of July, 1839, that this coin should be the standard of value in Russia. It is divided into 100 copecks; and the other silver coins are of the value of 75, 50, 25, and 10 copecks each. This same ukase enacts, that 1 silver rouble shall henceforth be equal to $3\frac{1}{2}$ old paper roubles.

The sterling value of the foreign coins, in the foregoing tables, has been computed from the assays as follows: — Let it be required to assign the value, in sterling, of a French double Louis d'or coined since 1786, the assay master's report being as follows: — "Weight, 9 dwts. 20 grs.; assay W. 1½ grs.," that is, 0 car. 1½ grs. worse than the English standard. We proceed as under: —

From 22 car. 0 gr. the fineness of English standard gold,
Take 0 car. 1½ gr. } There remains 21 car. 2½ gr.

Then, as 22 car. : 21 car. 2½ grs. :: 9 dwts. 20 grs. : 9 dwts. 16 grs., the standard gold contained in the Louis d'or; and hence, as 1 oz. : 3*l.* 17*s.* 10½*d.* :: 9 dwts. 16 grs. : 1*l.* 17*s.* 7½*d.*, the value of the Louis in sterling money, and so for any of the other coins.

Ancient Coins. — We subjoin, for the convenience of such of our readers as may at any time have occasion to consult works in which reference is made to ancient coins, the following tables of those that were principally current among the Jews, Greeks, and Romans. They were calculated by Dr. Arbuthnot (*Tables of Ancient Coins, Weights, &c.* 4to ed. Lond. 1754), and do not differ materially from the tables of Paucton, whose *Métrologie* (4to. Paris, 1780) is the most complete and elaborate work that has ever been published with respect to ancient monies, weights, and measures. At the same time we confess we should not be disposed to place much reliance on these tables, and we have elsewhere stated our reasons for holding this opinion. — (*Encyc. Britannica*, art. *Money*.)

1,660 384 120 60 30 15 7½ 5 2½ 1½ Pentadrachma	3 2 3

Of the foregoing Grecian coins, the drachma and didrachma were of silver; the rest, for the most part, of brass.

The drachma is here, with the generality of authors, supposed equal to the denarius: though there is reason to believe that the drachma was somewhat the weightier.

	Value in Sterling. £	s.	d.
The Grecian gold coin was the stater aureus, weighing 2 Attic drachms, or half of the stater argenteus; and exchanging usually for 25 Attic drachmas of silver	0	16	1¼
But according to our proportion of gold to silver it was worth	1	0	9
There were likewise the stater Cyzicenus, exchanging for 28 Attic drachmas, or	0	18	1
The stater Philippicus, and stater Alexandrinus, were of the same value.			
Stater Daricus, according to Josephus, worth 50 Attic drachmas, or	1	12	3½
Stater Crœsius, of the same value.

	£	s.	d.
The Roman gold coin, or aureus, weighed generally double the denarius; its value, according to the proportion of gold to silver, mentioned by Pliny, was	1	4	3¾
According to the proportion that now obtains amongst us	1	0	9
According to the decuple proportion mentioned by Livy and Julius Pollux	0	12	11
According to the proportion mentioned by Tacitus, by which the aureus exchanged for 25 denarii, its value	0	16	1½

COIR, a species of yarn manufactured out of the husk of cocoa nuts. The husks being steeped in water, the dry dusty substance mixed with the fibres is separated. These are afterwards spun into yarn, and manufactured into cordage, that is deemed by some superior to that made of hemp. The goodness of coir depends on the fineness of the filaments, and on their being of a bright yellow colour. About 2,500,000 lbs. weight are annually exported from Ceylon, principally to Calcutta, and other ports in the East Indies. It is also prepared in the Maldive Islands, and many other places; and is very extensively used throughout the East.—(*Bertolacci's Ceylon; Bell's Commerce of Bengal, &c.*)

COLOCYNTHIS, COLOQUINTIDA, OR BITTER CUCUMBER (Ger. *Koloquinten*; Du. *Bitter-appelen*; Fr. *Coloquintes*; It. *Coloquintida*; Sp. *Coloquintidas*; Arab. and Pers. *Hunzil*), the produce of an annual plant (*Cucumis colocynthis* Lin.) growing in Turkey, Nubia, India, and other places, much resembling the cucumber in herbage. When ripe, the fruit is peeled and dried in a stove; and in this state is brought to England. It is inodorous, but has an extremely nauseous taste. It is an exceedingly powerful drastic cathartic. When it is larger than a St. Michael's orange, and has black acute pointed ends, it is not good.—(*Ainslie's Materia Indica.*)

COLONIES.—COLONY TRADE.—*Colonies* are establishments founded on foreign countries by individuals who either voluntarily emigrate from, or are forcibly sent abroad by, their mother country. The *colony trade* is the trade carried on between colonies and their parent states.

I. ESTABLISHMENT OF COLONIES.
II. INFLUENCE OF THE MONOPOLY OF THE COLONY TRADE.
III. MAGNITUDE, POPULATION, TRADE, &C. OF BRITISH COLONIES.—DISPOSAL OF LAND IN THE COLONIES, &C.
IV. REGULATIONS UNDER WHICH THE COLONY TRADE IS CONDUCTED.
V. FOREIGN COLONIES.

I. ESTABLISHMENT OF COLONIES.

(1.) *Greek Colonies.*—Various motives have, in different countries and ages, led to the formation of colonies.* The Greek colonies of antiquity seem to have been chiefly

* Seneca has given, in a few words, a very clear and accurate statement of the different motives that induced the ancients to found colonies.—"*Nec omnibus eadem causa relinquendi quærendique patriam fuit. Alios excidia urbium suarum, hostilibus armis elapsos, in aliena, spoliatos suis, expulerunt: Alios domestica seditio submovit: Alios nimia superfluentis populi frequentia, ad exonerandas vires, emisit: Alios pestilentia, aut frequens terrarum hiatus, aut aliqua intoleranda infelicis soli ejecerunt: Quosdam fertilis oræ, et in majus laudatæ, fama corrupit: Alios alia causa excivit domibus suis.*"—(Consol. ad Helviam, c. 6.)

founded by citizens whom the violence and fury of contending factions forced to leave their native land; but they were sometimes formed for the purpose of relieving the mother country of a redundant population, and sometimes also for the purpose of extending the sphere of commercial transactions, or of providing for their security. The relations between the mother country and the colony depended, in a great measure, on the motives which led to the establishment of the latter. When a colony was founded by fugitives forcibly expelled from their ancient homes; or when it was founded, as was frequently the case, by bodies of voluntary emigrants, who received no assistance from, and were in no respect controlled by, the parent state, it was from the first independent; and even in those rarer cases in which the emigration was conducted under the superintendence of the parent city, and when the colony was protected by her power and influence, the dependence was, mostly, far from being absolute and complete. The great bulk of the Greek colonies were really independent states; and though they commonly regarded the land of their forefathers with filial respect, though they yielded to its citizens the place of distinction at public games and religious solemnities, and were expected to assist them in time of war, they did so as allies only, on fair and equal terms, and never as subjects. Owing to the freedom of their institutions, and their superiority in the arts of civilised life to the native inhabitants of the countries among whom they were generally placed, these colonies rose, in a comparatively short period, to a high pitch of opulence and refinement; and many among them, as Miletus and Ephesus in Asia Minor, Syracuse and Agrigentum in Sicily, and Tarentum and Locri in Italy, not only equalled, but greatly surpassed, their mother cities in wealth and power.

(2.) *Roman Colonies.*—The Roman colonies were, for the most part, founded by and under the authority of government; being intended to serve both as outlets for poor and discontented citizens, and as military stations, or garrisons, to secure the subjection of the conquered provinces over which they were scattered. The most intimate political union was always maintained between them and the mother city. Their internal government was modelled on that of Rome; and, while their superior officers were mostly sent from the capital, they were made to contribute their full quota of troops and taxes, to assist in carrying on the contests in which the Republic was almost constantly engaged.

(3.) *Spanish Colonies.*—The early colonies of most modern nations were founded by private adventurers, influenced either by the hope of gain, or by a desire to escape from religious persecution, without any wish to relieve the mother country of a surplus population, or to bridle subjugated provinces. On their first institution, therefore, the modern colonies approached, though with some essential variations, more nearly to the Grecian than the Roman model—but the period of their freedom was of very limited duration. They were very soon subjected to laws and regulations framed in the metropolis, and calculated, as was to be supposed, rather to promote its interests than those of the colony. At a somewhat later period the foundation of colonial establishments was eagerly patronised by most European governments, in the view of extending commerce, and of enriching the mother country, by securing to her the exclusive possession of the market of distant countries; and where, from the thinness of the aboriginal population, or their inferiority in the arts of civilised life, the colonists were enabled to amass fortunes with comparative rapidity.

The Spaniards who first resorted to America after its discovery, had no intention of settling in the country, or of colonising it. The idea that gold and silver alone constituted wealth was then universally prevalent; and the bold and enterprising companions and followers of Columbus, instead of engaging in industrious undertakings, which they neither understood nor relished, sought only to enrich themselves by plundering the feeble and defenceless natives of the gold and silver in their possession, and of the abundance of which the most exaggerated accounts were immediately spread throughout Europe. When new adventurers arrived on an unknown coast, their single inquiry was, whether it abounded in gold. If it did, they remained, for some time at least, in the country; if not, they immediately set sail for some other quarter. *Auri rabida sitis a cultura Hispanos divertit*, is the expressive statement of a contemporary writer (Petrus Martyrus, in the *Novus Orbis* of Grynæus, p. 511.). The slow progress of the Spanish colonies, after their first discovery, must principally be ascribed to this cause. The gold and silver accumulated by the natives were very soon exhausted; and the skill and energy of the successive swarms of adventurers, who continued to pour into the country, were principally directed to the unproductive and generally ruinous trade of mining. The few large fortunes that were made in this way, like the large prizes in a lottery, inflamed the cupidity of the multitude, and gave an appearance of credibility to the fabulous accounts of the excessive productiveness of the mines. After the gambling spirit which had exclusively actuated the early adventurers had begun to subside, the colonists gradually betook themselves to agricultural and commercial pursuits: and the vast variety of valuable productions with which Mexico and the other Spanish colonies

abound, the extreme richness of the soil, and their advantageous situation, would, had they been only tolerably well governed, have occasioned their rapid increase in wealth and civilisation. But a blind and intolerant despotism paralysed their energies, and fettered and retarded their progress. All the abuses and defects of the government of Old Spain were transferred to, and multiplied in, the colonies. The whole property of those vast regions was considered as vested in the crown of Spain; and every law or regulation, whether of a local or general nature, affecting their government, emanated from the council of the Indies, in which it was supposed the king was always present. We cannot stop to describe the sort of regulations to which the colonists were subjected with any degree of minuteness; but we may notice a few of them, to furnish the means of judging of their general spirit and probable effect. It was, for example, made a *capital* offence to carry on any intercourse with foreigners; and the inhabitants of the different colonies were even forbidden any intercourse with each other, unless under the strictest and most vexatious regulations. There were several articles, such as flax, hemp, and wine, which they were not permitted to cultivate; at the same time that the crown reserved to itself the monopoly of salt, tobacco, gunpowder, and some other less important articles. The alcavala, and other oppressive imposts, which had proved destructive of industry in Old Spain, were rigorously levied as well on the exports as on the imports of the colonies. No situation of power or emolument could be filled except by a native of Old Spain. The Catholic religion was established, to the exclusion of every other; and bishops, tithes, and the inquisition, followed in its train: while, in order still better to consolidate and strengthen the foundations of this monstrous despotism, the government endeavoured to make the colonists insensible of their degradation, by proscribing every species of instruction, and watchfully opposing the introduction and progress of all useful knowledge!

Under such circumstances, we cannot be surprised that the Continental colonists, among whom the monopoly system was maintained in its greatest purity, should have languished for above two centuries in a state of sluggish inactivity. Though surrounded by all the means of producing wealth, they were not generally wealthy. Oppression rendered them indolent; and went far to deprive them not only of the power, but also of the wish, to emerge from poverty. The progress of the colonists who occupied the West India islands was not quite so slow. It is certain, however, that down to the middle of last century, Spain reaped no greater advantage from the possession of Cuba, Hispaniola, and Porto Rico, than England or France from the smallest of its dependencies. In proof of this we may mention, that the noble island of Cuba, which could without difficulty supply all Europe with sugar, did not, in 1750, produce a sufficient quantity even for the consumption of Old Spain. But the combined influence of an arbitrary and intolerant government, and of a degrading superstition, could not balance the means of improvement, which the fertility of the soil, and the command thence arising over most of the necessaries and many of the conveniences of life, gave to the colonists. Owing also to the total incapacity of Old Spain to furnish her transatlantic provinces with a sufficient supply of the articles she had forced them to import from Europe, and the consequent extension of the contraband trade carried on with them by the other European nations, she had been compelled gradually to relax the severity of her commercial monopoly. A new impulse was thus given to the spirit of industry. The colonists began to be more sensible of the natural advantages of their situation, and less inclined to submit to the blind and bigoted policy of the Spanish court. In 1781, a rebellion broke out in Peru, in consequence of an attempt made by the government to establish a new monopoly in that province, which threatened to end in the total dissolution of the connection between Spain and South America, and was not quelled without great difficulty and much bloodshed. But the spirit of liberty, when once excited, could not be suppressed. It continued to gain ground progressively, until the commencement of the late contest between France and Spain interrupted the communication with the mother country, and gave the colonists an opportunity of proclaiming that independence which, after a lengthened and bloody struggle, they happily succeeded in achieving.

(4.) *British Colonies.*—The English, who, like all the other nations of Europe, had been impressed with mingled feelings of admiration and envy by the extent and importance of the acquisitions made by the Spaniards in the New World, speedily entered with enthusiasm and ardour into the career of discovery. Owing, however, to the bull which Ferdinand and Isabella had obtained from the Pope, conveying to them the ample donation of all the countries inhabited by infidels that the Spaniards had discovered, or might discover, the English, to avoid encroaching on the dominions of their rivals, directed their efforts further to the north. Several attempts to found colonies on the coast of America were made in the reign of Elizabeth by Sir Humphrey Gilbert, Sir Richard Grenville, Sir Walter Raleigh, and others. But in consequence of their ignorance of the country, the deficiency of their supplies of provisions,

the loss of time in fruitless searches after gold, and the various difficulties incident to the first settlement of a colony, none of these attempts proved successful: and it was not until 1607, that a small body of adventurers founded the first permanent establishment of the English in America, at James Town in Virginia. Letters patent were granted in 1609, by King James, to the principal persons resident in London, by whom the expense attending the formation of the colony was to be defrayed, incorporating them into a company, and establishing a council in England for the direction of their proceedings, the members of which were to be chosen by, and removeable at the pleasure of, the majority of the partners of the company; permitting whatever was necessary for the support and sustenance of the colony for the first 7 years to be exported free of duty; declaring that the colonists and their descendants were to be secured in all the rights and privileges of Englishmen, the same as if they had remained at home, or been born in England; and reserving only, as the stipulated price of these concessions, and in imitation of the policy of the Spaniards, *one fifth* part of the gold and silver ore to be found in the colonies, which was to be paid to his Majesty and his successors in all time to come. In virtue of these powers, the company issued, in 1621, a charter or ordinance, which gave a legal and permanent form to the constitution of the colony. By this charter the supreme legislative authority was lodged, partly in the governor, who held the place of the sovereign, partly in a council of state, named by the company, and partly in a general council, or assembly composed of the representatives of the people, in which were vested powers and privileges similar to those of the House of Commons. It was not long, however, before the king and the company quarrelled. The latter were in consequence divested of all their rights, partly by open violence, and partly under colour of law, without compensation, after having expended upwards of 150,000*l.* in founding the colony; and a governor and council of state appointed by the king succeeded to the powers of those appointed by the committee.—(*Robertson's History of America*, book ix. *passim*; *Jefferson's Notes on Virginia*, p. 179.)

The founders of the colony in Virginia had been actuated solely by the hopes of gain: but the colonies that were soon after established in New England, were chiefly planted by men who fled from religious and political persecution. The form of government in the New England colonies, though at first modified a good deal by the peculiar religious opinions entertained by the colonists, was in its leading principles essentially free. For a considerable period, the colonists elected their own governors, coined money, and exercised most of the rights of sovereignty; while the English, wholly engrossed with the contest between freedom and prerogative at home, had no leisure to attend to their proceedings. Subsequently to the Restoration, however, the governments of most of the New England states were established nearly on the same footing as that of Virginia; which, indeed, became the favourite model, not only for the constitution of the colonies established on the Continent, with the exception of the proprietary governments of Pennsylvania and Maryland, but also for those that were established in the West India islands. But under every vicissitude of government and fortune, the New England colonists were distinguished by the same ardent and enthusiastic love of liberty that had first induced them to quit their native land. Every thing relating to the internal regulation and administration of the different colonies was determined, in the colonial assemblies, by representatives freely chosen by the settlers. The personal liberty of the citizens was well secured and vigilantly protected. And, if we except the restraints on their commerce, the monopoly of which was jealously guarded by the mother country, the inhabitants of Virginia, Pennsylvania, and New England enjoyed nearly the same degree of freedom, when colonists of England, that they now enjoy as citizens of the powerful republic of North America. Their progress in wealth and population was in consequence quite unprecedented in the history of the world. The white population of the colonies had increased in 1776, at the commencement of the revolutionary war, to above 2,000,000, and the value of the exports from Great Britain to them amounted to about 1,300,000*l.* a year!

It is not difficult to discover the causes of the unexampled prosperity and rapid growth of our North American colonies, and generally of all colonies placed under similar circumstances. The North American colonists carried with them a knowledge of the arts and sciences practised by a civilised and polished people. They had been trained from their infancy to habits of industry and subordination. They were practically acquainted with the best and wisest form of civil polity that had been established in Europe; and they were placed in a situation that enabled them, without difficulty, to remedy its defects, and to try every institution by the test of utility. But the thinness of the aboriginal population, and the consequent facility of obtaining inexhaustible supplies of fertile and unoccupied land, must certainly be placed at the head of all the causes which have promoted the rapid increase of wealth and population in the United States, and in all the other colonies both of North and South America. On the first foundation of a colony, and for long after, each colonist gets an ample supply of land of

the *best quality;* and having no rent, and scarcely any taxes, to pay, his industry necessarily becomes exceedingly productive, and he has every means, and every motive, to amass capital. In consequence, he is eager to collect labourers from all quarters, and is both willing and able to reward them with high wages. But these high wages afford the means of accumulation, and, joined to the plenty and cheapness of the land, speedily change the more industrious labourers into proprietors, and enable them, in their turn, to become the employers of fresh labourers; so that every class participates in the general improvement, and capital and population advance with a rapidity hardly conceivable in old settled and fully peopled countries.

It has been frequently said, that the establishment of our American and West India colonies was a device of the supporters of the exclusive or mercantile system — that they founded them in the view of raising up a vast agricultural population, whose commerce should be confined entirely to an exchange of their raw products for our manufactured goods. There is, however, no truth in these assertions. On the contrary, the charters granted to the founders of the settlement in Virginia distinctly *empower the colonists to carry on a direct intercourse with foreign states.* Nor were they slow to avail themselves of this permission; for they had, so early as 1620, established tobacco warehouses in Middleburg and Flushing — (*Robertson's America*, book ix. p. 104.); and the subsequent proceedings of the British government, depriving them of this freedom of commerce, were the chief cause of those disputes which broke out, in 1676, in an open rebellion of ominous and threatening import. — (*Robertson's America*, p. 147.) It was not until the colonists had surmounted the difficulties and hardships incident to their first establishment, and had begun to increase rapidly in wealth, that their commerce became an object of importance, and that regulations were framed in the view of restricting its freedom, and of rendering it peculiarly advantageous to the mother country. The act of 1650, passed by the republican parliament, laid the first foundations of the monopoly system, by confining the import and export trade of the colonies exclusively to British or colony built ships. But the famous Navigation Act of 1660 (12 Charles 2. c. 18.) went much further. It enacted, that certain specified articles, the produce of the colonies, and since well known in commerce by the name of *enumerated* articles, should not be exported directly from the colonies to any foreign country; but that they should first be sent to Britain, and there unladen (the words of the act are, *laid upon the shore*), before they could be forwarded to their final destination. Sugar, molasses, ginger, fustic, tobacco, cotton, and indigo, were originally enumerated; and the list was subsequently enlarged by the addition of coffee, hides and skins, iron, corn, lumber, &c. In 1739, the monopoly system was so far relaxed, that sugars were permitted to be carried directly from the British plantations to any port or place southward of Cape Finisterre; but the conditions under which this indulgence was granted, continued so strict and numerous down to 1803, when they were a good deal simplified, as to render it in a great degree nugatory — (*Edwards's West Indies*, vol. ii. p. 452. ed. 1819.); and with this exception, the oppressive and vexatious restrictions on their direct exportation to foreign countries were maintained on most of the other *enumerated* commodities of any importance, down to a late period.

But besides compelling the colonists to *sell* their produce exclusively in the English markets, it was next thought advisable to oblige them to *buy* such foreign articles as they might stand in need of entirely from the merchants and manufacturers of England. For this purpose it was enacted, in 1663, that "no commodity of the growth, production, or manufacture of Europe, shall be imported into the British plantations, but such as are laden and put on board in England, Wales, or Berwick-upon-Tweed, and in English-built shipping, whereof the master and three fourths of the crew are English." The preamble to this statute, which effectually excluded the colonists from every market for European produce, except that of England, assigns the motive for this restriction to be, "the maintaining a greater correspondence and kindness between the subjects at home and those in the plantations; keeping the colonies in a firmer dependence on the mother country; making them yet more beneficial to it, in the further employment and increase of English shipping, and the vent of English manufactures and commodities; rendering the navigation to and from them more safe and cheap; and making this kingdom a staple, not only of the commodities of the plantations, but also of the commodities of other countries and places for their supply; it being the usage of other nations to keep their plantation trade exclusively to themselves."

It was also a leading principle in the system of colonial policy, adopted as well by England as by the other European nations, to discourage all attempts to manufacture such articles in the colonies as could be provided for them by the mother country. The history of our colonial system is full of efforts of this sort; and so essential was this principle deemed to the idea of a colony, that Lord Chatham did not hesitate to declare, in his place in parliament, that "the British colonists of North America had *no* RIGHT *to manufacture even a nail for a horseshoe!*" — (*Edwards's West Indies*, vol. ii. p. 566.) And

when such were the enactments made by the legislature, and such the avowed sentiments of a great parliamentary leader and a friend to the colonies, we need not be surprised at a declaration of the late Lord Sheffield, who did no more, indeed, than express the opinion of almost all the merchants and politicians of his time, when he affirmed that "THE ONLY *use of American colonies or West India islands is* THE MONOPOLY *of their consumption, and the carriage of their produce!*"

II. INFLUENCE OF THE MONOPOLY OF THE COLONY TRADE.

(1.) It is not necessary to enter into any lengthened disquisitions with respect to this part of our subject. The rules by which we are to form our judgment upon it, are unfolded in the article COMMERCE. Here it is sufficient to observe, in the first place, that, though it could be shown that restrictions on the colony trade were really advantageous to the mother country, that is not enough to prove that they should be adopted. In dealing with a colony, we are not dealing with a foreign country, but with an integral part of our own empire. And hence, in order to show that restrictions on the colony trade are advantageous, it must not merely be shown that they are beneficial to the mother country, but it must further be shown that they are beneficial, or, at all events, not injurious, to the colony. The advantage of one part of the empire is not to be purchased by the depression of some other part. The duty of government is to promote the prosperity and to maintain the equal rights and privileges of all; not to enrich one class, or one province, at the expense of others.

This principle is decisive of the whole question. Owing to the identity of language, manners, and religion, the merchants of the mother country must always have very great advantages in the colony markets; and if the commodities which they have to sell be about as suitable for them, and as low priced, as those of others, none else will be imported into them; but if they be not, it would plainly be to the injury of the colony to compel her to buy from the mother country what she might procure cheaper from others. It will immediately be seen that such forced sale could be of no real advantage to the mother country; but whether that were so or not, its mischievous influence upon the colony is manifest. Were Jamaica, for example, obliged to import any article from England which cost her 100,000*l.* a year more than she could procure a similar article for elsewhere, she would manifestly lose this amount; and though it were true that every shilling of this sum found its way as *extra profit* into the pockets of the merchants or manufacturers of England, that would be no sufficient justification of the policy of such a system. The protection due by a government to its subjects does not depend on the varying degrees of latitude and longitude under which they happen to live. It would not be more glaringly unjust to lay peculiar burdens on the Lothians for the sake of Middlesex, than it is to lay them on Jamaica for the sake of England.

In point of fact, however, the monopoly of the colony trade is of no real use, but the reverse, to the mother country. If, as has been already observed, she can supply her colonists with goods as cheaply as they can be supplied by others, she will have no competitors in their markets; and if she cannot do this, the monopoly is really hostile to her interests. Each country has some natural or acquired capabilities that enable her to carry on certain branches of industry more advantageously than any one else. But the fact of a country being liable to be undersold in the markets of her colonies, shows conclusively, that instead of having any superiority, she labours under a disadvantage, as compared with others, in the production of the peculiar articles in demand in them. And hence, in providing a forced market in the colonies for articles that we should not otherwise be able to dispose of, we really engage a portion of the capital and labour of the country in a less advantageous channel than that into which it would naturally have flowed. We impress upon it an artificial direction; and withdraw it from those secure and really beneficial businesses in which it would have been employed, to engage it in businesses the existence of which depends only on the continuance of oppressive regulations, and in which we are surpassed by foreigners.

Even were it conceded that the possession of an outlet in the colonies for goods that could not otherwise be disposed of, was an advantage, it is one that can exist in theory only. Practically it can never be realised. The interests of the colonists, and the dexterity and devices of the smuggler, are too much for Custom-house regulations. Cheap goods never fail of making their way through every obstacle. All the tyrannical laws and *guarda costas* of Old Spain did not hinder her colonies from being glutted with prohibited commodities. And we may be assured that the moment a competitor appears in the field capable of supplying the Canadians and people of Jamaica with cottons, woollens, hardware, &c. cheaper than we can supply them, that moment will they cease to be our customers. All the revenue officers, and all the ships of England, supposing them to be employed for that purpose, would be unable to avert this result.

The consequences of the American war should have led to sounder opinions than those that are still current as to the value of the monopoly of the colony trade. Has

the independence of the United States been in any respect injurious to us? So far from this, it is certain that it has redounded materially to our advantage. We have been relieved from the expense and trouble of governing extensive countries at a great distance from our shores, at the same time that we have continued to reap all the advantage that we previously reaped from our intercourse with them. It is visionary to imagine that we could have succeeded either in preventing them from establishing manufactories at home, or from importing products from abroad, had any one been able to undersell us. Our command of the American market depends, at this moment, on the very same principle—the comparative cheapness of our goods—on which it depended when we had a governor in every state. So long as we preserve this advantage, we preserve the only means by which the monopoly of any distant market can be maintained, and the only means by which such monopoly is rendered of the least advantage.

Being integral parts of the empire, the trade with the colonies should, as far as circumstances will permit, be conducted on the footing of a coasting trade. The state of the revenue requires that moderate duties should be laid on sugar, coffee, and rum, when imported into Great Britain or Ireland; but the duties on cotton, cocoa, and most other colonial products, might be repealed without injury to the revenue, and with advantage to all parties. Unfortunately, however, the system we pursued down to a late period was in most respects the reverse of what it should have been. By excluding the colonists from the cheapest markets for their food and lumber, we artificially raised the cost of their produce; and then, to protect them from the consequences of such short-sighted policy, we gave them a monopoly of the British market! It is thus that one unjust and vicious regulation is sure to give birth to others; and that those who depart from sound principle have nothing left but to endeavour to bolster up one absurdity by another. It is time, surely, that an end were put to every vestige of so ruinous a system. It is as much for the interest as it is the *duty* of England, to remove all restrictions from the colonists, not essential for the sake of revenue: for this is the only means by which she can provide for their real prosperity, by turning their industry into those departments for the prosecution of which they are naturally fitted, and rid herself of those monopolies that form the heaviest clog upon her industry.

We could not, however anxious, exclude manufactured articles, and such foreign goods as are valuable without being very bulky, from our West India islands, provided they were offered cheaper by others. But such is not the case with lumber, provisions, &c. They are too bulky to be easily smuggled; and may be, and indeed were, very much raised in price by restrictions on their importation. For many years, all direct intercourse between our West India colonies and the United States was interdicted; and, in consequence, the planters were compelled either to supply themselves with lumber, staves, &c. by a distant voyage from Canada, or, which was by far the most common practice, from the United States, through the circuitous and expensive channel of St. Thomas and other neutral islands! In papers laid by the West India merchants and planters before the House of Commons (No. 120. Session 1831), they estimated the increased expense they thus incurred on lumber, staves, flour, shingles, fish, &c. at 15 per cent. of the entire value of these articles, or at 187,576*l.* a year. And it will be observed, that no part of this sum went into the pockets of any British merchant. It went wholly to indemnify the Americans and others for being obliged to bring their products round about by St. Thomas, instead of direct from the States.

This system grew out of the American war; but it is due to Mr. Pitt to state that it received no countenance from him. On the contrary, he introduced a bill, in 1785, for reviving the beneficial intercourse that existed previously to the war, between the United States and the West India islands. But being opposed by a powerful party in parliament, and by the ship owners and Canada merchants, he was obliged reluctantly to withdraw the bill. The following remarks of Mr. Bryan Edwards on this subject, written in 1794, are too interesting to be omitted.

"This," says he, "is not a business of selfishness or faction; nor (like many of those questions which are daily moved in parliament merely to agitate and perplex government) can it be dismissed by a vote. It will come forward again and again, and haunt administration in a thousand hideous shapes, until a more liberal policy shall take place; for no folly can possibly exceed the notion that any measures pursued by Great Britain will prevent the American states from having, some time or other, a commercial intercourse with our West Indian territories on their own terms. With a chain of coast of 20° of latitude, possessing the finest harbours for the purpose in the world, all lying so near the sugar colonies and the track to Europe, with a country abounding in every thing the islands have occasion for, and which they can obtain no where else; all these circumstances necessarily and naturally lead to a commercial intercourse between our islands and the United States. It is true we may ruin our sugar colonies, and ourselves also, in the attempt to prevent it; but it is an experiment which God and nature have marked out as impossible to succeed. The present restraining system is forbidding men

to help each other; men who, by their necessities, their climate, and their productions, are standing in perpetual need of mutual assistance, and able to supply it. — (*Hist. West Indies*, Preface to 2d ed.)

We have also thought fit to interdict the West Indians from the refining, or, as it is technically termed, the *claying* of sugars. This is one of the few manufactures that might be advantageously set up in the islands. The process adds considerably to the value of sugar; and it might be carried on in the buildings, and by the hands, that are required to boil the cane or to prepare the raw or muscovado sugar. Instead, however, of being allowed to refine their sugars on the spot, and where it might be done for a third part of the expense that is required in England, the planters have been prohibited from engaging in this branch of industry; and have been obliged to export all their sugars, either raw or crushed, to England. Nothing can exceed the oppressiveness of such a regulation; and what is most singular, it has not been enforced, like most regulations of the sort, in order to bolster up any of the leading interests of the country, but merely to give a factitious employment to a very small class, — that of the sugar refiners, whose natural residence is in the West Indies. The planters and merchants estimated (in 1830) the loss caused by this preposterous regulation at 75,550*l.* a year; and we regret to say that it is still enforced.

The distillation of spirits from sugar, that used to be only occasionally, is now always allowed. The duties having been adjusted so as to give no advantage to the planters over the growers of barley, or to the latter over the former, the distillers have been permitted to distil indiscriminately from sugar, molasses, or grain. It was the business of government to take care that the duties should be so arranged as to give no unfair advantage to one party over another; but, having done this, it could, with propriety, do nothing more. To prohibit distillation from sugar, that a forced market may be opened for grain; or distillation from grain, that a forced market may be opened for sugar; are interferences with the freedom of industry, for which no good reason has been, nor, we believe, can be assigned.

(2.) *Relaxation of the Monopoly.* — But though something still remains to be done, it is not to be denied that great progress has been made towards the adoption of a sound system of colonial policy since 1822, when measures for the relaxation of the monopoly were introduced by Mr. Robinson (now Lord Ripon). These measures were farther followed up by Mr. Huskisson in 1825, by the act 6 Geo. 4. cap. 114.; and since his time by the 3 & 4 Will. 4. cap. 59., and more recently by the 5 & 6 Vict. cap. 49., which came into operation in the West Indies on the 5th of April, 1843. These acts repealed several of the prohibitions that formerly existed against the importation of certain articles into the West Indian colonies and the Mauritius, and they also either repealed or very materially reduced the duties that were previously laid on others. For example, the barrel of American or other foreign flour, that down to 1843 paid a duty of 5*s.*, has since been imported on paying a duty of 2*s.* Most other duties on articles of food have been reduced in the same proportion; and rice, wood, and lumber, articles of great importance in the colonies, which formerly paid high duties, may now be imported duty free. — (See *post.*) We believe, indeed, that it would be sound policy to carry still farther this liberal system, by entirely repealing the duties on flour, salt, meat, and all other articles of provision. Jamaica and our other West Indian colonies may be viewed as immense sugar, rum, and coffee manufactories, which, though situated at a distance from England, belong to Englishmen, and are carried on by English capital. But to promote the prosperity of any manufacture without injury to others, there are no means, at once so obvious and effectual, as to give those engaged in it the means of carrying it on with the least outlay, and to keep the duties on its produce as low as possible. And, how much soever we may fail in the last of these necessary conditions, we have now but little to reproach ourselves with in regard to the former. It were better, perhaps, that the duties on necessaries imported into the colonies should be repealed; but if they are to be retained, those imposed by the late act are as moderate as can well be desired.

Formerly, though American and other foreign flour could not be imported from a foreign country into the West India Islands without paying a duty of 5*s.* a barrel, it might be imported free of duty into Canada and our other possessions on the continent of N. America, and be thence exported in British ships to the islands free of duty. In consequence of this regulation a large proportion of the flour, lumber, and other articles required for the supply of the islands, instead of being shipped direct for them from New Orleans, Baltimore, and other American ports, was sent in the first instance to Canada, whence it was conveyed in British ships to its final destination. So that the influence of the duty was not so much to raise a revenue, or to open a market for the flour, provisions, and lumber of Canada, as to make the flour and other necessaries supplied to the colonists by the United States be carried, at a heavy expense, a roundabout voyage

of some 2,000 miles and transhipped, that employment might be found for a few thousand tons of British and colonial shipping! But this preposterous system is happily at an end. American flour is now charged with a duty of 3*s.* a barrel in Canada; and, independently of this, the duties on foreign articles directly imported into the colonies are too low to give any encouragement to their indirect conveyance.

It was, however, not a little singular, that while the imperial legislature had thus endeavoured, by repealing and lowering the duties on most articles of foreign produce, to provide for the future prosperity of the colonies, the legislature of Jamaica should have passed an act imposing heavy duties on the same articles. Luckily, however, this impolitic act expired on the 31st of December, 1843, and government most properly directed the governor to refuse his assent should it be attempted to renew it, or to propose any similar measure.—(*Parl. Paper*, No. 292. Sess. 1843.)

For a lengthened period, however, concession was all on the one side; and while we had all but emancipated the trade of the colonies, and allowed them to resort to all the markets of the world, we confined our demand for colonial produce exclusively to their markets. So long, indeed, as the colonists were compelled to take all that they wanted from us, it was but fair that we should be compelled to take the sugar and other articles with which they could supply us exclusively from them. But having liberated them from this obligation and permitted them to resort to whatever markets they thought most advantageous, there was neither justice nor policy in continuing to confine the people of the U. Kingdom to their markets. This, of all possible cases, is that in which reciprocity would seem to be most desirable. If it be right, as no doubt it is, that the planters of Jamaica should, if they deem it most for their interest, be allowed to draw supplies of flour, provisions, and manufactured goods from New Orleans or Baltimore, on what pretence is the British manufacturer or merchant to be prevented from importing sugar from Rio, the Havannah, or Batavia?

Having done so much to abolish prohibitions on one side, we were bound to do as much for their abolition on the other. Having deprived the merchants and manufacturers of the U. Kingdom of the monopoly of the colony market, we could not, without violating every principle of consistency and justice, refuse to deprive the colonists of the monopoly of the British markets. Indeed the ablest and most zealous defenders of the colony system have admitted that one part of it could not be supported independently of the rest, that it is of a piece, and must either stand or fall together. "The British dominions," says Lord Sheffield, "*are as much entitled to the markets of the British West Indies, as the latter are entitled to those of the former, and whenever that monopoly is given up it* WILL BE THE HIGHEST ABSURDITY NOT TO OPEN ALL THE BRITISH PORTS TO FOREIGN RAW SUGARS."—(*Observations on the Commerce of the American States*, p. 288.) Inasmuch, indeed, as the well-being and prosperity of the people of the U. Kingdom is of incomparably more importance than that of the West Indian colonists, every argument that has been or that may be brought forward to show the impolicy of the restraints on the trade of the latter, applies with tenfold force to those laid on the trade of the former.

Influence of the Monopoly on the Sugar, Timber, &c. imported into the U. Kingdom.—It appears from the official returns given in the Parl. Paper No. 226. Sess. 1843, that during the three years ending with 1842, 3,840,309½ cwts. sugar were annually retained for home consumption in the U. Kingdom; and it farther appears, from the same return, that while the average price of British muscovado sugar during that period was 41*s.* 10½*d.* a cwt., the average price of Brazil sugar was only 20*s.* 2*d.* a cwt. Hence it follows that had the then prohibitory duty of 63*s.* a cwt. on foreign sugar been reduced to the same level (24*s.*) as that on British colonial sugar, we might have purchased the same supply of sugar for 20*s.* 2*d.* a cwt. that cost us 41*s.* 10½*d.*, which, on the average quantity consumed during the three years referred to would have been a total saving in this single article of no less than 4,168,335*l.* a year! But it may, perhaps, be said, that, had our ports been open to the free importation of Cuban and other foreign sugars, the price of the latter would have been raised; and so, probably, it would; though, considering the vast extent and productiveness of the field from which sugar may now be brought, we doubt whether this effect would have been very sensible. But supposing that the opening of our ports had raised the price of foreign sugar from 20*s.* 2*d.* to 25*s.* a cwt., still the saving would have amounted to 3,240,260*l.* 6*s.* a year!—(See art. SUGAR.)

We are, however, glad to say that this preposterous system has been abandoned. Foreign sugar is now admitted, without regard to its origin, on payment of reasonable duties, which are to be reduced, in 1854, to the same level with those on British colonial sugar. Probably, indeed, we have gone, in this case, from one extreme to another; for, considering the difficulties under which the British colonists are placed from the want of supplies of compulsory labour, it may be doubted whether they were not entitled to a reasonable discriminating duty in their favour.

The extraordinary preference shown to colonial sugar was, on the whole, probably less objectionable than that shown to colonial timber; the latter having been, for a lengthened period, admitted into our markets at a nominal duty of 1*s.* a load, while Baltic and other foreign timber was subjected to a duty of 25*s.* a load! And this preference, though greatly modified, still exists. An act of the present year (1851), the 14 & 15 Vict. c. 62., has reduced the duties on foreign timber to 7*s.* 6*d.* per load. But there is no reason why this very moderate duty should not be extended to colonial timber. The differential duty of 6*s.* 6*d.* which it leaves in favour of the latter, is too trifling to have any considerable influence over the trade. The great demand for timber from British N. America of late years must have been occasioned, more by its suitableness for the purposes in which it is employed, than by its having been burdened with a less amount of duty than other timber.

The expense of the colonies is, also, a very heavy item in the national expenditure — far more so than is generally supposed. Not only have we been subjected to discriminating duties on foreign articles, that similar articles from the colonies might enjoy the monopoly of our markets, but we have to defray a very large sum on account of their military and naval expenditure. There are no means by which to estimate the precise amount of this expense; but it is, notwithstanding, abundantly certain, that Canada and the islands in the West Indies cost us annually, in military and naval outlays, upwards of a *million and a half in time of peace*, exclusive of the revenue collected in them. And if to this heavy expense be added the vast additional sums their defence costs during war, the debtor side of a fairly drawn up colonial budget would attain to a very formidable magnitude; and one which we apprehend could not easily be balanced.

With the exception of the outlet which they afford to emigrants (which, however, is not so great as that afforded by the U. States), it would be difficult to specify the peculiar advantages which we derive from our colonies in N. America. They furnish but few, if any, articles, which we might not import as cheaply, or cheaper, from elsewhere; and if we said that their occupation costs us directly and indirectly the sum of 2,000,000*l.* a-year, we are pretty confident we should be within rather than beyond the mark. Some, if not all, of our West India colonies are in the same, or nearly the same predicament. And on the whole, it would appear to be probable that we should gain, rather than lose, by providing, under judicious regulations, for the independence of our transatlantic dominions.

In entertaining this opinion we are not singular. "If," said Lord Sheffield, "we have not purchased our experience sufficiently dear, let us derive a lesson of wisdom from the misfortunes of other nations, who, like us, pursued the phantom of foreign conquest and distant colonisation; and who, in the end, found themselves less populous, opulent, and powerful. By the war of 1739, which may be truly called an American contest, we incurred a debt of upwards of 31,000,000*l.*; by the war of 1755 we incurred a further debt of 71,500,000*l.*; and by the war of the revolt we have added to both these debts nearly 100,000,000*l.* more! And thus we have expended a far larger sum in defending and retaining our colonies, than the value of all the merchandise we have ever sent them. So egregious has our impolicy been, in rearing colonists for the sake of their custom!" — (*On the Commerce of the American States*, p. 240.)

We hope it will not be supposed, from any thing now stated, that we consider the foundation of colonial establishments as, generally speaking, inexpedient. We entertain no such opinion. We do not object to the establishment of colonies, provided they be placed in advantageous situations, but we do object to the trammels that have been laid on their industry, the interference exercised by the mother countries in their domestic concerns, and the attempts to govern and coerce them after they have attained to maturity. Every individual should have full liberty to leave his native country; and occasions very frequently occur, when governments may advantageously interfere to settle emigrants in foreign countries, and when the soundest policy dictates the propriety of their supporting and protecting them until they are in a situation to support and protect themselves. There can be no question that Europe has been prodigiously benefited by the colonisation of America. The colonists carried the arts, the sciences, the language, and the religion of the most civilised communities of the Old World to regions of vast extent and great natural fertility, occupied only by a few miserable savages. The empire of civilisation has in consequence been immeasurably extended: and while the experience afforded by the rise and progress of communities placed under such novel circumstances, has served to elucidate and establish many most important and fundamental principles in government and legislation, Europe has been enriched by the vast variety of new products America has afforded to stimulate the inventive powers of genius, and to reward the patient hand of industry.

But whatever may have been the advantages hitherto derived from the colonisation of America, they are trifling compared to what they would have been, had the European

powers left the colonists at liberty to avail themselves of all the advantages of their situation, and avoided encumbering themselves with the government of extensive territories 3,000 miles distant. Fortunately, however, a new æra has begun — *Novus sæclorum nascitur ordo!* The monopoly of the trade of America is destroyed, and her independence achieved. From Canada to Cape Horn, every port is ready to receive adventurers from Europe; and a boundless field has, in consequence, been opened for the reception of our surplus population, and for the advantageous employment of European arts, capital, and skill. The few remains of the old colonial system which still exist, cannot be of long duration. Their mischievous operation is no longer doubtful, and they will disappear according as the knowledge of sound commercial principles is more generally diffused.

The colonisation of Australia will also contribute in no ordinary degree to extend the blessings of civilisation; and there can be no doubt that this newly discovered quarter of the globe, the native inhabitants of which were still fewer in number and more barbarous than those of America, is destined, at no very remote period, to be the seat of flourishing communities: and while they preserve the language and literature, it is to be hoped that they may also pursue the mild, liberal, and tolerant policy, of the illustrious people from whom it should ever be their proudest boast to have descended.

(3.) *Slavery.* — Since the publication of the first edition of this work, a vast change has been effected in the condition of society in our West India colonies and the Mauritius, by the abolition of slavery, under the provisions of the act 3 & 4 Will. 4. cap. 73. (See art. Slaves and Slave Trade.)

In the second edition of this work, published soon after the act for the abolition of slavery had been passed, and before its provisions had been carried into effect, we ventured to speculate as follows on its probable results: —

"Nothing but vague conjectures can, of course, be indulged in as to the future working of this measure in the colonies. We believe, however, that those who have contended that it will not be productive of any falling off in the industry of the blacks will be found to have taken a very erroneous view of the matter. Field labour in the West Indies has hitherto been always associated with slavery and degradation, and been enforced by the lash. The fair inference, consequently, is, that when the fetters are struck off the slave, and he is left to follow his own inclinations, he will be desirous of escaping from what he cannot fail to consider an ignominious occupation. Necessity, no doubt, will prevent him from becoming altogether indolent; but the effect will in this, as in other instances, be proportioned to its cause: and necessity in the West Indies is very different from necessity in Europe. Most articles that are here deemed indispensable, would there be positive incumbrances; and those essential to subsistence may be procured with less, certainly, than half the labour hitherto exacted from the slaves. At some future period, perhaps, when the recollection of their degradation has begun to fade, and a taste for conveniences and gratifications has been introduced amongst them, they may become more industrious; but this is a distant and a very uncertain prospect. We therefore look, at first, for a very considerable decline in the industry of the slaves, and a proportional falling off in the exports from the islands."

It will be seen, from the returns given in a subsequent part of this article, that these anticipations have been more than realised, and that there has been a most extraordinary falling off in the imports from the colonies. We confess, also, that we are a good deal more sceptical than formerly in our anticipations of their future increase. Industry, when carried on by free labourers, is prosecuted only as a means by which they may acquire an adequate supply of necessaries and conveniences. And it is all but contradictory and absurd to suppose that a population with few wants, occupying a soil of great natural fertility, lying under a burning sun which unfits for exertion, should voluntarily engage in severe, and, to them, useless labour. We believe, indeed, that it will be found wholly impossible, except under peculiar circumstances, to carry on the culture of sugar on its present plan, in tropical countries, by the agency of *really* free labourers. Hayti, formerly the most important and productive of all the sugar colonies, does not now produce a single cwt. of sugar. Mexico is, also, fast relapsing into the most deplorable barbarism (see *Geog. Dict.*, art. *Mexico*); and experience seems to show that some sort of modified slavery, or, which is the same thing, of compulsory labour, is indispensable to the successful prosecution of industry in tropical countries. It is to this that the extraordinary increase of produce in Java is to be ascribed; and, how much soever we may cry out against the slavery of the U. States, there cannot, we apprehend, be a doubt that its existence, how objectionable soever in many respects, is necessary to the advantageous cultivation of the Southern states. It is the same in Cuba and Brazil. Were their slaves emancipated, may it not be fairly presumed that they would gradually, and not very slowly, sink into the state of Mexico and Hayti? and that instead of an extensive culture of sugar and other articles for foreign demand, the bulk of the population would be satisfied if they supplied themselves with those

necessary for their subsistence? We need not, therefore, wonder that the projects for slave emancipation should make but little progress among the Americans, Brazilians, and Cubans. Whether the West India colonies cease to produce sugar and cotton is a matter of excessively little importance to the people of Britain; but it is a matter of the very last importance to the white people of the Southern states of America, of Brazil, and of Cuba; and they will be much to blame if they do not exercise extreme caution in legislating upon this most delicate matter. Perhaps the better policy will be for them gradually to relax the rigours of servitude, and to endeavour to improve the character and condition of the slaves, so as to fit them the better for emancipation, which may, probably, in the end be forced upon them: but they should carefully eschew all rash or precipitate measures.

III. Magnitude, Population, Trade, etc. of the British Colonies.

Notwithstanding the loss of the U. States, the colonies of Great Britain, exclusive of India, exceed in number, extent, and value, those of every other country. Previously, indeed, to the breaking out of the late contests, the colonial dominions of Spain far exceeded in extent and importance those of any other power. But Cuba, Porto Rico, and the Philippine Islands are now all that remain to her. These, indeed, are very valuable possessions, though inferior to those of England.

(1.) *North American Colonies.*—In N. America we possess the provinces of Lower and Upper, or of East and West Canada, Nova Scotia, New Brunswick, Prince Edward's Island, and their dependencies. The situation and boundaries of these provinces will be more easily learned from the inspection of the accompanying map, than they could be from any description. The shores of Nova Scotia and New Brunswick are washed by the Atlantic Ocean; and the noble river St. Lawrence, by its communication with the great American lakes, gives to Canada all the benefits of a most extensive inland navigation, and forms a natural outlet for her surplus produce, as well as for the surplus produce of that part of the U. States which is washed by the lakes. There is every variety in the soil and climate of these regions. In Lower Canada, the winter is very severe. The surface of the country is covered with snow for nearly half the year. From the beginning of December to the middle of April, the St. Lawrence is frozen over, and affords a smooth and convenient passage for the sledges by which it is then covered. But though severe, the climate is far from being unhealthy or disagreeable. The weather is generally clear and bracing; and the labour of artizans, at their out-door employments, is rarely suspended for many days in succession. On the breaking up of the ice in the latter end of April, or the beginning of May, the powers of vegetation almost immediately resume their activity, and bring on the fine season with a rapidity that is astonishing to a stranger. The highest temperature in Lower Canada varies from 96° to 102° of Fahrenheit; but the purity of the atmosphere abates the oppressive heat that is felt in most countries where the mercury ranges so high; and the weather is, on the whole, decidedly pleasant.

That part of the province of Upper or West Canada, which stretches from Lake Simcoe and the rivers Trent and Severn, westward to Lake Huron and the St. Clair River, and southward to Lake Erie, and part of Lake Ontario, has a soil of extraordinary fertility, capable of producing luxuriant crops of wheat, and every sort of grain. "The climate," says Mr. Bouchette, late surveyor-general of Lower Canada, "is so particularly salubrious, that epidemic diseases, either among men or cattle, are almost entirely unknown. Its influence on the fertility of the soil is more generally perceptible than it is in Lower Canada, and is supposed to be congenial to vegetation in a much superior degree. The winters are shorter, and not always marked with such rigour as in the latter. The duration of frost is always accompanied with a fine clear sky and a dry atmosphere. The spring opens, and the resumption of agricultural labours takes place, from 6 weeks to 2 months earlier than in the neighbourhood of Quebec. The summer heats rarely prevail to excess, and the autumns are usually very friendly to the harvests, and favourable for securing all the late crops."—(*Bouchette's Topographical Description of Canada*, p. 595.) The ground on the shores of Lake Ontario and Lake Erie, as far west as the junction of the Thames with the St. Clair Lake, is laid out in townships, and partly settled. But the population is still very thin. To the north of the river Thames, along the banks of the St. Clair, and the shores of Lake Huron, round to the River Severn, and thence to the river that joins Lake Nippissing and Lake Huron, is a boundless extent of country that is almost entirely unoccupied. The interior of this space has hitherto been but imperfectly explored; but the banks of the St. Clair and the shores of Lake Huron afford the finest situations for settlements. The soil is in many places of the greatest fertility, the river and lake teem with fish, and every variety of the best timber is found in the greatest profusion.

The winters in the provinces of Nova Scotia, Prince Edward's Island, and New Brunswick are more severe than in Upper Canada, and they are a good deal infested with fogs and mists. But their proximity to England, and their favourable situation for the fishing business, give them considerable advantages.

In addition to the above, we possess the Hudson's Bay territory, a tract of vast extent, but situated in an inhospitable climate, and worth very little except as hunting grounds. We also possess the large islands of Newfoundland and Cape Breton, the latter being a dependency of Nova Scotia; but their soil is barren, and the climate severe and foggy; so that they are valuable principally as fishing stations.

The following table exhibits the population of the different N. American colonies at the under-mentioned epochs:—

Colony.	Population (and Date of Census).	Colony.	Population (and Date of Census).
Western Canada - - -	1851, 952,004 *	Prince Edward's Island - -	1854, 71,496
Eastern Canada - - -	1852, 890,261	Newfoundland - - -	1857, 125,000
New Brunswick - - -	1851, 193,800	Nova Scotia and Cape Breton -	1850, 276,117

Of the inhabitants of Lower Canada in 1844 no fewer than 518,565 were of French extraction, forming what is called the *Nation Canadienne*. In Upper Canada, on the other hand, the population is almost wholly of British origin.

Number of Emigrants.—There emigrated to the British Colonies in N. America in

Total emigration of the 34 years, 1,180,046.

* *Estimated to amount, in 1857, to 2,500,000.*

Of these the great majority have been destined for Upper Canada. (For the total emigration from the U. Kingdom, see PASSENGERS.)

Information for Emigrants to British North America.—In January, 1840, a board of "Colonial Land and Emigration Commissioners" was appointed. It consists of 3 commissioners, whose proceedings are guided by instructions from the secretary of state for the colonies, and their practical duties may be divided under 3 heads, viz., the sale of colonial lands; the superintendence of emigration; and the diffusion of information in respect of the colonies.

1. The functions of the commissioners under the first head do not extend to the North American colonies. The crown having placed the revenue derived from the sale of their waste lands at the disposal of the local legislatures, these lands are, of course, disposed of by the authorities on the spot.

2. The board endeavours, in as far as possible, to protect poor emigrants from imposition, and from the effects of improvident arrangements on their parts, and takes care that the provisions of the Passengers' Acts are duly carried out and enforced.

3. The board publishes from time to time such authentic information as they may receive on matters connected with the settlement of waste lands in the colonies, the prices of the principal articles of colonial produce, the wages of labour, and such other matters as may appear to be useful to persons who propose to settle in the colonies. They likewise answer all applications from individuals, and afford them, as far as may be in their power, such information as may be adapted to their particular cases.*

No pecuniary assistance is afforded by government to parties desirous of proceeding to the N. American colonies; and emigrants after their arrival no longer receive grants of land, that being now wholly disposed of in the way stated below.

But though government makes no gifts at the public expense to emigrants to N. America, it maintains agents at the principal colonial ports, whose business is to protect emigrants from imposition upon their first landing, to acquaint them with the demand for labour in different districts, to point out the most advantageous routes, and to furnish them with useful advice upon the objects which they have had in view in emigrating, without making any charge for the same. Persons newly arrived should not omit to consult these agents, and should avoid detention in the ports, where they are exposed to all kinds of imposition, and pretences for keeping them at taverns till any money they may possess has been expended.

We subjoin a Table, extracted from the Colonisation Circular of the Emigration Commissioners, issued June, 1859, showing the cost of a passage to the different colonies.

* According to the accommodation and diet scale, and whether supplied with wine and spirits.

Charges for Children.—The general practice in charging for children to British North America is, to compute them according to the Passengers' Act, viz., Children from 1 to 12 years of age, half the price of adults; under 1, no charge.

CAUTION.—*Emigrants to New Brunswick, Prince Edward Island, or Nova Scotia, should not proceed thither by way of Quebec.*

Passage.—Emigrants intending to settle in Canada will find it in all respects more advantageous to proceed by Quebec.

The best months for leaving England are March and April; the later emigrants do not find employment so abundant, and have less time in the colony before the commencement of winter.

For information respecting the cost of passage and probable opportunities of sailing, application should be made to the government emigration agents at the various ports at which they are stationed; but no party need apply who does not intend to pay his own passage. The following are the ports at which agents are established:—London, Liverpool, Leith, Greenock, Belfast, Londonderry, Sligo, Limerick, and Cork.

* The office of the commissioners is at No. 9, Park Street, Westminster.—Secretary, Stephen Walcott, Esq.

The conveyance of emigrants or passengers to parts out of Europe is now (1859) regulated by the Passengers' Act of 1855, the 18 & 19 Vict. c. 119., of which a full abstract is given under the art. PASSENGERS. The following order in council has since been issued under the authority of that act.

Abstract of Order in Council (25 Feb. 1856) for promoting Order and Health, &c. in Passenger Ships to any of H. Majesty's Possessions abroad.

1. Every passenger to rise at 7 A.M., unless otherwise permitted by the surgeon; or, if no surgeon, by the master.
2. Breakfast from 8 to 9 A.M., dinner at 1 P.M., supper at 6 P.M.
3. The passengers to be in their beds at 10 P.M, except under permission of the surgeon, or if no surgeon, of the master.
4. Fires to be lighted by the passengers' cook at 7 A.M., and kept alight by him till 7 P.M.; then to be extinguished, unless otherwise directed by the master, or required for the use of the sick.
5. The master to determine the order in which each passenger or family of passengers shall be entitled to the use of the fires. The cook to take care that this order is preserved.
6. On each passenger deck three safety lamps to be lit at dusk, and kept burning all night, and such further number as shall allow one to be placed at each of the hatchways used by the passengers.
7. No naked light between deck or in the hold to be allowed at any time, or on any account.
8. The passengers, when dressed, to roll up their beds, to sweep the decks (including the space under the bottom of the berths), and to throw the dirt overboard.
9. Breakfast not to commence till this is done.
10. The sweepers for the day to be taken in rotation from the males above 14, in the proportion of 5 for every 100 passengers.
11. *Duties of the sweepers* to be to clean the ladders, hospitals, and round houses, to sweep the decks after every meal, and to dry holy-stone and scrape them after breakfast.
12. But the occupant of each berth to see that his own berth is well brushed out; and single women are to keep their own compartment clean in ships where a separate compartment is allotted to them.
13. The beds to be well shaken and aired on deck, and the bottom boards, if not fixtures, to be removed, and dry-scrubbed and taken on deck, at least twice a week.
14. Two days in the week to be appointed by the master as washing-days, but no clothes on any account to be washed or dried between decks.
15. The coppers and cooking vessels to be cleaned every day, and the cisterns kept filled with water.
16. The scuttles and stern ports, if any, to be kept open (weather permitting) from 7 A.M. to 10 P.M., and the hatches at all hours.
17. On Sunday the passengers to be mustered at 10 A.M., when they will be expected to appear in clean and decent apparel. The day to be observed as religiously as circumstances will admit.
18. No spirits or gunpowder to be taken on board by any passenger. Any that may be discovered to be taken into the custody of the master till the expiration of the voyage.
19. No loose hay or straw to be allowed below.
20. No smoking to be allowed between decks.
21. All gambling, fighting, riotous, disorderly, or quarrelsome conduct, swearing, and violent or indecent language, are strictly prohibited. Fire-arms, swords, and other offensive weapons, as soon as the passengers embark, to be placed in the custody of the master.
22. No sailors to remain on the passenger deck among the passengers except on duty.
23. No passenger to go to the ship's cookhouse without special permission from the master, nor to remain in the forecastle among the sailors on any account.

Besides the sea voyage from England, persons proceeding to Canada should be provided with the means of paying for the journey which they may have to make after their arrival at Quebec. The cost of their journey must, of course, depend upon the situation of the place where the individual may find employment, or where he may have previously formed a wish to settle. The Emigration Commissioners have published the following Hints to Emigrants to the N. American colonies: —

Hints to Emigrants to the North American Provinces.

1. *Caution to keep Contract Tickets.*—Emigrants ought to keep their contract tickets, as otherwise if the ship is prevented by any accident from reaching her destination, or if the passengers, for any other reason, are not landed at the place named in the tickets, they may have a difficulty in obtaining a return of their passage money, to which in that case they would by law be entitled.

2. *Caution against proceeding to New Brunswick, &c. viâ Quebec.*—Emigrants to New Brunswick, Prince Edward Island, or Nova Scotia, are particularly cautioned against taking passage to Quebec, as the only means of conveyance from Quebec is by steamer, which leaves once a fortnight for Pictoo, calling at the intermediate ports; viz., Gaspe (passage, 16*s.* stg.), Dalhousie (24*s.*), Miramichi (28*s.*), Pictoo (32*s.*): thence to Prince Edward Island, by steam, 5*s.* Time, from Quebec to Pictoo, 5 days. Passengers to find their own provisions.

The route from Quebec to St. John, New Brunswick, Halifax, &c. is by Grand Trunk Railway to Portland, in the United States; thence, by steamer, to St. John; and thence, by steamer and railway, to Halifax viâ Windsor.

3. *Caution to provide means for subsistence and transport after arrival.*—Many emigrants having latterly been found to rely on public funds for their assistance in the colonies, they are hereby warned that they have no claim of right on such fund, and that they should provide themselves with sufficient means of their own for their subsistence and conveyance into the interior from the port where they land.

In Canada a recent law expressly prohibits relief from the Emigrant Tax Fund, excepting in cases of sickness on the part of destitute emigrants.

4. *Tools.*—It is not generally considered desirable that agricultural labourers should take out implements of husbandry, as these can be easily procured in the colonies; but artisans are recommended to take such tools as they may possess, if not very bulky.

5. *Time to arrive in the Colony.*—The best period is early in May, so as to be in time to take advantage of the spring and summer work, and to get settled before the winter sets in.

6. *Average Length of Passage:*—

To Quebec	40 days.
Prince Edward Island (say)	56 ,,
Nova Scotia	34 ,,
New Brunswick	36 ,,
British Columbia, round Cape Horn	150 ,,
,, ,, viâ Panama	50 ,,

By the Passengers' Act, provisions and water are, however, required to be laid in for 70 days, and in winter time for 80 days.

7. *Maintenance on Arrival, &c.*—Passengers are entitled by law to be maintained on board in the same manner as during the passage for 48 hours after arrival, unless within that time the ship should quit the port in the prosecution of her voyage. Those bound to Quebec must also, by a Colonial Law, be landed with their baggage free of expense, at the usual public landing places of the port, not earlier than 6 in the morning nor later than 4 o'clock in the afternoon. The water of the river St. Lawrence is stated to have a strong tendency to produce bowel complaints in strangers. It should at first, therefore, be drunk as sparingly as possible. Emigrants should also avoid exposure to the great heat of the sun by day and the dews and noxious vapour by night.

8. *Colonial Tax on Emigrants:*—

CANADA.—By a Colonial Law of 30th June, 1858, the capitation tax is 5*s.* currency, payable by the master, for every passenger over the age of 1 year; and no part of the tax is remitted on emigrants going on to the United States. If embarked, however, without the sanction of Her Majesty's Government, ascertained by a certificate from an officer of customs at the port of embarkation, the tax is 7*s.* 6*d.* currency for every passenger.

NOVA SCOTIA.—The Emigrant Tax Act of 1850 has been repealed by an Act (No. 9.) passed 18th April, 1856. No tax is, therefore, now payable in respect of emigrants arriving in this colony.

NEW BRUNSWICK.—By an Act passed 22d October, 1852, the tax is 2*s.* 6*d.* for each passenger; but security must be given by bond in the penalty of 75*l.* currency, that any lunatic, idiotic, maimed, blind, or infirm person not belonging to an emigrant family, shall not become chargeable to the funds of the colony within 3 years. This bond may, however, be dispensed with on payment of such sum as may be deemed reasonable under the circumstances.

PRINCE EDWARD ISLAND.—The tax now levied under a Colonial Act, passed 8th May, 1851, is 12*s.* currency (equal to about 10*s.* sterling) on each emigrant passenger arriving in the colony between the 1st of April and the 1st of October, but no payment is required for children under 18 months old. The tax is increased to 18*s.* currency if the emigrants arrive after the 1st of October. The master of the ship has to pay an additional tax if the vessel is put into quarantine.

In all of the colonies the tax is made payable by the master of the ship.

NEWFOUNDLAND.—No emigrants' tax in this colony.

9. *Personal Effects exempt from Duty.*—By a Canadian Act (8 & 9 Vict. c. 31): "Wearing apparel in actual use, and other personal effects not merchandise, implements and tools of trade of handicraftsmen used in the occupation or employment of persons coming into the province for the purpose of actually settling therein;" are exempt from customs duties. A similar provision is in force in New Brunswick.

10. *Caution not to refuse good Wages.*—Until emigrants become acquainted with the labour of the country, their services are of comparatively small value to their employers. They should, therefore, be careful not to fall into the common error of refusing reasonable wages on their first arrival.

11. *Expense of erecting a Log Hut.*—The cost of a log hut, such as settlers usually erect, may be stated at from 5*l.* to about 12*l.* But when the chief part of the work is performed by the emigrant himself, the cost is much less. These huts, if properly constructed, are very warm and comfortable.

12. Value of the English Coins in Canada and United States West.

	Halifax Currency.	United States' Currency.
	£ *s.* *d.*	Dolls. *Cts.*
1 sovereign-sterling	1 4 4	4 85
1 crown	0 6 1	1 20
1 shilling	0 1 3	0 24

In Upper Canada the English sixpence is generally called in retail dealings "one York shilling" or a shilling; emigrants often believe one shilling sterling or currency is meant.

Emigrants should bring their money in gold, silver, or good Bills of Exchange. Bank notes are liable to heavy discounts and hardly taken.

13. *Route for Emigrants to Canada.*—Emigrants intending to settle in Canada will find it in all respects more advantageous to proceed by Quebec.

As there is competition among the steam-boat and railway companies at Quebec and the forwarding companies at Montreal, emigrants should exercise caution before agreeing for their passage, and should avoid those persons who crowd on board ships and steam-boats, offering their service to get passages, &c.

Emigrants for Upper Canada should not pause at Quebec or Montreal, but proceed at once on their journey. If, however, they require advice or direction, they should apply only to the Government Agents, who will furnish gratuitously all requisite information.

(2.) *West India Colonies.*—In the West Indies we possess Jamaica, Barbadoes, St. Lucia, Antigua, Grenada, Trinidad, and some other islands, exclusive of Demerara and Berbice in South America. Jamaica, by far the largest and most valuable of our insular possessions, is about 120 miles in length and 40 in mean breadth, containing about 2,800,000 acres, of which from 1,100,000 to 1,200,000 are supposed to be in cultivation. Being situate within the tropic of Cancer, the heat in the West Indies is intense, but is moderated by the sea breeze which blows regularly during the greater part of the day. The rains make the only distinction of seasons. They sometimes fall with prodigious impetuosity, giving birth to innumerable torrents, and laying all the low country under water; the trees are green the whole year round: they have no snow, no frost, and but rarely some hail. The climate is very humid; iron rusts and corrodes in a very short time; and it is this, perhaps, that renders the West Indies so unfriendly to European constitutions, and produces those malignant fevers that are so very fatal. The vegetable productions are numerous and valuable; but the sugar cane and the coffee plant are incomparably more important than the others, and constitute the natural riches of the islands.

The West Indies are occasionally assailed by the most dreadful hurricanes, which destroy in a moment the hopes and labours of the planters, and devastate entire islands. Whole fields of sugar canes are sometimes torn up by the roots, houses are either thrown down or unroofed, and even the heavy copper boilers and stills in the works have, in numerous instances, been wrenched from the ground and battered to pieces. The rain pours down in torrents, sweeping before it every thing that comes in its way. The destruction caused by such dreadful scourges seldom fails to produce a very great scarcity, and not unfrequently famine; and we are grieved to have to add, that the severity of the distress has on several occasions been materially aggravated by a refusal on the part of the authorities to allow importation direct from the United States!* This was the case at Dominica as late as 1817.

Jamaica was discovered by Columbus in 1494, and continued in possession of the Spaniards till 1655, when it was wrested from them by the English. Although it had thus been for more than a century and a half under the power of Spain, such was the deadening influence of her colonial system, that it did not, when we conquered it, contain 1,500 white inhabitants, and these were immersed in sloth and poverty. Of the many valuable articles which Jamaica soon after produced in such profusion, many were then altogether unknown; and of those that were known, such a supply only was cultivated as was required for the consumption of the inhabitants. "The Spanish settlers," says Mr. Bryan Edwards, "possessed none of the elegancies of life; nor were they acquainted even with many of those gratifications which, in civilised states, are considered necessary to its comfort and convenience. They were neither polished by social intercourse, nor improved by education; but passed their days in gloomy languor, enfeebled by sloth, and depressed by poverty. They had been for many years in a state of progressive degeneracy, and would probably in a short time have expiated the guilt of their ancestors, by falling victims themselves to the vengeance of their slaves."—(*Hist. West Indies*, vol. i. p. 297. 8vo. ed.)

For a considerable number of years after we obtained possession of Jamaica, the chief exports were cocoa, hides, and indigo. Even so late as 1772, the exports of sugar amounted to only 11,000 hogsheads. In 1774, they had increased to 78,000 hogsheads of sugar, 26,000 puncheons of rum, and 6,547 bags of coffee. The American war was very injurious to the West India settlements; and they may, indeed, be said to be still suffering from its effects, as the independence of America led to the enactment of those restrictions on the importation of food, lumber, &c., that were so very hurtful to the planters. In 1780, Jamaica was visited by a most destructive hurricane, the devastation occasioned by which produced a dreadful famine; and other hurricanes followed in the immediately succeeding years. But in 1787, a new æra of improvement began. The devastation of St. Domingo by the negro insurrection which broke out in 1792, first diminished, and in a few years almost entirely annihilated, the annual supply of 115,000 hogsheads of sugar which France and the Continent had previously been accustomed to receive from that island. This diminution of supply, by causing a greatly

* It is stated in a report by a committee of the Assembly of Jamaica, that 15,000 negroes perished between the latter end of 1780 and the beginning of 1787, through famine occasioned by hurricanes and the prohibition of importation from the United States.—(*Edwards's West Indies*, vol. ii. p. 515.)

increased demand for, and a consequent rise in the price of, sugar raised in the other islands, occasioned an extraordinary extension of cultivation. So powerful in this respect was its influence, that Jamaica, which at an average of the 6 years preceding 1799, had produced only 83,000 hogsheads, exported, in 1801 and 1802, upwards of 286,300 hogsheads, or 143,000 a year!

The same rise of price, which operated so powerfully in Jamaica, occasioned a similar though less rapid extension of cultivation in our other islands, and in Cuba, Porto Rico, and the foreign colonies generally. The vacuum caused by the cessation of the supplies from St. Domingo being thus more than filled up, a reaction commenced. The price of sugar rapidly declined; and, notwithstanding a forced market was for a while opened to it, by substituting it for malt in the distillery, prices did not attain to their former elevation. On the opening of the Continental ports, in 1813 and 1814, they, indeed, rose, for a short time, to an extravagant height; but they very soon fell, involving in ruin many of the speculators upon an advance. Prices, however, continued at a pretty high level down to 1818; but they sustained a material fall in the course of the following year, and were comparatively low from that period down to 1835, when the extraordinary falling off in the supplies of sugar consequent to the measures connected with the emancipation of the slaves, again occasioned a considerable rise of price. But, as already seen, this high price was entirely factitious, being wholly caused by our excluding foreign sugar from our market. Now that the sugar of Brazil, Cuba, and Java is admitted on paying reasonable duties, prices are comparatively low. And from the extraordinary facility with which sugar may be raised in the countries referred to and elsewhere, we have no idea, provided they adopt no rash or ill-advised measure in relation to slaves, that its price in their markets would be likely to sustain any material or permanent increase, even though the demand for it were doubled or more. The imports of sugar from our West Indian colonies, which amounted to 4,103,800 cwts. in 1831, sunk, in 1841, to 2,151,217 cwts.! In 1858 they amounted to 3,496,938 do.

The devastation of St. Domingo gave the same powerful stimulus to the growth of coffee in the other West Indian colonies, that it did to the growth of sugar; and owing to the extraordinary increase in the demand for coffee in this and other European countries, the supply went on increasing till it was checked by the influence of the measures relating to slavery. In 1752, for example, only 60,000 lbs. of coffee were exported from Jamaica; in 1775 the export amounted to 440,000 lbs.; in 1797 it had increased to 7,931,621 lbs.; and in 1832, when it had attained its maximum, the exports to England only amounted to 19,405,933 lbs. Such, however, and so rapid has been their subsequent decline, that in 1858 the exports to England from Jamaica amounted to only 2,091,607 lbs. (See next page.)

We have already seen, that when Jamaica was taken from the Spaniards, it only contained 1,500 white inhabitants. In 1673, the population amounted to 7,768 whites and 9,504 slaves. It would have been well for the island had the races continued to preserve this relation to each other; but, unfortunately, the black population has increased more than *five* times as rapidly as the white; the latter having only increased from 7,768 to about 30,000, while the former has increased from 9,504 to about 310,000, exclusive of persons of colour.

The real value of the exports to Jamaica amounts to about 700,000*l.* a year, being about 1-3rd part of the exports to the West Indian colonies. It was formerly much more; but then a large portion of the articles sent to Jamaica, and some of the other colonies, were only sent there as to an *entrepôt*; being subsequently exported to the Spanish main. During the ascendancy of the Spanish dominion in Mexico and South America, this trade, which was then contraband, was carried on to a great extent. It is now much fallen off, and is principally carried on from St. Thomas and Honduras.

Barbadoes was the earliest of our possessions in the West Indies. It is the most easterly of the Caribbee Islands; Bridge Town, the capital, being in long. 59° 41′ W. Barbadoes is by far the best cultivated of all the West Indian islands. It contains about 105,000 acres, having (in 1852) a population of about 13,000 whites, 15,000 people of colour, and 110,000 blacks. Of late years it has exported from 500,000 to 750,000 cwts. of sugar. Barbadoes had attained the acme of its prosperity in the latter part of the seventeenth century, when the white population is said to have amounted to about 50,000, though this is probably an exaggeration. But it is only as compared with itself that it can be considered as having fallen off; for, compared with the other West Indian islands, its superiority is manifest. It raises nearly as much food as is adequate for its supply.

The islands next in importance are St. Vincent, Grenada, Trinidad, Antigua, &c. It is unnecessary to enter into any special details with respect to them; their population and trade being exhibited in the annexed Tables.

During the late war, we took from the Dutch the settlements of Demerara, Berbice, and Essequibo, in Guiana, which were definitively ceded to us in 1814. The soil of these settlements is naturally very rich; and they have, in this respect, a decided advantage over most of the West Indian islands. Their advance, since they came into our possession, was for a while very great, but recently their progress has been checked, and their exports have declined most materially. This, however, is entirely in consequence of the want of labour; for, in other respects, these colonies have every facility of production. Various schemes have been suggested for supplying this want; but none of them, unless they involve the principle of compulsory service, will, we apprehend, be successful. The rum of Demerara enjoys a high reputation. The best samples of Berbice coffee are very superior, and it used to be extensively cultivated both in that colony and in Demerara. In 1831, the exports amounted, from both colonies, to 3,576,744 lbs.; but they have since declined to next to nothing, having amounted in 1858 to only 2,615 lbs.! Considerable quantities of cotton were formerly exported from Guiana; but the Americans having superior facilities for its production, its culture has nearly ceased. Cocoa, annotto, &c. are produced, but not abundantly.

Exclusive of the above, we possess the settlement of Balize on the Bay of Honduras. This is of importance, as affording a means of obtaining abundant supplies of mahogany; but it is of more importance as an *entrepôt* for the supply of Guatemala and Central America with English-manufactured goods.

The exports from this country to our West Indian colonies consist of coarse cottons, linens, checks, hats, and other articles of negro clothing; iron and steel, wrought and unwrought; leather, inc. saddlery and harness; glass; beer and ale; soap and candles; stationery; hardware and earthenware; staves, hoops, coal, lime, paint, lead; Irish provisions, herrings, and other salt fish; along with furniture, wine, beer, medicines, and, indeed, almost every article which a great manufacturing country can supply to one situated in a tropical climate, which has very few mechanics and hardly any manufactures. Since the opening of the ports on the Spanish main to ships from England, the exports to the West Indies have decreased both in quantity and value; this decrease being, however, more than balanced by the increased shipments to Mexico, Columbia, &c. The declared or real value of the exports amounted, in 1858, to 2,253,699*l.*

Money.—What used to be called West India currency was an imaginary money, and had a different value in different colonies. The value it bore, as compared with sterling money, was supposed to represent the corresponding value of the coins in circulation in the different islands at the time the proportion was fixed; these coins being for the most part mutilated and otherwise worn and defaced, currency was in all cases less valuable than sterling. The following are the old values of 100*l.* sterling, and of a dollar, in the currencies of the different islands;—

	Sterl.		Curr.	Dol.		Curr.
Jamaica	100*l.*	=	140*l.*	1	=	6*s.* 8*d.*
Barbadoes	100*l.*	=	135*l.*	1	=	6*s.* 3*d.*
Windward Islands (except Barbadoes)	100*l.*	=	175*l.*	1	=	8*s.* 3*d.*
Leeward Islands	100*l.*	=	200*l.*	1	=	9*s.* 0*d.*

Account of the Quantities of Sugar, Molasses, Rum, Coffee, and Cocoa, imported into the U. K. from the West Indies and British Guiana, during each of the under-mentioned 10 Years ending with 1858. — *Parl. Paper*, printed 8th June, Sess. 1859.

But latterly these currencies have been in great measure superseded by the introduction of sterling money, current at the same rates as in England, and of the Spanish dollar.

By an order in council of the 23rd of March, 1825, British silver money was made legal tender throughout all British colonial possessions, at the same nominal value as in England; and bills for the same are given on the Treasury of London, of 100*l.* each bill for 103*l.* such silver money. By this order, also, the value of the Spanish dollar was fixed at 4*s.* 4*d.* British silver money throughout all the colonies where it is current; but this value was farther reduced on the 21st of September, 1838, to 4*s.* 2*d.* The value of the doubloon was then, also, fixed at 64*s.*

(3.) *Australian Colonies.*—This group of colonies, though founded in a very distant part of the world, and at a comparatively recent epoch, will, probably, at no very distant epoch, surpass the others in magnitude and importance. The countries in which they are situated, including the great Australian continent, formerly called New Holland, with Van Diemen's Land or Tasmania, New Zealand, &c., are of vast extent, and differ in many respects from each other. Hitherto, also, by far the larger portion of the continent is wholly unexplored; and even the islands are but very imperfectly known. Enough, however, has transpired to show that this great division of the globe differs in some most important respects from most or all countries with which we were previously acquainted; and that it is, in fact, full of anomalies. The interior of the continent has not been sufficiently explored to enable any distinct opinion to be formed as to the height of the mountain chains; but it appears to be pretty well established that it has no great rivers, or, at least, none that reach the sea. Indeed it seems, speaking generally, to be a law in this new world, that rivers are largest near their source; and that they gradually diminish as they proceed, and most commonly dwindle into insignificance, or lose themselves in marshes, before they reach the ocean!

In consequence, perhaps, of this singular constitution of its river system, it is found that in Australia, the best land is not at the mouths, but towards the sources, of the rivers. There are, no doubt, exceptions to this rule; but it appears to hold in the greater number of instances. Generally, also, the extent of fine land appears to be comparatively limited; and in so far as the continental portion of the country has been explored, it appears to be much better adapted for pasturage than for tillage.

Gold Deposits.—But the land, the pasturage, the sheep, the copper and other ordinary minerals, which are found in abundance in various parts of Australia, have all been rendered, for the present at least, of no importance compared with the gold deposits with which the continent is so largely endowed. These, which were discovered so late as 1851, are of extraordinary richness. They equalled or exceeded in productiveness not only the gold fields of California, but every thing of which any idea could previously have been entertained. Australia, in consequence, became an object of earnest and universal attention. An almost unparalleled amount of emigration was directed to her shores. Her population and her trade increased with gigantic strides; and her gold influenced the wages, the prices, and the industry of every civilised people. —(See art. PRECIOUS METALS.)

A Licence Duty of 30*s.* a month, charged on all individuals who engage in the search for gold, was much, and, we think, justly objected to. We observed in the last edition of this work, "that licence duties are essentially unfair, except when they are proportioned to the extent of business carried on by those who pay them. But the business of the gold diggers is, to all intents and purposes, a lottery. So that while the tax presses with greatest severity on the great bulk of those at the 'diggings,' it is hardly felt by the few who carry off the great prizes. The better plan would be to make the licence duty next to nominal, and to impose a moderate customs' duty on gold when exported. The tax would then cease to be felt as a burden by individuals, while it would yield quite as great a revenue to government." And we are glad to have to state that this course has been nearly adopted. A duty of 2*s.* 6*d.* per oz. has been laid on gold when exported; and though the licence duty has not been wholly repealed, it has been reduced to the moderate charge of 20*s.* a year.

It were idle to indulge in speculations in regard to the period when the exhaustion of the Australian gold fields may be expected; there are no data on which to hazard even a conjecture on such a subject. But whether the supplies from them be destined to be of long or short duration, they have already been, and, no doubt, will continue to be, of great advantage. We do not mean by this to say, or insinuate, that the good resulting from the influx of gold from Australia and California has been unaccompanied by any drawbacks. The gambling and dissipation to which it has given rise are obvious. But these, though considerable, are but a trifling deduction from its many advantages; from the powerful stimulus it has given to industry and civilisation, from the new channels it has opened to commerce, and from its greatly ameliorating the condition of the labouring classes in this and most other countries.

The northern portion of Australia, including, perhaps, about a third part of the entire continent, lies between the tropics; the other portion of the continent, with the adjacent islands of Van Diemen's Land and New Zealand, being in the south temperate zone. The climate of the different parts of the continent *must*, therefore, it is obvious, differ very widely. We, however, know but little of the climate of intertropical Australia, except that it is within the range of the Indian monsoon; that the temperature along the coast is rapidly raised by a wind from the south, which has been supposed to afford a strong pre-

sumption of the existence of sandy deserts in the interior; and that the air is so very moist that during the season of the dry monsoon iron articles are with the utmost difficulty preserved from rusting.

It is commonly said that the climate of extra-tropical Australia, and especially of New South Wales, assimilates closely to that of Southern Italy. But this statement must be taken with considerable limitation; for, 1st, the atmosphere is very decidedly denser; 2nd, the extremes of temperature are infinitely greater; 3rd, the average heat is rather less; and 4th, the temperature appears to decline more rapidly by increase of elevation. The grand defect in the climate of extra-tropical Australia appears to consist in the periodical recurrence of wet and dry seasons. Sometimes hardly a single drop of rain falls for an entire year or more; and though, happily, dews are in such seasons peculiarly abundant, they form no adequate substitute for rain. During long-continued droughts crops of all kinds are destroyed; and herbage, except in a few favoured spots, suffers severely.

Hence, as already stated, all the eastern parts of extra-tropical Australia, and perhaps, also, the southern, would seem to be much better fitted for pasturage than for husbandry. The droughts are exceedingly injurious to the latter, and they would necessarily involve any large population that depended principally on the indigenous products of the soil in extreme privations. Certainly, however, no country seems to be better fitted for grazing, or rather for the growth of sheep and wool. A dry climate is especially suitable to the latter; and though the pastures be far from luxuriant, their boundless extent compensates for every other deficiency. Sheep are not native to the country, a small flock of 29 head having been introduced for the first time by the original English settlers in 1788. For a while, however, their value was not appreciated; but the importance of sheep farming, and its suitableness to the country, having been demonstrated by John M'Arthur, Esq. (to whom the colony is under the greatest obligations), it has since increased with unprecedented rapidity. In proof of this, it is only necessary to mention that while the import of wool from Australia amounted, in 1822, to only 152,880 lbs., it had increased, in 1825, to 411,600 lbs., in 1830 to 899,750 lbs., and in 1858 to the enormous amount of 51,104,560 lbs.

Van Diemen's Land being less subject to droughts than New South Wales, husbandry is carried on in it to a greater extent, and with more advantage; but there also sheep-farming is the principal and, perhaps, the most advantageous employment.—(See VAN DIEMEN'S LAND.)

New Zealand, which has only been resorted to by regular colonists since 1840, is better fitted for agriculture than either Australia or Van Diemen's Land, and its climate is more like that of England. The ground in it is, however, rather difficult to clear; the natives are also much more formidable, and it is not so suitable for sheep-farming.

The first of the Australian colonies, that in New South Wales, founded so late as 1788, and that in Van Diemen's Land, founded in 1808, were originally intended to serve as penal settlements; and great numbers of convicts have been carried to them. These colonies had, also, notwithstanding their distance, become, even before the discovery of the gold fields, a favourite resort of free settlers, consisting partly of voluntary emigrants, and partly of emigrants carried out at the public expense: and since their discovery the emigration to Australia from this country, China, California, &c., has been quite unprecedented. The facility with which supplies of compulsory labour were obtained tended at first to reconcile the free colonists to the abuses of the convict system, but they gradually became such as to occasion the greatest dissatisfaction in N. S. Wales; and since 1843 no fresh convicts have been sent to it.—They still, however, continued to be sent to Van Diemen's Land, but it, also, has ceased to be a receptacle for them. No convicts have ever been sent to the important and flourishing settlement of South Australia, founded in 1834, nor to Western Australia or New Zealand.—The settlements in the latter have recently made a rapid progress, and it promises, at no very remote period, to be a peculiarly thriving colony.

Population.—The population of the Australian colonies is believed to have been at the under-mentioned dates, nearly as follows:—

Countries.	Years	Males.	Females.	Total.
New South Wales	1857	171,673	133,814	305,487
Victoria	1838	209,983	176,786	485,769

Passage.—The cost of a passage to the Australian colonies, including provisions, is for the
Cabin, from 45*l.* to 90*l.*
Intermediate, from 20*l.* to 40*l.*
Steerage, about 16*l.*

The average length of the voyage is about four months; and at whatever season of the year it may be made, the passengers have to pass through both very hot and very cold weather, and should, therefore, be prepared accordingly with suitable clothing.

The prices of cabin and intermediate passages to New Zealand are about the same as to the Australian colonies; but a steerage passage is rather higher.

Emigration.—We subjoin a return of the number of individuals that have emigrated from the U. Kingdom to the Australian colonies, from 1825 down to 1858, both inclusive.

(4.) *Disposal of Land in the Colonies.*—The question as to the best method of disposing of the unoccupied lands in colonies planted in unsettled countries is one of considerable nicety and difficulty. Land in old settled and fully occupied countries being, for the most part, very valuable, and its possession bringing along with it great consideration and influence, and frequently, also, great wealth, colonists are very apt, wherever they have the opportunity, to appropriate a much larger extent of land than they have the means of cultivating, or of turning to any useful account. Not only, however, are settlers disposed to act in this way, but speculators, who have no thought of emigrating, and persons having influence with government, endeavour to obtain large tracts of land, in the view of holding them till, in consequence of the increase of population in the vicinity, they acquire a considerable value. It has been usual, also, to reserve large tracts for ecclesiastical and other public purposes. And these extensive tracts of unoccupied and reserved lands being interposed between the settled parts of a colony, render it in all cases more difficult, and sometimes all but impossible, to form roads and other means of communication; so that the settlers are thus frequently cut off from a market for their produce; and are less able to combine for municipal or such like purposes, and for the establishment of schools and churches, and the undertaking of such public works as require co-operation.

The improvident manner in which large tracts of land have been granted in Canada, and the great extent of the clergy and other reserves in that colony, have materially retarded its prosperity; and the same circumstances have had a similar operation in our other North American possessions, in Western Australia, and elsewhere. But there are various ways in which an abuse of this sort might be prevented. One of the most obvious of these is to impose such a moderate price on the land as might, without crippling the means of the settlers, hinder them from seeking unduly to extend their possessions; and making all the land held by individuals, whether occupied or not, contribute according to its extent to the construction of roads and other public works. Perhaps, however, the better plan would be to apportion the land according to the available capital of the settlers, it being stipulated that no individual should obtain above a certain number of acres; and that it should revert back to the public unless certain improvements were effected upon it within a specified time after the grant was made.

But, not satisfied with attempting to prevent abuses like those noticed above, we were lately told that all the difficulties incident to colonisation originated in the too great dispersion of the colonists, and that to obviate them, and to insure to all new colonies the acmé of prosperity, we had merely to compel the colonists to keep close together by exacting a high price for the surrounding waste or unoccupied land — in other words, by making the colony as like an old settled country as possible! And this precious nostrum was trumpeted forth as a great discovery. It is obvious, however, that if, on the one hand, the price set on waste land were inconsiderable, it would not (without a limitation of quantity) prevent the purchase of large tracts of land on speculation, and the entailing on the colony all the disadvantages that have resulted from the making of injudicious grants; and if, on the other hand, the price demanded for the land were high, it would go far to oppose an insuperable obstacle to the progress of the colony, at least if it were to be founded by voluntary emigrants. Rich men do not leave their native country to expose themselves to the inconveniences and hardships attending the establishment of new settlements in the wilderness. This, if it be done at all, must be done in time to come, as in time past, by individuals in straitened circumstances, and anxious to improve their fortunes. But to exact a high or considerable price for land from such persons would, by sweeping away the whole, or a considerable portion of their capital, deprive them of the means of clearing and culti-

vating the land, and proportionally retard their progress and that of the colony. The plan of letting lands by fine is admitted by every one who knows any thing of agriculture to be one of the worst that can be devised; and this colonisation project was bottomed on the same principle, and has been quite as pernicious.

It is said that, in consequence of the exacting of a price for the land, and the concentration of the colonists, their employments, being more combined and divided, will be prosecuted with a great deal more success than at present. All this, however, proceeds on the false and exploded assumption that the colonists are not, like other individuals, the best judges of what is for their own advantage. Adam Smith says truly, that it is the highest impertinence for kings and ministers to attempt to direct private people *how* they should employ their capitals. But it is, if possible, a still greater impertinence to attempt to direct them *where* they shall employ them. A regard to their own interest will draw people sufficiently together. And to enact regulations in the view of concentrating them still more, is in every respect as contradictory and absurd as it would be to set about increasing the public wealth by regulating the sort of employments to be carried on, and the countries with which, and the commodities in which, to deal.

Of late years the English government has disposed of all ungranted colonial lands by sale: and though we incline to think, as already stated, that the preferable plan would be to distribute them according to the capital or means of the settlers, still if the price at which land is sold be reasonable, the quantity that may be held by individuals be limited, and the lots put up to sale be of sizes suited to the means of the various classes of purchasers, we do not know that the plan is open to any very good objection. But the price charged for land in most of our colonies, and especially in Australia, where the minimum is 20*s.* an acre, is much too high, and has led to the most mischievous results. At the same time, however, we must bear in mind the distinction between founding a colony with a view principally to the interests of the colonists; and founding it not only with a view to their interests, but in an especial degree for the relief of the mother country. For it is not to be denied that the plan of exacting a pretty high (but not an oppressive) price for colonial lands, and applying that price to defray the cost of carrying out emigrants, may (how injurious soever to voluntary emigrants) be made to assist in relieving the mother country of those who might otherwise have had to be supported at the public expense. Inasmuch, too, as an extraordinary quantity of labour is thus supplied to the colony, the injury done to the capitalists by making land artificially dear, is in some degree, at least, compensated by its making labour artificially cheap. The emigration to the Australian colonies in the 4 years ending with 1847 was principally a consequence of the principle now stated, a very large proportion of the emigrants having been carried out at the public expense. It is, however, to be borne in mind, that when the revenue derived from the sale of land in the Australian colonies was at its maximum, its price was only 12*s.* an acre. After it had been raised to 20*s.* the sales, down to the æra of the gold discoveries, were comparatively trifling.

It would obviously be the extreme of folly for an agriculturist intending to emigrate who has a little, but not a great deal of capital, to think of establishing himself in a colony where a high price is set upon land. At all events, such person must not expect in such a colony to become a landowner, or to be independent, but must make up his mind to be a hired labourer: whereas, if he emigrate to a colony where land is sold at a low price, or given away on condition of certain improvements being effected upon it within a given time, he may at once acquire an estate, and exchange the condition of a hired servant for that of landowner.

Seeing that the Americans sell the best lands in the valley of the Mississippi at about a dollar an acre, it was not easy to discover the principle on which we proceeded to exact 6*s.* 7*d.* an acre for the worst land in Upper Canada. If this regulation were meant to divert the current of voluntary emigration from Canada to the U. States, nothing could be found to say against it: but otherwise it was alike contradictory and absurd. Notwithstanding the facilities of getting out to Quebec in timber ships, the direct emigration to the U. States greatly exceeds that to British N. America, the emigrants to the former being also of a superior description and having a greater command of capital. And there can be no doubt that the U. States are in no inconsiderable degree indebted for this influx of comparatively valuable immigrants to the fact of the public lands being sold at a less price than ours. "It is population alone which imparts value to land, and a more effectual method could not be devised for preventing an influx of inhabitants into Upper Canada, and drawing away many of those already settled, than government adhering to the present prices of land." (See Shireff's valuable *Agricultural Tour through N. America*, p. 365.) But since Canada has been in great measure self-governed, the price of land has been reduced.

Regulations for the Sale and Management of the Public Lands, approved by his Excellency the Governor General in Council:—

1. That the lands in townships which have already been delineated, or shall hereafter be delineated on survey by the exterior lines only, may be offered for sale on block on the following terms, viz.:—

2. That the price shall be one-half dollar per acre, payable at the time of sale.

3. That the purchaser shall cause the lands to be surveyed at his own expense into lots comprising either 100 or 200 acres of land in each lot; and on the north shore of Lake Huron into quarter sections of 160 acres each, except in spots where the configuration of the township may render such exact quantities impracticable, and then as near to those allotments as possible.

4. That such survey shall be made by a duly licensed provincial land surveyor, approved of by the Commissioner of Crown Lands, and acting under his instructions, who shall make his return with field notes, &c., in the usual method observed by surveyors, to be also approved of by the Department.

5. That one-third of the quantity of land in the township shall be settled upon within two years from the time of sale; one-third more settled upon within the following five years, that is seven years from the time of sale; and the residue within the further period of three years—i. e., ten years from the date of sale; the settlement required being that there shall be at least one bona fide settler in authorised occupation for every 200 acres of land; all land not so settled at the expiration of ten years from the time of sale to become forfeited and revert to the Crown absolutely, except such portions thereof as shall be found unfit for settlement, or such portions as are of a very inferior quality, and by reason thereof have remained unoccupied, in respect to which the Governor in Council may, upon application, dispense with the forfeiture, and cause the same to be conveyed to the original purchaser or his assignee.

6. A contract or sale to be made with the purchaser from the Crown subject to the foregoing and following conditions; but patents for the land to issue only to the occupants of the lots purchased deriving claim under the vendee of the Crown, or to the assignees claiming under such purchasers and occupants who shall have complied with the conditions of settlement hereinafter mentioned, upon a certificate or other evidence that they have paid such vendee or his assignee, or complied with the contract with him, for or in regard to such particular lot; and upon evidence that the party applying, or some one under whom he claims, has been a resident on the said lot for at least two years continuously, and that upon the same (not exceeding 200 acres) at least 10 acres for each 100 acres have been cleared and rendered fit for cultivation and crop, and have been actually under crop, and that a habitable house, in dimensions at least 16 by 20 feet, is erected thereon, and upon payment of the sum of $4 as patent fees, to cover expenses, &c. The nature and description of proof above referred to to be settled and prescribed by the Commissioner of Crown Lands.

7. All lands which shall under the foregoing conditions revert to the Crown, shall be exposed to sale at public auction at such times and places, and on such upset price as the Commissioner of Crown Lands shall fix.

8. That in townships which have been surveyed and laid out into lots, and where lands are now offered for sale at 4*s.* per acre, or where no lands have as yet been offered for sale, and in townships under survey or yet to be surveyed in lots, lands to be sold under the following regulations, to wit:

9. That lands be sold for cash at 70*c.* per acre, and on time upon the following terms—viz., $1 per acre; one-fifth to be paid at the time of the sale, and the remaining four-fifths in

four equal annual instalments, with interest on the purchase-money unpaid.

10. That when the lands in a township have remained open for sale for one year after public notice thereof, the lands unsold at the expiration of that period shall, at a time to be fixed, and after reasonable notice given by the Commissioner of Crown Lands, be offered for sale by public auction, at the upset price fixed for their sale as above, or at such other upset price as under special circumstances may be named by the Commissioner of Crown Lands; and that such public sales of all lands which shall remain unsold in the mean time shall take place semi-annually, at times to be named therefor by the Commissioner of Crown Lands, until the whole of the lands in the township shall have been disposed of; the lands remaining unsold after any such public sale to continue open for private sale at the said upset price until the period of one week next before the time at which the next public sale shall take place.

11. That all lots of land which shall have been offered as "Free Grants," and shall not have been located and occupied at the expiration of one year from the time the same shall have been so offered, shall no longer remain as "Free Grants," but shall be open for private sale, or shall be exposed to public sale by auction as part of the lands in the township in which the same are situate, and upon the same terms as other lands therein.

12. That all lands (except those now exempt) shall be subject to settlement duties, and no patent in any case (even though the land be paid for in full at the time of purchase) shall issue for any such land to any person who shall not by himself, or the person or persons under whom he claims, have taken possession of such land within six months from the time of sale, and shall from that time continuously have been a bona fide occupant of, and resident on the land for at least two years, and have cleared and rendered fit for cultivation and crop, and had under crop within four years at farthest from the time of sale of the land, a quantity thereof in the proportion of at least 10 acres to every 100 acres, and have erected thereon a house habitable, and of the dimensions at least of 16 by 20 feet.

13. That all other lands not embraced in the foregoing category be exposed to sale by public auction annually, or, in the discretion of the Commissioner of Crown Lands, half-yearly, for cash, at such times and places, and at such upset prices as the Commissioner of Crown Lands shall fix.

14. That the lands known as "Clergy Reserves" be sold on the same terms and in the same manner as other public lands in the townships in which they respectively lie.

15. That prompt payment in all cases be made of the essence of the contract, and any default to be on pain of forfeiture of all previous payments and of all right in the lands.

16. That in the cases of sales already made payment of arrears be required, and that public notice be given in the "Official Gazette," and through the usual channels, that unless such arrears be paid within 12 months from the 1st of January, 1859, the land in respect of which default shall continue will be resumed by the Crown and resold, and that in regard to all purchase moneys and interest hereafter to fall due, prompt payment will be exacted.

Squatters.

17. That the system of recognising unauthorised occupation of land, commonly known as "squatting," be discontinued, subject to the following provisions, viz.:—

That public and general notice be given by the Crown Lands Department, that no claim to pre-emption by reason of such occupation will be entertained after the first day of September next; and that no claim to such pre-emption not now in a state to be admitted, can be made good by any act of the party hereafter; and that therefore his labour will be thrown away.

That the prices above fixed for lands shall apply to Upper Canada only.

The prices of lands in Lower Canada shall be regulated by Orders in Council from time to time.

P. M. VANKOUGHNET, Commissioner.

Crown Lands Department, Toronto, Jan. 13, 1859.

Nova Scotia.—The public lands are here also sold at a fixed price, of 1*s.* 9*d.* sterling per acre, payable at once. The smallest regular farm lot contains 100 acres. Any less quantity of land may be had, but the cost would be the same as for 100 acres, viz. 8*l.* 15*s.*, the minimum sum for which a deed of grant is issued.

New Brunswick.—There are two modes of selling Crown lands in this province, viz, by auction, once a month; and by private contract on conditions of settlement. By the first, the lands are to be put up to sale at an upset price of 5*s.* an acre, exclusive of charge of survey, which, it is believed, is 2½*d.* sterling per acre. The purchase money is to be paid by 4 equal annual instalments, carrying interest at 6 per cent., with an allowance, on the other hand, of a discount of 20 per cent., if the whole of the purchase money is paid down at once. No person can purchase, under this plan, more than 100 acres.

By the other plan, the land is sold at a fixed price of 3*s.* an acre, payable also in 4 equal annual instalments, either in money or labour, at the option of the purchaser. If in money the amount is to be expended in opening or improving public roads leading to or through the land.

There is also a provision by which, if not less than 6 persons apply to any of the emigration officers in the United Kingdom, stating that they wish to obtain land in New Brunswick for actual settlement, and name an agent in the province to select it, such agent, on his name being reported by the Emigration Officer to the Colonial Government, will be authorised to select, not exceeding 100 acres, for each of the applicants, and the land will be reserved for them for one year.

Prince Edward Island.—With the exception of between 2000 and 3000 acres, the whole of the Crown lands in this colony were alienated in one day. But by Colonial Acts of 1853, 16 Vict. c. 18., and of 1857, 20 Vict. c. 20., the local government is authorised to repurchase from proprietors their unsold lands and to resell them to the present tenants or otherwise. 80,000 acres were thus repurchased in 1854. These may now be obtained at the land office at from 4*s.* to 8*s.* sterling per acre, according to locality and quality. About 40,000 acres of these lands remain undisposed of, for which the late proprietors demanded from 10*s.* to 20*s.* sterling per acre.

Most of the Crown lands (*i. e.*, those not repurchased under the Act of 1857) have been sold. There is, however, a small number of town lots for sale in Princetown. These lots are chiefly sought for at present as qualifications for electors of members to serve in the General Assembly; but may become valuable hereafter, being situated in front of one of the best harbours in this Island, from which the fisheries might be prosecuted.

Newfoundland.—By a Colonial law Crown lands are to be sold by auction, at an upset price to be fixed by the Governor, at not less than 2*s.* per acre. Land exposed to auction more than once on different days may afterwards be sold, without further competition, at the last upset price.

British Columbia.—That part of British territory on the north-west coast of North America, previously known as New Caledonia, has, by an Act passed on the 2nd of August, 1858 (21 & 22 Vict. cap. 99.), been erected into a colony, under the name of "British Columbia." It is bounded on the south by the frontier of the United States (*i. e.* the 49th degree of north latitude), on the east by the main chain of the Rocky Mountains, on the north by Simpson's river and the Finlay branch of the Peace River; and on the west by the Pacific Ocean. It includes Queen Charlotte's Island and all other adjacent islands, except Vancouver's Island. The Queen, however, may at any time, upon a joint address of the two Houses of the Legislature of Vancouver's Island, incorporate it with British Columbia.

Extent of Colony.—British Columbia possesses an extent of about 500 miles of sea coast, stretching from the point where the 49th parallel of latitude first strikes the sea coast to the line of the Russian possessions in Portland Canal.

The area of the colony, including Queen Charlotte's Island, is computed by Mr. Arrowsmith to contain about 200,000 square miles.

All the lands in British Columbia, and all the mines and minerals therein, belong to the Crown in fee.

The price of lands not being intended for the sites of towns, and not being reputed to be mineral lands, shall be 10*s.* per acre, payable one half in cash at the time of the sale (by auction), and the other half at the end of 2 years from such sale. Provided that under special circumstances some other price, or some other terms of payment may from time to time be specially announced for particular localities.

It shall also be competent to the Executive at any time to reserve such portions of the unoccupied Crown lands, and for such purposes, as the Executive shall deem advisable.

Except as aforesaid, all the land in British Columbia will be exposed in lots for sale, by public competition, at the upset price above mentioned, as soon as the same shall have been surveyed and made ready for sale. Due notice will be given of all such sales. Notice at the same time will be given of the upset price and terms of payment when they vary from those above stated, and also of the rights reserved (if any) for public convenience.

All lands which shall remain unsold at any such auction may be sold by private contract at the upset price and on the terms and conditions herein mentioned, on application to the Chief Commissioner of Lands and Works.

Unless otherwise specially notified at the time of sale, all such sales of Crown land shall be subject to such public rights of way as may at any time after such sale, and to such private rights of way, and of leading or using water for animals, and for mining and engineering purposes, as may at the time of such sale be specified by the Chief Commissioner of Lands and Works.

Unless otherwise specially announced at the time of sale, the conveyance of the land shall include all trees and all mines and minerals within and under the same, except mines of gold and silver.

When any "Ditch Privilege" shall be granted, there shall be included (unless excluded by express words) the right to lop, dress, or fell any trees standing on unoccupied Crown lands which, in the opinion of the proprietors of the ditch, might, by their accidental fall or otherwise, endanger the safety of the ditch or any part thereof.

Australian Colonies and Tasmania.

By the Imperial Acts 18 & 19 Vict. c. 56. (16th July, 1855), the Land Sales Acts 5 & 6 Vict. c. 56. and 9 & 10 Vict. c. 104. are repealed, and the Crown in Western Australia and the local legislatures in the other Australian colonies are left at liberty to alter the land regulations which existed at the time of the passing of the first-mentioned Act, 18 & 19 Vict. c. 56.

South Australia and Tasmania have accordingly passed laws to regulate the disposal of their public lands. New South Wales and Victoria have not yet passed land acts. The land question, however, has recently been under the consideration of the legislatures and government of those two colonies, and new regulations may shortly be expected in each. In the meantime, their waste lands, it is understood, are still disposed of as heretofore under the regulations which were prescribed in the Imperial Land Sales Act.* An abstract of the principal provisions of this Act is therefore subjoined.

Principal Regulations of the Repealed Land Sales Act, 5 & 6 Vict. c. 56. (1842).—1. All lands are to be disposed of by sale alone, and must have once at least been exposed to public auction.

2. The lowest upset price is to be not less than 1*l.* per acre; but the Government has power to raise the same by proclamation.

3. The lands are distinguished into three different classes, viz., Town, Suburban, and Country lots.

4. Upon town and suburban lots, as well as upon a proportion not exceeding one tenth of the whole of the country lots offered for sale at any auction, the Governor has the power of naming a higher than the general or lowest upset price; the country lots on which such power is exercised are designated "Special Country Lots."

5. Town and suburban lots will in no case be disposed of except by public auction, but country lots which have already been put up to public auction and not sold, may be disposed of afterwards by private contract at the upset price. In Victoria,

* In Victoria, however, the following alterations have recently been made:—

1. Lots are now rarely submitted to public competition of a larger size than about 200 acres.—2. The term "special country lots" has been abandoned.—3. The power of selecting blocks of 20,000 acres or more has been rescinded.

lands on which the deposit made at the time of sale has been forfeited by the non-payment of the balance within one month, will be open for selection by the public at the purchase price, less the amount of forfeited deposit.

6. No lands will be sold by private contract except for ready money. When sold by public auction, one tenth at least of the whole purchase-money must be paid down, and the remainder within one calendar month, or the deposit will be forfeited.

7. Lands will be put up for sale in lots not exceeding in extent 1 square mile each.

8. As an exception to the general regulations, and subject to certain restrictions laid down in the Australian Land Act, the Governor will have it in his discretion to dispose, by private contract, at a price not less than the lowest upset price for the district, of blocks comprising 20,000 acres or more.

South Australia.—The Waste Lands Act for this colony (21 Vict., No. 5, of 1857), was passed on the 19th of November of that year. The following is an abstract of the act:—

Abstract of South Australia Waste Land Acts.—§ 1 & 2.—Waste lands of the Crown not to be alienated except by sale as prescribed by act.

§ 3. *Reserves.*—Governor in Council may, however, make reserves for purposes of public safety, convenience, health, or enjoyment (except for churches).

§ 4. *Surveys and Size of Lots.*—Except pastoral lands, all lands to be surveyed and mapped in lots not exceeding 640 acres before they are sold.

§ 5. *Deed of Grant.*—Governor, on behalf of the Crown, to convey lands sold under the public seal of the province.

§ 6. *Auction.*—Except pastoral, all lands to be sold by auction after public notice of not less than 1 nor more than 3 months.

§ 7. *Classification of Lands.*—Lands to be classified into town, suburban, and country.

§ 8. *Upset Price.*—Lowest upset price, 1*l.* per acre.

§ 9. Government may fix a higher upset price for town lots and for special country lots, *i. e.* country lots on which improvements may have been lawfully made.

§ 10. *Sale by Private Contract.*—Town lots to be sold only by auction, but country lots which have been exposed to sale at auction may (if not withdrawn for future sale by auction) be sold by private contract at the upset price, or if bid for at auction and not sold, then at the price last bid.

§ 11. *Payment of Purchase Money.*—In the case of private sales, the whole of the purchase money to be paid down. At auctions 20 per cent. down, and the remainder within 1 calendar month.

§ 12. *Pasture Leases.*—The Governor may, without auction, grant to the first discoverer, or first occupier of waste lands, leases of 14 years for pastoral purposes; but no second lease is to be granted unless first put up to auction; the bidding to be on the rent. Annual leases of land within hundreds may be granted without being put up at auction.*

§ 13. *Mineral Leases.*—The Governor may also grant leases of 14 years for mining purposes of lots not exceeding 80 acres, at a rent of 10*s.* an acre, with a right of renewal for 14 years more on paying a fine of not less than 1*l.* an acre, subject to future regulations.

§ 14. *Regulations.*—The Governor in Council may make regulations from time to time for pastoral leases, to be officially published.

§ 15. All regulations made by Governor under the act are to be laid before the provincial Parliament within 14 days.

§ 16. *Mineral and Timber Licences.*—The Governor in Council may grant licences of 12 months' duration to search for gold and other metals, and to cut timber on the unsurveyed waste lands.

By an act No. 18 of 1858 (22nd Victoria, passed 24th December, 1858), to amend the above "Waste Lands Act," the Governor is empowered, when any lease for pastoral purposes shall have been determined by reason of the land being included in any hundred, to grant annual leases, without auction, to the lessee or his assigns, during the residue of his term.

The Governor is also empowered to make regulations affecting and defining the issue of depasturing, gold, timber, and mineral licences; and to fix a higher upset price for suburban land, than the lowest upset price fixed for waste lands.

The following table shows the quantity of Crown lands sold and paid for within South Australia during each year from the first sales:—

Year.	Acres.	Purchase Money received in the Colony.
1837 . .	563	£13,566 4 0
1838 . .	9,972	
1839 . .	122,505	122,505 0 0
1840 . .	2,446	2,446 0 0
1841 . .	7,331	7,331 2 0
1842 . .	17,001¼	17,001 16 0
1843 . .	598	613 13 0
1844 . .	5,428	5,566 13 0
1845 . .	49,658	52,902 8 0
1846 . .	37,682	76,874 8 0
1847 . .	33,096	35,428 18 0
1848 . .	28,914	31,476 13 0
1849 . .	54,957	58,557 17 0
1850 . .	62,237	86,557 15 0
1851 . .	81,092	87,242 14 0
1852 . .	85,562	97,059 8 0
1853 . .	211,985	290,324 6 0
1854 . .	212,846	376,224 8 0
1855 . .	170,730	232,864 13 0
1856 . .	187,251	255,260 3 0
1857 . .	178,086½	215,500 18 0
1858 (to 9th Dec.)	151,344	194,839 6 0
Grand totals .	1,709,584	£2,250,163 17 0

* N.B.—By an act (22 Vict.) No. 20 of 1858, an annual assessment is imposed of 2*d.* a head in respect of each sheep

The average price of all Crown lands sold during 1852 was 1*l.* 7*s.* 3*d.* per acre; in 1853 it was 1*l.* 7*s.* 3*d.*, in 1854 it was 1*l.* 18*s.* 3*d.*; in 1855 it was 1*l.* 10*s.* 8¾*d.*; in 1856 it was 1*l.* 5*s.* 5*d.*; and in 1857 it was 1*l.* 4*s.* 2½*d.*

Western Australia.—The Crown lands to be divided into 4 separate classes, town, suburban, mineral, and country. Country lands are to be sold at a fixed price of 10*s.* an acre, and in lots of not less than 40 acres. Town, suburban, and mineral lots are to be sold by auction. The size and upset price of the town and suburban lots are to be fixed by the Governor. The upset price for mineral lands is not to be less than 20*s.* an acre, payable in 3 equal instalments; one at the time of sale, another on the 1st of January then next, and the third on the 1st of January of the succeeding year.

For pastoral purposes country lands are subdivided into classes A and B. Class A is to comprise all lands near the settled districts, the sea-coast, and certain rivers; class B to comprehend all other lands in the colony. In class A the Governor may, if he sees fit, grant pastoral licences, not exceeding 1 year, at a yearly rent of not less than 1*l.*, nor more than 2*s.* per 100 acres, for sections of 1000 acres and upwards. A preference is to be given to the legal occupants, in fee simple, of the adjoining lands. No renewal of the licence is to be claimable as a right, but licences for the succeeding year may be granted preferably to existing holders. The lands under licence are to be subject to resumption for public purposes, or to general selection for purchase, without compensation to the licensee; but if the whole of the run be resumed or sold, land to an equal extent to be assigned in lieu.

Within class B, the Governor, if he thinks fit, may grant pastoral leases, not exceeding 8 years, for quantities of land not exceeding 10,000 acres, at a rent, for each run, of 5*l.* per annum, with an addition of 10*s.* per annum for every 1000 acres comprised in the lease. No right of renewal, however, is to be conveyed by any lease of lands in class B. Any lessee having a right of pre-emption will be entitled to exercise it at the rate of 10*s.* an acre for land not mineral.

Timber Licences, not exceeding 12 months, may also be granted on such conditions as may be established by the Governor in Council.

Tasmania.—On the 25th February, 1858, two Land Acts were passed,—21 Vict., Nos. 33 and 34, called "The Waste Lands Act," and "The Unsettled Lands Act."

The first Act provides for the division of the waste lands into the classes of town, agricultural, and pastoral, for their survey previously to their being sold, for their sale as a general rule by auction, and for the establishment of a minimum upset price (10*s.* an acre on new land, and 20*s.* on land that has been occupied, plus the cost of survey and grant deed). It also requires prompt payment of the purchase money, but allows a longer credit where the amount exceeds 40*l.* on the addition to the purchase money of a premium of 10*l.* per cent. It introduces, however, an exception to the rule of sale by auction, by allowing any person to select a single lot, not being town land, nor exceeding 320 acres, for purchase at the fixed price of 1*l.* an acre, but no person is, under any circumstances, to be allowed to exercise this right of selection more than once, and any land obtained in contravention of this prohibition is to be forfeited. The usual powers are reserved to the Governor in Council for granting lands necessary for wharves, jetties, and other works of public utility. The Act further contains the necessary provisions for the grant of leases and licences for the occupation of land; it is provided that leases should not exceed 14 years; that in the case of land that has been occupied the rent should not be less than 1*l.* per 100 acres, and in the case of new land not less than 10*s.*; that the lease shall be determinable on 12 months' notice if the land is required for sale; that it shall contain such covenants and conditions as may be prescribed by regulations to be made by the Governor in Council; and that during its continuance the land shall be open to survey. Licences of occupation are to be granted for 12 months only, and licences to cut timber, for terms not specified, on such conditions as may be provided by the regulations of the Governor in Council.

Provision is likewise made for the resumption of land forfeited for non-fulfilment of conditions, and for the summary extrusion of persons in unlawful occupation.

The second Act withdraws from the operation of the preceding Act that portion of the colony which lies between lines drawn from S.W. Cape to Arthur River along the coast, and from South Cape to the Surrey Hills, comprising, apparently, a tract of about 200 miles long by from 30 to 50 broad. And with a view to promote settlement in this district, it provides for the free grant within it of lands not less than 50 nor more than 640 acres in extent, under the special authority in each case of the Governor in Council, and on terms to be prescribed by regulations, which, however, must embody the following conditions:—That the applicant is possessed of capital in money, stock, or implements to the extent of 1*l.* for every acre applied for; that he has not already obtained a grant of this description, and will not, until he has obtained a grant, dispose of his interest without the consent of the Commissioner of Crown Lands; that he shall reside on his land for 5 years, and that during that period he shall clear, fence, and bring into cultivation one-tenth of the whole or erect buildings of the value of 250*l.* for every 50 acres. In case of only a partial fulfilment of these conditions, the Governor may either allow an extension of time, or make a proportionate reduction in the extent of the grant. The Act further provides for the issue of gratuitous leases for 10 years, of lands not exceeding 10,000 acres, on condition that the lessee shall within 1 year stock the land with a proportionate number of sheep or cattle.

New Zealand.—This colony is divided into 6 provinces, with a separate government in each, subject, however, to the general government, the seat of which is Auckland. The natives are prohibited from alienating their lands except to the Crown. In the 3 provinces of Nelson, Canterbury, and Otago the Crown

which the demised land is estimated to be capable of grazing. Waste lands leased, or to be leased, for pastoral purposes, are to be divided into classes (which classification is to be renewed every 5 years), and to be assessed at not less than 100 sheep per square mile for the lowest class, and at not more than 240 sheep for the highest class. On the expiration of the lease, the annual value of the lands is to be determined by an appointee of the Governor for the next 5 years, and the lease may be renewed for that term at the new rent.

has accordingly extinguished by purchase the native title over all the lands. In the other 3 provinces, which are situated in the Northern Island, this result has only been partially effected, and the native title still exists over large tracts.

The management of the crown lands throughout the colony has, by the imperial act 15 & 16 Vict. cap. 72, granting the colony a constitution, been vested in the general assembly. The general assembly, in its session of 1858, accordingly passed an act, No. 75, to regulate the disposal and administration of the waste lands of the crown in New Zealand. But the operation of the act, which was reserved for her majesty's assent, has been suspended to give the local legislature an opportunity of removing an objection to which the act was found open. It might only mislead, therefore, to introduce here the land regulations adopted by the act, as they are not in force, and may be modified by the colonial legislature.

West Indies.—Crown lands are to be sold by auction at an upset price of not less than 1*l.* per acre.

Antigua and Dominica.—The smallest lot sold is 40 acres, except in certain localities for villages.

British Guiana.—The crown lands will, in future, be disposed of by sale in tracts of 100 acres each and upwards by competition at the upset price of 1*l.* sterling per acre.

The limitation in the extent of grants does not apply to the owners of plantations who, under the regulations of their high mightinesses the States of Holland, are entitled to an additional depth of 250 acres as soon as two-thirds of the first grant are in cultivation. So long as an estate is in cultivation, and there is the most distant chance of the second depth being required by the proprietor of the first, a second depth can never be granted to a third party.

It is not the practice in British Guiana to open on survey any lands for settlement until after application has been made to the government for some particular tract.

Trinidad.—The price of crown land is 2*l.* per acre. All limitations as to the number of acres have fallen into desuetude. Lagoon or swampy land is sold at a lower rate, 10*s.*, and building lots are higher, depending on competition.

Bahamas.—The mode of sale is by auction, but the Governor is from time to time to name the upset price, which is never to be less than 6*s.* per acre. Land once exposed to auction may, in the discretion of the Governor, be afterwards sold by private contract, at not less than the upset price of such land. The ordinary size of the lots in the Bahamas is to be 20 acres, but lots of 5 acres may, if thought expedient, be disposed of.

Jamaica.—There are no regulations in force in this island, for the disposal of public lands, pasture licences, &c.

Cape of Good Hope. — Government Notice, 31st October, 1856. The conditions and regulations relative to the disposal of crown lands in this colony, published by government notice of the 17th May, 1844, are cancelled, and in future all waste and unappropriated crown lands will be sold subject to an annual quit rent on each lot, and at a reserved price sufficient to defray the costs of inspection, survey, and title deed.

Natal.—1. The unappropriated crown lands in this colony are sold in freehold, and by public auction only.

2. Unless it is otherwise notified the upset price will be 4*s.* per acre (one acre is about half a morgen), but the Governor for the time being will have the power to fix such higher upset price as the locality or other circumstances may render expedient, of which due notice will always be publicly given. Lands not sold at auction may at any time within three years afterwards be purchased at the upset price on payment of the whole purchase money.

Ceylon.—Crown lands are sold by auction at an upset price fixed by the Governor, at not less than 1*l.* per acre. They must be previously surveyed by the government, and duly advertised.

Summary of Modes of Sale, and Prices, in the Principal Land-Selling Colonies.

Colony.	Mode of Sale.	Price per Acre.
North American Colonies.		
Canada (West)	Fixed price for a whole township, and for lots in townships, till public notice of auction; afterwards, and for all other lands, auction.	For a whole township 2*s.* 6*d.* currency, 2*s.* 1*d.* stg. For lots in townships 3*s.* 6*d.* currency, 2*s.* 11*d.* stg. For all other lands upset price 5*s.* currency, 4*s.* 2*d.* stg.
Canada (East)	Ditto	1*s.* to 5*s.* ditto, according to situation, 10*d.* to 4*s.* 2*d.* sterling.
Nova Scotia	Fixed price	1*s.* 9*d.* sterling.
New Brunswick	Auction and private sales.	2*s.* 5*d.* sterling upset price, with 20 per cent. discount for ready money.
Newfoundland	Ditto	2*s.* currency upset price, 1*s.* 8*d.* stg.
Prince Edward Island.	Private contract	4*s.* to 8*s.*, according to situation.
Vancouver's Island	Ditto	1*l.* sterling.
British Columbia	Auction for agricultural lands. Lands not sold at auction may afterwards be bought at the upset price.	Upset price 10*s.*
Australian Colonies.		
New South Wales	Auction. Country lands not sold at auction may afterwards be bought at the upset price.	Upset price 1*l.* sterling.
Victoria	Ditto	Ditto.
South Australia	Ditto	Ditto.
Australian Colonies.		
Western Australia	Fixed price for agricultrl. lands. Auction for town, suburban, and mineral.	10*s.* Upset price for town and suburban, 20*s.* For mineral, to be fixed by government.
Tasmania	Auction and private sales.	Upset price to be fixed by government.
New Zealand [crown lands].	Auction for town, suburban, and rural lands. Fixed price for country lands.	Highest fixed price 10*s.* an acre, except in Canterbury, where it is 2*l.*
Falklands	Auction. Country lands not sold at auction may afterwards be bought at the upset price.	Upset price 8*s.* sterling.
Bahamas	Auction.	Ditto 6*s.*
Other West India colonies.	Ditto. ditto. Auction	Ditto 1*l.*
Cape of Good Hope	Ditto, subject to a quit-rent.	No fixed upset price.
Natal	Ditto	Upset price 4*s.* sterling.
Ceylon	Ditto	Ditto 1*l.* sterling.
Hong Kong	Ditto. Only leases granted.	The lowest fixed rental for *building*, not *farm*, lots is 2*l.* per acre. Highest ditto, hitherto, 35*l.*

Rights of Commonage and Leases of Pasture Lands in Australia.

New South Wales.—The following is the substance of the most important provisions of the regulations in force for the disposal of land for pastoral purposes: 1st, in the settled districts; and, 2dly, in the unsettled and intermediate districts. These regulations were established by the governor in pursuance of an order of the Queen in council, dated 9th March, 1847, and issued under the act of Parliament 9 & 10 Vict. c. 104.

I. As to the settled districts:

1. All purchasers of crown lands, or grantees who have commuted their quit rents, are to have a right of commonage over vacant crown lands in their neighbourhood until disposed of.

2. Persons holding in fee simple not less than 640 acres of land will be entitled to claim of government a lease of the adjacent lands, to the extent of three times their own property, at a fixed rent of 10*s.* for each section of 640 acres.

3. Any person may require government, or the government may proceed of its own accord, to put up to auction leases of any vacant lands at a minimum upset rent of the same amount.

4. The leases will, as a general rule, be renewed, unless the land is wanted by government for sale, or is required under the above provisions by the owner in fee of the adjacent property.

5. The leases are to be annual, and for pastoral purposes only, with a limited right of cutting timber. They are not assignable; and if the land is required for sale, it must be surrendered at one month's notice, without any compensation for improvements.

II. As to the unsettled and intermediate districts:

1. The governor may grant leases of runs for 14 years in the unsettled districts, and 8 in the intermediate. These leases confer the right to use the land for pastoral purposes, and to cultivate so much as is necessary for the consumption of the lessee's own establishment, but not for sale.

2. Each run must be capable of carrying 4,000 sheep, or an equivalent number of cattle.

3. The rent is at least 10*l.* per annum, with 2*l.* 10*s.* additional for every 1,000 sheep (beyond the first 4,000) which the run will carry.

4. During the currency of the lease the lessee may buy portions of the land, not being less than 160 acres in extent, without competition. The ordinary price will be 1*l.* an acre; but in peculiar cases the governor may require a larger sum. The governor may also resume any part of the land for public purposes.

5. Leases of vacant runs are disposed of by tender. Leases are forfeited if the lessee neglects to pay his rent, or is convicted of certain legal offences.

6. At the expiration of the lease in the unsettled districts, or at the expiration of each year of the lease in the intermediate districts, any part of the land may be sold by government, subject to a right in the lessee of preemption, and of compensation for improvements. Unless the land itself is brought within the settled districts, or one fourth part of it is sold, the lessee is entitled to a renewal of his lease as to the unsold part; but if any part of it be sold, the governor may raise the rent to an extent not exceeding 50 per cent.

7. If during the lease the land has been brought within the intermediate districts, it will only be relet subject to the rules applicable to land in those districts.

For the regulations themselves as to the settled districts, *vide* Parliamentary Papers (No. 994) presented by command in 1848, and Appendix No. 7. to the Emigration Commissioners General Report for 1849; and for the regulations as to the unsettled and intermediate districts, *vide* Parliamentary Papers

No. 252) of 1847, and Appendix No. 7. to Commissioners General Report for 1847.

South Australia.—The following regulations authorising district councils to grant depasturing licences within their districts were established by the governor's proclamation, dated Adelaide, 4th October, 1855, and issued under the authority of the provincial act, No. 16 of 1842, being an act to appoint district councils and define the powers thereof:—

1. That depasturing licences shall be granted for certain stated periods, to be determined by the district councils respectively.

2. That before granting any such licences, the several district councils shall make an estimate of the number of cattle which *the common lands* of their respective districts are capable of maintaining, and that the number of cattle to be licensed for the period then next ensuing shall in no case exceed the estimate so made.

3. That every person holding land within a district shall, on complying with any bye laws that may be made in that behalf, and on payment of such fees as may be fixed by the councils respectively, be entitled to receive a depasturing licence, the number of cattle to be depastured under such licence being calculated according to the extent of land held. Provided, however, that if any persons shall omit to take out the licences to which they are entitled, within such time as the councils may appoint, or if any persons shall take out licences for a less number of cattle than has been assigned to them, the councils may grant licences for such number of cattle as may be wanting to make up the whole number which the common lands have been estimated to be capable of maintaining, to any landholders in the district, in accordance with such regulations as the councils respectively shall think fit to make.

4. That every holder of a depasturing licence shall be entitled to depasture on the common lands either great cattle or small cattle, at his option; one head of great cattle to be deemed and taken to be equivalent to 6 head of small cattle, both as regards the number of cattle to be depastured, and the fees payable in respect thereof.

5. That the words "great cattle" shall be deemed and taken to mean horned cattle, horses, mules, and asses, male and female, with their offspring above 6 months old; and that the words "small cattle" shall be deemed and taken to mean sheep and goats, male and female, with their offspring above 4 months old; and that the words "common lands" shall be deemed and taken to mean all the unsold lands of the crown within any district, not granted under lease, nor appropriated to any particular purpose by the executive government of the province.

The holder of purchased land within any hundred or part of a hundred, not being within a district, will also be entitled, under the governor's proclamation of the 23rd March, 1853, to a depasturing licence over the unappropriated waste lands therein, for one head of great cattle, or 6 head of small cattle for every 5 acres purchased.

The licence must be applied for to the commissioner of crown lands, between the 1st and 30th of June in each year; and the fee payable is 2*s.* 6*d.* for not more than 5 head of great cattle, and 6*d.* per head for all above that number.

Timber licences are granted annually, terminable on the 31st December, on payment of a fee of 5*l.*

Considering that it may, speaking generally, be laid down that in N. S. Wales from 3 to 4 acres are required to depasture a single sheep, it is obvious that the plan of selling such land at a *minimum* price of 12*s.* or 20*s.* an acre, would effectually prevent its being bought for pastoral purposes. And, in point of fact, incomparably the greater number of the sheep belonging to the colony are depastured on what has been called the *squatting system.* A capitalist intending to become a wool grower formerly took out an annual licence, for which he paid 10*l.*, authorising him to depasture a *run*, or tract of land, of no definite magnitude, but usually varying in size from 3,000 or 4,000 to perhaps 25,000 or 30,000 acres, under the important proviso (which, however, has not been enforced) that he should pay in addition an annual rent of 1*d.* for every head of sheep and of 3*d.* for every head of cattle depastured on the run. This system having been acted upon for a lengthened period the runs began to be regarded as a sort of *quasi* property; and those in preferable situations were disposed of by one holder to another for considerable sums. In the end, however, government was forced to interfere with this system; and the act 9 & 10 Vict. c. 104. empowered the authorities to eject persons unlawfully occupying waste lands, provided they had not held them without interruption for 21 years previously to the passing of the act. If they had done this, their title was secured. From the passing of this act, a new and complicated system, the leading provisions of which have already been laid before the reader (p. 352, &c.), has been adopted for the disposal of waste lands. Under its operation, vast tracts have been let, of what was at the time *unsettled* districts, for 14 years with a right of pre-emption, without competition, at 1*l.* per acre. But, in the meantime, portions of the land so disposed of, being found to contain deposits of gold, have suddenly become of the greatest value; while other and far more extensive portions in the vicinity of the "diggings" are urgently required for agricultural purposes. Under such circumstances, we need not be surprised that the question in regard to the lands held, or alleged to be held, under 14 years' leases with a right of pre-emption, should have become of equal importance and difficulty. Owing to the want of surveys and defined boundaries, few of the occupiers of waste lands have obtained leases. And while, on the one hand, they insist on the fulfilment of their contracts, they are opposed, on the other, by the great bulk of the population, who justly object to the waste of the public property, and to the all but irreparable injury that would be done to the colony by handing over to a few individuals a vast extent of what is now become very valuable land. The idea that the leases, if granted, would be effectual, is, in the present state of the colony, quite preposterous. It is, in truth, all but contradictory to suppose that in a country like Australia, with a population increasing in numbers and wealth with unparallelled rapidity, millions of acres of the best situated lands should be engrossed, at a mere nominal rent, by a handful of individuals. If a system of this sort be not put an end to by the interference of government, it will, no doubt, be forcibly suppressed by the colonists themselves. It is too flagrant an absurdity to be tolerated, and the better way would be to come, while it is yet time, to some sort of compromise; that is, to give some compensation to the lessees for claims which were conceded to them in ignorance, and which they cannot, in the existing state of things, maintain or make good.

The following statement, laid on the council table at Sydney, the 22d May, 1849, shows the enormous extent to which the squatting system (of which the leasing system is an off-shoot) has been carried.

	Number of Persons holding Licences.	Number of Licences.	Money paid for Licences.	Land held, in Acres.
			£	
When less than 25,000 acres are held by each person	339	347	3,470	4,599,304

	660	820	8,200	29,464,240

* Eleven persons holding 4,570,108 acres in a colony under an infallible specific for preventing the accumulation of land in the hands of a few individuals!

Gold Fields and Miners' Rights. — Besides their great pastoral and agricultural capabilities, the Australian colonies possess vast mineral resources. South Australia has already become noted for her copper mines, and New South Wales and Victoria (late Port Philip) for their gold fields.

By law all mines of gold and all gold in its natural place of deposit, whether on the lands of the crown or of private individuals, belong by prerogative to the crown. And whoever takes away gold metal or ore containing gold, or digs for or disturbs the soil on the waste lands of the crown in search of gold metal or ore, without having been first duly authorised so to do, is liable to be prosecuted both criminally and civilly, and the gold may be seized by the crown.

In South Australia, however, the crown has given up its right to minerals.

In South Australia and in Tasmania no gold regulations have been issued, as no profitable gold fields have yet been discovered.

In New South Wales and Victoria acts have been passed by the local legislatures for regulating the right to dig for gold, and for imposing a duty on its export.

New South Wales.—By the New South Wales Act (20 Vict.) of the 17th March, 1857, No. 29., the governor in council may issue a document called "The Miners' Right," which is to be valid for 12 months, and entitles the holder to mine for gold in a space of 400 square feet of alluvial ground. 20 feet of frontage is allowed to each miner in the beds of rivers.

The annual fee for each "miner's right" is 10*s.*

The governor may also grant two classes of leases for mining purposes of auriferous tracts and quartz reefs; viz. :—

1. Leases of 8 acres of alluvial land, 500 yards of a river bed, or 400 yards on the line of a quartz vein, for a period limited to 2 years, at an annual rent of 5*l.* per acre; 5*l.* per 100 yards of river bed, or 5*l.* per 10 yards of quartz vein, respectively.

2. Leases for a longer period (but not exceeding 21 years) and for greater extent of land will be granted at a royalty on the gross produce of gold. (*Gold Fields' Regulations, Sydney, 5th August*, 1858.)

The governor may also grant business licences on the gold fields, for 12 months, the fee for which is 4*l.*

The duty on gold exported from New South Wales, whether by sea or land, is, by the Colonial Act of 12th February, 1857, No. 17., fixed at 2*s.* 6*d.* the troy oz., and on gold brought to the royal mint, 2*s.* 3*d.* per oz. But the customs duty is not to be leviable on gold which has paid duty at the mint.

Holders of "miner's rights," or of leases, are entitled, both in New South Wales and in Victoria, to vote for the members of the local court for the district in which they reside. These courts are for the consideration of matters connected with the general management of the district.

The above quoted acts will be found printed in the papers relative to the discovery of gold, presented to parliament in February, 1856, and August, 1857.

The escort of gold from the principal gold fields is undertaken by government, free of charge, if intended for export, otherwise a small charge per ounce is made, according to distance.

Victoria.—By the Victoria Act of 24th November, 1857, No. 32. (21 Vict.), the annual fee for "the miner's right" to dig for gold is 1*l.*; and storekeepers' licences to carry on business at the diggings are issued at the following rates:—

For 3 months, at	£2	10 0
„ 6 „	5	0 0
„ 12 „	10	0 0

Leases for mining purposes of auriferous lands may also be obtained at a rent, whether as a royalty or otherwise, to be fixed by the governor, for any period not exceeding 10 years.

The duty on gold exported from Victoria, whether by sea or land, is, by the Colonial Act of 20th April, 1855, No. 27., fixed at 2*s.* 6*d.* the troy oz.

Gold Fields of Victoria.—The gold fields of Victoria are divided into six principal districts, which are each under the supervision of a resident warden. These are again divided into sub-districts, as occasion may require, and placed in charge of sub-wardens.

In each of the six mining districts a local board is established, with power to make bye-laws applicable to the district, generally, with respect to mining affairs. Each of these mining boards consists of 10 members, who are elected to the office for a term of 12 months, by the holders of miners' rights or business licences resident in the district.

For the settlement of mining cases a "court of mines" is held periodically, at various places in each mining district.

The following is a list of the principal gold fields in the various mining districts of this colony, on 31st July, 1858:—

Ballaarat District.	Castlemaine Dist.	Maryborough Dist.	Ararat District.	Sandhurst District.	Beechworth Dist.
Ballaarat.	Castlemaine.	Maryborough.	Ararat.	Sandhurst.	Beechworth.
Bunningyong.	Barber's Creek.	Avoca.	Armstrong's.	Eagle Hawk.	Spring Creek.
Steighz.	Forest Creek.	Amherst.	Pleasant Creek.	Whipstick.	Snake Valley.
Mount Egerton.	Campbell's Creek.	McCullums.	Raglan.	Heathcoate.	Three-mile Creek.
Creswick.	Tarrangower.	Dunolly.		Waraicga.	Woolshed.
Smyth's Creek.	Fryer's Creek.	Sandy Creek.			Yackandaudale.
Carugham.	Tarradale.	Cochran's.			Buckland.
Linton's.	Mount Franklin.	Korong.			Omeo.
Mount Blackwood.	Saint Andrews.	Kingover.			
		New Bendigo.			

QUANTITIES OF GOLD EXPORTED.

Year.	New South Wales.		Victoria.

1857	*48,815	185,138	2,762,460	10,987,591
1858 to 30th June			1,279,767	5,119,069
Total	2,018,617	7,155,286	16,555,838	62,448,852

* The establishment of a mint at Sydney, will account for the small amount of gold exported in 1855, 1856, and 1857.

The quantity of gold *produced* at the mines in New South Wales and Victoria cannot be accurately ascertained; but the preceding Table shows the quantity and estimated value of gold *exported* from New South Wales and Victoria since the commencement of discoveries in May and October, 1851. (This Table is taken, as regards New South Wales, from Parliamentary Papers, Nos. 393. of 1856, 309. of 1857, and 480. of 1858: and as regards Victoria, from an official report of the registrar general of that colony, dated 30th June, 1858.)

There were also exported from New South Wales in 1857:—

Coin.	Boxes.	Value.
Australian sovereigns	198	£796,601
British and foreign gold	29	117,598
Total	227	914,199

The escort of gold from the principal gold fields is undertaken by the government, free of charge, if intended for export; otherwise a small charge per ounce is made, according to distance.

Gold Fields of British Columbia. — There seems good reason to suppose that the gold fields in this colony are both extensive and rich.

Governor Douglas, in a despatch, dated January, 1859, states that it is supposed, on very probable grounds, that the whole course of the Fraser River to its sources in the Rocky Mountains, contains deposits of gold.

Gold was known to exist in Queen Charlotte's Island in 1850, but it was not until April, 1856, that Governor Douglas reported to the secretary of state that considerable quantities of gold had been found in the Upper Columbia River. It was subsequently discovered in its natural state of deposit in the districts of Fraser River and of Thompson's River, commonly known as the Quasilan, Couteau, and Shuswap countries, which are the principal gold fields of the colony.

The governor, in the despatch above-mentioned, states that reports continue to arrive respecting the rich deposits of gold on and about Bridge River. The gold generally is coarse and lumpy, not requiring quicksilver for its separation from the soil.

Gold has been also found at Stonia, a point on Fraser's River, five miles beyond the Hudson's Bay establishment of Alexandria, about 400 miles from the sea coast.

The table in the preceding page embodies, within a brief space, a good deal of important information respecting our colonies in all parts of the world.

IV. — Regulations under which Colony Trade is conducted.

These are embodied in the Customs Consolidation Act, the 16 & 17 Vict. c. 107., and are as follows, viz. —

Absolute Prohibitions, Restrictions, &c. — Gunpowder, ammunition, arms, or utensils of war, except from the U. K. or any British Possession, and base or counterfeit coin, are hereby absolutely prohibited to be imported or brought, either by sea or inland carriage or navigation, into the British Possessions in America and the Mauritius.

Sugar (not being refined in bond in the U. K.) and molasses until 5th of July 1854, and rum, such sugar, molasses, and rum being the produce or manufacture of any British possession within the limits of the E. I. Company's charter (except as herein-after provided), or being of foreign produce or manufacture, are hereby prohibited to be imported or brought into any of the British possessions in the continent of S. America or in the W. Indies (the Bahama or Bermuda islands not included), or into the Mauritius except to be warehoused for exportation only, and may also by her Majesty's order in council be prohibited to be imported into the Bahama and Bermuda islands; and if any goods shall be imported or brought into any of the British possessions in America or the Mauritius, contrary hereto, the same shall be forfeited: provided always, that it shall be lawful to import into any British possessions in the W. Indies and S. America, and into the Mauritius, any sugar or rum the produce of any British possession within the limits of the E. I. Company's charter into which the importation of sugar or rum the produce of any foreign country, or of any British possession into which foreign sugar or rum may be legally imported, has been prohibited; provided that no such sugar or rum shall be so entered unless the master of the importing ship shall deliver to the proper officer of customs a *certificate of origin* under the hand of the proper officer at the place where the same shall have been taken on board, stating the name of the district in which such sugar or rum was produced, the quantity and quality or strength thereof, as the case may be, the number and denomination of the packages containing the same, and the name of the ship in which they were laden, and of the master thereof, and of the officer giving the same; the shipper of such sugar or rum shall likewise certify that there had been produced a certificate under the hand and seal of the collector or assistant collector of the land or customs revenue of the district within which such sugar and rum was produced, that such sugar or rum was the produce of such district, and that the importation into such district of foreign sugar and rum, or sugar and rum the growth of any British possession into which any foreign sugar or rum can be legally imported, is prohibited, and the master shall subscribe a declaration that such certificate was received by him at the place where the goods were taken on board, and that they are the goods therein mentioned.—§ 159.

Foreign Reprints of Books under Copyright prohibited. — Any books wherein the copyright shall be subsisting, first composed or written or printed in the U. K., and printed or reprinted in any other country, shall be and are hereby absolutely prohibited to be imported into the British possessions abroad: Provided always, that no such books shall be prohibited to be imported as aforesaid unless the proprietor of such copyright, or his agent, shall have given notice in writing to the Commissioners of Customs that such copyright subsists, and in such notice shall have stated when the copyright will expire; and the said commissioners shall cause to be made, and to be publicly exposed at the several ports in the British possessions abroad, from time to time, printed lists of books respecting which such notice shall have been duly given, and all books imported contrary thereto shall be forfeited; but nothing herein contained shall be taken to prevent H. Majesty from exercising the powers vested in her by the 10 & 11 Vict. cap. 95. to suspend in certain cases such prohibition.—§ 160.

Foreign Manufactures with British Marks.—If any articles of foreign manufacture, and any packages of such articles, bearing any names, brands, or marks being or purporting to be the names, brands, or marks of manufacturers resident in the U. K., be imported into any of the British possessions abroad, the same shall be forfeited.—§ 161.

Sugar, &c., though British, deemed Foreign in certain Cases.—All sugar and molasses, until the 5th July 1854, and rum (although the same may be of British plantations), exported from any of the British possessions in America into which the like goods of foreign production can be legally imported, shall, upon subsequent importation from thence into any of the British possessions in America or the Mauritius into which such goods being of foreign production cannot be legally imported, or into the U. K., be deemed to be of foreign production, and shall be liable on such importation respectively to the same duties or the same forfeitures as articles of the like description being of foreign production would be liable to, unless the same shall have been duly warehoused, and exported from the warehouse direct to such other British possession, or to the U. K., as the case may be.—§ 162.

Coasting Trade of the British Possessions.—No goods or passengers shall be carried from one part of any British possession in Asia, Africa, or America to another part of the same possession, except in British ships.—§ 163.

Ship and Cargo to be reported on Arrival.—The master of every ship arriving in any of the British possessions in America or the Channel Islands, whether laden or in ballast, shall come directly, and before bulk be broken, to the custom-house for the port or district where he arrives, and there make a report in writing to the proper officer of customs, in the same form and manner as hereinbefore provided on the arrival of any ship in the U. K. (see p. 696.) so far as the same may be applicable; and if any goods be unladen from any ship before such report be made, or if the master fail to make such report, or make an untrue report, or do not truly answer the questions demanded of him, he shall forfeit the sum of 50*l.*, and if any goods be not reported, such goods shall be forfeited. —§. 164.

Entry outwards of Ship or Cargo.—The master of every ship bound from any British possessions abroad, except the territories subject to the government of the presidencies of Bengal, Madras, and Bombay, shall deliver to the proper officer of customs an entry outwards under his hand of such ship, and also subscribe and deliver to such officer a content of the cargo of such ship, if any, or state that she is in ballast, as the case may be, and answer such questions concerning the ship, cargo, if any, and voyage, as shall be demanded of him, in the same manner, as nearly as may be, as is prescribed to be observed on the entry and departure of any ship from the U. K., and thereupon the proper officer shall give to the master a certificate of the clearance of such ship for her intended voyage; and if the ship shall depart without such clearance, or if the master shall deliver a false content, or shall not truly answer the questions demanded of him, he shall forfeit the sum of 50*l.*—§ 165.

Entry of Goods Inwards and Outwards.—Any person entering goods shall deliver to the proper officer a bill of entry thereof, containing the name of the ship and of the master, and of the place to or from which bound, and the particulars of the quality and quantity of the goods, and the packages containing the same, stating whether such goods be the produce of the British possessions in America or not, and the proper officer shall thereupon grant his warrant for the lading or unlading of such goods.—§ 166.

Entry of Goods to be laden or unladen, &c.—No goods shall be laden or water-borne to be laden on board any ship, or unladen from any ship, in any of the British possessions in America or in the Channel Islands, until due entry be made of such goods, and warrant granted for the lading or unlading of the same; and no goods shall be so laden or water-borne or so unladen in the said Channel Islands, except at some place at which an officer of the customs is appointed to attend the lading and unlading of goods, or at some place for which a sufferance shall be granted by the proper officer of customs for the lading and unlading of such goods, and in the presence or with the permission of such officer; but the commissioners of customs may make such regulations for the carrying coastwise of any goods, or for the removing of any goods for shipment in the said islands, as to them shall appear expedient; and all goods laden, water-borne, or unladen contrary hereto, or to any regulations to be so made, shall be forfeited.—§ 167.

Goods not stated to be Produce of British Possession to be deemed of Foreign Production.—No goods shall be stated in such certificate of clearance of any ship from any British possessions to be the produce of such possession, unless such goods shall have been so expressed in the entry outwards of the same; and all goods not expressly stated in such certificate of clearance to be the produce of such possession shall, at the place of importation in any other such possession, or in the United Kingdom, be deemed to be of foreign production.—§ 168.

If no Officer of Customs resident at the Port of Shipment, &c.—Where there is no officer of customs, the principal officer in the civil service of H. Majesty, or his representative, shall be deemed to be the proper officer for the performance of all such duties with respect to such goods as are hereby required to be performed by the collector or other officer of customs.—§ 169.

Clearing Officers to certify that the Cargo is below Deck.—Before any clearing officer permits any ship, wholly or in part laden with timber or wood goods, to clear out from any British port in North America or in the settlement of Honduras for any port in the U. K., at any time after the 1st of September or before the 1st of May in any year, he shall ascertain that the whole of the cargo of such ship is below deck, and shall give the master of such ship a certificate to that effect; and no master of any ship so laden shall sail from any of the ports aforesaid for any port of the U. K., at any such time as aforesaid, until he has obtained such certificate from the clearing officer.—§ 170.

No Part of the Cargo to be placed on Deck.—No master of any ship in respect of which such certificate as aforesaid has been obtained shall place, or permit or caused to be placed or remain, upon or above the deck of such ship, any part of the cargo thereof, until such ship has arrived at the port of her destination: Provided always, that if the master of any such ship consider that it is necessary, in consequence of the springing a leak or of other damage received or apprehended during the voyage, to remove any portion of the cargo upon deck, he may remove or cause to be removed upon the deck of such ship so much of the cargo, and may permit the same to remain there for such time, as he considers expedient; provided also, that the store spars or other articles necessary for the ship's use shall not be taken to be the cargo for the purposes of this act.—§ 171.

Penalty for Default.—If any master of any ship for which such certificate as aforesaid is required sails or attempts to sail without having obtained such certificate, or places or permits, or causes to be placed or to remain or be, upon or above the deck of such ship, any part of the cargo thereof, except in the cases in which the same is not hereby forbidden, he shall for every offence forfeit and pay any sum not exceeding 100*l.*—§ 172.

Dues in Canada on American Boats.—The same tonnage duties shall be paid upon all ships or boats of the U. States of America importing any goods into either of the provinces of Upper or Lower Canada as are or may be for the time being payable in the U. States of America on British vessels or boats entering the harbours of the State from whence such goods shall have been imported.—§ 173.

Certain Produce of the State of Maine to be treated as Produce of New Brunswick.—The treaty concluded between H. Majesty and the U. States of America, on the 9th of August 1842, stipulates that all the produce of the forest in logs, lumber, timber, timber boards, staves, or shingles, or of agriculture, not being manufactured, grown on any of those parts of the State of Maine watered by the river Saint John or by its tributaries, of which fact reasonable evidence shall, if required, be produced, shall have free access into and through the said river and its said tributaries, having their source within the State of Maine, to and from the seaport at the mouth of the river Saint John, and to and round the falls of the said river, either by boats, rafts, or other conveyance, and that within the province of New Brunswick the said produce shall be dealt with as if it were the produce of the said province; and it being the intention of the high contracting parties to the said treaty that the aforesaid produce should be dealt with as if it were the produce of the province of New Brunswick, the produce in the said recited treaty and herein-before described shall, so far as regards all laws relating to duties, navigation, and customs in force in the U. K. or in any of H. Majesty's dominions, be deemed and taken to be and be dealt with as the produce of the province of New Brunswick; provided, that in all cases in which declarations and certificates of production or origin and certificates of clearance would be required in respect of such produce if it were the produce of New Brunswick, similar declarations and certificates shall be required in respect of such produce, and shall state the same to be the produce of those parts of the State of Maine which are watered by the river Saint John or by its tributaries.—§ 174.

Newfoundland fishing Certificates in lieu of Clearance during fishing Season.—Whenever a ship shall be cleared out from any port in Newfoundland or in any other part of H. Majesty's dominions for the fisheries on the banks or coasts of Newfoundland or Labrador or the dependencies thereof, without having on board an article of traffic (except only such provisions, nets, tackle, and other things as are usually employed in and about the said fishery, and for the conduct and carrying on of the same), the master of any such ship shall be entitled to demand from the principal officer of customs at such port a certificate under his hand that such ship hath been specially cleared out for the Newfoundland fishery, and such certificate shall be in force for the fishing season for the year in which the same may be granted, and no longer; and upon the first arrival in any port in the said colony of Newfoundland or its dependencies of any ship having on board any such certificate as aforesaid, a report thereof shall be made by the master of such ship to the principal officer of customs at such port; and every ship having such certificate which has been so reported, and being actually engaged in the said fishery, or in carrying coastwise, to be landed or put on board any ship engaged in the said fishery, any fish, oil, salt, provisions, or other necessaries for the use and purposes thereof, shall be exempt from all obligation to make an entry at or obtain any clearance from any custom house at Newfoundland, upon arrival or departure from any of the ports or harbours of the said colony or its dependencies, during the continuance of the fishing season for which such certificate may have been granted; and previously to obtaining a clearance at the end of such season for any voyage at any of such ports, the master of such ship shall deliver up the before-mentioned certificate to the principal officer of the customs of such port: provided always,

that in case any such ship shall have on board during the time the same may be engaged in the said fishery any goods or merchandise whatsoever other than fish, seals, oil made of fish or seals, salt, provisions, and other things, being the produce of or usually employed in the said fishery; such ship shall forfeit the said fishing certificate, and shall thenceforth become and be subject and liable to all such and the same rules, restrictions, and regulations as ships in general are subject or liable to.—§ 175.

Certificate of Production for Sugar or Spirits.—Before any spirits or sugar, so long as any benefit attach to the distinction, shall be shipped for exportation in any British possession in America, or in the island of Mauritius, as being the produce of such possession or of the said island, the proprietor of the estate on which such goods were produced, or his known agent, shall make and sign a declaration in writing before the proper officer of customs at the port of exportation, or before one of H. Majesty's justices of the peace residing in or near the place where such estate is situated, declaring that such goods are the produce of such estate, and such declaration shall set forth the name of the estate, and the description and quantity of the goods, and the packages containing the same, with the marks and numbers thereon, and the name of the person to whose charge at the place of shipment they are to be sent; and if any justice of the peace or other officer aforesaid shall subscribe his name to any writing purporting to be such a declaration, unless the person purporting to make the same shall actually appear before him, and shall declare to the truth of the same, such justice of the peace or officer aforesaid shall forfeit and pay for any such offence the sum of 50*l.*; and the person entering and shipping such goods shall deliver such declaration to the proper officer of customs, and shall make and subscribe a declaration before him that the goods which are to be shipped by virtue of such entry are the same as are mentioned in such first-mentioned declaration; and the master of the ship in which such goods shall be laden shall, before clearance, make and subscribe a declaration before the proper officer of customs, that the goods shipped by virtue of such entry are the same as are mentioned and intended in such first-mentioned declaration, to the best of his knowledge and belief; and thereupon the proper officer of customs shall sign and give to the master a certificate of production, stating that proof has been made in manner required by law that such goods (describing the same) are the produce of such British possession or of the said island, and setting forth in such certificate the name of the exporter and of the exporting ship, and of the master thereof, and the destination of the goods; and if any spirits or sugar be imported into any British possession in America as being the produce of some other such possession or of the said island, without such certificate of production, the same shall be forfeited.—§ 176.

Certificate of Production on re-exportation from another Colony.—Before any sugar or spirits, so long as any benefit attach to the distinction, shall be shipped for exportation in any British possession in America as being the produce of some other such possession, the person exporting the same shall in the entry outwards state the place of production, and refer to the entry inwards and landing of such goods, and shall make and subscribe a declaration before the proper officer of customs to the identity of the same; and thereupon, if such goods shall have been duly imported with a certificate of production within 12 months prior to the shipping for exportation, the proper officer of customs shall sign and give to the master a certificate of production founded upon and referring to the certificate of production under which such goods had been so imported, and containing the like particulars, together with the date of such importation.—§ 177.

Certificate of Production of East India Sugar.—The shipper of any sugar the produce of some British possession within the limits of the E. I. Company's charter, about to be exported from any place in such possession, may go before the chief officer of customs at such place, or, if there be no such officer, before the principal officer of such place, or the judge or commercial resident of the district, and make and sign a declaration before him that such sugar was really and *bonâ fide* the produce of such British possession, to the best of his knowledge and belief; and such officer, judge, or resident is hereby required to grant a certificate thereof, stating therein the name of the ship in which the sugar is to be exported, and the destination of the same.—§ 178.

Certificate of Production of Wine.—The shipper of any wine, the produce of any British possession abroad, which is to be exported from thence, may go before the chief officer of customs, and make and sign a declaration before him that such wine was really and *bonâ fide* the produce of such British possessions; and such officer is hereby required to grant a certificate thereof, stating therein the name of the ship in which the wine is to be exported, and the destination of the same.—§ 179.

Certificate of Production of Goods in Guernsey, &c.—Any person who is about to export from the Channel Islands to the U. K., or to any of the British possessions in America or the Mauritius, any goods of the growth or produce of any of those islands, or any goods manufactured from materials which were the growth or produce thereof, of the U. K., or of materials duty free in the U. K., or whereupon the duty has been there paid, and not drawn back, may go before any magistrate of such islands, and make and sign before him a declaration that such goods, describing the same, are of such growth or produce, or of such manufacture, and such magistrate shall administer and sign such declaration; and thereupon the governor, lieutenant-governor, or commander-in-chief of the island from which the goods are to be exported shall, upon the delivery to him of such declaration, grant a certificate under his hand of the proof contained in such declaration, stating the ship in which, and the port to which, the goods are to be exported; and such certificate shall be the proper document to be produced at such port in proof that the goods mentioned therein are of the growth, produce, or manufacture of such island respectively.—§ 180.

Officers may board Ships.—The officer of customs may go on board any ship in any port in any British possession in America, and rummage and search such ship for prohibited goods, and if there be any goods on board prohibited to be imported into such possession they shall be forfeited.—§ 181.

Seized Goods, if unclaimed for a Month, to be condemned, and dealt with accordingly.—All vessels, boats, goods, and other things which shall have been or shall hereafter be seized as forfeited in or near any of the British possessions abroad, under this or any act relating to the customs, shall be deemed and taken to be condemned, and may be dealt with in the manner directed by law in respect to vessels, boats, goods, and other things seized and condemned for breach of any such act, unless the person from whom such vessels, boats, goods, and other things shall have been seized, or the owner of them, or some person authorised by him, shall, within one month from the day of seizing the same, give notice in writing to the person or persons seizing the same, or to the chief officer of customs at the nearest port, that he claims the vessel, boat, goods, or other things, or intends to claim them.—§ 182.

Penalties and Forfeitures, how to be recovered in British Possessions abroad.—Whenever any penalty or forfeiture shall have been incurred in any of the British possessions abroad, under this or any other act relating to the customs, such penalty or forfeiture shall and may be sued for, prosecuted, recovered, and disposed of in the Court of Record or of Vice-Admiralty having jurisdiction in any British possession where the same may have been incurred or forfeited; but in case there shall be no such court at such British possession, such penalty or forfeiture shall and may be sued for, prosecuted, recovered, and disposed of in the Court of Record or of Vice Admiralty having jurisdiction in some British possession near to that where such penalty or forfeiture may have been incurred; and all such penalties and forfeitures shall be deemed to be sterling money of Great Britain, and paid accordingly.—§ 183.

Application of Penalties.—All penalties and forfeitures recovered in the Channel Islands or in any of the British possessions abroad under this or any act relating to the customs, shall be paid into the hands of the collector, comptroller, or other proper officer of the port or place where the same shall have been recovered, and shall be divided, paid, and applied as follows; (that is to say,) after deducting the charges of prosecution from the produce thereof, ¼ of the net produce shall be paid to or for the use of

H. Majesty, ½ to the governor or commander-in-chief of the colony or plantation, and the other ½ part to the seizor, informer, and prosecutor; excepting such penalties and forfeitures as are from seizures made at sea by the commanders or officers of H. Majesty's ships of war duly authorised to make seizures, one moiety of which, first deducting the charges of prosecution from the gross produce, shall be paid as aforesaid to and for the use of H. Majesty, and the other moiety to the seizor, informer, and prosecutor, subject nevertheless to such distribution of the produce of the seizures so made at sea, as well with regard to the moiety herein-before granted to H. Majesty as with regard to the other moiety given to the seizor, informer, or prosecutor, as H. Majesty shall think fit to direct by order in council or by proclamation.—§ 184.

Bail may be given for Seizures.—If any goods or any ship or vessel shall be seized as forfeited under this or any act relating to the customs, and detained in any of the British possessions in America, the judge or judges of any court having jurisdiction to try and determine such seizures may, with the consent of the chief officer of customs, order the delivery thereof, on security by bond, with two sufficient sureties, to be first approved by such officer, to answer double the value of the same in case of condemnation; and such bond shall be taken to the use of H. Majesty in the name of the officer of customs in whose custody the goods or the ship or vessel may be lodged, and such bond shall be delivered and kept in the custody of the officer; and in case the goods or the ship or vessel shall be condemned, the value thereof shall be paid into the hands of such collector or officer, who shall thereupon cancel such bond.—§ 185.

Suits to be commenced in Name of Officers.—No suit shall be commenced for the recovery of any penalty or forfeiture in the Channel Islands, or in any of the British possessions abroad under this or any act relating to the customs, except in the name of such officer of the customs or navy, or other person employed as herein-before mentioned, or of H. Majesty's advocate or attorney-general for the place where such suit shall be commenced; and if a question shall arise whether any person is an officer of the customs or navy, or such other person as aforesaid, *vivâ voce* evidence may be given of such fact, and shall be deemed legal and sufficient evidence.—§ 186.

Limitation of Appeals.—No appeal shall be prosecuted from any decree or sentence of any of H. Majesty's courts in America touching any penalty or forfeiture imposed by this or any act relating to the customs, unless the inhibition shall be applied for and decreed within 12 months from the time when such decree or sentence was pronounced.—§ 187.

Security to abide an Appeal from Vice Admiralty.—If any proceedings shall have been or shall hereafter be instituted in any court of vice-admiralty or any other competent court in any of H. Majesty's possessions abroad, against any ship, vessel, boat, goods, or effects, for the recovery of any penalty or forfeiture under this or any act relating to the customs, the execution of any sentence or decree restoring such ship, vessel, boat, goods, or effects to the claimant thereof, which shall be pronounced by the said Vice-Admiralty Court in which such proceedings shall have been had, shall not be suspended by reason of any appeal which shall be prayed and allowed from such sentence; provided that the party or parties appellate shall give sufficient security, to be approved of by the court, to render and deliver the ship, vessel, boat, goods, or effects concerning which such sentence or decree shall be pronounced, or the full value thereof, to be ascertained either by agreement between the parties, or, in case the said parties cannot agree, then by appraisement under the authority of the said court, to the appellant or appellants, in case the sentence or decree so appealed from shall be reversed, and such ship, vessel, boat, goods, or effects be ultimately condemned.—§ 188.

Persons authorized to seize under 5 G. 4. c. 113. to have Benefit of this Act.—All persons authorised to make seizures under the act 5 Geo. 4. c. 113., shall, in making and prosecuting any such seizures, have the benefit of all the provisions granted to persons authorized to make seizures under this act; and all penalties and forfeitures created by the said act, whether pecuniary or specific, shall (except in cases specially provided for by the said act) go and belong to such persons as are thereby authorised to make seizures, in such shares, and shall and may be sued for and prosecuted, tried, recovered, distributed, and applied, in such and the like manner, and by the same ways and means, and subject to the same rules and directions, as any penalties and forfeitures incurred in Great Britain and in the British possessions in America respectively now go and belong to, and may be sued, prosecuted, tried, recovered, and distributed respectively in Great Britain or in the said possessions, under and by virtue of this act.—§ 189.

Colonial Laws repugnant to Acts of Parliament void.—All laws, byelaws, usages, or customs at this time or which hereafter shall be in practice, or endeavoured or pretended to be in force or practice, in any of the British possessions in America, which are in anywise repugnant to this act, or to any act relating to the customs or to trade and navigation, so far as the same shall relate to the said possessions, are and shall be null and void to all intents and purposes whatsoever.—§ 190.

Trade with the Channel Islands.—No goods or passengers shall be brought, imported, or carried into the U. K. from the Channel Islands, nor shall any passengers or goods be exported or carried from the U. K. to the said islands, nor shall any goods or passengers be carried from any one of the said islands to any other of them, nor from one part of any of the said islands to another part of the same, except in British ships; and if any goods or passengers be brought, imported, exported, or carried coastwise contrary hereto, all such goods shall be forfeited, and the master of the ship in which the same are so brought, imported, exported, or carried shall forfeit the sum of 100*l.*—§ 191.

Spirits from and to the Channel Islands in Ships of 50 Tons and Casks of 20 Gallons.—No spirits (except rum of the British plantations) shall be imported into or exported from the Channel Islands or any of them, or be removed from any one to any other of the said islands, or be carried coastwise from any one part to any other part of any one of the said Islands, or shall be shipped in order to be so removed or carried in any ship of less burden than 50 tons, nor in any cask or other vessel capable of containing liquids not being of the size or content of 20 gallons at the least; and all spirits imported, exported, removed, carried, shipped, or waterborne to be so shipped, removed, or carried, contrary hereto, shall be forfeited, together with the ship and any boat importing, exporting, removing, or carrying the same: provided always, that nothing herein contained shall extend to any spirits imported in glass bottles as part of the cargo, nor to any spirits being really intended for the consumption of the seamen and passengers during their voyage, and not being more in quantity than is necessary for that purpose, nor to any warehoused goods exported from the U. K. in ships of less than 40 tons burden, being regular traders to those islands, nor to any boat of less burden than 10 tons, for having on board at any one time any foreign spirits of the quantity of 10 gallons or under, such boat having a licence from the proper officer of customs at either of the islands of Guernsey or Jersey for the purpose of being employed in carrying commodities for the supply of the island of Sark, which licence such officer of customs is hereby required to grant without fee or reward; but if any such boat shall have on board at one time any greater quantity of spirits than 10 gallons, unless in casks or packages of the size and content of 20 gallons at the least, such spirits and boat shall be forfeited.—§ 192.

Importation of Cigars, &c., from Channel Islands.—No tobacco, cigars, or snuff shall be imported into the Channel Islands in ships of less than 120 tons burden, nor unless in hogsheads, chests, or cases, each containing not less than 200 lbs. net weight of such tobacco or snuff, nor unless in packages each containing not less than 100 lbs. net weight of such cigars, such tobacco or snuff not being in any manner separated or divided within such package, except tobacco, cigars, or snuff from the U. K., which may be imported from thence into the said islands in ships of not less than 50 tons burden, or in ships regularly trading to those islands not being of less than 40 tons burden, and in packages of the same weight and subject to the same provisions in and under which the like sorts of goods may respectively be legally im-

ported into the U. K.; and all cigars, tobacco, or snuff imported into the said islands contrary hereto, or which shall be found or discovered to have been on board any ship or boat within one league of the coasts thereof, shall be forfeited, together with the ship or boat.—§ 193.

Malta deemed to be in Europe.— The island of Malta and its dependencies shall be deemed to be in Europe.—§ 194.

Connection of the Planter and Home Merchant. Mode of transacting Business in England.—The mode of transacting West India business is as follows:— A sugar planter forms a connection with a mercantile house in London, Bristol, Liverpool, or Glasgow; stipulates for an advance of money on their part; grants them a mortgage on his estate; and binds himself to send them annually his crop, allowing them the full rate of mercantile commissions. These commissions are 2½ per cent. on the amount of sugar sold, and of plantation stores sent out; along with ½ per cent. on all insurances effected. During the war, when prices were high, the amount of these commissions was large; but, like other high charges, the result has, in nine cases in ten, been to the injury of those who received them; they led the merchants to undertake too much, and to make too large advances to the planters, for the sake of obtaining their business. At that time it was usual to allow a permanent loan at the rate of 3,000*l.* for the assured consignment of 100 hogsheads of sugar; but that *ratio* was very often exceeded by the planter, the 3,000*l.* becoming 4,000*l.*, 5,000*l.*, 6,000*l.*, and, in very many cases, still more, in consequence of unforeseen wants and too sanguine calculations on his part.

Persons resident in the West Indies are almost always bare of capital, and for obvious reasons. A climate of such extreme heat, and a state of society possessing so few attractions to persons of education, offer no inducement to men of substance in Europe to go thither. Those who do go, must trust to their personal exertion and the support of others; and when, after a continued residence in the West Indies, they have made some progress in acquiring a competency, and have become accustomed to the climate, they hardly ever consider themselves as settled there for life; their wish and hope is, to carry their acquisitions so far as to be enabled to pass the remainder of their days comfortably at home. The readiest means, in the view of the planter, for accomplishing this, used to be the extension of his undertakings; which he could do only by borrowing money. Hence a continual demand on his mercantile correspondents at home for fresh advances: the consuming effect of heavy commissions, and of the interest on borrowed money, being overlooked in his ardent speculations. But when prices fell, as they have done of late years to a comparatively low level, the planters found themselves embarrassed with debts contracted under a different state of things, which in but few instances they could expect to discharge: hence their ruin, and hence, also, the ruin of many of the merchants and mortgagees connected with the planters.

For a number of years the West India trade has been extremely depressed; and it is, perhaps, impossible to point out any means of effectual relief. The planters need not build expectations on such doubtful, or rather improbable, events as the stoppage of distillation from malt, or an insurrection or emancipation of the negroes in rival countries, such as Cuba or Brazil. Of a bounty on exportation it is idle to speak: so that their only rational ground of hope seems to be in the introduction of improved processes, and a reduction in the cost of producing sugar and other staples.

The sale of West India articles takes place through the medium of produce brokers, who in London reside chiefly in Mincing Lane and Tower Street. Samples of sugar and rum are on show in their respective sale rooms during four days of the week, viz. Tuesday, Wednesday, Thursday, and Friday, from 11 to 1 o'clock; during which time the sugar refiners, wholesale grocers, and other dealers in produce, call in, observe the state of the market, and buy what they require. The term of credit is short; only 1 month for coffee and rum, and 2 months for sugar. Coffee is generally sold by public auction, sugar and rum by private contract. The broker's commission is usually ½ per cent. on the amount; but in the case of coffee, as they guarantee the buyers, their charge amounts to 1 per cent. The brokers have no correspondence or connection with the planters; they are employed by the merchants; and their sales, though for large amounts, being very simple, a brokerage house of consequence generally does the business of a number of merchants. Neither merchant nor broker see, or are in the least under the necessity of seeing, the bulky packages containing the different articles of produce of which they effect the sales: all is done by sample; the packages remaining in the bonded warehouse from the time of landing till they are sold; after which they pass to the premises of the refiner, wholesale grocer, or whoever may be the purchaser.

The allowances made to the buyer in respect of weight, consist, first of the tare, which is the exact weight of the cask; and, in the second place, of a fixed allowance of 5 lbs. per cask in the case of coffee, called trett, and of 2 lbs. per cask on sugar, under the name of draft.—(See *Account Sales* of both, in p. 158.)

The shipping stores from England to the plantations is also a very simple transaction. West India merchants in London, Liverpool, or Bristol, receive from the planters, in the autumn of each year, a list of the articles required for the respective estates: these lists they divide, arrange, and distribute among different wholesale dealers in the course of September and October, with instructions to get them ready to ship in a few weeks. November and December are the chief months for the despatch of outward-bound West Indiamen, as the plantation stores ought, by rights, to arrive about the end of December, or in the course of January. That is a season of activity, and generally of health, in the West Indies; the comparatively cool months of November and December having cleared the air, and the produce of the fields having become ripe and ready to carry. Crop time lasts from January to the end of July, after which the heavy rains put a stop to field work in the islands. Demerara, being so near the line, experiences less difference in the seasons, and it is customary there to continue making sugar all the year round.

The arrivals of West Indiamen in England with homeward cargoes begin in April and continue till October; after which, with the exception of occasional vessels from Demerara and Berbice, they cease till the succeeding April. This corresponds with the time of carrying and loading the crops: for it would be quite unadvisable, on the score of health, as well as of the interruptions to work from the heavy rains, to attempt loading vessels in the sugar islands during the autumnal months.

The unloading of West Indiamen in London usually takes place at the West India docks; and did so uniformly from the autumn of 1802, when the docks were first opened, till August, 1823, when the dock monopoly expired. Cargoes are discharged very speedily, the time seldom exceeding 3 days. The dock dues have been materially reduced of late years: and the whole exhibits a striking example of the advantage attendant on transacting a mass of business on one spot; an advantage which can be enjoyed only in great sea-ports, such as London, Liverpool, or Amsterdam.—(See Docks.)

The rates of freight during the war were, on sugar from 7*s.* to 8*s.* per cwt., and on coffee from 10*s.* to 11*s.*; whereas they now amount, the former to 3*s.* 6*d.* and the latter to 4*s.* 6*d.*; the ship-owners, from the improvements that have been effected, being better paid now than formerly.

Selection of Sites for Colonial Establishments. — Nothing can be more unwise than the plan, if so we may call it, hitherto followed in the selection of places at which to found colonies. The captain of a ship, without any knowledge whatever of the nature of soils or the capacities of a country in an agricultural point of view, falls in after a long cruise with a river or bay, abounding with fish and fresh water, and surrounded with land that *looks* fertile and is covered with herbage. He forthwith reports all these circumstances, duly embellished, to the Admiralty, strongly recommending the situation as an admirable one at which to found a colony; and, in nine cases out of ten, *this* is all the information that is required in taking a step of such infinite importance! No wonder, therefore, that many fine schemes of colonisation should have ended only in loss and disappointment; and that situations which the colonists were taught to look upon as a species of paradise, have proved to be any thing but what they were represented. Botany Bay, though described by Captain Cook as one of the finest places in the world, had to be abandoned by the colonists that were sent out to it; as the country round it, instead of being favourable for cultivation, is a mere sandy swamp. Is it possible to suppose, had the proper inquiries been entered into, that any attempt would have been made to establish a colony in so pestilential a climate as that of Sierra Leone? The colony on Swan River may be adduced as another instance of misplaced or premature confidence in the reports of those who were really without the means of forming a correct estimate of the various circumstances necessary to be attended to in forming a colony.

We, therefore, hope that an end may be put to this system, — a system which is in no common degree injurious to the public interests, and is highly criminal towards those who embark as colonists. The founding of a colony should be looked upon in its true point of view—as a great national enterprise. It is not an adventure to be intrusted to presumptuous ignorance; but should be maturely weighed, and every circumstance connected with it carefully investigated. Above all, the situation in which it is proposed to found the colony should be minutely surveyed; and its climate, soil, and capacities of production deliberately inquired into by competent persons employed for the purpose. Were this done, government and the public would have the best attainable grounds upon which to proceed; and neither party would have much reason to fear those disappointments, which have hitherto so often followed the exaggerated representations of those to whom the important and difficult task of selecting situations for colonies has been delegated.

V. Foreign Colonies.

1. *Spanish Colonies.*—Spain, whose colonial possessions extended a few years ago from the frontiers of the U. States to the Straits of Magellan, is not, at present, possessed of a foot of ground in the whole American continent. Still, however, her colonial possessions are of great value and importance. In the West Indies, she is mistress of Cuba and Porto Rico;—the former by far the largest and finest of the West Indian islands; and the latter also a very valuable possession. In the East, Spain is mistress of the Philippine Islands, which, were they in the hands of an enterprising people, would speedily become of very great commercial importance.—(See the articles Havannah, Manilla, Porto Rico.)

2. *Dutch Colonies.*—Java is the principal Dutch colonial possession, and it is one of which it is not easy to exaggerate the value and importance.—(See Batavia.) In the East the Dutch also possess the Moluccas, Bencoolen on the coast of Sumatra, Macassar, and the eastern coast of Celebes, Banda, &c. They have several forts on the Gold Coast in Africa; and in the West Indies they possess the islands of Curaçao and St. Eustatius, Saba, and part of St. Martin; and on the continent of South America, they are masters of Dutch Surinam. Curaçao and St. Eustatius are naturally barren, but they have been both highly improved. From its being very conveniently situated for maintaining a contraband traffic with the Caraccas and other districts in South America, Curaçao was formerly a place of great trade, particularly during war. But since the independence of South America, Curaçao has ceased in great measure to be an *entrepôt*; the goods destined for the continent being now, for the most part, forwarded direct to the places of their destination.

That district of Surinam ceded to the British in 1814, comprising the settlements of Demerara, Berbice, and Essequibo, formed the most valuable portion of Surinam, or Dutch Guiana. The district which still belongs to the Dutch lies to the south of Berbice. It contains about 38,000 square miles, and a population of about 53,000. The value of the exports of sugar from this colony in 1854 was estimated at 2,313,000 fl. and in 1855 at 2,507,000 fl.

3. *French Colonies.*—Previously to the negro insurrection that broke out in 1792, St. Domingo was by far the most valuable colony in the West Indies. But this disastrous event, having first devastated the island, terminated in the establishment of the independent black republic of Hayti.—(See Port au Prince.) Having also sold Louisiana to the Americans, and ceded the Mauritius to the English, without making any new acquisition, the colonial dominions of France (for Algiers cannot be reckoned amongst them) are, at this moment, of very limited extent. The most important are Martinique and Guadaloupe in the W. Indies, the former with (in 1851) a population of 123,701, and the latter of 132,810. The exports of these islands were in 1857 as follows:—

	Martinique.	Guadaloupe.		Martinique.	Guadaloupe.
Sugar - - lbs.	59,333,880	50,791,000	Cassia - - lbs.	180,695	1,170
Rum - - gals.	1,120,370	174,146	Logwood - - lbs.	186,507	205,938
Coffee - - lbs.	125,435	720,019	Cotton - - lbs.	4,594	64,172
Cocoa - - lbs.	299,902	51,041			

The emancipation of the slaves was injurious to these islands; but the deficiency of labour thence arising has been, in part at least, supplied by immigrants. The crops of 1857 were below an average. The other French colonies consist of the small islands of Marie-Galante and Deseada, in the West Indies; Cayenne, in South America; Senegal and Goree, in Africa; the Isle de Réunion (Isle de Bourbon), in the Eastern Ocean; St. Marie, in Madagascar; and Pondicherry and Chandernagor, with a very small surrounding territory, in the E. Indies.

Of these the Isle de Réunion is the most important, and the exports from it have latterly increased very rapidly. At an average of 1849 and 1850, for example, she only sent to France 18,681,530 kilog. a year of sugar, whereas in 1855 and 1856 she sent to France no fewer than 47,918,170 kilog. a year. This extraordinary increase has been wholly owing to the importation of labourers from India, Africa, and Madagascar, and to the extensive employment of guano as manure.

4. *Danish Colonies.*—In the West Indies, these consist of the islands of St. Croix, St. Thomas, and St. John, and having together, in 1855, a population of 37,187. St. Croix contains about 100 sq. miles, and is fertile, and well cultivated. The principal productions are sugar, rum, and coffee. The exports formerly amounted to about 25,000,000 lbs. a-year, but they have been diminished in consequence of the emancipation of the slaves in 1848. St. Thomas, which has about 14,000 inhabitants, has long been, and though latterly much fallen off, it still continues to be one of the principal emporiums in the West Indies. It owes this distinction partly to its convenient situation, partly to its spacious and safe harbour at St. Thomas, on the S. side of the island, and partly and principally to the moderation of the import duties, which vary from 1 to 1½ per cent. St. Thomas has, in consequence, become as it were a depôt for the supply of the neighbouring islands; goods being sent to it to be warehoused till opportunity offers for conveying them to their final destination. The great articles of importation are manufactured goods, principally from England, but partly, also, from other countries of Europe, with provisions, lumber, &c. from the U. States.

The value of our exports to the 3 islands now referred to, 9-10ths being for St. Thomas, amounted in 1857, to 888,045*l.*, of which cottons made 464,414*l.*, linens 158,024*l.*, hardware and cutlery, 36,322*l.* &c.

In India the Danes formerly possessed Tranquebar, near Madras; and Serampoor, near Calcutta, but these they sold, in 1845, to the East India Company.

5. *Swedish Colonies.*—The Swedes possess one colony—the small island of St. Bartholomew, in the West Indies. It is only about 25 square miles in extent, but is very fertile. It has no springs, nor fresh water of any sort, except such as is supplied by the rain. Population between 8,000 and 9,000.

COLUMBO, the modern capital of Ceylon, on the south-west coast of the island; lat. 6° 56′ 6″ N., long. 79° 49′ 48″ E. It is defended by a very strong fort nearly surrounded by the sea, in which is a lighthouse 97 feet high. Population of the town and fort, in 1858, perhaps, 56,000. The houses, generally only one story high, are of stone, clay, and lime; and the town has more of a European appearance than any other in India. The inhabitants are principally Cingalese. The temperature is remarkable for its equality; and though very humid, the climate may, on the whole, be esteemed salubrious and temperate. There is no harbour at Columbo for large vessels, but only an open roadstead. A projecting rock, on which two batteries are erected, affords shelter to a small semicircular bay on the north side of the fort, having a wooden quay to facilitate the loading and unloading of boats. The depth of water is not

sufficient to allow sloops or large dhonies to come alongside the quay; those exceeding 100 tons burden lying at about a cable's length from it. A bar of sand, on some parts of which the water is not more than 7 feet deep, extends from the projecting rock across this bay. The channel where it may be crossed by the larger class of ships is liable to shift; and it is only in the fine weather of the safe season that they venture within the bar. The outer road affords secure anchorage for half the year, from the beginning of October to the end of March, during the prevalence of the N. E. monsoon, when the wind blows off the land: during the other, or S. W. monsoon, when the wind blows from the sea on shore, the road is very far from safe; and the ships that frequent it are sometimes obliged to slip their cables and stand out to sea. —(*Milburn's Orient. Comm.; Hamilton's Gazetteer, &c.*)

As respects its harbour, Columbo is, therefore, very inferior to Trincomalee, the harbour of which is accessible at all times, and one of the best in India, and it is also inferior to the harbour of Point de Galle. The country in the vicinity of Columbo has, no doubt, an extensive internal navigation; but as the cinnamon plantations near the town have lost much of their former importance, and as the central provinces adapted to the growth of coffee, now the great staple of the island, may be as easily reached from the other harbours as from Columbo, the decline of the commercial preponderance of the latter is far from unlikely.

Moneys.—The rix dollar = 1*s.* 6*d.*, has become obsolete, and the currency now consists of silver rupees = 2*s.* in which, or in dollars = 4*s.* 2*d.* accounts are kept.

The Bank of Ceylon, noticed in the former edition of this work, is extinct. There are now (1859) in Columbo—1st, A branch of the Oriental Bank Corporation, head-office, London; and 2nd, a branch of the Mercantile Bank of India, London, and China, head office, Bombay.

Weights, Measures, &c.—The weights are divided into ounces, pounds, &c., and are the same as in Great Britain. The candy or bahar=500 lbs. avoirdupois, or 461 lbs. Dutch Troy weight. The principal dry measures are *seers* or *parrahs*. The former is a perfect cylinder, of the depth and diameter under-mentioned:—

	Depth	Diameter.
Seer	4·35 inches.	4·35 inches.

The parrah is a perfect cube, its external dimensions being every way 11·57 inches.

The liquid measure consists of gallons, and their multiple and sub-multiples. 150 gallons = 1 leaguer or legger.

The bale of cinnamon consists of 92½ lbs. very nearly.

The great articles of export from Ceylon are coffee, cocoa-nut oil, areca nuts, cinnamon, plumbago, coir, arrack, tobacco, pearls, chanks, &c. The island is peculiarly suitable for the culture of coffee, the growth of which has rapidly increased since the reduction, in 1835, of the duty on coffee from Ceylon to the same level as that on coffee from the West Indies, the imports into the U. Kingdom from Ceylon in the former year having been only 1,870,143 lbs., whereas in 1858 they amounted to 43,755,163 lbs., and the supply appears to be susceptible of an indefinite increase. The exports of cocoa-nut oil, coir, and arrack might, also, be greatly increased; and it will be seen in the art. CINNAMON, how the growth of that important staple was restricted by the duty laid on its exportation.

Sailing Directions and Remarks on the Port of Columbo, by James Stewart, Esq., Master Attendant.

The land about Columbo is low near the sea, with some hills to the eastward at a distance in the country. The high mountain having on it a sharp cone, called Adam's Peak, bears from Columbo E. 7° S., distant 12½ leagues; its height above the level of the sea is estimated at about 7,000 feet, according to a rough trigonometrical measurement by Colonel Willerman. When the atmosphere is clear, it may be seen 50 leagues. During the prevalence of the N. E. monsoon Adam's Peak is generally visible in the morning, and frequently the whole of the day; but it is rarely seen in the S. W. monsoon, dense vapours generally prevailing over the island at this season.

Ships approaching Columbo in the night have a brilliant light to direct them, which is exhibited every night from a lighthouse in the fort; the height of the light above the level of the sea is 97 feet, and may be seen in clear weather as far as the light appears above the horizon.

A steep bank of coral, about ½ a mile broad, with 15 fathoms water on it, lies 7 miles W. from Columbo, extending northward towards Negombo (where its surface is sand), and a few miles to the southward of Columbo; outside the bank the water deepens at once to 25 fathoms, and in 2 miles to 28 fathoms, greenish sand, which is not far from the edge of soundings. Within the bank there are 25 fathoms gradually shoaling towards the shore.

A bed of sunken rocks, called the Drunken Sailor, lies S.W. by W. ½ W. from Columbo Lighthouse, distant 1,000 yards. The length of the ledge may be estimated at 100 yards, and the breadth 20 yards: on its N. end a small spot, about the size of the hull of a 20 ton boat, is said to have only 3 feet water on it at low water; but during several recent visits, when some of the coral from its surface was brought up, there did not appear to be less than 7 feet 6 inches water on the shallowest part: on the other parts of the ledge there is 4, 5, and 6 fathoms. The sea breaks on the shallow part of these rocks almost constantly during the S. W. monsoon, but this is very seldom the case during the N. E. monsoon.

The Drunken Sailor should not be approached under 9 fathoms during the night, as there are 8 fathoms very near to it, and in its stream to the southward.

The passage within the Drunken Sailor is clear, and some ships have sailed through; but no advantage can be gained by approaching the shore so very near at this point.

The Drunken Sailor lies so near the land, and so far to the southward of the anchorage in Columbo road, as scarcely to form any impediment to ships bound to or from Columbo.

The currents off Columbo are subject to considerable variation; but they are never so strong as to cause inconvenience to ships which may have to communicate with the shore in either monsoon without coming to anchor.

Columbo road affords good anchorage, free from foul ground; and is frequented at all seasons of the year.

The best anchorage during the prevalence of S. W. winds from April to October, is in from 7 to 8 fathoms, with the lighthouse bearing S. by E. ¼ E., Dutch Church E. by S. In the N. E. monsoon from November to April, it is more convenient to anchor in 6½ fathoms, with the lighthouse bearing S. or S. ¼ E., and the Dutch church E. S. E.

Ships requiring pilots to conduct them to the anchorage should make the usual signal; the charge for pilotage is 15*s.*

The bar is a bank of sand with 7 feet water on its shallowest part, the northern extremity being about 440 yards N. W. of the Custom-house Point; small vessels that draw less than 10 feet water ride within the bar protected from the S. W. wind and sea.

When the sea is high, it breaks with great force on the bar, and renders the passage from the shipping in the outer road dangerous for small boats: the native boats generally pass out and in to the southward of the bar, close to the breakers on the rocky point of the Custom-house; but as the passage is narrow, it should not be attempted by strangers: when the sea breaks on the bar, it is better to proceed round to the northward of the bar, which may be easily distinguished by the breakers.

What is strictly understood by a gale of wind, is a rare occurrence at Columbo; this may be owing to the vicinity of the equator. The strong gales which blow on the Malabar coast are felt in small squalls, and a high sea, but there is scarcely wind to endanger vessels properly found in ground tackling; it is true, ships have sometimes required the aid of a second anchor, but in most cases the cause has been attributable to some defect in the first anchor or cable, a light anchor, an anchor breaking, a short chain, or the chain coming unshackled; an instance occurred in Columbo road, of two ships receiving cargo during the S. W. monsoon, whose chain cables came unshackled twice: twice did it occur to each ship.

Exemptions.

Books and maps printed; bullion, pearls, precious stones (unset); horses, mules, asses, and all other live stock; shells, couries, chanks; seeds and plants; specimens illustrative of natural history free.

Port Dues.—2*d.* per ton for entry inwards and at the rate of 2*d.* per ton for clearance outwards on all ships and vessels arriving at or departing from any port of this island. Provided always, that such dues shall not be payable on any vessel entering inwards or clearing outwards in ballast, nor in cases when the cargoes are deported for exportation, and ultimately the vessel leaves the port without breaking bulk, or taking in merchandise for the purpose of exportation.

No vessel either at the time of entering inwards with cargo, or at the time of clearing outwards with cargo, shall be subject to pay more than £5 as port dues, whatever may be the tonnage of the vessel. Provided always, that a vessel shall pay port dues only at one port in this island during the same voyage.

Any vessel employed for the conveyance of goods between one port and another in this island only, shall be allowed to compound for port dues for 12 months at the rate of 1*s.* per ton of the registered tonnage; and on payment thereof, the collector or other principal officer shall grant a certificate, which shall exempt such vessel, while so employed, from any further demand for port dues during the period stated in such certificate.

General Rates of Agency, Commission, and Godown Rent agreed upon by the Chamber of Commerce of Ceylon, on the 29th April, 15th May, and 12th June, 1839; and revised 5th August, 1848.

	Per cent
1. On all sales and shipments - -	5
With the following exceptions:	
On returns made with the proceeds of goods, on which commission has been previously charged -	2½
On treasure, bullion, and bank shares -	1
On all property withdrawn, shipped, or delivered to order - - - -	2½
2. On guaranteeing sales, bills, bonds, contracts, or other engagements - - -	2½
3. On ships' disbursements - - -	5
4. On advertising for freight and passengers, on the amount of freight or passage money, whether the same pass through the agent's hands or not -	5
5. On effecting insurance or writing orders, for insurance	0½
6. On settling losses, partial and general, and returns of premium - - - -	5
7. On procuring money on respondentia - -	2½
8. On attending the delivery of contract goods, or receiving and delivering private commissions of wines, cattle and merchandise - - -	2½
9. On the total sum of the debit or credit side of an account at the option of the agent, excepting items on which a commission of 5 per cent. is chargeable	1
10. On effecting remittances, or on purchasing, selling, or negociating bills of exchange - -	1
11. On collecting freight inward or outward - -	5
12. On letters of credit granted - - -	2½
13. On the management of estates, as executors, administrators, or attorneys - - -	5
14. On debts, when a process at law or arbitration is necessary - - - -	2½
And if recovered by such means - -	5
15. On all debts collected or secured - -	5
16. On executing transfer of immovable property -	1
17. On landing, clearing, and delivering specie from steamers or other vessels, when above 1000*l.* -	0½
—— if under 1000*l.* - -	0½
18. On sales or purchases of ships, houses, or lands -	2½

Warehouse Rates. For all goods bonded in any Queen's Warehouse.

	Per week. £	s.	d.
For every butt, pipe, or puncheon	0	0	3
Half pipe or hogshead	0	0	2
Barrel or quarter cask	0	0	1
Cask or keg of smaller size	0	0	0¼
Six dozen case of wine, spirits or other liqueurs	0	0	2
Three dozen — —	0	0	1
One dozen — —	0	0	0½
Crate, cask, or case of hardware, earthenware or ironmongery	0	0	3
Bale of Indian cloth	0	0	3
Half bale	0	0	1½
Bale, case, or box measuring 60 cubic feet or upwards	0	0	4
— — 40 cubic feet & under 60	0	0	3
— — 20 cubic feet & under 40	0	0	2
— — 10 cubic feet & under 20	0	0	1
Other small boxes or packages	0	0	0½
Bag of rice, sugar or coffee	0	0	1
Ton of heavy goods, metals, timber, &c.	0	0	6

Other goods not enumerated, of the like weight or bulk, to be charged in proportion to these rates.

Double these rates will be charged on all goods landed under the provisions of the 21st clause of the ordinance No. 18 of 1852, which may not be entered or removed within 7 days.

Goods left on the quay, half of the above rates.

Goods brought to the custom house for exportation, and lodged in any of the custom house premises, if not shipped within two days, will also be charged half of the above rates.

25 per cent. will be deducted from the rent for all time exceeding 52 weeks. A week's rent will be charged for all fractions of a week.

Goods may be lodged in the Queen's warehouse for a period of 7 days free of charge, when, if not entered and removed for consumption, or bonded, they will be liable to the rates above mentioned.

Shipping and Landing Charges of the Cargo Boat and Wharf Improvement Company.

	£	s.	d.
120 bags of coffee of 1½ cwt. (and in proportion for larger)	0	12	6
18 casks of coffee of 6 cwt. each	0	12	6
60 bales of cinnamon of 100 lbs. each	0	12	6
30 hogsheads of oil	0	12	6
40 pipes of oil	0	12	6
120 boxes of plumbago	0	12	6

Rope yarn, horns, &c. in proportion.

Ballast, 13*s.* 6*d.* per load of about 7 tons.

Goods landed and warehoused at the Rates fixed by the Chamber of Commerce.

		£	s.	d.
Butts and pipes of wine or beer	each	0	1	0
Bales, hogsheads, and cases above the size of 3 doz. wine	—	0	0	9
Half bales, barrels, and cases above 1 doz. and not more than 3 doz.	—	0	0	6
Kegs, one doz. cases or packages of like size or less	—	0	0	3
Packages of 1 ton and not exceeding 1½ ton by weight or measurement	—	0	3	0
Packages under 1 ton by weight or measurement	—	0	0	9
Metals, per ton	—	0	3	0
Hogshead staves in packs, per 100 bundles	—	0	18	0
Puncheon	—	0	22	6
Rice or sugar, per 100 bags or robbins	—	0	15	0
Wheat, per 100 bags	—	0	18	0

Machinery by special agreement.

Double the above rates when the packages imported are less than 6 in number.

Specie will be landed by agreement with the manager.

Special agreements can be made with the manager for loading of coal, grain, and timber cargoes.

The total imports into Ceylon, in 1856, amounted (inc. 1,040,082*l.* in specie) to 2,714,565*l.* Rice, and other grain, and cotton goods are the principal articles of import, the former being wholly, and the latter partially, supplied by India. The exports from this country to Ceylon are smaller than might be supposed, having only amounted, at an average of 1856 and 1857, to 452,546*l.* a year. We subjoin

An Account of the Values of the Principal Articles imported into Ceylon in 1856.

	£	s.	d.
Coal and coke	68,453	1	0
Cotton manufacture	314,506	3	3
Cotton twist	35,501	17	7
Cotton wool	36,472	0	7
Couries and shells	15,985	6	0
Cutlery and hardware	13,640	12	4
	20,784	4	0
Earthenware	15,784	15	10
Fish dried and salted	56,800	16	0
Gram	17,665	16	0
Paddy	55,760	19	3
Rice	552,543	1	1
Wheat	13,106	5	0
Gunnies and twines	18,123	17	9
Haberdashery and millinery	26,537	3	9
Cattle, exclusive of horses and sheep	23,515	4	0
Malt liquor	16,286	16	0
Opium	10,303	15	9
All other articles (except specie)	362,011	0	8

Extent, Population, Revenue, &c. of Ceylon.—The area of Ceylon and its dependent islets is estimated at 25,742 sq. miles. Its population, according to a census taken in 1837, amounted to 1,243,066, of whom about 6,600 were whites. And if this statement may be depended upon, it would seem that the population has increased considerably in the interval; for it appears from a census taken in 1856 that the population then amounted to 1,691,924, of whom above 7,000 were whites. The following table sets the progress of the colony in a very clear light.

Statement showing the Progress of Ceylon in Population, Revenue, Trade, &c.

	1837.	1845.	1856.
Population of Ceylon	£1,243,066	£1,472,019	£1,691,924
Total public revenue	377,952	454,146	504,174
Value of imports, including specie	411,167	1,494,823	2,546,231
Value of exports, ditto	308,703	685,100	1,718,294
Value of coffee exported	106,999	363,259	981,702
Customs duty, exclusive of cinnamon	59,521	124,005	151,067
Value of arrack exported	12,214	5,611	12,458
Do. areca nuts	27,923	30,430	50,157
Do. cinnamon	49,263	40,820	45,369
Do. cocoanut oil	28,334	15,916	101,421
Do. tobacco	8,768	17,190	36,894
Do. timber	9,250	11,735	17,558
Revenue derived from salt	30,970	36,150	50,329
Do. arrack farms	35,963	61,518	66,171
Do. tolls	5,431	24,934	35,553
Do. stamps	12,812	22,312	31,024
Do. paddy and fine grain rents	40,608	48,228	55,884
Do. postage	2,922	7,385	6,701
Do. fines and forfeitures	729	2,150	4,507
Tax on houses	804	4,090	4,838
Vessels entered inwards	*tons* 71,232	*tons* 169,128	*tons* 345,592
Do outwards	68,463	162,953	335,479

The revenue of 1857 was about 570,000*l.*, including 37,067*l.* from sales of land. The total sales of land from 1834 to end of 1857 was 361,430 acres. The revenue of 1858 is estimated at 571,000*l.*, including

20,000*l.* expected from the pearl fishery. Export duties of 2½ per cent., abolished in 1848, were re-imposed from 1st January, 1858. The total customs revenue of 1858 is estimated at 200,000*l.* The value of 601,000 cwts. of coffee, exported in 1857, was close on 1½ million sterling. The tolls on the Kandy Road alone realised 28,588*l.* in 1857, and were let in 1858 for 31,054*l.*—(*Columbo Observer's Sheet Almanac for* 1858.)

We are indebted for most part of the above and for many other details to our friend Sir James Emerson Tennent, formerly secretary to the government of Ceylon: Judging from the portion that we have seen we shall be greatly mistaken if Sir James' account of Ceylon, now in the press, be not reckoned one of the most important contributions to our colonial literature that has hitherto appeared.

COLOMBO OR CALUMBA ROOT (Da. *Columbo wortel*; Fr. *Racine de Colombo*; Ger. *Colombo-wurzel*; It. *Radice di Colombo*; Port. *Raiz di Columba*; Sp. *Raiz di Columba*; Mosamb. *Kalumb*), the root of the plant of that name; the *Cocculus palmatus* of Decandolle. It is not cultivated, but grows wild in the forests of Mozambique, and being dug up by the natives, is exported by the Portuguese. It is brought to us in transverse sections from ⅛ to ½ in. thick, from 1 to 2½ in. diameter. Bark wrinkled and thick, of a brownish colour without, and a brightish yellow within; pith, spongy, yellowish, and slightly striped; when fresh, its smell is rather aromatic; it is disagreeably bitter, and slightly pungent to the taste, somewhat resembling mustard that has been too long kept. Choose the largest pieces, fresh, of a good colour, as free from worms as possible, rejecting that which is small and broken. It is used in the materia medica, and is a valuable tonic. Freight 16 cwt. to a ton.—(*Milburn's Orient. Com.*; *Thomson's Materia Medica.*)

COMMANDITE (Partnerships en), see Companies, p. [387.] § 6. & Supplement.

COMMERCE, from *commutatio mercium*, is simply, as its name imports, the exchange of commodities for commodities.

I. Origin of Commerce.—Mercantile Classes.
II. Home Trade.
III. Foreign Trade.
IV. Restrictions on Commerce.

I. Origin of Commerce.—Mercantile Classes.

(1.) *The Origin of Commerce* is coeval with the first dawn of civilisation. The moment that individuals ceased to supply themselves directly with the various articles and accommodations they made use of, that moment must a commercial intercourse have begun to grow up amongst them. For it is only by exchanging that portion of the produce raised by ourselves that exceeds our own consumption, for portions of the surplus produce raised by others, that the division of employments can be introduced, or that different individuals can apply themselves in preference to different pursuits.

Not only, however, does commerce enable the inhabitants of the same village or parish to combine their separate efforts to accomplish some common object, but it also enables those of different provinces and kingdoms to apply themselves in an especial manner to those callings, for the successful prosecution of which the district or country which they occupy gives them some peculiar advantage. This *territorial division of labour* has contributed more, perhaps, than anything else to increase the wealth and accelerate the civilisation of mankind. Were it not for it, we should be destitute of a vast number of the necessaries, comforts, and enjoyments which we now possess: while the price of the few that would remain would, in most instances, be very greatly increased. But whatever advantages may be derived—and it is hardly possible to exaggerate either their magnitude or importance—from availing ourselves of the peculiar capacities of production enjoyed by others, are wholly to be ascribed to commerce as their real source and origin.

We do not mean to say anything in this article with respect to the practical details connected with the different departments of commerce. These will be found under the various titles to which they refer. Our object, at present, is merely to show the nature and influence of commerce in general, and the restrictions that have sometimes been imposed upon it. We shall begin by endeavouring, first of all, to give some account of the nature of the services performed by the individuals by whom commercial undertakings are usually carried on. In the second place, we shall consider the influence of the *home* trade, or of the intercourse subsisting amongst individuals of the same country. In the third place, we shall consider the influence of *foreign* trade, or of that intercourse which subsists amongst individuals belonging to different countries. After these topics have been discussed, we shall offer a few remarks on what has been termed the restrictive system; or on the principles involved in the regulations enacted at different times, in this and other countries, for the government and direction of commerce.

(2.) *Mercantile Classes.*—While the exchange of different products is carried on by the producers themselves, they must unavoidably lose a great deal of time, and experience many inconveniences. Were there no merchants, a farmer wishing to sell his

crop would be obliged, in the first place, to seek for customers, and to dispose of his corn as nearly as possible in such quantities as might suit the demands of the various individuals inclined to buy it; and after getting its price, he would next be obliged to send to 10 or 20 different and, perhaps, remote places, for the commodities he wanted to get in its stead. So that, besides being exposed to a world of trouble and inconvenience, his attention would be continually diverted from the labours of his farm. Under such a state of things, the work of production, in every different employment, would be meeting with perpetual interruptions, and many branches of industry that are successfully carried on in a commercial country would not be undertaken.

The establishment of a distinct mercantile class effectually obviates these inconveniences. When a set of dealers erect warehouses and shops for the purchase and sale of all descriptions of commodities, every producer, relieved from the necessity of seeking customers, and knowing beforehand where he may at all times be supplied with such products as he requires, devotes his whole time and energies to his proper business. The intervention of merchants gives a continuous and uninterrupted motion to the plough and the loom. Were the class of traders annihilated, all the springs of industry would be paralysed. The numberless difficulties that would then occur in effecting exchanges would lead each particular family to endeavour to produce all the articles they had occasion for: society would thus be thrown back into primæval barbarism and ignorance; the divisions of labour would be relinquished; and the desire to rise in the world and improve our condition would decline, according as it became more difficult to gratify it. What sort of agricultural management could be expected from farmers who had to manufacture their own wool, and make their own shoes? And what sort of manufacturers would those be, who were every now and then obliged to leave the shuttle for the plough, or the needle for the anvil? A society, without that distinction of employments and professions resulting from the division of labour, that is, *without commerce*, would be totally destitute of arts or sciences of any sort. It is by the assistance each individual renders to and receives from his neighbours, by every one applying himself in preference to some peculiar task, and combining, though probably without intending it, his efforts with those of others, that civilised man becomes equal to the most gigantic efforts, and appears endowed with almost omnipotent power

The mercantile class has generally been divided into two subordinate classes — the wholesale dealers, and the retail dealers. The former purchase the various products of art and industry in the places where they are produced, or are least valuable, and carry them to those where they are more valuable, or where they are more in demand; and the latter, having purchased the commodities of the wholesale dealers, or the producers, collect them in shops, and sell them in such quantities and at such times as may best suit the public demand. These classes of dealers are alike useful; and the separation that has been effected between their employments is one of the most advantageous divisions of labour. The operations of the wholesale merchant are analagous to those of the miner. Neither the one nor the other makes any change on the bodies which he carries from place to place. All the difference between them consists in this, — that the miner carries them from below ground to the surface of the earth, while the merchant carries them from one point to another on its surface. Hence it follows that the value given to commodities by the operations of the wholesale merchant may frequently exceed that given to them by the producers. The labour or expense required to dig a quantity of coal from the mine, does not exceed what is required for its conveyance from Newcastle to London; and it is a far more difficult and costly affair to fetch a piece of timber from Canada to England, than to cut down the tree. In this respect there is no difference between commerce and agriculture and manufactures. The latter give utility to matter, by bestowing on it such a shape as may best fit it for ministering to our wants and comforts; and the former gives additional utility to the products of the agriculturist and manufacturer, by bringing them from where they are of comparatively little use, or are in excess, to where they are of comparatively great use, or are deficient.

If the wholesale merchant were himself to retail the goods he has brought from different places, he would require a proportional increase of capital; and it would be impossible for him to give that exclusive attention to any department of his business, which is indispensable to its being carried on in the best manner. It is for the interest of each dealer, as of each workman, to confine himself to some one business. By this means each trade is better understood, better cultivated, and carried on in the cheapest possible manner, But whether carried on by a separate class of individuals or not, it is obvious that the retailing of commodities is indispensable. It is not enough that a cargo of tea should be imported from China, or a cargo of sugar from Jamaica. Most individuals have some demand for these articles; but there is not, perhaps, a single private person, even in London, requiring so large a supply for his own consumption. It is clear, therefore, that they must be *retailed*; that is, they must be sold in such quanti-

ties and at such times as may be most suitable for all classes of consumers. And since it is admitted, on all hands, that this necessary business will be best conducted by a class of traders distinct from the wholesale dealers, it is impossible to doubt that their employment is equally conducive as that of the others to the public interest, or that it tends equally to augment national wealth and comfort.

II. Home Trade.

The observations already made serve to show the influence of the home trade in allowing individuals to confine their attention to some one employment, and to prosecute it without interruption. But it is not in this respect only that the establishment of the home trade is advantageous. It is so in a still greater degree, by its allowing the inhabitants of the different districts of the empire to turn their labour into those channels in which it will be most productive. The different soils, different minerals, and different climates of different districts, fit them for being appropriated, in preference, to certain species of industry. A district, like Lancashire, where coal is abundant, which has an easy access to the ocean, and a considerable command of internal navigation, is the natural seat of manufactures. Wheat and other species of grain are the natural products of rich arable soils; and cattle, after being reared in mountainous districts, are most advantageously fattened in meadows and low grounds. Hence it follows, that the inhabitants of different districts, by confining themselves to those branches of industry for the successful prosecution of which they have some peculiar capability, and exchanging their surplus produce for that of others, will obtain an incomparably larger supply of all sorts of useful and desirable products, than they could do, were they to apply themselves indiscriminately to every different business. The territorial division of labour is, if possible, even more advantageous than its division among individuals. A person may be what is commonly called *Jack of all trades;* and though it is next to certain that he will not be well acquainted with any one of them, he may nevertheless make some sort of rude efforts in them all. But it is not possible to apply the same soils or the same minerals to every different purpose. Hence it is, that the inhabitants of the richest and most extensive country, provided it were divided into small districts without any intercourse with each other, or with foreigners, could not, how well soever labour might be divided among themselves, be otherwise than poor and miserable. Some of them might have a superabundance of corn, at the same time that they were wholly destitute of wine, coal, and iron: while others might have the largest supplies of the latter articles, with but very little grain. But in commercial countries no such anomalies can exist. Opulence and comfort are there universally diffused. The labours of the mercantile classes enable the inhabitants of each district to apply themselves principally to those employments that are naturally best suited to them. This superadding of the division of labour among different provinces to its division among different individuals, renders the productive powers of industry immeasurably greater; and augments the mass of necessaries, conveniences, and enjoyments, in a degree that could not previously have been conceived possible, and which cannot be exceeded except by the introduction of foreign commerce.

"With the benefit of commerce," says an eloquent and philosophical writer, "or a ready exchange of commodities, every individual is enabled to avail himself, to the utmost, of the peculiar advantage of his place; to work on the peculiar materials with which nature has furnished him; to humour his genius or disposition, and betake himself to the task in which he is peculiarly qualified to succeed. The inhabitant of the mountain may betake himself to the culture of his woods and the manufacture of his timber; the owner of pasture lands may betake himself to the care of his herds; the owner of the clay-pit to the manufacture of his pottery; and the husbandman to the culture of his fields, or the rearing of his cattle. And any one commodity, however it may form but a small part in the accommodations of human life, may, under the facility of commerce, find a market in which it may be exchanged for what will procure any other part, or the whole: so that the owner of the clay-pit, or the industrious potter, without producing any one article immediately fit to supply his own necessities, may obtain possession of all that he wants. And commerce, in which it appears that commodities are merely exchanged, and nothing produced, is, nevertheless, in its effects, very productive, because it ministers a facility and an encouragement to every artist in multiplying the productions of his own art; thus adding greatly to the mass of wealth in the world, in being the occasion that much is produced."—(*Ferguson's Principles of Moral Science*, vol. ii. p. 424.)

The roads and canals that intersect a country, and open an easy communication between its remotest extremities, render the greatest service to internal commerce, and also to agriculture and manufactures. A diminution of the expense of carriage has, in fact, the same effect as a diminution of the direct cost of production. If the coals brought into a city sell at 20*s.* a ton, of which the carriage amounts to a half, or 10*s.*, it is plain

that in the event of an improved communication, such as a more level or direct road, a railway, or a canal, being opened for the conveyance of the coals, and that they can, by its means, be imported for half the previous expense, their price will immediately fall to 15*s.* a ton; just as it would have done, had the expense of extracting them from the mine been reduced a half.

Every one acquainted with the merest elements of political science is aware that employments are more and more subdivided, that more powerful machinery is introduced, and the productive powers of labour increased, according as larger masses of the population congregate together. In a great town like London, Glasgow, or Manchester, the same number of hands will perform much more work than in a small village, where each individual has to perform several operations, and where the scale of employment is not sufficiently large to admit of the introduction of extensive and complicated machinery. But the great towns with which England is studded could not exist without our improved means of communication. These, however, enable their inhabitants to supply themselves with the bulky products of the soil and of the mines almost as cheaply as if they lived in country villages; securing to them all the advantages of concentration, with but few of its inconveniences. Roads and canals are thus productive of a double benefit; for while by affording comparatively cheap raw materials to the manufacturers, they give them the means of perfecting the divisions of labour, and of supplying proportionally cheap manufactured goods; the latter are conveyed by their means, and at an extremely small expense, to the remotest parts of the country. The direct advantages which they confer on agriculture are not less important. Without them it would not be possible to carry to a distance sufficient supplies of lime, marl, shells, and other bulky and heavy articles necessary to give luxuriance to the crops of rich soils, and to render those that are poor productive. Good roads and canals, therefore, by furnishing the agriculturists with cheap and abundant supplies of manure, reduce, at one and the same time, the *cost of producing* the necessaries of life, and the cost of bringing them to market.

In other respects, the advantages resulting from improved communications are probably even more striking. They give the same common interest to every different part of the most widely extended empire; and put down, or rather prevent, any attempt at monopoly on the part of the dealers of particular districts, by bringing them into competition with those of all the others. Nothing in a state enjoying great facilities of communication is separate and unconnected. All is mutual, reciprocal, and dependent. Every man naturally gets into the precise situation that he is best fitted to fill; and each, cooperating with every one else, contributes to the utmost of his power to extend the limits of production and civilisation. — (See. ROADS.)

Such being the nature and vast extent of the advantages derived from the home trade, it is obviously the duty of the legislature to give it every proper encouragement and protection. It will be found, however, on a little consideration, that this duty is rather negative than positive — that it consists less in the framing of regulations, than in the removal of obstacles. The error of governments in matters of trade has not been that they have done too little, but that they have attempted too much. It will be afterwards shown that the encouragement which has been afforded to the producers of certain species of articles in preference to others, has uniformly been productive of disadvantage. In the mean time it is sufficient to observe, that the encouragement which a prudent and enlightened government bestows on industry, will equally extend to all its branches; and will be especially directed to the removal of every thing that may in any respect fetter the freedom of commerce, and the power of individuals to engage in different employments. All regulations, whatever be their object, that operate either to prevent the circulation of commodities from one part of the empire to another, or the free circulation of labour, necessarily tend to check the division of employments and the spirit of competition and emulation, and must, in consequence, lessen the amount of produce. The same principle that prompts to open roads, to construct bridges and canals, should lead every people to erase from the statute book every regulation which either prevents or fetters the operations of the merchant, and the free disposal of capital and labour. Whether the freedom of internal commerce and industry be interrupted by impassable mountains and swamps, or by oppressive tolls or restrictive regulations, the effect is equally pernicious.

The common law and the ancient statute law of England are decidedly hostile to monopolies, or to the granting of powers to any particular class of individuals to furnish the market with commodities. Lord Coke distinctly states, "that all monopolies concerning trade and traffic are against the liberty and freedom granted by the great charter, and divers other acts of parliament which are good commentaries upon that charter." — (2 *Inst.* 63.) And he affirms, in another place, that, "*Commercium jure gentium commune esse debet, et non in monopolium et privatum paululorum questum convertendum. Iniquum est aliis permittere, aliis inhibere mercaturam.*"

But, notwithstanding this concurrence of the common and statute law of the country in favour of the freedom of industry, during the arbitrary reigns of the princes of the house of Tudor, the notion that the crown was by its prerogative entitled to dispense with any law to the contrary, and to establish monopolies, became fashionable among the court lawyers, and was acted upon to a very great extent. Few things, indeed, occasioned so much dissatisfaction in the reign of Elizabeth as the multiplication of monopolies; and notwithstanding the opposition made by the crown, and the court party in parliament, the grievance became at length so intolerable as to give rise to the famous statute of 1624 (21 James 1. c. 3.), by which all monopolies, grants, letters patent, and licences, for the sole buying, selling, and making of goods and manufactures, not given by an act of the legislature, are declared to be "*altogether contrary to the laws of this realm, void, and of none effect.*" This statute has been productive of the greatest advantage; and has, perhaps, contributed more than any other to the development of industry, and the accumulation of wealth. With the exception of the monopoly of printing Bibles, and the restraints imposed by the charters of bodies legally incorporated, the freedom of internal industry has ever since been vigilantly protected; full scope has been given to the principle of competition; the whole kingdom has been subjected to the same equal law; no obstacles have been thrown in the way of the freest transfer of commodities from one country or place to another; the home trade has been perfectly unfettered; and though the public have not been supplied with commodities at so low a price as they might have obtained them for, had there been no restrictions on foreign commerce, they have obtained them at the lowest price that would suffice to pay the *home producers* the cost of producing and bringing them to market. It is to this freedom that the comparatively flourishing state of industry in Great Britain is mainly to be ascribed.

III. Foreign Trade.

What the home trade is to the different provinces of the same country, foreign trade is to all the countries of the world. Particular countries produce only particular commodities, and, were it not for foreign commerce, would be entirely destitute of all but such are indigenous to their own soil. It is difficult for those who have not reflected on the subject, to imagine what a vast deduction would be made, not only from the comforts, but even from the necessaries, of every commercial people, were its intercourse with strangers put an end to. It is not, perhaps, too much to say that in Great Britain we owe to our intercourse with others a full half or more of all that we enjoy. We are not only indebted to it for the cotton and silk manufactures, and for supplies of wine, tea, coffee, sugar, the precious metals, &c.; but we are also indebted to it for most of the fruits and vegetables that we now cultivate. At the same time, too, that foreign commerce supplies us with an immense variety of most important articles, of which we must otherwise have been wholly ignorant, it enables us to employ our industry in the mode in which it is sure to be most productive, and reduces the price of almost every article. We do not misemploy our labour in raising sugar from the beet-root, in cultivating tobacco, or in forcing vines; but we employ ourselves in those departments of manufacturing industry in which our command of coal, of capital, and of improved machinery give us an advantage; and obtain the articles produced more cheaply by foreigners, in exchange for the surplus produce of those branches in which we have a superiority over them. A commercial nation like England avails herself of all the peculiar facilities of production given by Providence to different countries. To produce claret here is perhaps impossible; and at all events it could not be accomplished, unless at more than 100 times the expense required for its production in France. We do not, however, deny ourselves the gratification derivable from its use; and to obtain it, we have only to send to France, or to some country indebted to France, some articles in the production of which we have an advantage, and we get claret in exchange at the price which it takes to raise it under the most favourable circumstances. One country has peculiar capacities for raising corn, but is at the same time destitute of wine, silk, and tea; another, again, has peculiar facilities for raising the latter, but is destitute of the former; and it is impossible to point out a single country which is abundantly supplied with any considerable variety of commodities of domestic growth. *Non omnis fert omnia tellus.* Providence, by giving to each particular nation something which the others want, has evidently intended that they should be mutually dependent upon one another. And it is not difficult to see that, *cæteris paribus*, those must be the richest and most abundantly supplied with every sort of useful and desirable accommodation, who cultivate the arts of peace with the greatest success, and deal with all the world on fair and liberal principles.

"The commerce of one country with another is, in fact," to use the words of an able and profound writer, "merely an extension of that division of labour by which so many benefits are conferred upon the human race. As the same country is rendered the richer by the trade of one province with another; as its labour becomes thus infinitely

more divided and more productive than it could otherwise have been; and as the mutual supply to each other of all the accommodations which one province has, and another wants, multiplies the accommodations of the whole, and the country becomes thus in a wonderful degree more opulent and happy; the same beautiful train of consequences is observable in the world at large, — that great empire of which the different kingdoms and tribes of men may be regarded as the provinces. In this magnificent empire, too, one province is favourable to the production of one species of accommodation, and another province to another: by their mutual intercourse they are enabled to sort and distribute their labour as most peculiarly suits the genius of each particular spot. The labour of the human race thus becomes much more productive, and every species of accommodation is afforded in much greater abundance. The same number of labourers, whose efforts might have been expended in producing a very insignificant quantity of home-made luxuries, may thus, in Great Britain, produce a quantity of articles for exportation, accommodated to the wants of other places, and peculiarly suited to the genius of Britain to furnish, which will purchase for her an accumulation of the luxuries of every quarter of the globe. There is not a greater proportion of her population employed in administering to her luxuries, in consequence of her commerce; there is probably a good deal less; but their labour is infinitely more productive: the portion of commodities which the people of Great Britain acquire by means of the same labour, is vastly greater." — (*Mill's Commerce defended*, p. 38.)

What has been already stated is sufficient to expose the utter fallacy of the opinion that has sometimes been maintained, that whatever one nation may gain by her foreign commerce, must be lost by some one else. It is singular, indeed, how such a notion should ever have originated. Commerce *is not directly productive*, nor is the good derived from it to be estimated by its immediate effects. What commercial nations give is uniformly the fair equivalent of what they get. In their dealings they do not prey upon each other, but are benefited alike. The advantage of commerce consists in its enabling labour to be divided, and giving each people the power of supplying themselves with the various articles for which they have a demand, at the lowest price required for their production in those countries and places where they are raised with the greatest facility. We import wine from Portugal, and cotton from America, sending in exchange cloth and other species of manufactured goods. By this means we obtain two very important articles, which it would be all but impossible to produce at home, and which we could not, certainly, produce, except at an infinitely greater cost. But our gain is no loss to the foreigners. They derive precisely the same sort of advantage from the transaction that we do. We have very superior facilities for manufacturing, and they get from us cloth, hardware, and other important articles, at the price at which they can be produced in this country, and consequently for far less than their direct production would have cost them. The benefits resulting from an intercourse of this sort are plainly mutual and reciprocal. Commerce gives no advantage to any one people over any other people; but it increases the wealth and enjoyments of *all* in a degree that could not previously have been conceived possible.

But the influence of foreign commerce in multiplying and cheapening conveniences and enjoyments, vast as it most certainly is, is perhaps inferior to its indirect influence — that is, to its influence on industry, by adding immeasurably to the mass of desirable articles, by inspiring new tastes, and stimulating enterprise and invention by bringing each people into competition with foreigners, and making them acquainted with their arts and institutions.

The apathy and languor that exist in a rude state of society have been universally remarked. But these uniformly give place to activity and enterprise, according as man is rendered familiar with new objects, and is inspired with a desire to obtain them. An individual might, with comparatively little exertion, furnish himself with an abundant supply of the commodities essential to his subsistence; and if he had no desire to obtain others, or if that desire, however strong, could not be gratified, it would be folly to suppose that he should be laborious, inventive, or enterprising. But, when once excited, the wants and desires of man become altogether illimitable; and to excite them, no more is necessary than to bring new products and new modes of enjoyment within his reach. Now, the sure way to do this is to give every facility to the most extensive intercourse with foreigners. The markets of a commercial nation being filled with the various commodities of every country and every climate, the motives and gratifications which stimulate and reward the efforts of the industrious are proportionally augmented. The husbandman and manufacturer exert themselves to increase their supplies of raw and manufactured produce, that they may exchange the surplus for the products imported from abroad. And the merchant, finding a ready demand for such products, is prompted to import a greater variety, to find out cheaper markets, and thus constantly to afford new incentives to the vanity and ambition, and consequently to the enterprise and industry, of his customers. The whole powers of the mind and the body are thus

called into action; and the passion for foreign commodities — a passion which has sometimes been ignorantly censured — becomes one of the most efficient causes of wealth and civilisation.

Not only, however, does foreign commerce excite industry, distribute the gifts of nature, and enable them to be turned to the best account, but it also distributes the gifts of science and of art, and gives to each particular country the means of profiting by the inventions and discoveries of others as much as by those of her own citizens. The ingenious machine invented by Mr. Whitney, of the United States, for separating cotton wool from the pod, by reducing the cost of the raw material of one of our principal manufactures, has been quite as advantageous to us as to his own countrymen. And the discoveries and inventions of Watt, Arkwright, and Wedgwood, by reducing the cost of the articles we send abroad, have been as advantageous to our foreign customers as to ourselves. Commerce has caused the blessings of civilisation to be universally diffused, and the treasures of knowledge and science to be conveyed to the remotest corners. Its humanising influence is, in this respect, most important; while, by making each country depend for the means of supplying a considerable portion of its wants on the assistance of others, it has done more than any thing else to remove a host of the most baleful prejudices, and to make mankind regard each other as friends and brothers, and not as enemies. The dread, once so prevalent, of the progress of other nations in wealth and civilisation, is now universally admitted to be as absurd as it is illiberal. While every people ought always to be prepared to resist and avenge any attack upon their independence or their honour, it is not to be doubted that their real prosperity will be best secured by their endeavouring to live at peace. "A commercial war, whether crowned with victory or branded with defeat, can never prevent another nation from becoming more industrious than you are; and if they are more industrious they will sell cheaper; and consequently your customers will forsake your shop and go to theirs. This will happen, though you covered the ocean with fleets, and the land with armies. The soldier may lay waste; the privateer, whether successful or unsuccessful, will make poor; but it is the eternal law of Providence that '*the hand of the diligent can alone make rich.*'" — (*Tucker's Four Tracts*, p. 41. 3d ed.)

Mr. Hume has beautifully illustrated the powerful and salutary influence of that spirit of industry and enterprise resulting from the eager prosecution of commerce and the arts. "Men," says he, "are then kept in perpetual occupation, and enjoy, as their reward, the occupation itself, as well as those pleasures which are the fruits of their labour. The mind acquires new vigour; enlarges its powers and faculties; and, by an assiduity in honest industry, both satisfies its natural appetites, and prevents the growth of unnatural ones, which commonly spring up when nourished with ease and idleness. Banish those arts from society, you deprive men both of action and of pleasure; and, leaving nothing but indolence in their place, you even destroy the relish of indolence, which never is agreeable but when it succeeds to labour, and recruits the spirits, exhausted by too much application and fatigue.

"Another advantage of industry and of refinements in the mechanical arts is, that they commonly produce some refinements in the liberal; nor can the one be carried to perfection, without being accompanied in some degree with the other. The same age which produces great philosophers and politicians, renowned generals and poets, usually abounds with skilful weavers and ship-carpenters. We cannot reasonably expect that a piece of woollen cloth will be wrought to perfection in a nation which is ignorant of astronomy, or where ethics are neglected. The spirit of the age affects all the arts; and the minds of men, being once roused from their lethargy, and put into a fermentation, turn themselves on all sides, and carry improvements into every art and science. Profound ignorance is totally banished; and men enjoy the privilege of rational creatures, to think as well as to act, to cultivate the pleasures of the mind as well as those of the body.

"The more these refined arts advance, the more sociable do men become; nor is it possible that, when enriched with science, and possessed of a fund of conversation, they should be contented to remain in solitude, or live with their fellow citizens in that distant manner which is peculiar to ignorant and barbarous nations. They flock into cities; love to receive and communicate knowledge; to show their wit or their breeding; their taste in conversation or living, in clothes or furniture. Curiosity allures the wise, vanity the foolish, and pleasure both. Particular clubs and societies are every where formed; both sexes meet in an easy and sociable manner; and the tempers of men, as well as their behaviour, refine apace. So that beside the improvements they receive from knowledge and the liberal arts, it is impossible but they must feel an increase of humanity from the very habit of conversing together, and contributing to each other's pleasure and entertainment. Thus *industry*, *knowledge*, and *humanity* are linked together by an indissoluble chain; and are found, from experience as well as reason, to be peculiar to the

more polished, and what are commonly denominated the more luxurious ages."—(*Essay of Refinement in the Arts.*)

Most commercial treatises, and most books on political economy, contain lengthened statements as to the comparative advantages derived from the home and foreign trade. But these statements are almost always bottomed on the most erroneous principles. The quantity and value of the commodities which the inhabitants of an extensive country exchange with each other, is far greater than the quantity and value of those they exchange with foreigners: but this is not, as is commonly supposed, enough to show that the home trade is proportionally more advantageous. Commerce, it must be borne in mind, is not a direct but an indirect source of wealth. The mere exchange of commodities adds nothing to the riches of society. The influence of commerce on wealth consists in its allowing employments to be separated and prosecuted without interruption. It gives the means of pushing the divisions of labour to the furthest extent; and supplies mankind with an infinitely greater quantity of necessaries and accommodations of all sorts, than could have been produced, had individuals and nations been forced to depend upon their own comparatively feeble efforts for the supply of their wants. And hence, in estimating the comparative advantageousness of the home and foreign trades, the real questions to be decided are, which of them contributes most to the division of labour? and which of them gives the greatest stimulus to invention and industry? These questions do not, perhaps, admit of any very satisfactory answer. The truth is, that both home trade and foreign trade are most prolific sources of wealth. Without the former, no division of labour could be established, and man would for ever remain in a barbarous state. Hence, perhaps, we may say that it is the most indispensable; but the length to which it could carry any particular country in the career of civilisation, would be limited indeed. Had Great Britain been cut off from all intercourse with strangers, there is no reason for thinking that we should have been at this day advanced beyond the point to which our ancestors had attained during the Heptarchy! It is to the products and the arts derived from others, and to the emulation inspired by their competition and example, that we are mainly indebted for the extraordinary progress we have already made, as well as for that we are yet destined to make.

Dr. Smith, though he has satisfactorily demonstrated the impolicy of all restrictions on the freedom of commerce, has, notwithstanding, endeavoured to show that it is more for the public advantage that capital should be employed in the home trade than in foreign trade, on the ground that the capitals employed in the former are more frequently returned, and that they set a greater quantity of labour in motion than those employed in the latter. But we have elsewhere endeavoured to show that the rate of profit which different businesses yield is the only test of their respective advantageousness. — (*Principles of Political Economy*, 3d ed. pp. 165—181.) Now, it is quite evident that capital will not be employed in foreign trade, unless it yield as much profit as could be made by employing it at home. No merchant sends a ship to China, if it be in his power to realise a larger profit by sending her to Dublin or Newcastle; nor would any one build a ship, unless he expected that the capital so laid out would be as productive as if it were employed in agriculture or manufactures. The more or less rapid return of capital is a matter of very little importance. If the average rate of profit be 10 per cent., an individual who turns over his capital 10 times a year, will make *one* per cent. of profit each time; whereas if he turns it only once a year, he will get the whole 10 per cent. at once. Competition reduces the rate of nett profit to about the same level in all businesses; and we may be quite certain that those who employ themselves in the departments in which capital is most rapidly returned, do not, at an average, gain more than those who employ themselves in the departments in which the returns are most distant. No one is a foreign merchant because he would rather deal with foreigners than with his own countrymen, but because he believes he will be able to employ his capital more advantageously in foreign trade than in any other business: and while he does this, he is following that employment which is most beneficial for the public as well as for himself.

IV. Restrictions on Commerce.

The statements already made, by explaining the nature and principles of commercial transactions, are sufficient to evince the inexpediency of subjecting them to any species of restraint. It is obvious, indeed, that restrictions are founded on false principles. When individuals are left to pursue their own interest in their own way, they naturally resort to those branches of industry which they reckon most advantageous for themselves; and, as we have just seen, these are the very branches in which it is most for the public interest that they should be employed. Unless, therefore, it could be shown that a government can judge better as to what sort of transactions are profitable or otherwise than private individuals, its regulations cannot be of the smallest use, and may be exceedingly injurious. But any such pretension on the part of government would be

universally scouted. It is undeniably certain that a regard to our own interest is, if not an unerring guide to direct us in such matters, at least incomparably better than any other. If the trade with a particular country or in a particular commodity be a losing one, or merely a less profitable one than others, it is quite as unnecessary to pass an act to prevent it from being carried on, as it would be to interfere to prevent individuals from selling their labour or their commodities below the market price. It appears, therefore, that all regulations affecting the freedom of commerce, or of any branch of industry, are either useless or pernicious. They are useless, when they are intended to protect the interest of individuals by preventing them from engaging in disadvantageous businesses; and pernicious, when they prevent them from engaging in those that are advantageous. The self-interest of the parties concerned is the only safe principle to go by in such matters. When the acts of the legislature are in unison with it, there is nothing to object to in them, save only that they might as well not exist; but whenever they are inconsistent with it, — that is, whenever they tend to divert capital and industry into channels into which individuals, if left to their own discretion, would not have carried them, — they are decidedly injurious.

No one denies that it is possible to confer, by means of a restrictive regulation, an advantage on a greater or less number of individuals. This, however, is no proof that it is advantageous in a public point of view; and it is by its influence in this respect that we are to decide concerning it. If the exclusion of an article imported from abroad, in order to encourage its manufacture at home, raise its price in the home market, that circumstance will, for a while at least, be advantageous to those engaged in its production. But is it not clear that all that is thus gained by them is *lost by those who purchase the article?* To suppose, indeed, that the exclusion of commodities that are comparatively cheap, to make room for those that are comparatively dear, can be a means of enriching a country, is equivalent to supposing that a people's wealth might be increased by destroying their most powerful machines, and throwing their best soils out of cultivation.

But it is contended, that though this might be the case in the instance of commodities produced at home, it is materially different when the commodity excluded came to us from abroad. It is said, that in this case the exclusion of foreign produce increases the demand for that produced at home, and consequently contributes to increase the demand for labour; so that the rise of price it occasions is, in this way, more than balanced by the other advantages which it brings along with it. But the fact is, that though the demand for one species of produce may be increased by a prohibition of importation, the demand for some other species is sure to be at the same time equally diminished. There is no jugglery in commerce. Whether it be carried on between individuals of the same country, or of different countries, it is in all cases bottomed on a fair principle of reciprocity. Those who will not buy need not expect to sell, and conversely. It is impossible to export without making a corresponding importation. We get nothing from the foreigner gratuitously: and hence, when we prevent the importation of produce from abroad, we prevent, by the very same act, the exportation of an equal amount of British produce. All that the exclusion of foreign commodities ever effects, is the substitution of one sort of demand for another. It has been said, that "when we drink beer and porter we consume the produce of English industry, whereas when we drink port or claret we consume the produce of the industry of the Portuguese and French, to the obvious advantage of the latter, and the prejudice of our countrymen!" But, how paradoxical soever the assertion may at first sight appear, there is not at bottom any real distinction between the two cases. What is it that induces foreigners to supply us with port and claret? The answer is obvious: — We either send directly to Portugal and France an *equivalent in British produce*, or we send such equivalent, in the first place to South America for bullion, and then send that bullion to the Continent to pay for the wine. And hence it is as clear as the sun at noon-day, that the Englishman who drinks only French wine, who eats only bread made of Polish wheat, and who wears only Saxon cloth, gives, by occasioning the exportation of a corresponding amount of British cotton, hardware, leather, or other produce, the same encouragement to the industry of his countrymen, that he would give were he to consume nothing not immediately produced at home. A quantity of port wine and a quantity of Birmingham goods are respectively of the same value; so that whether we directly consume the hardware, or, having exchanged it for the wine, consume the latter, must plainly, in so far as the employment of British labour is concerned, be altogether indifferent.

It is absolutely nugatory, therefore, to attempt to encourage industry at home by restraining importation from abroad. We might as well try to promote it by interdicting the exchange of shoes for hats. We only resort to foreign markets, that we may supply ourselves with articles that cannot be produced at home, or that require more labour to produce them here than is required to produce the equivalent exported to pay for them. It is, if any thing can be, an obvious contradiction and absurdity to attempt

to promote wealth or industry by prohibiting an intercourse of this sort. Such prohibition, even when least injurious, is sure to force capital and labour into less productive channels; and cannot fail to diminish the foreign demand for one species of produce, quite as much as it extends the home demand for another.

It is but seldom, however, that a restriction on importation from abroad does no more than substitute one sort of employment for another. Its usual effect is both to alter the distribution of capital and to increase the price of commodities. A country rarely imports any commodity from abroad that may be as cheaply produced at home. In the vast majority of instances, the articles bought of the foreigner could not be directly produced at home, without a much greater outlay of capital. Suppose that we import 1,000,000*l.* worth of any commodity, that its importation is prohibited, and that the same quantity of produce cannot be raised in this country for less than 1,200,000*l.* or 1,500,000*l.*: in a case of this sort, — and this is actually the case in 99 out of every 100 instances in which prohibitions are enacted, — the prohibition has the same effect on the consumers of the commodity, as if, supposing it not to have existed, they had been burdened with a peculiar tax of 200,000*l.* or 500,000*l.* a year. But, had such been the case, what the consumers lost would have gone into the coffers of the treasury, and would have afforded the means of repealing an equal amount of other taxes; whereas, under the prohibitory system, the high price, being occasioned by an increased difficulty of production, is of no advantage to any one. So that, instead of gaining any thing by such a measure, the public incurs a dead loss of 200,000*l.* or 500,000*l.* a year.

We have said that a prohibition of importation may be productive of immediate advantage to the home producers of the prohibited article. It is essential, however, to remark that this advantage cannot continue for any considerable time, and that it *must* be followed by a period of distress. Were the importation of foreign silks put an end to, that circumstance, by narrowing the supply of silk goods, and raising their prices, would, no doubt, be, in the first instance, advantageous to the manufacturers, by elevating their profits above the common level. But the consequence would be, that those already engaged in the trade would immediately set about extending their concerns; at the same time that not a few of those engaged in other employments would enter a business which presented such a favourable prospect: nor would this transference of capital to the silk manufacture be stopped, till such an increased supply of silks had been brought to market as to occasion a glut. This reasoning is not founded upon hypothesis, but upon the widest experience. When a business is carried on under the protection of a restriction on importation, it is limited by the extent of the home market, and is incapable of further extension. It is, in consequence, particularly subject to that fluctuation which is the bane of industry. If, owing to a change of fashion, or any other cause, the demand be increased, then, as no supplies can be brought from abroad, prices suddenly rise, and the manufacture is rapidly extended, until a reaction takes place, and prices sink below their usual level: and if the demand decline, then, as there is no outlet abroad for the superfluous goods, their price is ruinously depressed, and the producers are involved in inextricable difficulties. The businesses deepest entrenched behind ramparts of prohibitions and restrictions, such as the silk trade previously to 1825, the West India trade, and agriculture since 1815, have undergone the most extraordinary vicissitudes; and have been at once more hazardous and less profitable than the businesses carried on under a system of fair and free competition.

A prohibition against buying in the cheapest markets is really, also, a prohibition against selling in the dearest markets. There is no test of high or low price, except the quantity of other produce for which an article exchanges. Suppose that, by sending a certain quantity of cottons or hardware to Brazil, we might get in exchange 150 hhds. of sugar, and that the same quantity, if sent to Jamaica, would only fetch 100 hhds; is it not obvious, that by preventing the importation of the former, we force our goods to be sold for *two thirds* of the price they would otherwise have brought? To suppose that a system productive of such results can be a means of increasing wealth, is to suppose what is evidently absurd. It is certainly true that a restrictive regulation, which has been long acted upon, and under which a large amount of capital is employed, should not be rashly or capriciously repealed. Every change in the public economy of a great nation ought to be gone about cautiously and gradually. Adequate time should be given to those who carry on businesses that have been protected, either to withdraw from them altogether, or to prepare to withstand the fair competition of foreigners. But this is *all* that such persons can justly claim. To persevere in an erroneous and oppressive system, merely because its abandonment might be productive of inconvenience to individuals, would be a proceeding inconsistent with every object for which society is formed, and subversive of all improvement.

It may, perhaps, be supposed that in the event of commodities being imported from abroad, after the abolition of a protecting regulation, that were previously produced

at home, the workmen and those engaged in their production would be thrown upon the parish. Such, however, is not the case. We may, by giving freedom to commerce, change the *species* of labour in demand, but it is not possible that we should thereby change its *quantity*. If, in consequence of the abolition of restrictions, our imports were increased 4,000,000*l.* or 5,000,000*l.*, our exports, it is certain, must be augmented to the same extent: so that whatever diminution of the demand for labour might be experienced in certain departments would be balanced by a corresponding increase in others.

The pressure of taxation has often been alleged as an excuse for restrictions on commerce; but it is not more valid than the rest. Taxation may be heavy, and even oppressive; but so long as it is impartially and fairly assessed, it equally effects *all* branches of industry carried on at home, and consequently affords no ground whatever for the enactment of regulations intended to protect any particular business. And to propose to protect *all* branches of industry from foreign competition, is, in effect, to propose to put a total stop to commerce; for if nothing is to be imported, nothing can be exported. The imposition of moderate duties on foreign commodities, for the sake of revenue, is quite another thing. Several of these commodities are among the very best subjects of taxation; and when the duties on them are confined within proper bounds,—that is, when they are not so high as to exert any injurious influence over trade, or to occasion smuggling and fraud,—they cannot fairly be objected to.

It is sometimes contended, by those who assert, on general grounds, that restrictions are inexpedient, that it would be unwise, on the part of any country, to abolish them until she had obtained a security that those imposed by her neighbours would also be abolished. But the reasons that have been alleged in favour of this statement are not entitled to the least weight. It is our business to buy in the cheapest and sell in the dearest markets, without being, in any degree, influenced by the conduct of others. If they consent to repeal the restrictions they have laid on commerce, so much the better. But whatever others may do, the line of policy *we* ought to follow is clear and well defined. To refuse, for example, to buy claret, brandy, &c. from the French, because they lay restrictions on the importation of British hardware, cottons, &c., is not to retaliate upon them, but upon ourselves. The fact that we *do* import French wine and brandy shows that we do export to France, or to some other country to which France is indebted, an equivalent, in some sort, of British produce. The fear of being glutted with foreign products, unless we secure beforehand a certain outlet for our own, is the most unfounded that can be imagined. The foreigner who will take nothing of ours, can send us nothing of his. Though our ports were open to the merchants of all the countries of the world, the exports of British produce must always be equal to the imports of foreign produce; and none but those who receive our commodities, either at first or second hand, could continue to send any thing to us.

"Les étrangers ne peuvent demander ni désirer rien mieux, que la liberté de vous acheter et de vous vendre chez vous et dans vos colonies. Il faut la leur accorder, non par foiblesse et par impuissance, mais parcequ'elle est juste en elle-même, et qu'elle vous est utile. Ils ont tort sans doute de la refuser chez eux: mais cette faute d'ignorance, dont, sans le savoir, ils sont punis les premiers, n'est pas un raison qui doive vous porter à vous nuire à vous-même en suivant cet exemple, et à vous exposer aux suites et aux dépenses d'une guerre pour avoir la vaine satisfaction d'user des représailles, dont l'effet ne peut manquer de retomber sur vous, et de rendre votre commerce plus désavantageux." —(*Le Trosne de l' Ordre Social*, p. 416.)

There are some, however, who contend, that though restrictions on importation from abroad be unfavourable to opulence, and the advancement of individuals and nations in arts and civilisation, they may, notwithstanding, be vindicated on other grounds, as contributing essentially to independence and security. The short and decisive answer to this is to be found in the reciprocity of commerce. It does not enrich one individual or nation at the expense of others, but confers its favours equally on all. We are under no obligations to the Portuguese, the Russians, or any other people with whom we carry on trade. It is not *our* advantage, but *their own*, that they have in view in dealing with us. We give them the full value of all that we import; and they would suffer quite as much inconvenience as we should do were this intercourse put an end to. The independence at which those aspire who would promote it by laying restrictions on commerce, is the independence of the solitary and unsocial savage; it is not an independence productive of strength, but of weakness. "The most flourishing states, at the moment of their highest elevation, when they were closely connected with every part of the civilised world by the golden chains of successful commercial enterprise, were, according to this doctrine, in the most perfect state of absolute dependence. It was not till all these connections were dissolved, and they had sunk in the scale of nations, that their true independence commenced! Such statements carry with them their own refutation. There is a natural dependence of nations upon each other, as there is a natural dependence of

individuals upon each other. Heaven has so ordered it. Some soils, some climates, some situations, are productive exclusively of some peculiar fruits, which cannot elsewhere be profitably produced. Let nations follow this as their guide. In a rich and rising community, the opulent capitalists may be as dependent upon the poor labourers, as the poor labourers upon the opulent capitalists. So it is with nations. The mutual dependence of individuals upon each other knits and binds society together, and leads to the most rapid advancement in wealth, in intelligence, and in every kind of improvement. It is the same, but on a far larger scale, with the mutual dependence of nations. To this alone do we owe all the mighty efforts of commerce; and what lights, what generous feelings, and multiplied means of human happiness, has it not every where spread!" — (*North American Review*, No. 57.)

The principles of commercial freedom, and the injurious influence of restrictive regulations, were set in a very striking point of view by Adam Smith, in his great work; and they have been since repeatedly explained and elucidated. Perhaps, however, the true doctrines upon this subject have seldom been better stated than in the petition presented by the merchants of London to the House of Commons on the 8th of May, 1820. This document afforded a convincing proof of the progress of liberal and enlarged views. It was subscribed by all the principal merchants of the metropolis, who expressed their conviction, that the repeal of every *protective regulation* would be for the public advantage. Such an address, confirming, as it did the conclusions of science, by the approval of the best-informed and most extensive merchants of the world, had a powerful influence over the legislature. It paved the way for the reforms introduced by Mr. Huskisson; and the advantages of which they were found to be productive helped to forward the still greater and more complete reforms carried through Parliament by Sir Robert Peel. These were so very extensive that they left but little for others to accomplish; and that little having been since effected, our commercial policy is of the most liberal description. The time anticipated by the poet has already come,—

> "When free as sea or wind,
> Unbounded Thames shall flow for all mankind,
> Whole nations enter with each swelling tide,
> And seas but join the regions they divide."*

And while this change has been productive of vast advantage to this country, it has weakened the prejudices of others, and made them enter, to some extent at least, on the same enlightened course of policy.

The petition now referred to is too important to be omitted in a work of this sort.† It is as follows:—

"To the Honourable the Commons, &c. The Petition of the Merchants of the City of London,

"Sheweth,

"That foreign commerce is eminently conducive to the wealth and prosperity of a country, by enabling it to import the commodities for the production of which the soil, climate, capital, and industry, of other countries are best calculated, and to export, in payment, those articles for which its own situation is better adapted.

"That freedom from restraint is calculated to give the utmost extension to foreign trade, and the best direction to the capital and industry of the country.

"That the maxim of buying in the cheapest market, and selling in the dearest, which regulates every merchant in his individual dealings, is strictly applicable, as the best rule for the trade of the whole nation.

"That a policy founded on these principles would render the commerce of the world an interchange of mutual advantages, and diffuse an increase of wealth and enjoyments among the inhabitants of each state.

"That, unfortunately, a policy the very reverse of this has been and is more or less adopted and acted upon by the government of this and every other country; each trying to exclude the productions of other countries, with the specious and well-meant design of encouraging its own productions: thus inflicting on the bulk of its subjects, who are consumers, the necessity of submitting to privations in the quantity or quality of commodities; and thus rendering what ought to be the source of mutual benefit and of harmony among states, a constantly recurring occasion of jealousy and hostility.

"That the prevailing prejudices in favour of the protective or restrictive system may be traced to the erroneous supposition that every importation of foreign commodities occasions a diminution or discouragement of our own productions to the same extent: whereas it may be clearly shown, that although the particular description of production which could not stand against unrestrained foreign competition would be dis-

* Pope's Windsor Forest, line 397.
† It was written by Thomas Tooke, Esq., author of the valuable work on Prices.

couraged, yet, as no importation could be continued for any length of time without a corresponding exportation, direct or indirect, there would be an encouragement, for the purpose of that exportation, of some other production to which our situation might be better suited; thus affording at least an equal, and probably a greater, and certainly a more beneficial, employment to our own capital and labour.

"That of the numerous protective and prohibitory duties of our commercial code, it may be proved that, while all operate as a very heavy tax on the community at large, very few are of any ultimate benefit to the classes in whose favour they were originally instituted, and none to the extent of the loss occasioned by them to other classes.

"That among the other evils of the restrictive or protective system, not the least is, that the artificial protection of one branch of industry or source of production against foreign competition, is set up as a ground of claim by other branches for similar protection; so that if the reasoning upon which these restrictive or prohibitory regulations are founded were followed out consistently, it would not stop short of excluding us from all foreign commerce whatsoever. And the same train of argument, which, with corresponding prohibitions and protective duties, should exclude us from foreign trade, might be brought forward to justify the re-enactment of restrictions upon the interchange of productions (unconnected with public revenue) among the kingdoms composing the union, or among the counties of the same kingdom.

"That an investigation of the effects of the restrictive system at this time is peculiarly called for, as it may, in the opinion of your petitioners, lead to a strong presumption, that the distress, which now so generally prevails, is considerably aggravated by that system; and that some relief may be obtained by the earliest practicable removal of such of the restraints as may be shown to be most injurious to the capital and industry of the community, and to be attended with no compensating benefit to the public revenue.

"That a declaration against the anti-commercial principles of our restrictive system is of the more importance at the present juncture; inasmuch as, in several instances of recent occurrence, the merchants and manufacturers of foreign countries have assailed their respective governments with applications for further protective or prohibitory duties and regulations, urging the example and authority of this country, against which they are almost exclusively directed, as a sanction for the policy of such measures. And certainly, if the reasoning upon which our restrictions have been defended is worth any thing, it will apply in behalf of the regulations of foreign states against us. They insist upon our superiority in capital and machinery, as we do upon their comparative exemption from taxation, and with equal foundation.

"That nothing would tend more to counteract the commercial hostility of foreign states, than the adoption of a more enlightened and more conciliatory policy on the part of this country.

"That although, as a matter of mere diplomacy, it may sometimes answer to hold the removal of particular prohibitions, or high duties, as depending upon corresponding concessions by other states in our favour, it does not follow that we should maintain our restrictions in cases where the desired concessions on their part cannot be obtained. Our restrictions would not be the less prejudicial to our own capital and industry, because other governments persisted in preserving impolitic regulations.

"That, upon the whole, the most liberal would prove to be the most politic course on such occasions.

"That independent of the direct benefit to be derived by this country, on every occasion of such concession or relaxation, a great incidental object would be gained, by the recognition of a sound principle or standard, to which all subsequent arrangements might be referred; and by the salutary influence which a promulgation of such just views, by the legislature and by the nation at large, could not fail to have on the policy of other states.

"That in thus declaring, as your petitioners do, their conviction of *the impolicy and injustice of the restrictive system*, and in desiring every practicable relaxation of it, they have in view only such parts of it as are not connected, or are only subordinately so, with the public revenue. As long as the necessity for the present amount of revenue subsists, your petitioners cannot expect so important a branch of it as the customs to be given up, nor to be materially diminished, unless some substitute less objectionable be suggested. But it is *against every restrictive regulation of trade, not essential to the revenue, against all duties merely protective from foreign competition, and against the excess of such duties as are partly for the purpose of revenue, and partly for that of protection*, that the prayer of the present petition is respectfully submitted to the wisdom of parliament.

"May it therefore," &c.

For an account of the doctrines with respect to the *balance of trade*, and the importation and exportation of the precious metals, see the articles BALANCE OF TRADE, and EXCHANGE.

For an account of the articles imported into and exported from Great Britain, see IMPORTS AND EXPORTS.

COMPANIES. In commerce or the arts, a company is a number of persons associated for the purpose of carrying on some commercial or industrious undertaking. When there are only a few individuals associated, it is most commonly called a *copartnery*; the term company being usually applied to large associations, like the East India Company, the Bank of England, the Railway Companies, &c., who conduct their operations by means of agents acting under the orders of a board of directors.

Companies have generally been divided into two great classes — exclusive or joint stock companies, and open and regulated companies.

1. *Exclusive or Joint Stock Companies.* — By an institution of this sort is meant a company having a certain amount of capital, divided into a greater or smaller number of transferable shares, managed for the common advantage of the shareholders by a body of directors chosen by and responsible to them. After the stock of a company of this sort has been subscribed, no one can enter it without previously purchasing one or more shares belonging to some of the existing members. The partners do nothing individually; all their resolutions are taken in common, and are carried into effect by the directors and those whom they employ.

According to the common law of England, all the partners in a joint stock company are jointly and individually liable, to the whole extent of their fortunes, for the debts of the company. They may make arrangements amongst themselves, limiting their obligations with respect to each other; but unless established by an authority competent to set aside the general rule, they are all indefinitely responsible to the public. Parliament sometimes limits the responsibility of the shareholders in joint stock companies established by statute, to the amount of the shares they respectively hold. And the 6 Geo. 4. c. 96. empowers the Crown to grant charters of incorporation by which the members of corporate bodies are made individually liable, to such extent, and subject to such regulations and restrictions, as may be deemed expedient. Hence charters are now frequently granted for the purpose merely of enabling companies to sue and be sued in courts of law, under the names of some of their office-bearers, without in any respect limiting the responsibility of the shareholders to the public. This limitation cannot be implied in a charter any more than in an act of parliament, and is held not to exist unless it be distinctly set forth.

"In a private copartnery, no partner, without the consent of the company, can transfer his share to another person, or introduce a new member into the company. Each member, however, may, upon proper warning, withdraw from the copartnery, and demand payment from them of his share of the common stock. In a joint stock company, on the contrary, no member can demand payment of his share from the company; but each member may, without their consent, transfer his share to another person, and thereby introduce a new member. The value of a share in a joint stock is always the price which it will bring in the market; and this may be either greater or less, in any proportion, than the sum which its owner stands credited for in the stock of the company." — (*Wealth of Nations*, p. 333.)

The law in regard to the formation and constitution of joint stock companies is now principally determined by the 7 & 8 Vict. c. 110.; the 7 & 8 Vict. c. 111. having been passed at the same time to facilitate their dissolution and winding up. The powers given to different associations, though in some respects the same, differ widely in others, according to the special purposes for which they are organised. But it would be idle to attempt to specify in this place the peculiar rules and regulations affecting these institutions. Full information respecting most questions connected with the constitution and working of joint stock companies may, however, be found in Wordsworth's valuable treatise on the law relating to these associations; and to it we beg to refer the reader.

2. *Utility of Joint Stock Companies.* — Whenever the capital required to carry on any undertaking exceeds what may be furnished by an individual, it is indispensable, in order to the prosecution of the undertaking, that an association should be formed. In all those cases, too, in which the chances of success are doubtful, or where a lengthened period must necessarily elapse before an undertaking can be completed, an individual, though ready enough to contribute a small sum in connection with others, would, generally speaking, be very little inclined, even if he had the means, to encounter the whole responsibility of such enterprises. Hence the necessity and advantage of companies or associations. It is to them that we are indebted for those canals and railways by which every part of the country is intersected, for the formation of so many noble docks and warehouses, for the institution of our principal banks and insurance offices, and for many other establishments of great public utility carried on by the combined capital and energies of large bodies and individuals.

3. *Branches of Industry for the Prosecution of which Joint Stock Companies may be advantageously established.* — In order to ensure a rational prospect of success to a com-

pany, the undertaking should admit of being carried on according to a regular systematic plan. The reason of this is sufficiently obvious. The business of a great association must be conducted by factors or agents, and unless it be of such a nature as to admit of their duties being clearly pointed out and defined, the association would cease to have any effectual control over them, and would be, in great measure, at their mercy. An individual who manages his own affairs reaps all the advantage derivable from superior skill, industry, and economy; but the agents, and even directors of joint stock companies, labour, in most cases, entirely or principally for the advantage of others; and cannot, therefore, however conscientious, have the same powerful motives to act with energy, prudence, and economy. "Like," says Adam Smith, "the stewards of a rich man, they are apt to consider attention to small matters as not for their master's honour, and very easily give themselves a dispensation from having it. Negligence and profusion, therefore, must always prevail more or less in the management of the affairs of such a company." It also not unfrequently happens that they suffer from the bad faith, as well as the carelessness and extravagance of their servants; the latter having in many instances endeavoured to advance their own interests at the expense of their employers. Hence the different success of companies whose business may be conducted according to a nearly uniform system,—such as dock, canal, railway, insurance, and banking companies,—and those whose business does not admit of being reduced to any regular plan, and where much must always be left to the sagacity and enterprise of those employed. All purely commercial companies, trading upon a joint stock, belong to the latter class. Not one of them has ever been able to withstand the competition of private adventurers; they cannot subject the agents they employ to buy and sell commodities in distant countries to any effectual responsibility; and from this circumstance, and the abuses that usually insinuate themselves into every department of their management, no such company has ever succeeded, unless when it has obtained some exclusive privilege, or been protected from competition.

And even with these advantages, such is the negligence, profusion, and peculation inseparable from the management of great commercial companies, that those that have had the monopoly of the most advantageous branches of commerce have rarely been able to keep out of debt. It will be shown in the article EAST INDIA COMPANY, that that association lost by its trade; and that, had it not been for the aid derived from the revenues of India, it would long since have ceased to exist. To buy in one market; to sell with profit in another; to watch over the perpetually occurring variations in the prices, and in the supply and demand of commodities; to suit with dexterity and judgment the quantity and quality of goods to the wants of each market; and to conduct each operation in the best and cheapest manner; requires a degree of unremitting vigilance and attention, which it would be visionary to expect from the directors or servants of a great joint stock association. Hence it has happened, over and over again, that branches of commerce which proved ruinous to companies, have become exceedingly profitable when carried on by individuals.

"The spirit of monopolists," to borrow the just and forcible language of Gibbon, "is narrow, lazy, and oppressive. The work is more costly and less productive than that of independent artists; and the new improvements so eagerly grasped by the competition of freedom, are admitted with slow and sullen reluctance in those proud corporations, above the fear of a rival, and below the confession of an error." (*Memoirs of his own Life, Miscellaneous Works*, i. p. 49. ed. 1814.)

We stated in the first edition of this work that the circumstances now mentioned opposed all but insuperable obstacles to the success of the companies established in this country for the prosecution of mining in America. "This business does not admit of being reduced to a regular routine system. Much must always depend on the skill and probity of the agents employed at the mines; and it must plainly be very difficult, if not quite impossible, for directors resident in London to exercise any effectual *surveillance* over the proceedings of those who are at so great a distance. Hence it is not at all likely that these establishments will ever be so productive to the undertakers, as if they had been managed by the parties themselves." And every one knows that the history of the undertakings has more than verified the truth of these statements.

The Abbé Morellet has given, in a tract published in 1769 (*Examen de la Reponse de M. N.* pp. 35—38.), a list of 55 joint stock companies, for the prosecution of various branches of foreign trade, established in different parts of Europe since 1600, every one of which had failed, though most of them had exclusive privileges. Most of those that have been established since the publication of Morellet's tract have had a similar fate.

But notwithstanding both principle and experience concur in showing how very ill fitted a large association is for the purpose of prosecuting commercial undertakings, there are cases in which they cannot be prosecuted except by associations of this sort, and when it may be expedient to grant them certain peculiar privileges. When, owing either to the disinclination or inability of government to afford protection to those engaged in any

particular department of trade, they are obliged to provide for their own defence and security, it is obviously necessary that they should have power to exclude such individuals as may refuse to submit to the measures, or to bear their due share of the expense, required for the common protection of all. The Russian Company, the East India Company, the Levant or Turkey Company, and most of the other great trading companies which have existed in this country, seem principally to have grown out of a real or supposed necessity of this sort. It was not believed that any safe or advantageous intercourse could be carried on with barbarous countries without the aid of ships of war, factories, interpreters, &c. And as government was not always able or willing to afford this assistance, the traders were formed into companies or associations, and vested with such peculiar privileges as appeared to be necessary for enabling them to prosecute the trade without any extrinsic support. "When," says Smith, "a company of merchants undertake, at their own risk and expense, to establish a new trade with some remote and barbarous nation, it may not be unreasonable to incorporate them into a joint stock company, and to grant them, in case of success, a monopoly of the trade for a certain number of years. It is the easiest and most natural way in which the state can recompense them for hazarding a dangerous and expensive experiment, of which the public is afterwards to reap the benefit. A temporary monopoly of this kind may be vindicated upon the same principles upon which a like monopoly of a new machine is granted to its inventor, and that of a new book to its author. But upon the expiration of the term, the monopoly ought certainly to determine; the forts and garrisons, if it was found necessary to establish any, to be taken into the hands of government, their value to be paid to the company, and the trade to be laid open to all the subjects of the state."—(*Wealth of Nations*, p. 339.)

It may be doubted, however, whether it be really necessary, even in such a case as that now mentioned, to establish *a joint stock company* with peculiar privileges, and whether the same thing might not be more advantageously effected by the establishment of an open or regulated company.

4. *Open or Regulated Companies.*—The affairs of such companies or associations are managed by directors appointed by the members. They do not, however, possess a common or joint stock. Each individual pays a fine upon entering into the company, and most commonly an annual contribution: a duty applicable to the business of the company is also sometimes charged upon the goods imported and exported from and to the countries with which they trade. The sums so collected are applied by the directors to fit out ambassadors, consuls, and such public functionaries as may be required to facilitate commercial dealings, or to build factories, maintain cruisers, &c. The members of such companies trade upon their own stock, and at their own risk. So that when the fine, or sum payable on admission into a regulated company, is moderate, it is impossible for its members to form any combination that would have the effect of raising their profits above the common level; and there is the same keen and close competition amongst them that there is amongst other classes of traders. A regulated company is, in fact, a device for making those engaged in a particular branch of trade bear the public or political expenses incident to it, at the same time that it leaves them to conduct their own business with their own capital, and in their own way.

Should, therefore, government at any time refuse, or be unable to afford, that protection to those engaged in any branch of trade which is necessary to enable them to carry it on, their formation into a regulated company would seem to be the most judicious measure that could be adopted; inasmuch as it would obtain for them that protection which is indispensable, without encroaching on the freedom of individual enterprise.

The African, the Levant, and some other branches of trade, were for a long time conducted by open or regulated companies. These, however, have been abolished: the African Company, by the act 1 & 2 Geo. 4. c. 28.; and the Levant Company, by the act 6 Geo. 4. c. 33. The Russia Company still exists.—(See Russia Company.)

5. *Constitution of Companies.*—When application is made to parliament for an act to incorporate a number of individuals into a joint stock company for the prosecution of any useful undertaking, care should be taken not to concede to them any privileges that may be rendered injurious to the public. If a company be formed for the construction of a dock, a road, or a canal, it may be necessary, in order to stimulate individuals to engage in the undertaking, to give them some peculiar privileges for a certain number of years. But if other persons be permanently hindered from constructing new docks, or opening new lines of communication, a lasting injury may be done to the public. It may be highly expedient to incorporate a company for the purpose of bringing water into a city; but supposing there were no springs in the vicinity, other than those to which this company has acquired a right, they might, unless restrained by the act incorporating them, raise the price of water to an exorbitant height, and make large profits for themselves at the expense and to the injury of the public. In all cases of this sort, and in the case, indeed, of all joint stock companies established for the formation of canals, railways, &c., it would be sound policy not only to limit the rates charged

for their services, or on account of the water, ships, goods, &c. conveyed by their means, but also to limit the dividends, or to fix a *maximum* beyond which they should not be augmented: enacting, that if the rates charged by the company produce more than sufficient to pay the maximum rate of dividend, and to defray the wear and tear of the aqueduct, canal, &c., they should be allowed to reduce them till they only yield this much; and, in the event of their declining to do so, that the whole surplus above paying the dividend shall be applied to purchase up the stock of the association, so that ultimately the charges on account of dividends may be entirely abolished. Had this principle been acted upon when canals first began to be formed in England, the carriage of goods conveyed by some of the most important lines of communication would now have cost almost nothing; and this desirable result might have been accomplished in the way now suggested, without, we believe, diminishing in any degree the number of those undertakings. Probably, however, the better way, in such cases, would be for the legislature to reserve to itself, when it institutes such companies, power periodically to revise their rates of charge, or to purchase up the undertakings. There are few who, at the time they engage in such enterprises, suppose that they will yield more than 10 or 12 per cent.; and vast numbers will always be disposed to engage in them, if there be any reasonable prospect of their yielding this much. Now, when such is the case, is it not the duty of government to provide, in the event of the undertaking becoming in an *unexpected* and *unusual degree profitable*, that the public should derive some advantage from it? This is not a case in which competition can reduce profits to the common level. The best, perhaps the only practicable, line for a canal or railway between any two places will be appropriated by those who are first in the field; who thus, in fact, obtain a natural monopoly of which they cannot be deprived: and hence the advantage of limiting the charges and dividends. Without discouraging enterprise it affords a security that private individuals shall not reap an unusual and unlooked-for profit at the expense of the public.

In all those cases in which companies are formed for the prosecution of undertakings that may be carried on, with equal advantage to the public, by individuals; or where there are no very considerable difficulties to overcome, or risks to encounter; they ought to enjoy no privilege whatever, but should be regarded, in every point of view, as if they were mere individuals.

For accounts of the principal joint stock and regulated companies established in this country, see the articles BANK OF ENGLAND, DOCKS, EAST INDIA COMPANY, INSURANCE, RUSSIA COMPANY, &c. &c.

6. *Companies with Limited Liability.*—These, which are denominated by the French partnerships *en commandite*, may be constituted in a great variety of ways. Thus, the liability may be limited to the amount of the sums which each partner has contributed to the capital of the partnership, or it may extend to some multiple of such sums. The liability of the manager (*Fr. gérant*) of the concern is usually unlimited; but this, of course, may or may not be the case.

It is said that the establishment of such companies would be productive of many advantages. That at present the principle of association is obstructed, and that many important undertakings are neglected from the extreme risk which attaches to joint-stock speculations; and that as the capital of a partnership with limited responsibility would be publicly declared there would be less risk of bankruptcy and fraud in dealing with it than with partnerships as now constituted. We doubt, however, whether these and similar statements are entitled to much, or, indeed, to any weight. There are, as already seen (art. 3.), certain classes of undertakings which admit of being systematically carried on, such as the construction and management of docks, railways, gas and waterworks, banks and insurance offices on a large scale, and other concerns of the same kind, which may be and are advantageously carried on by companies with limited liability. And there can be no good objection, in the event of a company being organised for any such object, to give them a charter, if they require it, limiting the responsibility of the partners to the amount of their shares. But the question now before us does not concern this class of companies, but has relation to others of a totally different description, that is, to partnerships for carrying on some branch or department of manufacturing or agricultural industry, or of domestic or foreign trade. In these cases the cost of articles, the conditions under which they are supplied, the extent of the demand, and a thousand other circumstances, are perpetually changing, so that their production and sale cannot be conducted on a routine system, but require the most vigilant attention to vary and adopt measures suited to emergencies as they arise. Now the question is, will such partnerships be more prudently and skilfully managed by those whose *all* is responsible for their proceedings, or by those whose responsibility is limited to some part (perhaps a small one) of their fortune, and to whom, consequently, their success or failure is a matter of comparative indifference? Such a question evidently admits but of one answer, which is too obvious to require being stated. It is true, no doubt, that notwithstanding the heavy responsibility under which the partners in ordinary associations

or partnerships now act, they too often display an inexcusable degree of foolhardiness. But if parties will do this when everything that they have is staked on the result, what would they not do if they could limit their liabilities and speculate, or it may be, gamble on a great scale without any fear of the result? It is all but certain that, under such circumstances, reckless speculation and bankruptcy would be increased in an extraordinary degree; and that the numbers and the intensity of those mercantile convulsions which are productive of so much misery would be very largely augmented.

But we are assured that such would not be the case, inasmuch as the capital of all societies *en commandite* would be publicly notified! But we take leave to say that such notification would merely operate to deceive and mislead the public. Suppose a partnership begins business with a capital said to amount to 10,000*l.* or 100,000*l.*, what security have we that such capital has been *bonâ fide* paid in and will be really available? And supposing that we have such security, it can be applicable only to the outset of the enterprise. In a year or a couple of years the capital may be wholly dissipated. What is to hinder the partners, if they be so disposed, from conspiring to divide among themselves some 10 or 20 per cent. profit, when, perhaps, they have not made sixpence? And yet the association may, from the ignorance of the public with respect to its real situation, continue to enjoy the same degree of credit that it did at the beginning.

It is true no doubt that it is customary, where companies with limited liability are established, to prohibit the partners or *commanditaires* from taking any share in their management, which the law vests exclusively in the manager or *gèrant*. But the policy of such prohibition, were it made effectual, is very questionable. This, however, is a question into which we need not enter; for every body knows that the probibition is good for nothing, unless it be to make that be done in a secret and underhand manner which would otherwise be done publicly and openly. And it can hardly do this without, in so far, corrupting the parties, and weakening their sense of honour and of moral rectitude.

Let it not be supposed that it is possible to obviate these abuses of partnerships *en commandite* by obliging them to publish an annual balance sheet. Such a return would be worse than useless. Even if a partnership intended to make an honest return, it would frequently make one that was false, from its inability to calculate the debts owing to it at their just value; and if it wished to dress up a return, to make a ricketty or bankrupt concern appear to be flourishing and wealthy, it would have every means and facility for doing so. The fraud might or might not be eventually detected; but if it were, it would not be till it had served its purpose, and enabled a concern, destitute alike of character and stock, to enter into speculations that could hardly fail to ruin many unsuspecting parties.

A system of this sort enables a man to escape from that responsibility which naturally attaches to all his actions, and is the grand security for their being fair and honourable. It tempts him to engage in desperate adventures, of which, if successful, he reaps all the advantage, and of which, if unsuccessful, he eludes most part of the loss. It is not easy to see how such a system can be productive of any good result. Something, perhaps, might be found to say in its favour if individuals were with difficulty found to engage in partnerships accompanied with the usual risks. But there is no such difficulty. On the contrary, every outlet, whatever may be the hazard attending it, that opens any field for the employment of capital with the prospect of even a moderate return, is immediately filled up. Why, then, should we offer such parties a bonus? Why relieve them of their natural responsibility to make them engage in pursuits into which they are ready and willing to engage without any extraordinary stimulus?

But it is said that it is unjust to interfere to hinder A, B, and C, from engaging in a partnership with limited liability; that the terms on which the partnership is to be conducted being declared, everybody is put on his guard; and that there can be no more risk in dealing with it than with any other association. But in cases of this sort justice is identical with public or general utility, and not with any abstract or imagined right. Society is founded on the principle that every man and set of men shall be responsible, in the widest sense of the term, for his or their proceedings. And this principle should be enforced in all cases, unless when it can be clearly shown that the public interests would be promoted by its suspension. But we deny that this has been or can be shown by the advocates for the general introduction of partnerships *en commandite*; for we have seen, 1st, that in all ordinary cases, such partnerships are wholly unnecessary; and, 2nd, that, if organised, they would unavoidably occasion a vast increase of fraud and of reckless speculation. There is, consequently, no ground for their introduction; but, on the contrary, had they been introduced, there are sufficient grounds why they should have been suppressed.

It is sometimes said that by making the manager or *gèrant* act under an unlimited responsibility, we should secure the advantages of both systems, that is, of the present

system of unlimited liability, and of the limited liability which it is proposed to introduce in its stead, or along with it. But it is plain that it would do nothing of the sort. If the security of the public is to be augmented by making the manager indefinitely responsible, that security would, it is obvious, be still further augmented by extending the same indefinite responsibility to all the members of the association. Under the proposed plan the *gèrant* may be a man of straw. He may be, and the probability is, that whenever it is thought desirable, he will be selected, not because he deserves the confidence of the public, but because he may be depended upon for carrying out the secret objects of the association, or of its leaders. Do what you will it is impossible to hinder him from combining with his partners to defraud the public? Provided they keep their own counsel, how is the fraud to be discovered? And supposing it to be ultimately discovered, what advantage will thence result to those who have in the meantime been swindled out of their property?

In dealing with firms or associations as they are now constituted, people trust, or believe they may trust, to the reputation for skill and integrity, and to the presumed wealth of one or more of the parties. Such parties have a character to lose; and as they at the same time act under the heaviest responsibility, the chances are ten to one that they will act discreetly, fairly, and honourably. But a partner in a society *en commandite*, has no such guarantees for his conduct. Instead of being responsible he is all but irresponsible. And it would be contradictory alike of principle and common sense to suppose that the one association should be as carefully and as honestly conducted as the other.

These reasonings might be indefinitely extended, but they have already encroached too much on our limits. And yet though brief, we incline to think that they are enough to show that the establishment of partnerships *en commandite* would be productive of very great disadvantages, unaccompanied by a single countervailing advantage.

7. *Civic Companies, or Corporations.*—Exclusive of the companies previously mentioned, a number of ancient companies or corporations exist in this and most other European countries, the members of which enjoy certain political as well as commercial privileges. When the feudal system began to be subverted by the establishment of good order and regular government in the towns, the inhabitants were divided into certain trades or corporations, by which the magistrates and other functionaries were chosen. The members of these trades, or corporations, partly to enhance the value of their privileges, and partly to provide a resource, in case of adversity, for themselves, acquired or usurped the power of enacting by-laws regulating the admission of new members, and at the same time set about providing a fund for the support of such as accident or misfortune might reduce to a state of indigence. Hence the origin of apprenticeships, the refusal to allow any one not a member of a corporation to carry on any business within the precincts of any town corporate, and the various regulations that had to be submitted to, and the fees that had to be paid by the claimants for inrolment in corporations. For a lengthened period these privileges and regulations were very oppressive. Within the last century, however, their influence has been progressively diminishing. In France, where the abuses inseparable from the system had attained to a very great height, it was entirely swept off by the Revolution: and though corporations still exist in this country, they have been stripped of several of their peculiar franchises; and should now, for the most part, be regarded more, perhaps, in the light of charitable than of political institutions. It would be well, however, were they reduced entirely to the former character; and were the few political and commercial privileges, which they still enjoy, communicated to the rest of the citizens. At their first institution, and for some time after, corporations, considered as political bodies, were probably useful; but such is no longer the case; and in so far as they now possess any special immunities, they tend to obstruct that free competition that is so advantageous.

The following extract from a *Report on the Commerce and Manufactures of the United States*, drawn up by Albert Gallatin, Esq., then secretary to the Treasury, and laid before Congress in 1816, sets the superior advantages resulting from the unrestricted freedom of industry in a very striking point of view. "No cause," says he, "has, perhaps, more promoted in every respect the general improvement of the United States, than the absence of those systems of internal restriction and monopoly which continue to disfigure the state of society in other countries. No laws exist here, directly or indirectly, confining men to a particular occupation or place, or excluding any citizen from any branch he may, at any time, think proper to pursue. Industry is, in every respect, free and unfettered; every species of trade, commerce, and profession, and manufacture, being equally open to all, *without requiring any regular apprenticeship, admission, or licence*. Hence the improvement of America has not been confined to the improvement of her agriculture, and to the rapid formation and settlement of new states in the wilderness; but her citizens have extended their commerce to every part of the globe, and carry on with complete success even those branches for which a monopoly had heretofore been considered essentially necessary.

There is in *Rees's Cyclopædia*, article *Company*, a list of the different Civic Companies belonging to the City of London, in which the periods of their incorporations, and various other particulars with respect to several of them, are specified.

COMPASS (Ger. *Ein Kompass*; Du. *Zeekompass*; Da. *Söekompass*; Sp. *Sjöcompass*; Fr. *Boussole, Compas de mer*; It. *Bussola*; Sp. *Aguja de marear*; Port. *Compasso de marear*; Rus. *Kompass korabelniii*), or mariner's compass, an instrument composed of a needle and card, by which the ship's course is directed. The needle, with

little variation, always points towards the north; and hence the mode of steering by the compass.

The common opinion is that the compass was invented by Flavio Gioia, a citizen of the once famous republic of Amalphi, very near the beginning of the fourteenth century. Dr. Robertson has adopted this opinion, and regrets that contemporary historians furnish no details as to the life of a man to whose genius society is so deeply indebted.—(*Hist. of America*, vol. i. p. 47. 8vo. ed.) But though Gioia may have made improvements on the compass, it has been shown that he has no claim to be considered as its discoverer. Passages have been produced from writers who flourished more than a century before Gioia, in which the polarity of the needle, when touched by the magnet, is distinctly pointed out. Not only, however, had this singular property been discovered, but also its application to the purposes of navigation, long previously to the fourteenth century. Old French writers have been quoted (*Macpherson's Annals of Commerce*, anno 1200; *Rees's Cyclopædia*), that seem fully to establish this fact. But whatever doubts may exist with respect to them, cannot affect the passages which the learned Spanish antiquary, Don Antonio de Capmany (*Questiones Criticas*, p. 73—132.) has given from a work of the famous Raymond Lully (*De Contemplatione*) published in 1272. In one place Lully says, "as the needle, when touched by the magnet, naturally turns to the north" (*sicut acus per naturam vertitur ad septentrionem dum sit tacta a magnete*). This is conclusive as to the author's acquaintance with the polarity of the needle; and the following passage from the same work—"as the nautical needle directs mariners in their navigation" (*sicut acus nautica dirigit marinarios in sua navigatione, &c.*) is no less conclusive as to its being used by sailors in regulating their course. There are no means of ascertaining the mode in which the needle Raymond Lully had in view was made use of. It has been sufficiently established—(see the authorities already referred to, and *Azuni, Dissertation sur l'Origine de la Boussole,*)—that it was usual to float the needle, by means of a straw, on the surface of a basin of water; and Capmany contends that we are indebted to Gioia for the card and the method now followed of suspending the needle; improvements which have given to the compass all its convenience, and a very large portion of its utility. But this part of his *Dissertation*, though equally learned and ingenious, is by no means so satisfactory as the other. It is difficult to conceive how mariners at sea could have availed themselves of a floating needle; but, however this may be, it seems most probable that Gioia had considerably improved the construction of the compass; and that, the Amalphitans having been the first to introduce it to general use, he was, with excusable partiality, represented by them, and subsequently regarded by others, as its inventor.

The statements which have sometimes been put forward in regard to the antiquity of the Chinese compass have been treated with very little respect by some great authorities*; and are much too questionable to warrant any stress being laid on them. The Chinese have never been in the habit of making distant voyages; but had the needle been used in their trading vessels, the Indians, with whom they came in contact, would no doubt have eagerly availed themselves of so valuable an invention; and they would, in all probability, have communicated it to the Arabs. There is, however, no evidence to show that the compass was used by the Indians previously to the voyage of De Gama.† And there are no good grounds for thinking that the Arabs had any knowledge of the instrument, or that it was ever used by them, till after the period when they might have learned it from the Venetians, the Amalphitans, and other European traders. The notion that we are indebted to them for the compass, appears, indeed, to have little to recommend it, except that it began to become known when the Saracens became powerful in the Mediterranean. This, however, is too weak a ground on which to found a claim. And though it be impossible to speak with perfect confidence on such a subject, the fair conclusion seems to be, that the compass is a European invention; that it was discovered in the 12th or 13th century, and brought into use in some of the countries bordering on the Mediterranean.

The reader will not consider these details out of place in a work on commerce, which the compass has done so much to extend. "Its discovery," to borrow the language of Mr. Macpherson, "has given birth to a new æra in the history of commerce and navigation. The former it has extended to every shore of the globe, and increased and multiplied its operations and beneficial effects in a degree which was not conceivable by those who lived in the earlier ages. The latter it has rendered expeditious, and comparatively safe, by enabling the navigator to launch out upon the ocean free from the danger of rocks and shoals. By the use of this noble instrument, the whole world has become one vast commercial commonwealth, the most distant inhabitants of the earth

* Capmany, p. 76. &c. The learned Mr. Forster, who is anything but inclined to underrate the obligations we are under to the Arabs, admits that they were ignorant of the compass.—*Mahomedanism Unveiled*, &c. ii. 223.

† *Azuni*, "*De la Boussole*," pp. 118—122.

are brought together for their mutual advantage, ancient prejudices are obliterated, and mankind are civilised and enlightened."—(Vol. i. p. 366.)

COMPOSITION, in commerce, commonly implies the dividend or sum paid by an insolvent debtor to his creditors, and accepted by them in payment for their debts.

CONEY WOOL (Ger. *Kaninchenwolle;* Du. *Konynhair;* Fr. *Poil de lapin;* It. *Pelo di Caniglio;* Sp. *Conejuna*), the fur of rabbits. This article is extensively used in the hat manufacture; and besides the large supplies raised at home, a great deal is imported. The imports usually range from about 120,000 to about 130,000 skins a year.

CONSTANTINOPLE (Turk. STAMBOUL), a famous city of South-eastern Europe, formerly the metropolis of the Eastern, as it still is of the Turkish Empire, on a triangular point of land, on the European side of the Sea of Marmara (Propontis), at the point where it unites with the Bosphorus, or channel leading to the Black Sea, lat. 41° 0′ 12″ N., lon. 28° 59′ 2″ E. Population variously estimated at from 500,000 to 800,000, but believed, by the best authorities, to be about 650,000. The situation of this renowned city is, in a commercial point of view, one of the finest imaginable. Standing on the narrow straits uniting the Mediterranean and Euxine Seas, she at once commands, and is the *entrepôt* for, the commerce between them. The harbour is most excellent. It consists of an extensive inlet, or arm of the sea, stretching along the north-east side of the city, which it divides from the suburbs of Galata and Pera. It has sufficient depth of water to float the largest ships, and can accommodate more than 1,000 sail. The strong current that sets through the Bosphorus into the sea of Marmara strikes against Seraglio Point—(see Plan); a part of the water, being in consequence forced into the harbour, runs along its south-western side in the direction marked by the arrows—(see Plan), till, arriving at its extremity, it escapes by the opposite side. In the middle the water is still. On leaving the port, it is necessary to keep well over to the northern side; for otherwise the ship might be taken by the current, and driven on Seraglio Point. It may be worth while, however, to remark, that, notwithstanding this inconvenience, the current has been of signal service to the city, by scouring the harbour, and carrying away the filth and ballast by which it must otherwise have been long since choked up. The distance across from Seraglio Point to the opposite suburb of Scutari, on the Asiatic coast, is rather more than an English mile. Within less than $\frac{1}{4}$ of a mile of the latter is a rocky islet, upon which is a tower and light-house, known by the name of the Tower of Leander. Foreigners reside in Galata, Pera, and the suburbs on the eastern side of the harbour; and it is there, consequently, that the principal trade of the place is carried on. The quays are good, and ships lie close alongside.

The Bosphorus, or channel of Constantinople, runs in a N. E. by N. direction about 15 miles, varying in breadth from 1$\frac{1}{4}$ to $\frac{1}{2}$ a mile. It is swept by a rapid current, which it requires a brisk gale to stem, and has throughout a great depth of water. The Hellespont, or strait of the Dardanelles, leading from the Archipelago to the Sea of Marmara, is about 13 leagues in length. Its direction is nearly N. E. Where narrowest, it is little more than a mile across. It also is swept by a strong current, and has deep water throughout.

The subjoined plan of part of Constantinople and its port is copied, without reduction, from the beautiful plan of the city and Bosphorus, drawn and engraved by M. Merzoff Robert of Munich, and published by Mr. Wilde of this city.

Nothing can be more imposing than the appearance of the city when seen from the sea, but on landing the illusion vanishes. The streets are narrow, dark, ill-paved, and irregular. Owing to the want of any effective system of police, and of the most ordinary attention to cleanliness, they are extremely filthy; and are infested with herds of dogs, and also with rats, which perform the functions of scavengers. The houses are mostly built of wood, and fires are very frequent. Most of these happen designedly; the burning of a few hundred houses being deemed the readiest and most effectual means of making the government aware of the public dissatisfaction, and of procuring a change of ministers, or a redress of grievances!

* *Weights and Measures.*—The commercial weights are—176 drams = 1 rottolo; 2·272 rottoli = 1 oke; 6 okes = 1 batman; 7$\frac{1}{2}$ batmans = 1 quintal or cantaro = 124·457 (124$\frac{1}{2}$ very nearly) lbs. avoirdupois = 56·437 kilogrammes = 116·527 lbs. of Hamburg. The quintal of cotton is 45 okes = 127·2 lbs. avoirdupois.

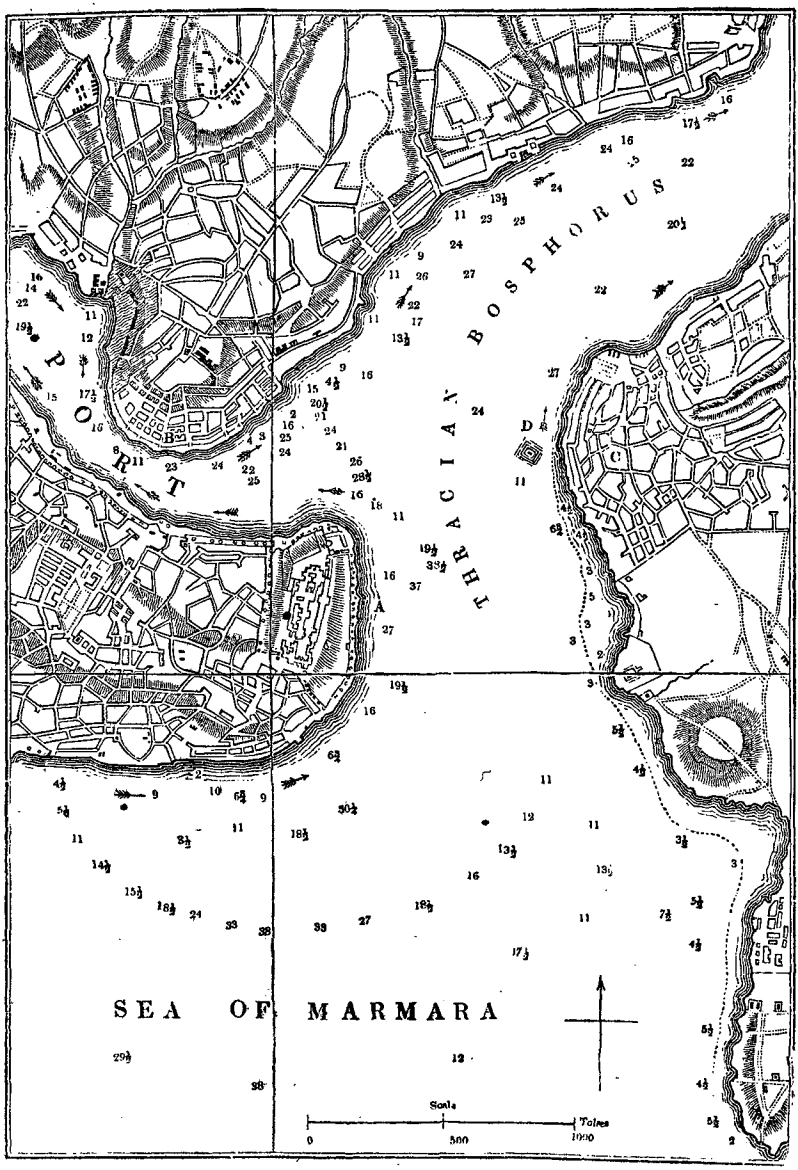
The pik, or pike, is of two sorts, the greater and the less. The greater, called *halebi* or *arschim*, used in the measurement of silks and woollens, is very near 28 inches (27·9). The lesser, called *endeze*, used in the measuring of cottons, carpets, &c. = 27 inches. Hence 100 long piks = 77·498 English yards, and 100 short piks = 75·154 do. But in ordinary commercial affairs, the pik is estimated at $\frac{3}{4}$ of an English yard.

Corn is measured by the *kisloz* or *killow* = 0·941 of a Winchester bushel; 8$\frac{1}{2}$ ki-loz = 1 quarter. The *fortin* = 4 kisloz.

Oil and other liquids are sold by the *alma* or *meter* = 1 gallon 3 pints English wine measure. The alma of oil should weigh 8 okes.—(*Nelkenbrecher* and *Dr. Kelly.*)

The *Port Charges* on account of English vessels in the harbours of the Ottoman empire are fixed by treaty at 300 aspers, neither more nor less.

Money and Banks.—Owing to successive degradations, the value of the Turkish coin has been so much reduced that the piastre, which, previously to 1770, was worth about 2*s.* 6*d.*, is so sunk as to be only worth about 2$\frac{1}{4}$*d.* But the pernicious consequences of this continued tampering with the standard



References to Plan. — A, Seraglio Point; B, Galata; C, Scutari; D, Tower and lighthouse of Leander. The arrows show the direction of the currents. The soundings are in fathoms. N.B. The port is crossed by two bridges of boats, which open in the centre to allow vessels to pass and repass, one joining the city to the suburb of Galata, and the other, farther up, to that of Pera. Vessels entering the port pass the lower bridge after sunset and those leaving it before sunrise. At each of these periods the bridge is kept open for three hours to admit of their ingress and egress. At other times it is shut.

of value were at last discerned by the Turkish authorities, and an attempt has been made to arrest the evil. In this view the old coins were called in and replaced by new ones, issued in 1844, called *Medjidiè*, from the Sultan's name. The designations and values of these coins are given in the following table.

Unluckily, however, the supply of new coins, amounting to only about 200 millions of piastres, was quite inadequate to fill the place of the old coins, and they either circulated at an agio in their favour, or were exported. To obviate the inconveniences of this state of things, *caimés*, or paper notes, were

New Money of Sultan Abdul Medjid.

Coins.	Value in Piastres.	Weight in Grammes.	Purity.	Value in Francs.
Gold: The Juslik, Sarra Juslik (yellow piece) or piece of	100	7·216	·916	22·50
The Ellilik, or piece of	50	3·608	·916	11·25
Piece of 10 piastres	10	0·722	·916	2·25
Piece of 5 piastres	5	0·361	·916	1·12
Silver: The Medjidiè, or piece of	20	24·055	·830	4·553
The Onlik, or piece of	10	12·055	·830	2·276

issued. And to maintain the latter in circulation, and the piastre at a stationary value (108 piastres to the *l.* sterling), the Bank of Constantinople was founded in 1848. But, having failed to accomplish the objects for which she was intended, and incurred a heavy loss, she was wound up in 1853, and the Ottoman Bank established in her stead. The functions of the latter are in part political, and in part commercial. She has a capital of 200 millions of piastres, in shares of 2,000 each; and is bound to withdraw from circulation old coins of the value of 497 millions, and to replace them by new coins; to receive such *caimés* as bear interest (132 millions) at par; and to receive those which do not bear interest (45 millions) at par, to the amount of one-third in the payments made to her. In return for these services she is chartered for 15 years, and is to receive an annual pension of 30 millions, with a bonus of 30 millions at the expiration of the charter. In addition to the functions now specified she transacts all sorts of ordinary banking business.—(See the excellent and instructive work of Ubicini, *Lettres sur la Turquie*, i. pp. 312—325, 2nd ed.)

It would be hazardous to speculate on the future of the Ottoman Bank. Much, of course, must depend on the regular payment of the pension of 30 millions. And that, we should think, was not a little uncertain.

Besides the new monies, the old coins of the late and former sultans, and also foreign coins, continue in circulation. But all large payments are made by the *kitze*, or purse of gold, of 30,000 piastres, and the *kis*, or purse of silver, of 500 ditto. It may be worth while to mention that Ottoman coins are not marked with the effigy of the sovereign, but merely with his cypher, *tewghra*.

Trade, &c. — Owing to the vicious institutions of the Turks, and the disorganised state of the empire, the trade of Constantinople is very far from being so extensive as might be supposed from its situation and population. The imports consist of corn, timber, tallow, and furs, principally from the Black Sea; and of cotton stuffs and yarn, iron, coal, tin, tin plates, woollens, silks, cutlery, watches and jewellery, paper, glass, furniture, indigo, cochineal, &c. from England and other European countries. Corn and coffee are imported from Alexandria; but considerable quantities of Brazil and West India coffee are also imported, particularly in British and American bottoms. Sugar is partly imported from the East, but principally from the West Indies. The exports consist of silk from Brussa, which is by far the most important article, carpets, hides, wool, Angola goats' hair, yellow berries, copper, boxwood, opium, galls, leeches, specie, and a few other articles. But the exports are always very much less than the imports; and ships carrying goods to Constantinople either return in ballast, or get return cargoes at the ports on the Black Sea, or at Smyrna, Salonica, &c., on which places they frequently procure bills at Constantinople. By far the largest proportion of the trade of this city, and of the Levant generally, is in the hands of Greek merchants, who by their superior skill, industry, and knowledge of those with whom they have to deal, have completely distanced their English, French, and other European competitors (denominated Franks). The Armenians only have been able to withstand the competition of the Greeks. Bargains are negotiated by Jew brokers, some of whom are rich.

If we formed an estimate of the trade of Constantinople from the number of vessels by which its port is visited, it would appear to be much greater than it really is. This arises from the circumstance of almost all the vessels passing from the Mediterranean to the Black Sea, and from the latter to the former, calling here, where they sometimes discharge and take on board part of their cargoes. We subjoin

An Account of the Number and Tonnage of the Foreign Ships that entered at, and cleared out from, Constantinople, in 1857, specifying the Countries to which they belonged, and the Number and Tonnage of those belonging to each.

Steam Navigation.—Constantinople is now visited by steamers from London, Liverpool, Marseilles, Trieste, Odessa, the Danube, Smyrna, and other places, and its commerce, as well as that of the empire, has, in consequence been materially promoted. The steamers belonging to the *Lloyd Austriaco* at Trieste, and the Danube Steam Company, are said to reflect great credit on these associations.

Commercial Policy of the Turks.—It is singular that as respects commerce, the policy of the Turkish government, whether originating in design or carelessness, is entitled to the highest praise. "No restrictions," says Mr. Thornton, "are laid on commerce, except in the instance of a general prohibition of exporting the articles necessary for the support of human life to foreign countries, especially from the capital, where alone it is rigorously enforced; and this impolitic restraint will no doubt be removed when the Turkish government shall become sensible that what is intended as the means of securing abundance, is, in fact, the sole cause of that scarcity which is sometimes experienced. With this one exception, commerce is perfectly free and unfettered. Every article of foreign or domestic growth or manufacture is conveyed into every port, and over every province, without any interference on the part of the magistrates, after payment of the duties. On this subject I speak from actual experience, and may appeal to every foreign or native merchant in Turkey for its general truth."—(*Present State of Turkey*, vol. i. p. 82.)

The duties on importation are extremely moderate, being only 5 per cent., viz., 3 per cent. on goods when landed, and 2 per cent. on their being admitted to consumption. But the duties on exports of native produce amount to 12 per cent., whereof 9 per cent. is paid when the goods arrive at the port whence they are to be exported, and 3 per cent. on their being shipped.*—(*Ubicini, sur la Turquie*, i. 281.) It is needless to dwell on the impolicy of a general export duty of this amount; and the better plan would be to raise the duty on imports to 10 or 12 per cent., and to reduce the duty on exports to the 3 per cent. paid on embarkation. But despite the 12 per cent. charged on exports, Turkey is entitled, in all that relates to trade, to read a lesson to most European powers; and this she did in a very able manner, in an official paper published in the *Moniteur Ottoman*, in September, 1832. We extract a few paragraphs from this interesting document.

"Good sense, tolerance, and hospitality have long ago done for the Ottoman empire, what the other states of Europe are endeavouring to effect by more or less happy political combinations. Since the throne of the sultans has been elevated at Constantinople, commercial prohibitions have been unknown; they opened all the ports of their empire to the commerce, to the manufactures, to the territorial produce of the Occident, or, to say better, of the whole world. Liberty of commerce has reigned here without limits, as large, as extended as it was possible to be.

"Here every object of exchange is admitted, and circulates without meeting any obstacle other than the payment of an infinitely small portion of the value to the Custom-house. The chimera of a balance of trade never entered into heads sensible enough not to dream of calculating whether there was most profit in buying or selling. Thus the markets of Turkey, supplied from all countries, refusing no objects which mercantile spirit puts into circulation, and imposing no charge on the vessels that transport them, are seldom or never the scenes of those disordered movements occasioned by the sudden deficiency of such or such merchandise, which, exorbitantly raising prices, are the scourges of the lower orders, by unsettling their habits, and by inflicting privations. From the system of restrictions and prohibitions arise those devouring tides and ebbs which sweep away in a day the labour of years, and convert commerce into a career of alarms and perpetual dangers. In Turkey, where this system does not exist, these disastrous effects are unknown.

"The extreme moderation of the duties is the complement of this régime of commercial liberty: and in no portion of the globe are the officers charged with the collection, of more confiding facility for the valuations, and of so decidedly conciliatory a spirit in every transaction regarding commerce.

"Away with the supposition that these facilities granted to strangers are concessions extorted from weakness! The dates of the contracts termed capitulations, which establish the rights actually enjoyed by foreign merchants, recall periods at which the Mussulman power was altogether predominant in Europe. The first capitulation which France obtained was in 1535, from Soliman the Canonist (the Magnificent). The dispositions of these contracts have become antiquated, the fundamental principles remain. Thus, 300 years ago, the sultans, by an act of munificence and of reason, anticipated the most ardent desires of civilised Europe, and proclaimed unlimited freedom of commerce."

Did the policy of Turkey in other respects harmonise with this, she would be one of the most civilised and powerful of nations, instead of being one of the most abject and degraded. Unfortunately, however, this is very far from being the case. Tyranny and insecurity universally prevail. "The cultivator of the soil," says one of her eulogists, "is ever a helpless prey to injustice and oppression. The government agents have to suffer in their turn from the cruelty and rapacity of which they themselves have been guilty; and the manufacturer has to bear his full share of the common insecurity; he is fixed to the spot, and cannot escape the grasp of the local governor. The raw material monopolised by a bey or ayan, may be forced upon him at a higher price than he could purchase it himself, and perhaps of inferior quality; fines may be imposed upon him, he may be taken for forced labour, or troops may be quartered on his workshop."—(*Urquhart on Turkey and its Resources*, p. 139.)

Some vigorous efforts have been made of late years by the Turkish government to reform abuses; but with little or no practical effect. There is, in truth, neither public virtue nor principle in the country to second these efforts. Corruption of every kind is as prevalent as ever; and the Rayas continue to be exposed to every sort of oppression. Though railways have been projected, there are at present (1859) no roads in any part of the empire; and agriculture is everywhere in the most abject condition. Indeed, vast tracts of the most fertile (and of old the most flourishing) districts of Asia Minor are wholly waste and unoccupied; and the evil, instead of diminishing, is continually increasing.† The greater density of population in European Turkey, and whatever

* This 3 per cent. is not unfrequently represented as being the entire duty on exports.

† For an account of Turkish agriculture, manufactures, &c., see Ubicini, *Lettres sur la Turquie*, i. pp. 355—438. Though written with a strong bias in favour of the Turks, this is incomparably the best of the late works on Turkey.

industry is found in it, are due to the energies of the Christian population. And when the latter have been emancipated from the slavery in which they have been long held, by the expulsion of their barbarian task-masters from Europe, the beautiful provinces in which the latter have been so long permitted to encamp will again become the favourite seats of industry and civilisation. But the degradation in which the native inhabitants are involved would have been still more complete, but for the freedom of commerce they have always enjoyed. This has tended to keep alive the seeds of industry, and to countervail to some small extent the destructive influence of oppression and insecurity. Had their intercourse with foreigners been either prohibited, or placed under oppressive restrictions, the barbarism of Turkey would have been completed, and it is difficult to suppose that there could have been anything like wealth or industry in the empire.

Trade of Turkey with England.—The trade between this country and Turkey is of considerable value and importance, though not so much so as is generally supposed. Many of the ships for the Danube, Odessa, Trebizond (cargoes in transit to Persia), and other ports on the Black Sea, clear out for Constantinople; so that the exports to Turkey appear to be a good deal larger than they are in reality. Cotton stuffs and twist are by far the largest articles of export; and next are woollens, iron and steel, coals, refined sugar, hardware and cutlery, machinery, earthenware, &c. Most part of the Turkish establishments for the manufacture of cottons, except those which use English yarn, have been given up. But the great consumption of Turkey consists of home-made fabrics, and hitherto these have not been much interfered with. Most part of the stuffs we send out are what are called plain goods; and if our coarser fabrics should begin generally to supersede those made by the Turkish peasantry, it is not easy to say to what degree the demand for them might be extended.

Of the European states, Austria and Switzerland have been our most formidable rivals in the supply of Turkey with cottons. Their stuffs were, in several respects, well fitted for the Eastern markets; but owing to the difficulty they lay under of getting returns, and the continued and rapid reduction in the price of English cottons, we have gained a decided advantage over them, and are now nearly in the exclusive possession of the market. Cheapness is everywhere the grand desideratum. Though our muslin and chintzes be inferior in fineness to those of the East, and our red dye (a colour in great esteem in Turkey, Persia, &c.) be inferior in brilliancy, these defects are more than balanced by the greater cheapness of our goods: and from Smyrna to Canton, from Madras to Samarcand, we are everywhere supplanting the native fabrics, and laying the foundations of a commerce that will be eminently beneficial to all parties.

Our commerce with Turkey has been considerably facilitated by the reduction of the duties on silks, figs, currants, and oil. Nothing, however, would contribute so much to its extension, as the establishment of order and tranquillity throughout the country. But this, we fear, is beyond the ability of the Ottoman government. The abuses which have reduced the empire to its present state of degradation seem to be inherent in the structure of Turkish society, and to be in harmony with the habits and prejudices of the people. And if such be the case, that reform, which is so much to be wished for, must come from without, and not from within. We subjoin

CONSUL, in commerce, an officer appointed by competent authority to reside in foreign countries, in the view of facilitating and extending the commerce carried on between the subjects of the country which appoints him, and those of the country or place in which he is to reside.

Origin and Appointment of Consuls.— The office of consul appears to have originated in Italy, about the middle of the twelfth century. Soon after this, the French and other Christian nations trading to the Levant began to stipulate for liberty to appoint consuls to reside in the ports frequented by their ships, that they might watch over the interests of their subjects, and judge and determine such differences with respect to commercial affairs as arose amongst them. The practice was gradually extended to other countries; and in the sixteenth century was generally established all over Europe. — (*Martens, Précis du Droit des Gens*, § 147.)

British consuls were formerly appointed by the Crown, upon the recommendation of great trading companies, or of the merchants engaged in the trade with a particular country or place; but they are now directly appointed by government, without requiring any such recommendation, though it, of course, is always attended to when made.

The right of sending consuls to reside in foreign countries depends either upon a tacit or express convention. Hence their powers differ very widely in different states. In some they exercise a very extensive jurisdiction over the subjects of the state which appoints them; but the extent of this jurisdiction is not discretionary, and must, in all cases, be regulated either by an express convention between the state appointing and the state receiving the consul, or by custom. Consuls established in England have no judicial power; and the British government has rarely stipulated with other powers for much judicial authority for its consuls. Turkey, however, is an exception to this remark. English consuls enjoy in that country several peculiar privileges conferred by ancient treaties, and confirmed by that signed at the Dardanelles in 1809. It is there stipulated and agreed upon —

"That if there happen any suit, or other difference or dispute, among the English themselves, *the decision thereof shall be left to their own ambassador or consul*, according to their custom, without the judge or other governors, our slaves, intermeddling therein.

"That if an Englishman, or other subject of that nation, shall be involved in any lawsuit, or other affair connected with law (with a Turk), the judge shall not hear nor decide thereon, until the ambassador, consul, or interpreter shall be present; and all suits exceeding the value of 4000 aspers shall be heard at the Sublime Porte, and nowhere else.

"That the consuls appointed by the English ambassadors in our sacred dominions, for the protection of their merchants, shall never, under any pretence, be imprisoned, nor their houses sealed up, nor themselves sent away; but all suits or differences in which they may be involved, shall be represented to our Sublime Porte, where their ambassador will answer for them.

"That in case any Englishman, or other person subject to that nation, or navigating under its flag, should happen to die in our sacred dominions, our fiscal and other officers shall not, upon pretence of its not being known to whom the property belongs, interpose any opposition or violence, by taking or seizing the effects that may be found at his death, but they shall be delivered up to such Englishman, whoever he may be, to whom the deceased may have left them by his will; and should he have died intestate, then the property shall be delivered up to the English consul, or his representative who may be then present; and in case there be no consul, or consular representative, they shall be registered by the judge, in order to his delivering up the whole thereof, whenever any ship shall be sent by the ambassador to receive them."

Conformably to these capitulations, and the by-laws of the Levant Company, Nos. 39, 40, and 41., the consuls were authorised to administer justice in all cases of contention

amongst British subjects within the Turkish dominions; and they were further authorised to send to England, in safe custody, any British subject resident in Turkey, who should decline their jurisdiction, or appeal from them to the courts of the Grand Signior, or of any other potentate. And the act 6 Geo. 4. c. 33. § 4., for the abolition of the Levant Company, expressly provides for the continuance to the consuls appointed by his Majesty, of the same rights and duties of jurisdiction over British subjects in Turkey, that were enjoyed by the consuls appointed by the Company.

At present, therefore, consuls in Turkey enjoy extensive judicial powers; but owing to the freedom of Turkish commerce, and the simplicity of the regulations under which it is carried on, their other functions, with the exception of furnishing statistical details, Mr. Urquhart, whose opinion as to all that respects Turkey is deservedly of considerable weight, seems to think that the judicial powers enjoyed by the European consuls in that country have been productive of much mischief. Still, however, we doubt whether they could be entirely dispensed with in a country so peculiarly situated. But there can be no doubt that it is highly necessary that the greatest care should be taken in the selection of the individuals to whom such powers are entrusted.

Other states have occasionally given to consuls similar powers to those conceded to them in Turkey. Thus, in the treaty between Sweden and the United States of America, ratified on the 24th of July, 1818, it is stipulated that the consuls appointed by either government to reside within the dominions of the other, or their substitutes, "shall, as such, have the right of acting as judges or arbiters in all cases of differences which may arise between the captains and crews of the vessels of the nation whose affairs are intrusted to their care. The respective governments shall have no right to interfere in these sort of affairs, except in the case of the conduct of the crews disturbing public order and tranquillity in the country in which the vessel may happen to be, or in which the consul of the place may be obliged to call for the intervention and support of the executive power, in order to cause his decision to be respected; it being, however, well understood, that this sort of judgment or arbitration cannot deprive the contending parties of their rights of appealing on their return to the judicial authorities of their country."

Duties of Consuls.—The duties of a consul, even in the confined sense in which they are commonly understood, are important and multifarious. It is his business to be always on the spot, to watch over the commercial interests of the subjects of the state whose servant he is; to be ready to assist them with advice on all doubtful occasions; to see that the conditions in commercial treaties are properly observed; that those he is appointed to protect are subjected to no unnecessary or unjustifiable demands in conducting their business; to represent their grievances to the authorities at the place where they reside, or to the ambassador of the sovereign appointing him at the court on which the consulship depends, or to the government at home; in a word, to exert himself to render the condition of the subjects of the country employing him, within the limits of his consulship, as comfortable, and their transactions as advantageous and secure as possible.

The following more detailed exposition of the *general* duties of a British consul, is taken from Mr. Chitty's work on *Commercial Law*: —

"A British consul, in order to be properly qualified for his employment, should take care to make himself master of the language used by the court and the magistracy of the country where he resides, so as to converse with ease upon subjects relating to his duties. If the common people of the port use another, he must acquire that also, that he may be able to settle little differences without troubling the magistracy of the place for the interposition of their authority; such as accidents happening in the harbour, by the ships of his nation running foul of and doing damage to each other.

"He is to make himself acquainted, if he be not already, with the law of nations and treaties, with the tariff or specification of duties on articles imported or exported, and with all the municipal ordinances and laws.

"He must take especial notice of all prohibitions to prevent the export or import of any articles, as well on the part of the state wherein he resides, as of the government employing him; so that he may admonish all British subjects against carrying on an illicit commerce, to the detriment of the revenues, and in violation of the laws, of either. And it is his duty to attend diligently to this part of his office, in order to prevent smuggling, and consequent hazard of confiscation or detention of ships, and imprisonment of the masters and mariners.—(*Beawes, Lex Merc.* vol. ii. p. 42.)

"It is also his duty to protect from insult or imposition British subjects of every description within his jurisdiction. If redress for injury suffered is not obtained, he is to carry his complaint by memorial to the British minister residing at the court on which the consulship depends. If there be none, he is to address himself directly to the court; and if, in an important case, his complaint be not answered, he is to transmit the memorial to his majesty's secretary of state.—(*Beawes, Warden, &c.*)

"When insult or outrage is offered by a British subject to a native of the place, and the magistrate thereof complains to the consul, he should summon, and in case of disobedience may by armed force bring before him the offender, and order him to give immediate satisfaction; and if he refuse, he resigns him to the civil jurisdiction of the magistrate, or to the military law of the garrison; nevertheless *always acting as counsellor or advocate at his trial*, when there is question of life or property.

"But if a British subject be accused of an offence alleged to have been committed at sea, within the dominion or jurisdiction of his sovereign, it is then the duty of the consul to claim cognizance of the cause for his sovereign, and to require the release of the parties, if detained in prison by the magistracy of the place on any such accusation brought before them, and that all judicial proceedings against them do instantly cease; and he may demand the aid of the power of the country, civil and military, to enable him to secure and put the accused parties on board such British ship as he shall think fit, that they may be conveyed to Great Britain, to be tried by their proper judges. If, contrary to this requisition, the magistrates of the country persist in proceeding to try the offence, the consul should then draw up and transmit a memorial to the British minister at the court of that country; and if that court give an evasive answer, the consul should, if it be a sea offence, apply to the Board of Admiralty at London, stating the case; and upon their representation, the secretary for the proper department will lay the matter before the king, who will cause the ambassador of the foreign state, resident in England, to write to his court abroad, desiring that orders may immediately be given by that government, that all judicial proceedings against the prisoner be stayed, and that he be released.—(See *Case of Horseman and his Crew*, *Beawes*, vol. ii. p. 422.)

"It is the duty also of a British consul to relieve all distressed British mariners, to allow them 6*d.* daily for their support, to send them home in the first British vessels that sail for England, and to keep a regular account of his disbursements, which he is to transmit yearly, or oftener if required, to the Navy Office, attested by two British merchants of the place: this is provided for by positive enactment.—(1 *Geo.* 2. s. 2. c. 14. § 12.) He is also to give free passes to all poor British subjects wishing to return home, directed to the captains of the king's packet boats, or ships of war, requiring them to take them on board.—(See SEAMEN.)

"The consul is not to permit a British merchant ship to leave the port where he resides without his passport, which he is not to grant until the master and crew thereof have satisfied all just demands upon them; and for this purpose he ought to see the governor's pass of a garrisoned town, or the burgomaster's; unless the merchant or factor to whom the ship was consigned will make himself responsible.—(*Beawes*, *Lex Merc.* vol. ii. p. 423.)

"It is also his duty to claim and recover all wrecks, cables and anchors, belonging to British ships, found at sea by fishermen or other persons, to pay the usual salvage, and to communicate a report thereof to the Navy Board.

"The consuls and vice-consuls of his Majesty are, by express enactment (46 Geo. 3. c. 98. § 9.), empowered to administer oaths in all cases respecting quarantine, in like manner as if they were magistrates of the several towns or places where they respectively reside. It is also laid down, that a consul is to attend, if requested, all arbitrations where property is concerned between masters of British ships and the freighters, being inhabitants of the place where he resides."—(*Chitty on Commercial Law*, vol. i. pp. 58—61., and the numerous authorities there quoted.)

Any individual, whether he be a subject of the state by which he is appointed, or of another, may be selected to fill the office of consul, provided he be approved and admitted by the government in whose territory he is to reside. In most instances, however, but not always, consuls are the subjects of the state appointing them.

Much, however, of the peculiar duties of a consul must always depend on the nature of the intercourse with the country to which he is sent, and of the instructions given him. British consuls are regularly supplied with copies of all acts relating to trade and navigation, quarantine, slave trade suppression, emigration, &c., and with the treaties between this and other countries, and must, of course, shape their conduct accordingly. They are strictly forbidden from corresponding with private parties on public matters. We subjoin an extract from the *General Instructions for British Consuls*.

"He will bear in mind that it is his principal duty to protect and promote the lawful trade and trading interests of Great Britain, by every fair and proper means, taking care to conform to the laws and regulations in question; and whilst he is supporting the lawful trade of Great Britain, he will take special notice of all prohibitions with respect to the export or import of specified articles, as well on the part of the state in which he resides, as of the government of Great Britain, so that he may caution all British subjects against carrying on an illicit commerce to the detriment of the revenue, and in violation of the laws and regulations, of either country; and he will not fail to give to this department immediate notice of any attempt to contravene those laws and regulations.

"The consul will give his best advice and assistance, when called upon, to his Majesty's trading subjects, quieting their differences, promoting peace, harmony, and good-will amongst them, and conciliating as much as possible the subjects of the two countries, upon all points of difference which may fall under his cognizance. In the event of any attempt being made to injure British subjects, either in their persons or property, he will uphold their rightful interests, and the privileges secured to them by treaty,

by due representation in the proper official quarter. He will, at the same time, be careful to conduct himself with mildness and moderation in all his transactions with the public authorities, and he will not upon any account urge claims, on behalf of his Majesty's subjects, to which they are not justly and fairly entitled. If redress cannot be obtained from the local administration, or if the matter of complaint be not within their jurisdiction, the consul will apply to his Majesty's consul-general, or to his Majesty's minister, if there be no consul-general in the country wherein he resides, in order that he may make a representation to the higher authorities, or take such other steps in the case as he may think proper; and the consul will pay strict attention to the instructions which he may receive from the minister or consul-general."

Emoluments of Consuls. Prohibition of Trading, &c.—The emoluments of our consuls were, until these few years, principally derived from certain fees, depending on the tonnage, length of the voyages, &c. of the British ships entering and clearing out of the limits of their consulships. But this mode of remunerating them was materially changed by the act of 6 Geo. 4. c. 87. The fees payable under this act — (see *post*) — are but inconsiderable: but the deficiency has been, partly at least, compensated by salaries allowed by government.

At present British consuls are, in some instances, permitted to carry on trade, while in others they are interdicted from having anything to do with it. The principle on which the distinction is made does not seem very obvious. We observe, for example, that the consul at St. Petersburg, who must have a great deal to do, is allowed to trade; while the consul at Odessa, whose duties must be much lighter, is denied this privilege. There is the same distinction between the consuls at Venice and Trieste; the latter, whose duties must be the heavier of the two, being allowed to act as a merchant, while the other is not. If this distinction must be kept up, the preferable plan would seem to be to interdict all consuls resident at the great ports, and those resident at other ports, principally in the character of political agents, from trading; and to permit it to others. The public duties of the former are either quite sufficient wholly to engross their attention, or they are of such a kind as would make it very inexpedient for those employed in them to be occupied in mercantile pursuits; in the case of the smaller class of ports, but little frequented by British ships, and where the consuls have no peculiar political functions to discharge, there is a less urgent necessity for prohibiting them from carrying on business on their own account. At the same time, however, we are clearly of opinion that it would in *all* cases be better not to allow consuls to engage, either directly or indirectly, in any sort of industrious undertaking. The main end and purpose of their institution is the facilitating of commerce with the nation in which they reside; and in furtherance of such object they ought, on all occasions, to communicate the fullest and earliest information in their power touching commercial matters, not only to the government that appoints them, but to such of its subjects as may apply for their advice and assistance. But, however advantageous publicity may be to others, it may in various ways be extremely hostile to the interests of the consul considered in his capacity of a merchant; and, when his own advantage and his public duty are set in opposition, it requires little sagacity to discover which will have the ascendancy. Hence the fair presumption is, that a trading consul will rather endeavour to profit by the peculiar information his situation may enable him to obtain, than to communicate it to others. His interests as a merchant must frequently, also, even when such is not really the case, appear to be in opposition to those of the parties for whose behoof he is said to be appointed; and under such circumstances, his proceedings, however fair, will always be liable to the suspicion of partiality. It is material, also, to observe that mercantile consuls labour under peculiar disadvantages in the obtaining of information. If a consul, not engaged in business, make a proper application to a public functionary, or merchant, for information as to any subject with which they may be acquainted, he will, in most instances, learn all that they know. But it is obvious, on general principles, and we have been assured of the fact by some of the most intelligent officers of the class, that if a trading consul make the same application, the chances are 10 to 1 he will either learn nothing, or nothing that is not false or misleading. The inquiries of the former excite no jealousy, those of the latter invariably do. The former is known to be actuated only by a feeling of liberal curiosity, or by a wish properly to discharge his public duties; but the latter, being engaged in business, gets credit only for selfish and interested motives, and is believed to be seeking the information merely that he may turn it to his own account. A mercantile consul is, therefore, uniformly the object of the suspicions of all parties, both of his countrymen, and of the foreigners amongst whom he resides. Instead of being, as he ought to be, an independent public functionary, he necessarily gets entangled in the cabals and intrigues of those whose differences it is his province to conciliate. He is tempted, also, to engage in smuggling adventures, contrary to his duty, and highly injurious to the character of his nation. And though he should be proof against temptations of this sort, he is, like all other individuals, subject to misfortune and bankruptcy; and may, in this way, bring discredit and embarrassment on the government that appoints him. These reasons seem to be far more than sufficient to vindicate the policy of interdicting consuls from trading. But were it otherwise, it is enough to decide the question to state, that if they be made properly to perform the functions of their office, it will occupy every moment of their time. To the argument in favour of the existing system derived from economical considerations, we do not attach the smallest weight. To attempt to save a few thousand pounds by allowing an important class of public functionaries to engage in avocations inconsistent with their duty, and destructive of their utility, would be something the very reverse of economy.

Cost of the Establishment. Improvements made in it.—We had occasion, in the former edition of this work, to complain of the cost and inadequacy of our consular establishment. But its expense has since been very much, and, in some instances perhaps, too much, reduced; at the same time that measures have been taken for increasing the duties of the consuls, by making them furnish details as to the trade, manufactures, duties, prices, &c., of the districts in which their consulships are situated. Hitherto this important department of what ought to be the peculiar duty of a consul has been most strangely neglected; but if it be properly attended to, it will occupy a large portion of the consul's time, and will be a field for the display of superior talents. Some of the answers made by the consuls to the *Circular Queries* prepared for the former edition of this work were drawn up with great care and intelligence, and reflected much credit on their authors. There were a good many certainly of a very inferior description; but this is not to be wondered at — it being hardly possible for those who have not given a good deal of their time to such subjects, to make a proper reply to queries relating to them. And if the system is to be perfected to the degree of which it is susceptible, the salaries allowed to the consuls ought to be such as to afford a sufficient remuneration for the services of gentlemen of character, familiar with the principles of public law, commerce, and statistics; and such only ought to be nominated to consular situations. We subjoin that part of the *General Instructions for the Consuls* that has reference to statistical inquiries.

"The consul will forward to the secretary of state, in duplicate, so soon as the information he can collect will enable him so to do, but at any rate within a period of 6 months from the date of his arrival at his residence, a general Report on the trade of the place and district, specifying the commodities, as well of the export as import trade, and the countries which supply the latter, together with the increase or decline in late years, and the probable increase or decline to be expected, and the causes in both cases.

He will state the general regulations with respect to trade at the place where he is resident, and their effects. He will give the average market prices within the year of the several articles of export and import, he will particularise what articles, if any, are absolutely prohibited to be imported into the country wherein he resides; what articles are prohibited to be imported from any other places than from the place of their growth or production; whether there be any privileges of importation, and what those privileges are, in favour of ships that are of the built of, or belonging to, the country wherein he resides; whether there be any difference in the duty on goods when imported into that country in a foreign ship, and if so, whether it be general, or applicable only to particular articles; what are the rates of duty payable on goods imported into the said country; whether there be any tonnage duty or other port dues, and what, payable on shipping entering at, or clearing from, the ports of that country; whether there be any (and, if so, what) ports in that country wherein goods may be warehoused on importation, and afterwards exported with or without payment of any duties, and under what regulations."

He is also to transmit an annual statement of the trade with the principal ports of his consulship; and quarterly returns of the prices of corn, &c. Mr. Macgregor's Tariffs have been mostly compiled from these returns.

The following are the provisions of the act 6 Geo. 4. c. 87. with respect to the salaries and charges of consuls: —

Salaries to Consuls. — "Whereas the provision which hath hitherto been made for the maintenance and support of the consuls general and consuls appointed by his Majesty to reside within the dominions of sovereigns and foreign states in amity with his Majesty, is inadequate to the maintenance and support of such consuls general and consuls, and it is expedient to make further and due provisions for that purpose;" it is therefore enacted, that it shall be lawful for his Majesty, by any orders to be issued by the advice of his privy council, to grant to all or any of the consuls general or consuls appointed by his Majesty to reside within any of the dominions of any sovereign or foreign state or power in amity with his Majesty, such reasonable salaries as to his Majesty shall seem meet, and by such advice from time to time to alter, increase, or diminish any such salaries or salary as occasion may require.—(6 *Geo.* 4. c. 87. § 1.)

Terms on which Salaries shall be granted. Leave of Absence.— Such salaries shall be issued and paid to such consuls general and consuls without fee or deduction; provided that all such salaries be granted during his Majesty's pleasure, and not otherwise, and be held and enjoyed by such consuls general and consuls so long only as they shall be actually resident at the places at which they may be so appointed to reside, and discharging the duties of such their offices: provided nevertheless, that in case his Majesty shall, by any order to be for that purpose issued through one of his principal secretaries of state, grant to any such consul general or consul leave of absence from the place to which he may be so appointed, such consul general or consul shall be entitled to receive the whole, or such part as to his Majesty shall seem meet, of the salary accruing during such period of absence.—§ 2.

Salaries in lieu of Fees formerly paid. Consuls not to take other than the Fees hereinafter mentioned.— The salaries so to be granted shall be taken by the consuls general and consuls as a compensation for all salaries heretofore granted, and all fees of office and gratuities heretofore taken by them from the masters or commanders of British vessels, or from any other person, for any duties or services by such consuls general or consuls done or performed for any such persons; and no such consuls general or consuls shall from the 1st of January, 1826, be entitled, on account of anything by him done in the execution of such his office, or for any service by him rendered to any masters or commanders of British vessels, or to any other person in the execution of such his office, to ask or take any fees, recompence, gratuity, compensation, or reward, or any sum of money, save as hereinafter is excepted.—§ 3.

Certain Fees still allowed to be taken.—It shall be lawful for all consuls general and consuls appointed by his Majesty, and resident within the dominions of any sovereign, or any foreign state or power in amity with his Majesty, to accept the several fees particularly mentioned in the tables to this present act annexed, marked with the letters A and B. for the several things and official acts and deeds particularly mentioned in the said schedules; and it shall be lawful for his Majesty, by any orders to be by him made, by the advice of his privy council, from time to time, as occasion may require, to diminish, or wholly to abolish, all or any of the fees aforesaid, and to establish and authorise the payment of any greater or smaller or new or additional fees for the several things mentioned in the said schedules, or for any other thing to be by any such consul general or consul done in the execution of such his office.—§ 4.

Penalty on Consuls demanding more Fees than specified in the Schedule.— In case any consul general or consul appointed by his Majesty as aforesaid shall, by himself or deputy, or by any person authorised thereto in his behalf, ask or accept, for anything by him done in the execution of such his office, or for any service or duty by him rendered or performed in such his office, for any person whomsoever, any other or greater fee or remuneration than is specified in the schedule, or than shall be sanctioned and specified in or by any such order in council, the person so offending shall forfeit and become liable to pay to his Majesty any sum of sterling British money, not exceeding the amount of the salary of such person for 1 year, nor less than the 12th part of such annual salary, at the discretion of the court in which such penalty may be recovered; and shall moreover upon a second conviction for any such offence forfeit such his office, and for ever after become incapable of serving his Majesty in the same or the like capacity.—§ 5.

Table of Fees to be exhibited at Custom-houses.—A printed copy of the tables of fees allowed by this act or which may be sanctioned or allowed by any order to be made in pursuance of this act by his Majesty in council, shall be exhibited in a conspicuous manner, for the inspection of all persons, in the Custom-house in the port of London, and in all other Custom-houses in the several ports and harbours of the U. Kingdom of Great Britain and Ireland; and printed copies thereof shall, by the collector or other chief officer of customs in all such ports and harbours, be delivered gratuitously, and without fee or reward, to every master of any vessel clearing out of any such port or harbour, and demanding a copy thereof.—§ 6.

Table of Fees to be exhibited at Consuls' Offices.— A copy of the schedule or table of fees to this present act annexed, or which may be established and authorised by any such order in council, shall be hung up and exhibited in a conspicuous place in the public offices of all consuls general or consuls appointed by his Majesty, in the foreign places to which they may be so appointed, for the inspection of all persons interested therein; and any consul general or consul omitting or neglecting to exhibit any such copy of the schedules in such his public office, or refusing to permit the same to be inspected by any person interested therein, shall for every such offence forfeit and pay a sum of British sterling money not exceeding one half the amount of the salary of such person for 1 year, nor less than the 12th part of such annual salary, at the discretion of the court in which such penalty may be recovered. —§ 7.

Superannuation. — "And whereas it is expedient that his Majesty should be enabled to grant to the said consuls general and consuls, appointed as aforesaid, allowances in the nature of superannuation or reward for meritorious public services;" it is further enacted, that all the regulations contained in 50 Geo. 3. c. 117., 3 Geo. 4. c. 113., 5 Geo. 4. c. 104., respecting superannuation allowances, are hereby extended to the said consuls general and consuls, so far as such regulations can be applied to the cases of such several persons respectively, as fully to all intents and purposes as if the same were repeated and enacted in this present act. —§ 8.

Allowances during War.—If it shall at any time happen that by reason of any war which may hereafter arise between his Majesty and any sovereign, or foreign state or power, within the dominions of whom

any such consul general or consul shall be appointed to reside, he shall be prevented from residing, and shall in fact cease to reside, at the place to which he may be so appointed, it shall be lawful for his Majesty, by any order to be issued by the advice of his privy council, to grant to any such consul general or consul, who may have served his Majesty in that capacity for any period not less than 3 years, nor more than 10 years next preceding the commencement of any such war, a special allowance not exceeding the proportion of their respective salaries to which such consuls general and consuls would be entitled under the provisions of the said act of 3 Geo. 4., in case the period of their respective service had exceeded 10 years and had not exceeded 15 years: provided that in case any such consul general or consul shall have served in such his office for the space of 10 years and more, it shall be lawful for his Majesty, by any such order in council as aforesaid, to grant to him such a proportion of his salary, which, by the said act is authorised to be granted, as a superannuation allowance, according to the several periods of service exceeding 10 years, in the said act. — § 9.

Commencement. — This act shall take effect from the 1st of January, 1826, except where any other commencement is particularly directed. — § 22.

Tables of Fees allowed to be taken by Consuls General and Consuls, by the preceding Act of 6 Geo. 4. c. 87.

Table A.—Certificate of due landing of goods exported from the United Kingdom	-	2 dollars.
Signature of ship's manifest	-	2 do.
Certificate of origin, when required	-	2 do.
Bill of health, when required	-	2 do.
Signature of muster-roll, when required	-	2 do.
Attestation of a signature, when required	-	1 do.
Administering an oath, when required	-	½ do.
Seal of office, and signature of any other document not specified herein, when required	-	1 do.
Table B.—Bottomry or arbitration bond	-	2 do.
Noting a protest	-	1 do.
Order of survey	-	2 do.
Extending a protest or survey	-	1 do.
Registrations	-	½ dollar.
Visa of passport	-	½ do.
Valuation of goods	-	1 per cent.
Attending sales, ½ per cent. where there has been a charge for valuing; otherwise 1 per cent.		
Attendance out of consular office at a shipwreck, 5 dollars per diem for his personal expenses, over and above his travelling expenses.		
Ditto on opening a will	-	5 dollars.
Management of property of British subjects dying intestate	-	2½ per cent.

The dollars mentioned in the preceding tables are in all cases to be paid by the delivery of dollars, each of which is to be of the value of 4*s.* 6*d.* sterling, and no more, according to the rate of exchange prevailing at the place where such payment is made.

CONTRABAND, in commerce, a commodity prohibited to be exported or imported, bought or sold.

CONTRABAND is also a term applied to designate that class of commodities which neutrals are not allowed to carry during war to a belligerent power. (See NEUTRALITY.)

CONVOY, in navigation, the term applied to designate a ship or ships of war, appointed by government, or by the commander in chief on a particular station, to escort or protect the merchant ships proceeding to certain ports. Convoys are mostly appointed during war; but they are sometimes, also, appointed during peace, for the security of ships navigating seas infested with pirates.

Individuals have not always been left to themselves to judge as to the expediency of sailing with or without convoy. The governments of most maritime states have thought proper, when they were engaged in hostilities, to oblige their subjects to place themselves under an escort of this sort, that the enemy might not be enriched by their capture. Acts to this effect were passed in this country during the American war and the late French war. The last of these acts (43 Geo. 3. c. 57.) enacted, that it should not be lawful for any ship belonging to any of his Majesty's subjects (except as therein provided) to depart from any port or place whatever, unless under such convoy as should be appointed for that purpose. The master was required to use his utmost endeavours to continue with the convoy during the whole voyage, or such part thereof as it should be directed to accompany his ship; and not to separate therefrom without leave of the commander, under very heavy pecuniary penalties. And in case of any ship departing without convoy contrary to the act, or wilfully separating therefrom, all insurances on the ship, cargo, or freight, belonging to the master, or to any other person directing or privy to such departure or separation, were rendered null and void. The customs officers were directed not to allow any ship that ought to sail with convoy to clear out from any place in the U. Kingdom for foreign parts, without requiring from the master, bond with one surety, with condition that the ship should not depart without convoy, nor afterwards desert or wilfully separate from it. The regulations of this act did not extend to ships not requiring to be registered, nor to those licensed to sail without convoy, nor to those engaged in the coasting trade, nor to those belonging to the East India Company, &c.

It is very common, during periods of war, to make *sailing or departing with convoy* a condition in policies of insurance. This, like other warranties in a policy, must be *strictly* performed. And if a ship warranted to sail with convoy, sail without it, the policy becomes void, whether this be imputable to any negligence on the part of the insured, or the refusal of government to appoint a convoy.

There are five things essential to sailing with convoy: viz. *first*, it must be with a regular convoy under an officer appointed by government; *secondly*, it must be from the place of rendezvous appointed by government; *thirdly*, it must be a convoy for the voyage; *fourthly*, the master of the ship must have sailing instructions from the commanding officer of the convoy; and *fifthly*, the ship must depart and continue with the convoy till the end of the voyage, unless separated by necessity.

With respect to the third of these conditions we may observe, that a warranty to sail with convoy generally means a convoy *for the voyage;* and it is not necessary to add the words "for the voyage" to make it so. Neither will the adding of these words in some instances, make the omission of them, in any case, the ground of a different construction. A warranty to sail with convoy does not, however, uniformly mean a convoy that is to accompany the ship insured the entire way from the port of departure to her port of

destination; but such convoy as government may think fit to appoint as a sufficient protection for ships going the voyage insured, whether it be for the whole or only a part of the voyage.

Sailing instructions, referred to in the fourth condition, are written or printed directions delivered by the commanding officer of the convoy to the several masters of the ships under his care, that they may understand and answer signals, and know the place of rendezvous appointed for the fleet in case of dispersion by storm, or by an enemy, &c. These sailing instructions are so very indispensable, that no vessel can have the full protection and benefit of convoy without them; hence, when, through the negligence of the master, they are not obtained, the ship is not said to have sailed with convoy; and a warranty in a policy of insurance to that effect is held not to be complied with. If, however, the master do all in his power to obtain sailing instructions, but is prevented from obtaining them by any insuperable obstacle, as the badness of the weather; or if they be refused by the commander of the convoy; the warranty in the policy is held to be complied with.

For further information as to convoy, see *Abbott on the Law of Shipping*, part iii. c. 3.; *Marshall on Insurance*, book i. c. 9. § 5., and the *Act* 43 *Geo.* 3. c. 57. &c.

COPAIVA. See BALSAM.

COPAL, improperly called gum copal, is a valuable and singular kind of resin, that naturally exudes from different large trees, and is imported partly from America, and partly from the East Indies. The best copal is hard and brittle, in rounded lumps of a moderate size, easily reducible to a fine powder, of a light lemon yellow colour, beautifully transparent, but often, like amber, containing parts of insects and other small extraneous bodies in its substance. Its specific gravity varies from 1·045 to 1·139. It has neither the solubility in water common to gums, nor the solubility in alcohol common to resins, at least in any considerable degree. It may be dissolved by digestion in drying linseed oil, and other volatile menstrua. This solution forms a beautiful transparent varnish, which, when properly applied, and slowly dried, is very hard and very durable. Copal varnish was first discovered in France, and was long known by the name of *vernis martin*. It is applied to snuff-boxes, tea-boards, and other utensils. It preserves and gives lustre to paintings; and contributes to restore the decayed colours of old pictures, by filling up cracks, and rendering the surface capable of reflecting light more uniformly. Copal is liable to be confounded with *gum animé*, when the latter is very clear and good. But it is of importance to distinguish between them, as the animé, though valuable as a varnish, is much less so than the finest copal; the varnish with the former being darker coloured, and not so hard. Besides the external appearance of each, which is pretty distinct to a practised eye, the solubility in alcohol furnishes a useful test, — the animé being readily soluble in this fluid, while the copal is hardly affected by it; copal is also brittle between the teeth, whereas animé softens in the mouth. — (*Rees's Cyclopædia*; *Ure's Dictionary*, &c.)

The imports of gum animé and copal are not distinguished in the custom-house accounts. The entries of both for home consumption amounted, in 1842, to about 983 cwts. The duty was, in the same year, reduced from 6*s.* to 1*s.* a cwt. Copal fetches in the London market from 3*l.* to 3*l.* 10*s.* a cwt.

COPENHAGEN, the capital of Denmark, on the E. coast of the island of Zealand, in the channel of the Baltic called the Sound; lat. 55° 41′ 4″ N., lon. 12° 35′ 46″ E. Population, in 1855, 148,591. It is a well-built, handsome city. In going into Copenhagen, the course is between the buoy on the Stubben Bank to the left, and the buoy on the Middle-grounds, and those in advance of the three Crown batteries on the right, W. S. W. by compass. From the three crowns to the roads the course is S. S. W. The water in the channel is from 6 to 4 fathoms deep; but it is narrow, and the navigation rather difficult. There is no obligation to take a pilot on board; but if a vessel wish for one, she may heave to abreast of the battery, when he will come to her. Vessels not intending to come into harbour bring up in the roads, at from ¼ to ½ mile from shore, in about 4 fathoms, the town bearing S. S. W. In the harbour, within the boom, the water is from 17 to 18 feet deep. Vessels in harbour load and unload alongside the quay. The anchorage in the roads is good and safe.

Money.—Accounts are kept in rixdollars of 6 marcs, or 96 skillings; the rixdollar being formerly worth about 4*s.* 1*d.* sterling. But in 1813, a new monetary system was adopted, according to which the new or *Rigsbank* dollar is worth 2*s.* 3½*d.*, being half the value of the old specie dollar, and ⅔ of the old current dollar. But the money generally used in commercial transactions is bank money. The *par* of exchange, estimated by the Rigsbank dollar, would be 8 dollars 7·6 skillings per pound sterling.

Weights and Measures. — The commercial weights are, 16 pounds = 1 lispound; 20 lispounds = 1 shippound; 100 lbs. = 110½ lbs. avoirdupois = 134 lbs. Troy = 101 lbs. of Amsterdam = 105 of Hamburg.

The liquid measures are, 4 ankers = 1 ahm or ohm; 1½ ahm = 1 hogshead; 2 hogsheads = 1 pipe; 2 pipes = 1 quarter. The anker = 10 (very nearly) English wine gallons. A *fuder* of wine = 950 pots; and 100 pots = 25½ wine gallons.

The dry measures are, 4 viertels = 1 scheffel; 8 scheffels = 1 toende or ton; 12 tons = 1 last = 47⅝ Winchester bushels. The last of oil, butter, herrings, and other oily substances should weigh 224 lbs. nett.

The measure of length is the Rhineland foot = 12⅓ inches very nearly. The Danish ell = 2 feet; 100 ells = 68⅞ English yards.

Trade of Copenhagen.—This is not very considerable. But it, as well as that of the entire kingdom, is rapidly increasing; a consequence mainly of the improvement of

agriculture, occasioned in part by the formation of railways, but far more by the repeal of our corn laws and of the prohibition against importing live stock. These measures, by insuring to the Danes a convenient and advantageous market for all sorts of produce, have been nearly as advantageous to them as to ourselves. Timber, pitch and tar are chiefly imported from Sweden and Norway; flax, hemp, masts, sail-cloth, and cordage, from Russia; West India produce, from the Danish and foreign West India islands; tobacco, from America; wines and brandy, from France: coal, iron and machinery, cotton-twist, hardware, and earthenware, are the principal articles of direct importation from England. Of coal, we sent to Denmark (principally to Copenhagen), in 1857, 472,499 tons, and of iron 36,533 ditto. Owing to the erroneous policy of the Danish government, which has attempted, at a great public loss, to raise and bolster up manufactures, the direct imports of woollens and cottons are inconsiderable. These articles are not, however, prohibited. Down to 1841 they were admitted on condition of their being stamped and put up to auction by the custom-house, which, after retaining 30 per cent. of the gross produce of the sale, paid over the surplus to the importer. In the above years, however, the duty, in imitation of the German plan, was ordered to be assessed, partly according to the description of the goods, and partly according to their weight; so that the existing duty varies on cotton goods, from 3*l.* 15*s.* to 22*l.* 10*s.* per 100 lbs. Danish (equal to 110 lbs. English); and on woollens, from 2*l.* 16*s.* 3*d.* to 14*l.* 1*s.* 3*d.* per 100 lbs. Danish. But, though advantageous in some respects, this change was mischievous in others; for while it facilitated the collection of the duties, and reduced those on the finer descriptions, it added materially to those on the coarser and most essential fabrics. Hence we need not be surprised that there is an extensive illicit importation of these articles by the Elbe and Holstein frontier. The exports consist principally of the produce of the soil, as corn, rape-seed, butter and cheese, beef and pork, horses and cattle, wool, hides and skins, bones, corn-brandy, &c. At an average of the seven years ending with 1839, the annual exports of corn from Denmark were — wheat, 140,989 imp. qrs.; rye, 127,521 do.; barley, 388,068 do.; and oats, 125,986 do. In 1857 we imported from Denmark 287,466 qrs. wheat, 416,733 do. barley, 246,579 do. oats, and 22,264 do. peas and beans. (See Corn Laws.)

In 1856, the import duties in Denmark amounted to 7,041,707 rix-dollars, being about 11 per cent. of the computed value of the imports.

Banks, Banking. — The national bank of Denmark, established in 1818, has its head office in Copenhagen, with branches at Odensee and Flensburg. It issues notes of 100, 50, 20, and 5 rix-dollars, payable in specie on demand, and transacts all sorts of banking business. In 1856, a private joint-stock bank was established, with a capital of 2,000,000 rix-dollars. It is to the credit of the Danish merchants that they passed through the crisis of 1857 with comparatively few failures of any importance.

Colonial Trade. — In the West Indies, the Danes possess the island of St. Croix, which, though small, is fertile and well cultivated. All the ports of Denmark may send vessels thither, and import sugar or other produce, on payment of the duties. St. Croix produced in 1849, 17,711,733 lbs. sugar, and 654,804 gall. rum; but, owing to the dryness of the season, this was a very deficient crop.

Since 1833, when the restrictions on the colonial trade were abolished, St. Croix has sometimes sent considerable quantities of sugar to the U. States. But latterly these have decreased, and the produce is now mostly brought to Denmark. The entire imports of sugar, the foreign as well as colonial, into Copenhagen, amount to about 25,000,000 lbs. a year. The imports of coffee are considerable. In 1856, they amounted to about 15,000,000 lbs. About three-fourths of the trade with the West Indies is engrossed by Copenhagen, and the rest by Flensburg. The settlements of Tranquebar and Serampore in the E. Indies were sold, in 1845, to the E. I. Company.

The trade to India and China, formerly a monopoly in the hands of a joint-stock company, was opened to the public in 1840. Several vessels have since been fitted out for the trade; but it is doubtful, from the want of produce suitable for the Eastern markets, whether it can ever attain to any considerable importance.

Port Charges vary according as the vessel has come from this or the further side of Cape Finisterre, or from the Indian seas; as she is wholly, or only part loaded; and as she clears out with goods that have been *in transitu*, and are for the most part free of duty, or has on board a cargo of native produce subject to duty. On a ship of 300 tons belonging to a privileged nation from this side Cape Finisterre, unloading and loading mixed cargoes in Copenhagen, the different public charges, brokerage, &c., would exceed 60*l.*; and from the further side of Cape Finisterre, the charges were nearly 100*l.*; but as these charges included the Sound duties, which have since been repealed, they will now be proportionally reduced. When a ship is not fully loaded, lastage money and light dues are only charged in proportion to the cargo on board. Lastage money is not charged on ships outward bound, laden with transit goods, as tar, pitch, iron, &c.

Commission on purchases is generally ½ per cent., and on sales, 3 per cent., including 1 per cent. *del credere.*

Credit. — Goods imported into Copenhagen are commonly sold on credit; 3 months is the term generally allowed on most sorts of goods, and in a few instances 6 months. The discount for ready money is 4 per cent. Bankruptcy is of rare occurrence.

Insurance. — Marine assurance is effected, on liberal terms, by a company established in 1746. A good many risks are, however, insured at Amsterdam and Hamburg.

Careening, Ships' Stores, &c. — Copenhagen has good building yards, and is in all respects an eligible place for the repair of ships, and for supplying them with provisions.

General Remarks. — The Danish government exerted itself for a lengthened period to bolster up a manufacturing interest, by laying oppressive duties on most species of manufactured articles. Even under the most favourable circumstances, such conduct, though it may benefit a few individuals, is sure to be productive of great national loss. But in the case of Denmark, the circumstances were such as to render the restrictive system peculiarly injurious. All, or nearly all, the branches of industry carried on in the kingdom were subject to the government of guilds or corporations; no person could engage in any line of business until he was authorised by its peculiar guild; and as the sanction of this body was rarely obtained without a considerable sacrifice, the real effect of the system was to fetter competition and improvement, and to perpetuate monopoly and routine. Even the Danish writers acknowledge that such was the influence of the late regulations. "*Nos ouvriers,*" say they, "*sont chers, travaillent lentement, et souvent mal et sans goût; leur éducation est négligée. On ne les forme point à penser, et l'apprentif suit machinalement ce qu'il voit faire au maître.*"—(*Catteau, Tableau des Etats Danois*, tome ii. p. 260.) But within the last few years this system has been quite changed: Industry has been emancipated from many troublesome regulations, and moderate duties have been substituted for prohibitions. But, however favourably situated in other respects, it would be idle to expect that a country without waterfalls, and without coal, should be able to manufacture cottons, woollens, &c. at so cheap a rate as they may be imported from others enjoying greater natural facilities for their production. The staple business of Denmark, her agricultural and rural economy, has been most materially improved of late years; and, as already seen, her exports of raw produce are now of great value and importance.

COPPER (Ger. *Kupfer*; Du. *Koper*; Da. *Kobber*; Sw. *Kopper*; Fr. *Cuivre*; It. *Rame*; Sp. *Cobre*; Port. *Cobre*; Rus. *Mjed, Krasnoi mjed*; Pol. *Miedz*; Lat. *Cuprum*; Arab. *Nehass*; Sans. *Tamra*), a well-known metal, so called from its having been first discovered, or at least wrought to any extent, in the island of Cyprus. It is of a fine red colour, and has a great deal of brilliancy. Its taste is styptic and nauseous; and the hands, when rubbed for some time on it, acquire a peculiar and disagreeable odour. It is harder than silver; its specific gravity varies according to its state, being,

when quite pure, near 9·000. Its malleability is great; it may be hammered out into leaves so thin as to be blown about by the slightest breeze. Its ductility is also considerable. Its tenacity is so great, that a copper wire 0·078 of an inch in diameter is capable of supporting 302·26 lbs. avoirdupois without breaking. Its liability to oxidation from exposure to air or damp is its greatest defect. The rust with which it is then covered is known by the name of verdigris, and is one of the most active poisons.—(*Thomson's Chemistry.*)

If we except gold and silver, copper seems to have been more early known than any other metal. In the first ages of the world, before the method of working iron was discovered, copper was the principal ingredient in all domestic utensils, and instruments of war. Even now it is applied to so many purposes, as to rank next, in point of utility, to iron.

Alloys of Copper are numerous and of great value. Those of tin are of most importance. Tin added to copper makes it more fusible, less liable to rust, or to be corroded by the air and other common substances, harder, denser, and more sonorous. In these respects the alloy has a real advantage over unmixed copper: but this is in many cases more than counterbalanced by the great brittleness which even a moderate portion of tin imparts; and which is a singular circumstance, considering that both metals are separately very malleable.

Copper alloyed with from 1 to 5 per cent. of tin is rendered harder than before; its colour is yellow, with a cast of red, and its fracture granular: it has considerable malleability. This appears to have been the usual composition of many of the ancient edged tools and weapons, before the method of working iron was brought to perfection. The χαλκος of the Greeks, and, perhaps the *æs* of the Romans, was nothing else. Even their copper coins contain a mixture of tin. The ancients did not, in fact, possess (as has been often contended) any peculiar process for hardening copper, except by adding to it a small quantity of tin. An alloy in which the tin is from 0·1 to ⅛ of the whole is hard, brittle, but still a little malleable, close grained, and yellowish white. When the tin is as much as ¼ of the mass, it is entirely brittle; and continues so in every higher proportion. The yellowness of the alloy is not entirely lost till the tin amounts to 0·3 of the whole.

Copper (or sometimes copper with a little zinc), alloyed with as much tin as will make from about 0·1 to ¼ of the whole, forms an alloy, which is principally employed for bells, brass cannon, bronze statues, and various other purposes. Hence it is called *bronze or bell metal*; and is excellently fitted for the uses to which it is applied, by its hardness, density, sonorousness, and fusibility. For cannon, a lower proportion of tin is commonly used. According to Dr. Watson, the metal employed at Woolwich consists of 100 parts of copper and from 8 to 12 of tin; hence it retains some little malleability, and, therefore, is tougher than it would be with a larger portion of tin. This alloy being more sonorous than iron, brass guns give a louder report than iron guns. A common alloy for bell metal is 80 parts of copper and 20 of tin: some artists add to these ingredients zinc, antimony, and silver, in small proportions; all of which add to the sonorousness of the compound.—(See BELL METAL.)

When, in an alloy of copper and tin, the latter metal amounts to about ⅓ of the mass, the result is a beautiful compound, very hard, of the colour of steel, and susceptible of a very fine polish. It is well adapted for the reflection of light for optical purposes; and is therefore called *speculum metal*. Besides the above ingredients, it usually contains a little arsenic, zinc, or silver. The application of an alloy similar to the above, to the construction of mirrors, is of great antiquity, being mentioned by Pliny; who says, that formerly the best mirrors were reckoned those of Brundusium, of tin and copper mixed (*stanno et ære mistis*).—(*Hist. Nat.* lib. xxxiii. § 9.)

For the alloys of copper with zinc, see the articles BRASS, PINCHBECK. See, also, *Thomson's Chemistry*; *Rees's Cyclopædia*; *Dr. Watson's Chemical Essays*, vol. iv., *&c.*

British Copper Trade.—Great Britain has various copper mines, in Cornwall, Devonshire, Wales, &c., but particularly in the first. Though known long before, the Cornish copper mines were not wrought with much spirit till last century. From 1726 to 1735, they produced at an average about 700 tons a year of pure copper. During the ten years from 1766 to 1775, they produced, at an average, 2,650 tons. In 1798 the produce exceeded 5,000 tons; and it now amounts to from 10,000 to 12,000 tons, worth, at 100*l.* a ton, from 1,000,000*l.* to 1,200,000*l.* sterling. In 1768, the famous mines in the Parys mountains, near Amlwch, in Anglesea, were discovered. The supplies of ore furnished by them were for a long time abundant beyond all precedent; but for many years past the productiveness of the mine has been declining, and it is now almost exhausted. At present the mines of Anglesea, and other parts of Wales, do not furnish 200 tons copper. Those of Devonshire yield above 2,000 tons; the quantity produced in the other parts of England being quite inconsiderable. The Irish mines produce above 900 tons. Those of Scotland never were productive, and have been almost entirely abandoned. Owing to the want of coal in Cornwall, the ores are not smelted on the spot, but are all sent to Swansea; it being found cheaper to carry the ores to the coal than the contrary.

We subjoin an Account compiled by Mr. Robert Hunt of the Mining Record Office, on which every dependence may be placed, of the Produce of Copper Ore and Copper, and of the Value of the Ore in the U. Kingdom in 1857.

	Ore.	Copper.	Value of Ore.
	Tons.	*Tons. Cwts.*	£ *s. d.*
Cornwall and Devonshire - - -	191,798	12,179 18	1,201,270 15 0

Mean average market price of copper - -	- -	- -	124 0 0

Account of the Quantities and Values of the different Descriptions of Copper exported from the U. Kingdom during each of the 3 Years ending with 1857.

	Quantities.			Values.		
	1855.	1856.	1857.	1855.	1856.	1857.
	Tons.	*Tons.*	*Tons.*	£	£	£
Copper, in bricks and pigs	5,119	6,096	7,196	585,702	675,224	852,047
Copper, in sheets, nails, &c., including yellow metal	10,432	14,378	13,702	1,266,274	1,661,648	1,167,772
Copper, wrought, of other sorts	1,106	1,430	3,243	152,146	189,181	451,312
Brass, of all sorts	841	959	1,100	106,784	121,206	141,790
	17,498	22,863	25,241	2,110,916	2,648,259	2,813,831

France, the East Indies, Holland, the Hanse Towns, Turkey, Egypt, the U. States, &c., are the great markets for British copper. Thus, in 1857, the value of the exports to France was 676,971*l.*, India, 592,169*l.*, Holland, 247,868*l.*, Hanse Towns, 196,638*l.*, Turkey, 140,631*l.*, Egypt, 153,940*l.*, &c.

In consequence of the greatly increased supplies of copper that have been thus obtained, England, instead of being, as formerly, dependent on foreigners for the greater part of her supplies of this valuable metal, became, previously to 1793, one of the principal markets for the supply of others. And notwithstanding the vastly increased demand for copper during the war for the sheathing of ships and other purposes, the exports continued to increase and the imports to diminish: the greater productiveness of the Cornish mines have sufficed not only to balance the increased demand, but also to make up for the falling off in the supplies from Anglesea.

Foreign Copper.—Copper ores are abundant in Sweden, Russia, Japan, Australia, Chili, Cuba, Colombia, &c. Near Fahlun, in the province of Dalecaria, in Sweden, is the celebrated copper mine of the same name, supposed to have been wrought nearly 1,000 years. For a long time it was extremely productive, yielding, towards the beginning of the seventeenth century, an annual produce of about 8,000,000 lbs. of pure metal; but it has since greatly declined; and it is most probable that at no distant period it will be wholly abandoned.—(*Thomson's Travels in Sweden*, p. 221.) There are copper mines in other parts of Sweden; but the entire produce of copper in that country does not at present exceed from 750 to 800 tons, of a quality inferior to that of England. The produce of the copper mines of Russia has been estimated at 290,000 poods, or 4,661 tons (Eng.) a year.—(*Tegoborski, Forces Productives de la Russie*, i. 300.) The copper mines of Japan are said to be among the richest in the world. The Dutch and Chinese export considerable quantities of their produce, which is spread all over the East, and is regularly quoted in the price currents of Canton, Calcutta, and Singapore. It is uniformly met with in the shape of bars or ingots; and when the copper of S. America is worth in the Canton market from 15 to 16 dollars per picul, that of Japan is worth from 18 to 20 per ditto. Copper the produce of the Persian mines is imported into Bombay and Calcutta from Bushire and Bussorah.

But, in a commercial point of view, the copper mines of Chili, Cuba, Spain, and Australia are, after those of England, by far the most important. The working of the mines of Cuba which had been abandoned for a lengthened period, was resumed a few years ago, principally by an English company, which has been eminently successful. Large quantities both of Chilian and Cuban ore are brought to Swansea to be smelted.

The imports of Copper Ore and *Regulus*, in 1857, were principally derived as follows, viz.:—

From	Ore.	Regulus.	From	Ore.	Regulus.
	Tons.	*Tons.*		*Tons.*	*Tons.*
Chili	21,385	17,910	South Australia	1,839	6
Cuba	16,352		Bolivia	1,569	
Spain	15,030		Algeria	1,390	12
Victoria (Australia)	4,182		Italy	1,358	
British possessions in S. Africa	3,582		France	1,200	542
U. States	3,022	272	Portugal	710	
Peru	2,424	217	Total of the above, and all other places	75,852	19,262
New South Wales	2,174				

There was a very extraordinary increase in the supplies of copper from Australia during the 4 or 5 years preceding the discovery of the gold fields. The produce of the Burra Burra mine, for example, which in 1846 was 6,359½ tons ore, had swelled in 1850 to 18,692 tons. But since then some of the mines have been abandoned, and the progress of the others checked, so that, as seen above, the imports from Victoria in 1857 amounted to only 4,182 tons. Foreign copper imported into this country, and the copper obtained from the smelting of foreign ore, were, previously to 1842, wholly, or almost wholly, re-exported; the duty on the copper ore when it was taken or smelted for home use being so very heavy as to make it be altogether exported in an unwrought state. But in 1842 the duty on copper ores and unwrought copper was very materially reduced; and it was wholly repealed in 1853. Hence the great increase in

the imports of ore for smelting, and the application of the copper thence derived indifferently to home use or exportation.

Copper is in extensive demand all over India; being largely used in the dockyards, in the manufacture of cooking utensils, in alloying spelter and tin, &c. The funeral of every Hindoo brings an accession to the demand, according to his station; the relatives of the deceased giving a brass cup to every Brahmin present at the ceremony: so that 5, 10, 50, 100, 1,000, and sometimes more than 10 times this last number, are dispensed upon such occasions.—(*Bell's Commerce of Bengal.*)

COPPERAS, a term employed by the older chemists, and popularly as synonymous with vitriol. There are three sorts of copperas: the *green*, or sulphate of iron; the *blue*, or sulphate of copper; and the *white*, or sulphate of zinc. Of these, the first is the most important.

Sulphate of iron is distinguished in common by a variety of names, as Martial vitriol, English vitriol, &c. When pure, it is considerably transparent, of a fine bright, though not very deep, grass green colour; and of a nauseous astringent taste, accompanied with a kind of sweetness. Its specific gravity is 1·834. It uniformly reddens the vegetable blues. This salt was well known to the ancients; and is mentioned by Pliny (*Hist. Nat.* lib. xxxiv. § 12.) under the names of *misy*, *sory*, and *calchantum*. It is not made in the direct way, because it can be obtained at less charge from the decomposition of pyrites on a large scale in the neighbourhood of collieries. It exists in two states; one containing oxide of iron, with 0·22 of oxygen, which is of a pale green, not altered by gallic acid, and giving a white precipitate with prussiate of potass. The other, in which the iron is combined with 0·30 of oxygen, is red, not crystallisable, and gives a black precipitate with gallic acid, and a blue with prussiate of potass. In the common sulphate, these two are often mixed in various proportions.

Sulphate of iron is of great importance in the arts. It is a principal ingredient in dyeing; in the manufacture of ink, and of prussian blue: it is also used in tanning, painting, medicine, &c. Sulphuric acid, or oil of vitriol, was formerly manufactured from sulphate of iron.—(See Acids.)

Sulphate of copper, or *blue* vitriol, commonly called Roman or Cyprian vitriol, is of an elegant sapphire blue colour, hard, compact, and semi-transparent; when perfectly crystallised, of a flattish, rhomboidal, decahedral figure; its taste is extremely nauseous, styptic, and acrid; its specific gravity is 2·1943. It is used for various purposes in the arts, and also in medicine.

Sulphate of zinc or *white* vitriol is found native in the mines of Goslar and other places. Sometimes it is met with in transparent pieces, but more commonly in white efflorescences. These are dissolved in water, and crystallised into large irregular masses, somewhat resembling fine sugar, having a sweetish, nauseous, styptic taste. Its specific gravity, when crystallised, is 1·912; when in the state in which it commonly occurs in commerce, it is 1·3275. Sulphate of zinc is prepared in the large way from some varieties of the native sulphuret. The ore is roasted, wetted with water, and exposed to the air. The sulphur attracts oxygen, and is converted into sulphuric acid; and the metal, being at the same time oxidised, combines with the acid. After some time the sulphate is extracted by solution in water; and the solution being evaporated to dryness, the mass is run into moulds. Thus, the white vitriol of the shops generally contains a small portion of iron, and often of copper and lead.—(*Lewis's Mat. Medica; Ure's Dictionary; Rees's Cyclopædia; Thomson's Chemistry*, &c.)

COPYRIGHT. See Books.

CORAL (Ger. *Korallen*; Du. *Koraalen*; Fr. *Corail*; It. *Corale*; Sp. and Port. *Coral*; Rus. *Korallü*; Lat *Corallium*; Arab. *Besed*; Pers. *Merjan*; Hind. *Moonga*), a marine production, of which there are several varieties. It was well known to the ancients, but it was reserved for the moderns to discover its real nature. It is, in fact, the nidus or nest of a certain species of vermes, which has the same relation to coral that a snail has to its shell. As an ornament, black coral is most esteemed; but the red is also very highly prized. Coral is found in very great abundance in the Red Sea, the Persian Gulph, in various places in the Mediterranean, on the coast of Sumatra, &c. It grows on rocks, and on any solid submarine body; and it is necessary to its production that it should remain fixed to its place. It has generally a shrub-like appearance. In the Straits of Messina, where a great deal is fished up, it usually grows to nearly a foot in length, and its thickness is about that of the little finger. It requires 8 or 10 years to arrive at its greatest size. The depth at which it is obtained is various—from 10 to 100 fathoms or more; but it seems to be necessary to its production that the rays of the sun should readily penetrate to the place of its habitation. Its value depends upon its size, solidity, and the depth and brilliancy of its colour; and is so very various, that while some of the Sicilian coral sells for 8 or 10 guineas an ounce, other descriptions of it will not fetch 1*s.* a pound. It is highly prized by opulent natives in India, as well as by the fair sex throughout Europe. The inferior or worm-eaten coral is used in some parts of the Madras coast, in the celebration of funeral rites. It is also used medicinally. Besides the fishery in the Straits of Messina already alluded to, there are valuable

fisheries on the shores of Majorca and Minorca, and on the coast of Provence. A good deal of Mediterranean coral is exported to India, which, however, draws the largest portion of its supplies from the Persian Gulph. The produce of the fishery at Messina is stated by Spallanzani (*Travels in the Two Sicilies*, vol. iv. p. 408, &c.) to amount to 12 quintals of 250 lbs. each.

The manner of fishing coral is nearly the same every where. That which is most commonly practised in the Mediterranean is as follows:—Seven or 8 men go in a boat, commanded by the proprietor; the caster throws his net, if we may so call the machine which he uses to tear up the coral from the bottom of the sea; and the rest work the boat, and help to draw in the net. This is composed of two beams of wood tied crosswise, with leads fixed to them to sink them: to these beams is fastened a quantity of hemp, twisted loosely round, and intermingled with some loose netting. In this condition the machine is let down into the sea; and when the coral is pretty strongly entwined in the hemp and nets, they draw it up with a rope, which they unwind according to the depth, and which it sometimes requires half a dozen boats to draw. If this rope happen to break, the fishermen run the hazard of being lost. Before the fishers go to sea, they agree for the price of the coral; and the produce of the fishery is divided, at the end of the season, into 13 parts; of which the proprietor has 4, the caster 2, and the other 6 men 1 each; the thirteenth belongs to the company for payment of boat-hire, &c.—(See *Ainslie's Mat. Indica; Rees's Cyclopædia; Ency. Metrop.; Bell's Com. of Bengal, &c.*)

CORDAGE (Ger. *Tauwerk*; Du. *Touwwerk*; Fr. *Manœuvres, Cordage*; It. *Caolame*; Sp. *Jarcia, Cordaje*), a term used to denote all manner of cords or ropes, how much soever they may differ in size, but especially those used in the rigging of ships. The term *cord* is usually employed to distinguish cordage of small size, that is, of small circumference; *rope*, to distinguish the larger descriptions of cordage; and *cable*, to distinguish the largest of all, or the cordage used in the anchoring of ships.

Cordage may be made of an infinite variety of materials, of every thing, in fact, which is slender, flexible, and moderately tenacious, such as the fibres of various descriptions of vegetables; hair, wool, and silk; leathern thongs, wire, &c. In Europe it has been mostly formed of the fibres of hemp and flax, particularly the former. But in some parts of the East, coir, or the fibres of the husk of the cocoa nut, is extensively used in the manufacture of the larger descriptions of cordage.—(See COIR, &c.)

The best cordage is that, of course, which is made of the best material and in the most approved manner. It must neither be too much nor too little twisted. Ropes consist of more or fewer yarns according to their thickness. At an average the fibres of hemp used in making ropes lose about $\frac{1}{3}$rd part of their length by twisting; but in the case of cables the loss is greater.

Ropes are sometimes made of iron wire; and when properly manufactured they have been found to answer much better than might have been anticipated. Chains are now, also, frequently substituted for various descriptions of ropes; and every body knows that hempen cables have been all but wholly superseded by iron chains.—(See CABLES.)

The use of foreign cordage in English ships was formerly prohibited, except under peculiar circumstances. But this prohibition has latterly been repealed. And our ship-owners and ship-builders may now use either native or foreign cordage, whichever they prefer.

According to Professor Robinson, if you square the circumference of a rope in inches, $\frac{1}{3}$th the product will be the number of tons weight which it will bear. Very little dependence can, however, be placed on a rule of this sort; for the strength of a rope will depend as much on the material of which it is made, and on its make, as on its circumference.—(*Rees' Cyclopædia; Penny Do., &c. &c.*)

CORK (Ger. *Kork*; Du. *Kork, Kurk, Vlothout*; Fr. *Liege*; It. *Sughero, Suvero*; Sp. *Corcho*; Port. *Cortica (de Sovreiro)*; Rus. *Korkowoe derewo*; Lat. *Suber*), the thick and spongy bark of a species of oak (*Quercus Suber* Lin.), abundant in dry mountainous districts in the south of France, and in Spain, Portugal, Italy, and Barbary. The tree grows to the height of 30 feet or more, has a striking resemblance to the *Quercus Ilex*, or evergreen oak, and attains to a great age. After arriving at a certain state of maturity, it periodically sheds its bark; but this valuable product is found to be of a much better quality when it is artificially removed from the tree, which may be effected without any injury to the latter. After a tree has attained to the age of from 26 to 30 years, it may be barked; and the operation may be subsequently repeated once every 8 or 10 years *, the quality of the cork improving with the increasing age of the tree. The bark is taken off in July and August; and trees that are regularly stripped are said to live for 150 years, or more.—(*Poiret, Hist. Philosophique des Plantes*, tom. vii. 419.)

Cork is light, porous, readily compressible, and wonderfully elastic. It may be cut into any sort of figure, and notwithstanding its porosity, is nearly impervious to any common liquor. These qualities make it superior to all other substances for stoppers for bottles, in the manufacture of which it is principally made use of. It is also employed as buoys to float nets, in the construction of life-boats, the making of waterproof shoes, and in various other ways. Before being manufactured into stoppers, the

* Beckmann (vol. ii. p. 115. Eng. ed.) says, that "when the tree is 15 years old, it may be barked, and this can be done successively for 8 years." This erroneous statement having been copied into the article CORK in Rees's Cyclopædia, has thence been transplanted to a multitude of other works.

cork is charred on each side; this makes it contract, lessens its porosity, and consequently fits it the better for cutting off all communication between the external air and the liquid in the bottle. Spanish black is made of calcined cork.

The Greeks and Romans were both well acquainted with cork. They seem also to have occasionally used it as stoppers for vessels (*Cadorum obturamentis*, Plin. Hist. Nat. lib. xvi. cap. 8.); but it was not extensively employed for this purpose till the 17th century, when glass bottles, of which no mention is made before the 15th century, began to be generally introduced. —(*Beckmann's Hist. Invent.* vol. ii. pp. 114—127. Eng. ed.)

The duty on corks ready made is 8*d.* per lb., and on cork squared for rounding 16*s.* a cwt.; but unmanufactured cork is admitted duty free. The quantity entered for home consumption amounts, at an average, to from 40,000 to 50,000 cwts. Its price varies with the variations in its quality, from about 17*l.* to about 50*l.* a ton. The Spanish is the best, and fetches the highest price.

CORN (Ger. *Corn, Getreide;* Du. *Graanen, Koren;* Da. *Korn;* Sw. *Sad, Spannal;* Fr. *Bleds, Grains;* It. *Biade, Grani;* Sp. *Granos;* Rus. *Chljeb;* Pol. *Zboze;* Lat. *Frumentum*), the grain or seed of plants separated from the spica or ear, and used for making bread, &c. Such are wheat, rye, barley, oats, maize, peas, &c.; which see.

CORNELIAN. See CARNELIAN.

CORN LAWS AND CORN TRADE. — From the circumstance of corn forming, in this and most other countries, the principal part of the food of the people, the trade in it, and the laws by which that trade is regulated, are justly looked upon as of the highest importance. But this is not the only circumstance that renders it necessary to enter at some length into the discussion of this subject. Its difficulty is at least equal to its interest. The enactments made at different periods with respect to the corn trade, and the opinions advanced as to their policy, have been so very various and contradictory that it is indispensable to submit them to some examination, and, if possible, to ascertain the *principles* which ought to pervade this department of commercial legislation.

I. HISTORICAL SKETCH OF THE CORN LAWS.
II. PRINCIPLES OF THE CORN LAWS.
III. BRITISH CORN TRADE.
IV. FOREIGN CORN TRADE.

I. HISTORICAL SKETCH OF THE CORN LAWS.

For a long time the regulations with respect to the corn trade were principally intended to promote abundance and low prices. But though the purpose was laudable, the means adopted for accomplishing it had, for the most part, a directly opposite effect. When a country exports corn, it seems, at first sight, as if nothing could do so much to increase her supplies as the prevention of exportation: and even in countries that do not export, its prohibition seems to be a prudent measure, and calculated to prevent the supply from being diminished, upon any emergency, below its natural level. These are the conclusions that immediately suggest themselves upon this subject; and it requires a pretty extensive experience, an attention to facts, and a habit of reasoning upon such topics, to perceive their fallacy. These, however, were altogether wanting when the regulations affecting the corn trade began to be introduced into Great Britain and other countries. They were framed in accordance with what were supposed to be the dictates of common sense; and their object being to procure as large a supply of the prime necessary of life as possible, its exportation was either totally forbidden, or forbidden when the home price was above certain limits.

The principle of absolute prohibition seems to have been steadily acted upon, as far as the turbulence of the period would admit, from the Conquest to the year 1436, in the reign of Henry VI. But at the last-mentioned period an act was passed, authorising the exportation of wheat whenever the home price did not exceed 6*s.* 8*d.* (equal in amount of pure silver to 12*s.* $10\frac{3}{4}$*d.* present money) per quarter, and barley when the home price did not exceed 3*s.* 4*d.* In 1463, an additional benefit was intended to be conferred on agriculture by prohibiting importation until the home price exceeded that at which exportation ceased. But the fluctuating policy of the times prevented these regulations from being carried into full effect; and, indeed, rendered them in a great measure inoperative.

In addition to the restraints laid on exportation, it has been common in most countries to attempt to increase the supply of corn, not only by admitting its unrestrained importation from abroad, but by holding out extraordinary encouragement to the importers. This policy has not, however, been much followed in England. During the 500 years immediately posterior to the Conquest, importation was substantially free; but it was seldom or never promoted by artificial means; and during the last century and a half it has, for the most part, been subjected to severe restrictions.

Besides attempting to lower prices by prohibiting exportation, our ancestors attempted to lower them by proscribing the trade carried on by corn dealers. This most useful class of persons were looked upon with suspicion by every one. The agriculturists concluded that they would be able to sell their produce at higher prices to the consumers, were the corn dealers out of the way: while the consumers concluded that the profits of the dealers were made at their expense; and ascribed the dearths that were then very prevalent entirely to the practices of the dealers, or to their buying up corn and withholding it from market. These notions, which have still a considerable degree of influence, led to various enactments, particularly in the reign of Edward VI., by which the freedom of the internal corn trade was entirely suppressed. The *engrossing* of corn, or the buying of it in one market with intent to sell it again in another, was made an offence punishable by imprisonment and the pillory; and no one was allowed to carry corn from one part to another without a licence, the privilege of granting which was confided by a statute of Elizabeth to the quarter sessions. But as the principles of commerce came to be better understood, the impolicy of these restraints gradually grew more and more obvious. They were considerably modified in 1624; and, in 1663, the engrossing of corn was declared to be legal so long as the price did not exceed 48*s.* a quarter — (15 *Chas.* 2. c. 7.); an act which, as Dr. Smith has justly observed, has, with all its imperfections, done more to promote plenty than any other law in the statute book. In 1773, the last remnant of the *legislative* enactments restraining the freedom of the internal corn dealers, was entirely repealed. But the engrossing of corn has, notwithstanding, been since held to be an offence at common law; and, so late as 1800, a corn dealer was convicted of this imaginary crime. He was not, however, brought up for judgment; and it is not very likely that any similar case will ever again occupy the attention of the courts.

The acts of 1436 and 1463, regulating the prices when exportation was allowed and when importation was to cease, continued, nominally at least, in force till 1562, when the prices at which exportation might take place were extended to 10*s.* for wheat and 6*s.* 8*d.* for barley. But a new principle — that of imposing duties on exportation — was soon after introduced; and, in 1571, it was enacted that wheat might be exported, paying a duty of 2*s.* a quarter, and barley and other grain a duty of 1*s.* 4*d.*, whenever the home price of wheat did not exceed 20*s.* a quarter, and barley and malt 12*s.* At the Restoration, the limit at which exportation might take place was very much extended; but as the duty on exportation was, at the same time, so very high as to be almost prohibitory. the extension was of little or no service to the agriculturists. This view of the matter seems to have been speedily taken by the legislature; for in 1663, the high duties on exportation were taken off, and an *ad valorem* duty imposed in their stead, at the same time that the limit of exportation was extended. In 1670, a still more decided step was taken in favour of agriculture; an act being then passed which extended the exportation price to 53*s.* 4*d.* a quarter for wheat, and other grain in proportion, imposing, at the same time, prohibitory duties on the importation of wheat till the price rose to 53*s.* 4*d.*, and a duty of 8*s.* between that price and 80*s.* But the real effects of this act were not so great as might have been anticipated. The extension of the limit of exportation was rendered comparatively nugatory, in consequence of the continuance of the duties on exportation caused by the necessities of the Crown; while the want of any proper method for the determination of prices went far to nullify the prohibition of importation.

At the accession of William III. a new system was adopted. The interests of agriculture were then looked upon as of paramount importance: and to promote them, not only were the duties on exportation totally abolished, but it was encouraged by the grant of a *bounty* of 5*s.* on every quarter of wheat exported, while the price continued at or below 48*s.*; of 2*s.* 6*d.* on every quarter of barley or malt, while their respective prices did not exceed 24*s.*; and of 3*s.* 6*d.* on every quarter of rye, when its price did not exceed 32*s.* — (1 *Will. & Mary*, c. 12.) A bounty of 2*s.* 6*d.* a quarter was subsequently given upon the exportation of oats and oatmeal, when the price of the former did not exceed 15*s.* a quarter. Importation continued to be regulated by the act of 1670.

Much diversity of opinion has been entertained with respect to the policy of the bounty. That it was intended to raise the price of corn is clear, from the words of the statute, which states, "that the exportation of corn and grain into foreign parts, *when the price thereof is at a low rate in this kingdom*, hath been a great advantage not only to the owners of land, but to the trade of the kingdom in general; therefore," &c. But admitting this to have been its object, it has been contended that the low prices which prevailed during the first half of last century show that its real effect was precisely the reverse; and that, by extending tillage, it contributed to reduce prices. It will be afterwards shown that this could not really be the case; and the fall of prices may be sufficiently accounted for by the improved state of agriculture, the gradual consolidation of farms, the diminution of sheep husbandry, &c., combined with the slow increase of the population. In point of fact, too, prices had begun to give way 30 years before the bounty was

granted; and the fall was equally great in France, where, instead of exportation being encouraged by a bounty, it was almost entirely prohibited; and in most other Continental states. — (For proofs of what is now stated, see the article *Corn Laws*, in the new edition of the *Ency. Brit.*)

The Tables annexed to this article show that, with some few exceptions, there was, during the first 66 years of last century, a large export of corn from England. In 1750, the wheat exported amounted to 947,000 quarters; and the total bounties paid during the 10 years from 1740 to 1751 reached the sum of 1,515,000*l.* But the rapid increase of population subsequently to 1760, and particularly after the peace of Paris, in 1763, when the commerce and manufactures of the country were extended in an unprecedented degree, gradually reduced this excess of exportation, and occasionally, indeed, inclined the balance the other way. This led to several suspensions of the restrictions on importation; and at length, in 1773, a new act was framed, by which foreign wheat was allowed to be imported on paying a nominal duty of 6*d.* whenever the home price was at or above 48*s.* a quarter, and the bounty * and exportation were together to cease when the price was at or above 44*s.* This statute also permitted the importation of corn at any price, duty free, in order to be again exported, provided it were in the mean time lodged under the joint locks of the king and the importer.

The prices when exportation was to cease by this act seem to have been fixed too low; and, as Dr. Smith has observed, there appears a good deal of impropriety in prohibiting exportation altogether the moment it attained the limit when the bounty given to force it was withdrawn; yet, with all these defects, the act of 1773 was a material improvement on the former system, and ought not to have been altered unless to give greater freedom to the trade.

The idea that this law must, when enacted, have been injurious to the agriculturists, seems altogether illusory; the permission to import foreign grain, when the home price rose to a moderate height, certainly prevented their realising exorbitant profits, in dear years, at the expense of the other classes; and prevented an unnatural proportion of the capital of the country from being turned towards agriculture. But as the limit at which importation at a nominal duty was allowed was fixed a good deal above the average price of the reign of George II., it cannot be maintained that it had any tendency to reduce previous prices, which is the only thing that could have discouraged agriculture: and, in fact, no such reduction took place.

It is, indeed, true, that, but for this act, we should not have imported so much foreign grain in the interval between 1773 and 1791. This importation, however, was not a consequence of the decline of agriculture; for it is admitted that every branch of rural economy was more improved in that period than in the whole of the preceding century; but arose entirely from a still more rapid increase of the manufacturing population, and hence, of the effective demand for corn.

By referring to the Tables annexed to this article, it will be seen that, in 1772, the balance on the side of wheat imported amounted to 18,515 quarters; and in 1773, 1774, and 1775, all years of great prosperity, the balance was very much increased. But the loss of a great part of our colonial possessions, the stagnation of commerce, and difficulty of obtaining employment, occasioned by the American war, diminished the consumption; and this, combined with unusually productive harvests, rendered the balance high on the side of exportation, in 1778, 1779, and 1780. In 1783 and 1784 the crops were unusually deficient, and considerable importations took place; but in 1785, 1786, and 1787 the exports again exceeded the imports; and it was not till 1788, when the country had fully recovered from the effects of the American war, and when manufacturing improvements were carried on with extraordinary spirit, that the imports permanently overbalanced the exports.

The growing wealth and commercial prosperity of the country had thus, by increasing the population and enabling individuals to consume additional quantities of food, caused the home supply of corn to fall somewhat short of the demand; but it must not therefore be concluded that agriculture had not at the same time been very greatly meliorated. "The average annual produce of wheat," says Mr. Comber, "at the beginning of the reign of George III. (1760), was about 3,800,000 quarters, of which about 300,000 had been sent out of the kingdom, leaving about 3,500,000 for home consumption. In 1773, the produce of wheat was stated in the House of Commons to be 4,000,000 quarters, of which the whole, and above 100,000 imported, were consumed in the kingdom. In 1796, the consumption was stated by Lord Hawkesbury to be 500,000 quarters per month, or 6,000,000 quarters annually, of which about 180,000 were imported; showing an increased produce in about 20 years of 1,820,000 quarters. It is evident, therefore, not only that no defalcation of produce had taken place in consequence of the cessation of exportation, as has been too lightly assumed from the

* The bounty amounted to 5*s.* on every quarter of wheat; 2*s.* 6*d.* on every quarter of barley; 3*s* 6*d.* on every quarter of rye; and 2*s.* 6*d* on every quarter of oats.

occasional necessity of importation, but that it had increased with the augmentation of our commerce and manufactures."—(*Comber on National Subsistence*, p. 180.)

These estimates are, no doubt, very loose and unsatisfactory; but the fact of a great increase of produce having taken place is unquestionable. In a report by a committee of the House of Commons on the state of the *waste lands*, drawn up in 1797, the number of acts passed for enclosing, and the number of acres enclosed, in the following reigns, are thus stated: —

	Number of Acts.	Number of Acres.
In the reign of Queen Anne -	2	1,439
George I. - -	16	17,960
George II. - -	226	318,778
George III. to 1797 -	1,532	2,804,197

It deserves particular notice, that from 1771 to 1791, both inclusive, the period during which the greater number of these improvements were effected, there was no rise of prices.

The landholders, however, could not but consider the liberty of importation granted by the act of 1773 as injurious to their interests, inasmuch as it prevented prices from rising with the increased demand. A clamour, therefore, was raised against that law; and in addition to this interested feeling, a dread of becoming habitually dependent on foreign supplies, operated on many, and produced a pretty general acquiescence in the act of 1791. By this act, the price when importation could take place from abroad at the low duty of *6d.* was raised to *54s.*; under *54s.* and above *50s.* a middle duty of *2s. 6d.*; and under *50s.* a prohibiting duty of *24s. 3d.* was exigible. The bounty continued as before, and exportation without bounty was allowed to *46s.* It was also enacted, that foreign wheat might be imported, stored under the king's lock, and again exported free of duty; but, if sold for home consumption, it became liable to a warehouse duty of *2s. 6d.* in addition to the ordinary duties payable at the time of sale.

In 1797, the Bank of England obtained an exemption from paying in specie; and the consequent facility of obtaining discounts and getting a command of capital, which this measure occasioned, gave a fresh stimulus to agriculture; the efficacy of which was most powerfully assisted by the scarcity and high prices of 1800 and 1801. Inasmuch, however, as the prices of 1804 would not allow the cultivation of the poor soils, which had been broken up in the dear years, to be continued, a new corn law was loudly called for by the farmers, and passed in 1804. This law imposed a prohibitory duty of *24s. 3d.* per quarter on all wheat imported when the home price was at or below *63s.*; between *63s.* and *66s.* a middle duty of *2s. 6d.* was paid, and above *66s.* a nominal duty of *6d.* The price at which the bounty was allowed on exportation was extended to *50s.*, and exportation without bounty to *54s.* By the act of 1791, the maritime counties of England were divided into 12 districts, importation and exportation being regulated by the particular prices of each; but by the act of 1804 they were regulated, in England, by the *aggregate average* of the maritime districts; and in Scotland by the aggregate average of the 4 maritime districts into which it was divided. The averages were taken 4 times a year, so that the ports could not be open or shut for less than 3 months. This manner of ascertaining prices was, however, modified in the following session; it being then fixed that importation, both in England and Scotland, should be regulated by the average price of the 12 maritime districts of England.

In 1805, the crop was very considerably deficient, and the average price of that year was about *22s.* a quarter above the price at which importation was allowed by the act of 1804. As the depreciation of paper, compared with bullion, was at that time only *four* per cent., the high price of that year must have been principally owing to the new law preventing importation from abroad till the home price was high, and then fettering mercantile operations; and to the formidable obstacles which the war threw in the way of importation. In 1806*, 1807, and 1808, the depreciation of paper was nearly 3 per cent.; and the price of wheat in those years being generally from *66s.* to *75s.*, the importations were but small. From autumn 1808, to spring 1814, the depreciation of the currency was unusually great; and several crops in that interval being likewise deficient, the price of corn, influenced by both causes, rose to a surprising height. At that time no vessel could be laden in any Continental port for England without purchasing a licence, and the freight and insurance were at least 5 times as high as during peace. But the destruction of Napoleon's anti-commercial system, in the autumn of 1813, having increased the facilities of importation, a large quantity of corn was poured into the kingdom; and, in 1814, its *bullion* price fell below the price at which importation was allowed.

* Several impolitic restraints had been for a long time imposed on the free importation and exportation of corn between Great Britain and Ireland, but they were wholly abolished in 1806; and the act of that year (*46 Geo. 3. c. 97.*), establishing a free trade in corn between the 2 great divisions of the empire, was not only a wise and proper measure in itself, but has powerfully contributed to promote the general advantage.

Before this fall of price, a committee of the House of Commons had been appointed to inquire into the state of the laws affecting the corn trade; and recommended in their Report (dated 11th of May, 1813) a very great increase of the prices at which exportation was allowable, and when importation free of duty might take place. This recommendation was not, however, adopted by the House; but the fact of its having been made when the home price was at least 112*s.* a quarter, displayed a surprising solicitude to exclude foreigners from all competition with the home growers.

The wish to lessen the dependence of the country on foreign supplies formed the sole ostensible motive by which the committee of 1813 had been actuated, in proposing an alteration in the act of 1804. But after the fall of price in autumn 1813, and in the early part of 1814, it became obvious, on comparing our previous prices with those of the Continent, that without an alteration of the law in question this dependence would be a good deal increased; that a considerable extent of such poor lands as had been brought into cultivation during the high prices, would be again thrown into pasturage; and that rents would be lowered. These consequences alarmed the landlords and occupiers; and in the early part of the session of 1814, a series of resolutions were voted by the House of Commons, declaring that it was expedient to repeal the bounty, to permit the free exportation of corn whatever might be the home price, and to impose a graduated scale of duties on the importation of foreign corn. Thus, foreign wheat imported when the home price was at or under 64*s.* was to pay a duty of 24*s.*; when at or under 65*s.* a duty of 23*s.*; and so on, till the home price should reach 86*s.*, when the duty was reduced to 1*s.*, at which sum it became stationary. Corn imported from Canada, or from the other British colonies in North America, was to pay half the duties on other corn. As soon as these resolutions had been agreed to, two bills founded on them — one for regulating the importation of foreign corn, and another for the repeal of the bounty, and for permitting unrestricted exportation — were introduced. Very little attention was paid to the last of these bills; but the one imposing fresh duties on importation encountered a very keen opposition. The manufacturers, and every class not directly supported by agriculture, stigmatised it as an unjustifiable attempt artificially to keep up the price of food, and to secure excessive rents and large profits to the landholders and farmers at the expense of the consumers. Meetings were very generally held, and resolutions entered into strongly expressive of this sentiment, and dwelling on the fatal consequences which, it was affirmed, a continuance of the high prices would have on manufactures and commerce. This determined opposition, coupled with the indecision of ministers, and perhaps, too, with an expectation on the part of some of the landholders that prices would rise without any legislative interference, caused the miscarriage of this bill. The other bill, repealing the bounty, and allowing an unlimited freedom of exportation, was passed into a law.

Committees had been appointed in 1814, by both Houses of Parliament, to examine evidence and report on the state of the corn trade; and, in consequence, a number of the most eminent agriculturists were examined. The witnesses were unanimous in this only, — that the protecting prices in the act of 1804 were insufficient to enable the farmers to make good the engagements into which they had subsequently entered, and to continue the cultivation of the inferior lands lately brought under tillage. Some of them thought that 120*s.* should be fixed as the lowest limit at which the importation of wheat free of duty should be allowed: others varied from 90*s.* to 100*s.* — from 80*s.* to 90*s.* — and a few from 70*s.* to 80*s.* The general opinion, however, seemed to be that 80*s.* would suffice; and as prices continued to decline, a set of resolutions founded on this assumption were submitted to the House of Commons by Mr. Robinson, of the Board of Trade (now Lord Ripon); and having been agreed to, a bill founded on them was, after a very violent opposition, carried in both Houses by immense majorities, and finally passed into a law (*55* Geo. 3. c. 26.). According to this act, all sorts of foreign corn, meal, or flour might be imported at all times free of duty into any port of the United Kingdom, in order to be warehoused; but foreign corn was not permitted to be imported for home consumption, except when the average prices of the several sorts of British corn were as follows: viz. wheat, 80*s.* per quarter; rye, peas, and beans, 53*s.*; barley, bear, or bigg, 40*s.*; and oats, 26*s.*: and all importation of corn from any of the British plantations in North America was forbidden, except when the average home prices were at or under — wheat, 67*s.* per quarter; rye, peas, and beans, 44*s.*; barley, bear, or bigg, 33*s.*; and oats, 22*s.*

The agriculturists confidently expected that this act would immediately raise prices, and render them steady at about 80*s.* But, for reasons which will be afterwards stated, these expectations were entirely disappointed; and a more ruinous fluctuation of prices took place during the period it was in existence, than in any previous period of our recent history. In 1821, when prices had sunk very low, a committee of the House of Commons was appointed to inquire into the causes of the depressed state of agriculture, and to report their observations thereon. This committee, after ex-

amining a number of witnesses, drew up a report, which, though not free from error, is a valuable document. It contains a forcible exposition of the pernicious influence of the law of 1815, of which it suggested several important modifications. These, however, were not adopted; and as the low prices, and consequent distress of the agriculturists, continued, the subject was brought under the consideration of parliament in the following year. After a good deal of discussion, a new act was then passed (3 Geo. 4. c. 60.), which enacted, that after prices had risen to the limit of free importation fixed by the act of 1815, that act was to cease and the new statute to come into operation. This statute lowered the prices fixed by the act of 1815, at which importation could take place for home consumption, to the following sums, viz. —

	For corn not of the British Possessions in North America.	For Corn of the British Possessions in North America.
Wheat	70*s.* per quarter.	59*s.* per quarter.
Rye, peas, and beans	46*s.* —	39*s.* —
Barley, bear, or bigg	35*s.* —	30*s.* —
Oats	25*s.* —	20*s.* —

But, in order to prevent any violent oscillation of prices from a large supply of grain being suddenly thrown into the market, it was enacted, that a duty of 17*s.* a quarter should be laid on all wheat imported from foreign countries, during the first 3 months after the opening of the ports, if the price was between 70*s.* and 80*s.* a quarter, and of 12*s.* afterwards; that if the price was between 80*s.* and 85*s.*, the duty should be 10*s.* for the first 3 months, and 5*s.* afterwards; and that if the price should exceed 85*s.*, the duty should be constant at 1*s.*; and proportionally for other sorts of grain.

This act, by preventing importation until the home price rose to 70*s.*, and then loading the quantities imported between that limit and the limit of 85*s.* with heavy duties, was certainly more favourable to the views of the agriculturists than the act of 1815. But, unluckily for them, the prices of no species of corn, except barley, were sufficiently high, while this act existed, to bring it into operation.

In 1825, the first approach was made to a better system, by permitting the importation of wheat from British North America, without reference to the price at home, on payment of a duty of 5*s.* a quarter. But this act was passed with difficulty, and was limited to one year's duration.

Owing to the drought that prevailed during the summer of 1826, there was every prospect that there would be a great deficiency in the crops of that year; and, in order to prevent the disastrous consequences that might have taken place, had importation been prevented until the season was too far advanced for bringing supplies from the great corn markets in the north of Europe, his Majesty was authorised to admit 500,000 quarters of foreign wheat on payment of such duties as the order in council for its importation should declare. And when it was ascertained that the crops of oats, peas, &c. were greatly below an average, ministers issued an order in council, on their own responsibility, on the 1st of September, authorising the immediate importation of oats on payment of a duty of 2*s.* 2*d.* a boll; and of rye, peas, and beans, on payment of a duty of 3*s.* 6*d.* a quarter. A considerable quantity of oats was imported under this order, the timely appearance of which had undoubtedly a very considerable effect in mitigating the pernicious consequences arising from the deficiency of that species of grain. Ministers obtained an indemnity for this order on the subsequent meeting of parliament.

Nothing could more strikingly evince the impolicy of the acts of 1815 and 1822, than the necessity, under which the legislature and government had been placed, of passing the temporary acts and issuing the orders alluded to. The more intelligent portion of the agriculturists began, at length, to perceive that the corn laws were not really calculated to produce the advantages that they had anticipated; and a conviction that increased facilities should be given to importation became general throughout the country. The same conviction made considerable progress in the House of Commons; so much so, that several members who supported the measures adopted in 1815 and 1822, expressed themselves satisfied that the principle of exclusion had been carried too far, and that a more liberal system should be adopted. Ministers having participated in these sentiments, Mr. Canning moved a series of resolutions, as the foundation of a new corn law, on the 1st of March, 1827, to the effect that foreign corn might always be imported, free of duty, in order to be warehoused; and that it should always be admissible for home consumption upon payment of certain duties. Thus, in the instance of wheat, it was resolved that, when the home price was at or above 70*s.* a quarter, the duty should be a fixed one of 1*s.*; and that for every shilling that the price fell below 70*s.* a duty of 2*s.* should be imposed; so that when the price was at 69*s.* the duty on importation was to be 2*s.*, when at 68*s.* the duty was to be 4*s.*, and so on. The limit at which the constant duty of 1*s.* a quarter was to take place in the case of barley was originally fixed at 37*s.*; but it was subsequently raised to 40*s.*, the duty increasing by 1*s.* 6*d.* for every 1*s.* when the price fell below that limit. The

limit at which the constant duty of 1*s.* a quarter was to take place in the case of oats was originally fixed at 28*s.*; but it was subsequently raised to 33*s.*, the duty increasing at the rate of 1*s.* a quarter for every shilling that the price fell below that limit. The duty on colonial wheat was fixed at 6*d.* the quarter when the home price was above 65*s.*; and when the price was under that sum the duty was constant at 5*s.*; the duties on other descriptions of colonial grain were similar. These resolutions were agreed to by a large majority; and a bill founded on them was subsequently carried through the House of Commons. Owing, however, to the change of ministers, which took place in the interim, several peers, originally favourable to the bill, and some, even, who assisted in its preparation, saw reason to become amongst its most violent opponents; and a clause moved by the Duke of Wellington, interdicting all importation of foreign corn until the home price exceeded 66*s.* having been carried in the Lords, ministers gave up the bill, justly considering that such a clause was entirely subversive of its principle.

A new set of resolutions with respect to the corn trade were brought forward in 1828 by Mr. Charles Grant (now Lord Glenelg). They were founded on the same principles as those which had been rejected during the previous session. But the duty was not made to vary equally, as in Mr. Canning's resolutions, with every equal variation of price; it being 23*s.* 8*d.* when the home price was 64*s.* the Imperial quarter; 16*s.* 8*d.* when it was 69*s.*; and 1*s.* only when it was at or above 73*s.* After a good deal of debate, Mr. Grant's resolutions were carried, and embodied in the act 9 Geo. 4. c. 60.

The crops having been deficient in 1829 and 1830, there was a large importation of corn in these years, its average price being at the same time about 65*s.* a quarter. But the crops from 1831 to 1836 having been more than usually abundant, importation almost wholly ceased, and the price of wheat sunk in 1835 to 39*s.* 4*d.* a quarter, being less than it had been in any previous year since 1776. In consequence of this succession of good harvests and low prices, the corn laws ceased for a while to attract any considerable portion of the public attention, and an impression began to gain ground that the improvement of agriculture was so very rapid, that, despite the increase of population and the existence of the corn laws, our prices would fall to about the level of those of the Continent. But the cycle of favourable seasons having terminated in 1837, the crops of that and the succeeding 5 years were considerably deficient: so much so that prices rose in 1839 to 70*s.* 8*d.* a quarter, the importations in that and the three following years being also very large. This increase in the price of corn, combined with the depressed state of the commerce of the country, originating in the pecuniary revulsion in the U. States and other causes, again attracted a great deal of attention to the corn laws; and the oppressive magnitude and injurious operation of the duties were very strongly animadverted upon at public meetings in the manufacturing towns and elsewhere. An association, denominated the Anti-Corn Law League, originally founded in Lancashire, but which subsequently extended its ramifications to most parts of the country, was set on foot for the express purpose of keeping up an incessant agitation against the corn laws, which, in consequence of these concurring circumstances, were assailed with greater bitterness than ever. The importance of the subject at length forced it on the attention of government, and in 1841 ministers, actuated partly by a sense of the mischievous influence of the sliding scale, and partly, also, by a wish to strengthen their declining popularity, brought forward a plan for remodelling the corn laws, by repealing the sliding scale and imposing in its stead a constant duty of 8*s.* a quarter on wheat, and in proportion on other grain. But, having no majority in parliament, ministers were obliged to resort to a dissolution; and their proposal having, notwithstanding its moderation, excited the greatest apprehensions among the agriculturists, without being very warmly supported by the other classes, a new parliament was returned, which gave a decided majority to the opposition. It was, however, felt on all hands to be necessary to make some considerable change in the existing law, and in 1842 a measure was introduced in that view by Sir Robert Peel, which was subsequently passed into a law, 5 Victoria, 2d Sess. c. 14.

Unfortunately, however, this measure, like that by which it was preceded, was bottomed on the principle of making the duties vary with the variations in the price of corn; and though the duties were decidedly less oppressive than those imposed by the 9 Geo. 4. c. 60., still they were in no ordinary degree objectionable, as well from their too great magnitude as from their adding to the natural insecurity of the corn trade, and increasing the chances and severity of fluctuations. It is not, therefore, to be wondered at that the new measure gave but little satisfaction. Instead of being abated, the agitation and clamour against the corn laws continued progressively to gain strength; and the conviction began at the same time gradually to extend itself among many of those by whom these laws had hitherto been supported, that farther modifications would have to be made in them; and that they might be made without inflicting any very serious injury upon agriculture.

This conviction was greatly strengthened by the result of the important changes made by Sir Robert Peel in the tariff in 1842, and more especially by those which had reference to the importation of live cattle and fresh provisions. These had previously been prohibited; but the minister proposed that this prohibition should be repealed, and that their importation should be permitted under reasonable duties. This proposal, when first brought forward, excited the greatest apprehensions among the farmers and graziers, and was followed by an immediate fall in the price of cattle. Happily, however, the measure was carried, and it was speedily discovered that there was no such difference between the prices of cattle of the same quality here and in the adjacent parts of the continent, as had been supposed; and that the fears entertained by the agriculturists of the approaching ruin of the businesses of breeding and grazing were altogether visionary and unfounded. The experience afforded by the reduction and subsequent abolition of the duty on wool was exactly similar. Instead of being injured, the interests of the British sheep farmers have been most materially promoted by these measures; the demand for home-grown wool having been rendered comparatively steady, and its price considerably increased by the powerful stimulus which the change in the duty on foreign wool gave to the woollen manufacture.

In the following year, that is, in 1843, a measure was adopted which made a wide breach in the corn laws. In 1842 the legislature of Canada passed a law imposing a duty of 3*s.* a quarter on all wheat imported into the province, unless from the U. Kingdom, stating in the preamble to this act, that it was passed in the expectation and belief that a corresponding reduction would be made in the duties on wheat and wheat-flour imported into the U. Kingdom from Canada. And conformably to this anticipation, the act 6 & 7 Vict. c. 29., passed in the course of 1843, reduced the duty on wheat imported from Canada to 1*s.* a quarter, and proportionally on wheat-flour. This act met with much opposition from a part of the agricultural interest in this country, who contended that it would lead to the introduction of unlimited supplies of corn from the U. States at a duty of only 4*s.* a quarter, or, allowing for smuggling, at perhaps only half that amount. But experience showed that these anticipations were not likely to be realised; for, though the imports from Canada were materially increased, the obstacles in the way of the importation of corn from the U. States into Canada, and the danger and expense of the voyage from Montreal or Quebec to England, must necessarily have prevented the importation through this channel from ever becoming of much importance. Still, however, the measure was in so far an abandonment of the corn laws; and if we were justified in admitting the produce of the U. States to our markets in this indirect way, it was not easy to discover satisfactory grounds on which to exclude the produce of other states.

The success of the measures adopted in 1842 encouraged Sir Robert Peel to attempt still more considerable changes in 1845, when he totally abolished the customs duties on no fewer than 420 different articles, some of which were of very considerable importance. The measures then adopted were equivalent, in fact, to the virtual abandonment of the protective system; and under such circumstances it could not be expected that the corn laws, on which so serious an inroad had been made by the Canada act, would be able to maintain their place on the statute book for any very lengthened period.

They might, however, have been continued for some time longer, had not the unsatisfactory corn harvest, and the failure of the potato crop of 1845, made it necessary to adopt measures for averting the anticipated deficiency in the supplies of food. Under the critical circumstances in which the population was then believed to be placed, the temporary suspension of the corn laws could hardly have been avoided; but if once suspended, their re-enactment would have been all but impossible, and it was better by at once providing for their repeal to make an end of the system, and of the dissatisfaction and agitation to which it had given birth, than to endeavour to continue it in any modified shape. Such was the view of the matter taken by Sir Robert Peel, and he fortunately succeeded, despite difficulties that none else could have overcome, in carrying the act 9 & 10 Vict. c. 22., for the immediate modification of the corn laws, and for their total repeal at the end of three years, or on the 1st February, 1849. (See *post.*)

II. Principles of the Corn Laws.

1. *Internal Corn Trade.* — It is needless to take up the reader's time by endeavouring to prove by argument the advantage of allowing the free conveyance of corn from one province to another. Every one sees that this is indispensable, not only to the equal distribution of the supplies of food over the country, but to enable the inhabitants of those districts that are best fitted for the raising and fattening of cattle, sheep, &c. to addict themselves to these or other necessary occupations not directly connected with the production of corn. We shall, therefore, confine the few remarks we have to make

on this subject, to the consideration of the influence of the speculations of the corn merchants in buying up corn in anticipation of an advance. Their proceedings in this respect, though of the greatest public utility, have been the principal causes of that odium to which they have been long exposed.

Were the harvests always equally productive, nothing would be gained by storing up supplies of corn; and all that would be necessary would be to distribute the crop equally throughout the country and throughout the year. But such is not the order of nature. The variations in the aggregate produce of a country in different seasons, though not perhaps so great as are commonly supposed, are still very considerable; and experience has shown that two or three unusually luxuriant harvests seldom take place in succession; or that when they do, they are invariably followed by those that are deficient. The speculators in corn anticipate this result. Whenever prices begin to give way in consequence of an unusually luxuriant harvest, speculation is at work. The more opulent farmers withhold either the whole or a part of their produce from market; and the more opulent dealers purchase largely of the corn brought to market, and store it up in expectation of a future advance. And thus, without intending to promote any one's interest but their own, speculators in corn become the benefactors of the public. They provide a reserve stock against those years of scarcity which are sure at no distant period to recur; while, by withdrawing a portion of the redundant supply from immediate consumption, prices are prevented from falling so low as to be injurious to the farmers, or at least are maintained at a higher level than they would otherwise have reached; provident habits are maintained amongst the people; and that waste and extravagance are checked, which always take place in plentiful years, but which would be carried to a much greater extent if the whole produce of an abundant crop were to be consumed within the season.

It is, however, in scarce years that the speculations of the corn merchants are principally advantageous. Even in the richest countries, a very large proportion of the individuals engaged in the business of agriculture are comparatively poor, and are totally without the means of withholding their produce from market, in order to speculate upon any future advance. In consequence the markets are always most abundantly supplied with produce immediately after harvest; and in countries where the merchants engaged in the corn trade are not possessed of large capitals, or where their proceedings are fettered and restricted, there is then, almost invariably, a heavy fall of prices. But as the vast majority of the people buy their food in small quantities, or from day to day, as they want it, their consumption is necessarily extended or contracted according to its price at the time. Their views do not extend to the future; they have no means of judging whether the crop is or is not deficient. They live, as the phrase is, from hand to mouth; and are satisfied if, in the mean time, they obtain abundant supplies at a cheap rate. But it is obvious, that were there nothing to control or counteract this improvidence, the consequence would very often be fatal in the extreme. The crop of one harvest must support the population till the crop of the other harvest has been gathered in; and if that crop should be deficient—if, for instance, it should only be adequate to afford, at the usual rate of consumption, a supply of 9 or 10 months' provisions instead of 12—it is plain that, unless the price were so raised immediately after harvest as to enforce economy, and put, as it were, the whole nation on short allowance, the most dreadful famine would be experienced previously to the ensuing harvest. Those who examine the accounts of the prices of wheat and other grain in England, collected by Bishop Fleetwood and Sir F. M. Eden, will meet with abundant proofs of the accuracy of what has now been stated. In those remote periods when the farmers were generally without the means of withholding their crops from market, and when the trade of a corn dealer was proscribed, the utmost improvidence was exhibited in the consumption of grain. There were then, indeed, very few years in which a considerable scarcity was not experienced immediately before harvest, and many in which there was an absolute famine. The fluctuations of price exceeded every thing of which we can now form an idea; the price of wheat and other grain being 4 or 5 times as high in June and July as in September and October. Thanks, however, to the increase of capital in the hands of the large farmers and dealers, and to the freedom given to the operations of the corn merchants, we are no longer exposed to such ruinous vicissitudes. Whenever the dealers, who, in consequence of their superior means of information, are better acquainted with the real state of the crops than any other class of persons, find the harvest likely to be deficient, they raise the price of the corn they have warehoused, and bid against each other for the corn which the farmers are bringing to market. In consequence of this rise of prices, all ranks and orders, but especially the lower, who are the great consumers of corn, find it indispensable to use greater economy, and to check all improvident and wasteful consumption. Every class being thus immediately put upon short allowance, the pressure of the scarcity is distributed equally throughout the year; and instead of indulging, as was formerly the case, in the same scale of consumption as in seasons of

plenty, until the supply became altogether deficient, and then being exposed without resource to the attacks of famine and pestilence, the speculations of the corn merchants warn us of our danger, and compel us to provide against it.

It is not easy to suppose that these proceedings of the corn merchants should ever be injurious to the public. It has been said that in scarce years they are not disposed to bring the corn they have purchased to market until it has attained an exorbitant price, and that the pressure of the scarcity is thus often very much aggravated; but there is no real ground for any such statement. The immense amount of capital required to store up any considerable quantity of corn, and the waste to which it is liable, render most holders disposed to sell as soon as they can realise a fair profit. In every extensive country in which the corn trade is free, there are infinitely too many persons engaged in it to enable any sort of combination or concert to be formed amongst them; and though it were formed, it could not be maintained for an instant. A large proportion of the farmers and other small holders of corn are always in straitened circumstances, more particularly if a scarce year has not occurred so soon as they expected; and they are consequently anxious to relieve themselves, as soon as prices rise, of a portion of the stock on their hands. Occasionally, indeed, individuals are found, who retain their stocks for too long a period, or until a reaction takes place, and prices begin to decline. But instead of joining in the popular cry against such persons, every one who takes a dispassionate view of the matter will perceive that, inasmuch as their miscalculation must, under the circumstances supposed, be exceedingly injurious to themselves, we have the best security against its being carried to such an extent as to be productive of any material injury or even inconvenience to the public. It should also be borne in mind, that it is rarely, if ever, possible to determine beforehand, when a scarcity is to abate in consequence of new supplies being brought to market; and had it continued a little longer, there would have been no miscalculation on the part of the holders. At all events, it is plain that by declining to bring their corn to market, they preserved a resource on which, in the event of the harvest being longer delayed than usual, or of any unfavourable contingency taking place, the public could have fallen back; so that, instead of deserving abuse, these speculators are most justly entitled to every fair encouragement and protection. A country in which there is no considerable stock of grain in the barnyards of the farmers, or in the warehouses of the merchants, is in the most perilous situation that can easily be imagined, and may be exposed to the severest privations, or even famine. But so long as the sagacity, the miscalculation, or the avarice of merchants and dealers retain a stock of grain in the warehouses, this last extremity cannot take place. By refusing to sell it till it has reached a very high price, they put an effectual stop to all sorts of waste, and husband for the public those supplies which they could not have so frugally husbanded for themselves.

We have already remarked that the last remnant of the shackles imposed by statute on the freedom of the internal corn dealer was abolished in 1773. It is true that engrossing, forestalling, and regrating—(see ENGROSSING, &c.)—are still held to be offences at common law; but there is very little probability of any one being in future made to answer for such ideal offences.

2. *Exportation to foreign Countries.*—The fallacy of the notion so long entertained, that the prevention of exportation was the surest method of increasing plenty at home, is obvious to every one who has reflected upon such subjects. The markets of no country can ever be steadily and plentifully supplied with corn, unless her merchants have power to export the surplus supplies with which they may be occasionally furnished. When a country without the means of exporting grows nearly her own average supplies of corn, an abundant crop, by causing a great overloading of the market, and a heavy fall of price, is as injurious to the farmer as a scarcity. It may be thought, perhaps, that the greater quantity of produce in abundant seasons will compensate for its lower price; but this is not the case. It is uniformly found that variations in the quantity of corn exert a much greater influence over prices, than equal variations in the quantity of almost any thing else offered for sale. Being the principal necessary of life, when the supply of corn happens to be less than ordinary, the mass of the people make very great, though unavailing, exertions, by diminishing their consumption of other and less indispensable articles, to obtain their accustomed supplies of this prime necessary; so that its price rises much more than in proportion to the deficiency. On the other hand, when the supply is unusually large, the consumption is not proportionally extended. In ordinary years, the bulk of the population is about adequately fed; and though the consumption of all classes be somewhat greater in unusually plentiful years, the extension is considerable only among the lowest classes, and in the feeding of horses. Hence it is that the increased supply at market, in such years, goes principally to cause a glut, and consequently a ruinous decline of prices. These statements are corroborated by the widest experience. Whenever there is an inability to export, from whatever cause it may arise, an unusually luxuriant crop is uniformly accompanied by a very heavy fall of

price, and severe agricultural distress; and when two or three such crops happen to follow in succession, the ruin of a large proportion of the farmers is completed.

If the mischiefs resulting from the want of power to export stopped here, they might, though very great, be borne; but they do not stop here. It is idle to suppose that a system ruinous to the producers can be otherwise to the consumers. A glut of the market, occasioned by luxuriant harvests, and the want of power to export, cannot be of long continuance; for, while it continues, it can hardly fail, by distressing all classes of farmers, and causing the ruin of many, to give a check to every species of agricultural improvement, and to lessen the extent of land in tillage. When, therefore, an unfavourable season recurs, the reaction is, for the most part, appalling. The supply, being lessened, not only by the badness of the season, but also by a diminution of the quantity of land in crop, falls very far below an average; and a severe scarcity, if not an absolute famine, is most commonly experienced. It is therefore clear, that if a country would render herself secure against famine and injurious fluctuations of price, she must give every possible facility to exportation in years of unusual plenty. If she act upon a different system,—if her policy make exportation in such years impracticable, or very difficult,—she will infallibly render the bounty of Providence an injury to her agriculturists; and two or three abundant harvests in succession will be the forerunners of scarcity and famine.

3. *Bounty on the Exportation of Corn.*—In great Britain, as already observed, we have not only been allowed to export for a long series of years, but from the Revolution down to 1815 a bounty was given on exportation, whenever the home prices were depressed below certain limits. This policy, however, erred as much on the one hand as a restriction on exportation errs on the other. It causes, it is true, an extension of the demand for corn: but this greater demand is not caused by natural, but by artificial means; it is not a consequence of any really increased demand on the part of the foreigner, but of our furnishing the exporters of corn with a *bonus*, in order that they may sell it abroad below its natural price! To suppose that a proceeding of this sort can be a public advantage, is equivalent to supposing that a shopkeeper may get rich by selling his goods below what they cost. (See Bounty.)

4. *Importation from Foreign Countries.*—If a country were, like Poland or Russia, uniformly in the habit of exporting corn to other countries, a restriction on importation would be of no material consequence; because, though such restriction did not exist, no foreign corn would be imported, unless its ports were so situated as to serve for an *entrepôt*. A restriction on importation is sensibly felt only when it is enforced in a country which, owing to the greater density of its population, the limited extent of its fertile land, or any other cause, would either occasionally or uniformly import. It is familiar to the observation of every one, that a total failure of the crops is a calamity that but rarely occurs in an extensive kingdom; that the weather which is unfavourable to one description of soil, is generally favourable to some other description; and that, except in anomalous cases, the total produce is not very different. But what is thus generally true of single countries, is always true of the world at large. History furnishes no single instance of a universal scarcity; but it is uniformly found, that when the crops in a particular country are unusually deficient, they are proportionally abundant in some other quarter. It is clear, however, that a prohibition of importation excludes the country which enacts it from profiting by this beneficent arrangement. She is thrown entirely on her own resources. Under the circumstances supposed, she has nothing to trust to for relief but the reserves in her warehouses; and should these be inadequate to meet the exigency of the crisis, there are apparently no means by which she can escape experiencing all the evils of scarcity, or, it may be, of famine. A country deprived of the power to import is unable to supply the deficiencies of her harvests by the surplus produce of other countries; so that her inhabitants may starve amidst surrounding plenty, and suffer the extreme of scarcity, when, but for the restrictions on importation, they might enjoy the greatest abundance. If the prohibition be not absolute, but conditional; if, instead of absolutely excluding foreign corn from the home markets, it be merely loaded with a duty, the degree in which such duty will operate to increase the scarcity and dearth will depend on its magnitude. If the duty be constant and moderate, it may not have any very considerable effect in discouraging importation; but if it be fluctuating and heavy, it will, by falsifying the speculations of the merchants, and making a corresponding addition to the price of the corn imported, be proportionally injurious. In whatever degree foreign corn may be excluded in years of deficient crops, to the same extent must prices be artificially raised, and the pressure of the scarcity rendered so much the more severe.

Such would be the disastrous influence of a restriction on importation in a country which, were there no such obstruction in the way, would sometimes import and sometimes export. But its operation would be infinitely more injurious in a country which, under a free system, would uniformly import a portion of her supplies. The restriction

in this case has a twofold operation. By preventing importation from abroad, and forcing the population to depend for subsistence on corn raised at home, it compels recourse to comparatively inferior soils; and thus, by increasing the cost of producing corn above its cost in other countries, adds proportionally to its average price. The causes of fluctuation are, in this way, increased in a geometrical proportion; for, while the prevention of importation exposes the population to the pressure of want whenever the harvest happens to be less productive than usual, it is sure, at the same time, by raising average prices, to hinder exportation in a year of unusual plenty, until the home prices fall ruinously low. It is obvious, therefore, that a restriction of this sort must be alternately destructive of the interests of the consumers and producers. It injures the former by making them pay, at an average, an artificially increased price for their food, and by exposing them to scarcity and famine whenever the home crop proves deficient; and it injures the latter, by depriving them of the power to export in years of unusual plenty, and by overloading the market with produce, which, under a free system, would have met with an advantageous sale abroad.

The principle thus briefly explained, shows the impossibility of permanently keeping up the home prices by means of restrictions on importation, at the same time that it affords a clue by which we may trace the causes of most part of the agricultural distress experienced in this country since the peace. The real object of the Corn Law of 1815 was to keep up the price of corn at about 80*s.* a quarter; but to succeed in this, it was indispensable not only that foreign corn should be excluded when prices were under this limit, but that the markets should never be overloaded with corn produced at home: for it is clear, according to the principle already explained, that if the supply should in ordinary years be sufficient to feed the population, it must, in an unusually abundant year, be more than sufficient for that purpose; and when, in such a case, the surplus is thrown upon the market, it cannot fail, in the event of our average prices being considerably above the level of those of the surrounding countries, to cause a ruinous depression. Now, this was the precise situation of this country at the end of the war. Owing partly to the act of 1804, but far more to the difficulties in the way of importation, and the depreciation of the currency, prices attained to an extraordinary elevation from 1809 to 1814, and gave such a stimulus to agriculture, that we grew, in 1812 and 1813, sufficient corn for our own supply. And, such being the case, it is clear, though our ports had been hermetically sealed against importation from abroad, that the first luxuriant crop must have occasioned a ruinous decline of prices. It is the exclusion, not the introduction, of foreign corn that has caused the occasional distress of the agriculturists since 1815; for it is this exclusion that has forced up the price of corn in this country, in scarce and average years, to an unnatural level, and that, consequently, renders exportation in favourable seasons impossible, without such a fall of prices as is most disastrous to the farmer. It may be mentioned, in proof of what is now stated, that the average price of wheat in England and Wales in 1814 was 74*s.* 4*d.* a quarter, and in 1815 it had fallen to 65*s.* 7*d.* But as these prices would not indemnify the occupiers of the poorest lands brought under tillage during the previous high prices, they were gradually relinquishing their cultivation. A considerable portion of them had been converted into pasture; rents had been generally reduced, and wages had begun to decline; but the legislature having laid additional restrictions on the importation of foreign corn, the operation of this natural principle of adjustment was unfortunately counteracted, and the price of 1816 rose to 78*s.* 6*d.* This rise was, however, insufficient to occasion any new improvement; and as foreign corn was now excluded, and large tracts of bad land had been thrown out of cultivation, the supply was so much diminished that, notwithstanding the increase in the value of money, prices rose in 1817, partly, no doubt, in consequence of the bad harvest of the previous year, to 96*s.* 11*d.*; and in 1818 to 86*s.* 3*d.* These high prices had their natural effect. They revived the drooping spirits of the farmers, who imagined that the Corn Law was, at length, beginning to produce the effects anticipated from it, and that the golden days of 1812, when wheat sold for 126*s.* 6*d.* a quarter, were about to return! But this prosperity carried in its bosom the seeds of future mischief. The increased prices necessarily occasioned a fresh extension of tillage; capital was again applied to the improvement of the soil; and this increase of tillage, conspiring with favourable seasons, and the impossibility of exportation, sunk prices to such a degree, that they fell, in October, 1822, so low as 38*s.* 1*d.*, the average price of that year being only 44*s.* 7*d.*

It is thus demonstrably certain, that the recurrence of periods of distress, similar to those which have been experienced by the agriculturists of this country since the peace, cannot be warded off by restricting or prohibiting importation. A free corn trade is the only system that can give them that security against fluctuations that is so indispensable. The increased importation that necessarily takes place, under a free system, as soon as any considerable deficiency in the crops is apprehended, prevents prices from rising to an oppressive height; while, on the other hand, when the crops are unusually luxuriant,

a ready outlet is found for the surplus in foreign countries, without its occasioning any very heavy fall. To expect to combine steadiness of prices with restrictions on importation, is to expect to reconcile what is contradictory and absurd. The higher the limit at which the importation of foreign corn into a country like England is fixed, the greater is the oscillation of prices. If we would secure for ourselves abundance, and avoid fluctuation, we must renounce all attempts at exclusion, and be ready to deal in corn, as we ought to be in every thing else, on fair and liberal principles.

That the restrictions imposed on the foreign corn trade during the last 20 years should not have been productive of more disastrous consequences than those that have actually resulted from them, is partly and principally to be ascribed to the unparalleled improvement of tillage in Great Britain during that period, and partly, also, to the great increase that has taken place in the imports from Ireland. Previously to 1806, when a perfectly free corn trade between Great Britain and Ireland was for the first time established, the yearly imports did not amount to 400,000 quarters, whereas they now amount to above 3,000,000; and any one who has ever been in Ireland, or is aware of the wretched state of its agriculture, and of the fertility of the soil, must be satisfied that a slight improvement would occasion a great increase in the imports from that country; and it is not improbable that the check that has latterly been given to the pernicious practice of splitting farms, to the potato culture, and consequently to the increase of a pauper population, may eventually lead to material improvements. Hence it is by no means improbable, seeing the fall that has already taken place, that the rapid spread of improvement at home, and the growing imports from Ireland, may, at no distant period, reduce our prices to the level of those of the Continent, and even render us an occasionally exporting country. These, however, are contingent and uncertain results; and supposing them to be ultimately realised, the corn laws, had they been maintained on their old footing, would, in the mean time, have been productive of great inconvenience, and would have materially aggravated the misery inseparable from bad harvests.

Nothing but the great importance of the subject could excuse us for dwelling so long on what is so very plain. To facilitate production, and to make commodities cheaper and more easily obtained, are the grand motives which stimulate the inventive powers, and which lead to the discovery and improvement of machines and processes for saving labour and diminishing cost; and it is plain that no system of commercial legislation deserves to be supported, which does not conspire to promote the same objects: but a restriction on the importation of corn into a country like England, which has made a great comparative advance in population and manufacturing industry, is diametrically opposed to these principles. The density of our population is such, that the exclusion of foreign corn has obliged us to resort to soils of less fertility than those that are under cultivation in the surrounding countries; and, in consequence, our average prices are comparatively high. The impolicy of this conduct is obvious. If we could, by laying out 1000*l.* on the manufacture of cottons or hardware, produce a quantity of these articles that would exchange for 500 quarters of American or Polish wheat; and if the same sum, were it expended in cultivation in this country, would not produce more than 400 quarters; the prevention of importation occasions an obvious sacrifice of 100 out of every 500 quarters consumed in the empire; or, which is the same thing, it occasions an artificial advance of 20 per cent. in the price of corn. We do not mean to say that this statement exactly represents the amount of injury that was inflicted by the late corn laws; but, at all events, it clearly illustrates the principle which they embodied. But though plainly injurious to the public, it may seem, at first sight, as if this system were advantageous to the landlords. The advantage is, however, merely apparent: at bottom there is no real difference between the interests of the landlords and those of the rest of the community. It would be ridiculous, indeed, to imagine for a moment that the landlords could be benefited by a system in which those fluctuations of prices, so subversive of all agricultural prosperity, were inherent; but though these could have been got rid of, the result would have been the same. The prosperity of agriculture must always depend upon, and be determined by, the prosperity of other branches of industry; and any system which, like the corn laws, is injurious to the latter, cannot but be injurious to the former. Instead of being publicly advantageous, high prices are in every case distinctly and completely the reverse. The smaller the sacrifice for which any commodity can be obtained, so much the better. When the labour required to produce, or the money required to purchase, a sufficient supply of corn, is diminished, it is as clear as the sun at noon-day that more labour or money must remain to produce or purchase the other necessaries, conveniences, and amusements of human life, and that the sum of national wealth and comforts must be proportionally augmented. Those who suppose that a rise of prices can ever be a means of improving the condition of a country might, with equal reason, suppose that it would be improved by throwing its best soils out of cultivation, and destroying its most

powerful machines. The opinions of such persons are not only opposed to the plainest and best established principles, but they are opposed to the obvious conclusions of common sense, and the universal experience of mankind.

It would, however, be unjust not to mention that there has always been a large and respectable party amongst the landlords, opposed to all restrictions on the trade in corn, and who have uniformly thought that their interests, being identified with those of the public, would be best promoted by the abolition of restrictions on importation. A protest expressive of this opinion, subscribed by 10 peers, was entered on the Journals of the House of Lords, against the corn law of 1815. It is said to have been written by the late Lord Grenville, distinguished as an enlightened advocate of sound commercial principles. Its reasoning is so clear and satisfactory, that we are sure we shall gratify our readers, as well as strengthen the statements previously made, by laying it before them.

"*Dissentient.*— I. Because we are adverse in principle to all new restraints on commerce. We think it certain that public prosperity is best promoted by leaving uncontrolled the free current of national industry; and we wish rather, by well considered steps, to bring back our commercial legislation to the straight and simple line of wisdom, than to increase the deviation by subjecting additional and extensive branches of the public interest to fresh systems of artificial and injurious restrictions.

"II. Because we think that the great practical rule, of leaving all commerce unfettered, applies *more peculiarly*, and on still stronger grounds of justice as well as policy, to the corn trade than to any other. Irresistible, indeed, must be that necessity which could, in our judgment, authorise the legislature to tamper with the sustenance of the people, and to impede the free purchase of that article on which depends the existence of so large a portion of the community.

"III. Because we think that the expectations of ultimate benefit from this measure are founded on a delusive theory. We cannot persuade ourselves that this law will ever contribute to produce plenty, cheapness, or steadiness of price. So long as it operates at all, its effects must be the opposite of these. *Monopoly is the parent of scarcity, of dearness, and of uncertainty.* To cut off any of the sources of supply, can only tend to lessen its abundance; to close against ourselves the cheapest market for any commodity, must enhance the price at which we purchase it; and to confine the consumer of corn to the produce of his own country, is to refuse to ourselves the benefit of that provision which Providence itself has made for equalising to man the variations of climate and of seasons.

"IV. But whatever may be the future consequences of this law at some distant and uncertain period, we see with pain that these hopes must be purchased at the expense of a great and present evil. To compel the consumer to purchase corn dearer at home than it might be imported from abroad, is the immediate practical effect of this law. In this way alone can it operate. Its present protection, its promised extension of agriculture, must result (if at all) from the profits which it creates by keeping up the price of corn to an artificial level. These future benefits are the consequences expected, but, as we confidently believe, erroneously expected, from giving a bounty to the grower of corn, by a tax levied on its consumer.

"V. Because we think the adoption of any permanent law for such a purpose required the fullest and most laborious investigation. Nor would it have been sufficient for our satisfaction, could we have been convinced of the general policy of a hazardous experiment. A still further inquiry would have been necessary to persuade us that the present moment is fit for its adoption. In such an inquiry we must have had the means of satisfying ourselves what its immediate operation will be, as connected with the various and pressing circumstances of public difficulty and distress with which the country is surrounded: with the state of our circulation and currency, of our agriculture and manufactures, of our internal and *external* commerce, and above all, with the condition and reward of the industrious and labouring classes of our community.

"On all these particulars, as they respect this question, we think that parliament is almost wholly uninformed; on all we see reason for the utmost anxiety and alarm from the operation of this law.

"Lastly. Because, if we could approve of the principle and purpose of this law, we think that no sufficient foundation has been laid for its details. The evidence before us, unsatisfactory and imperfect as it is, seems to us rather to disprove than to support the propriety of the high price adopted as the standard of importation, and the fallacious mode by which that price is to be ascertained. And on all these grounds we are anxious to record our dissent from a measure so precipitate in its course, and, as we fear, so injurious in its consequences."

Attempts have sometimes been made to estimate the pecuniary burden which the restrictions on importation entailed in ordinary years upon the country. This, however, is a subject with respect to which it is not possible to obtain any accurate data. But supposing the total quantity of corn annually produced in Great Britain and Ireland to amount to 50,000,000 quarters, every shilling added to its price by the corn laws was equivalent to a tax on corn of 2,500,000*l.*; and estimating the average rise on all sorts of grain previously to 1846 at 3*s.* a quarter, the total rise would be 7,500,000*l.* So great a quantity of corn is, however, consumed by the agriculturists themselves, as food, in seed, the keep of horses, &c., that not more than a half, perhaps, of the whole quantity produced is brought to market. If we are nearly right in this hypothesis, and in the previous estimates, it will follow that the restrictions cost the classes not engaged in agriculture no less 3,750,000*l.* a year, exclusive of their other pernicious consequences. Of this sum a *fifth*, probably, or 750,000*l.*, went to the landlords as rent; and this is *all* that the agriculturists can be said to have gained by the system, for the additional price received by the farmer on that portion of the produce which is exclusive of rent was no more than the ordinary return for his capital and labour. His profits, indeed, like those of all other capitalists, instead of being increased by this system, was diminished by it; and though, nominally at least, it somewhat increased the rents of the landlords, it is, notwithstanding, abundantly certain that it was any thing but advantageous to them. It would require a far larger sum to have balanced the injury which fluctuations of price occasioned to their tenants, and the

damage done to their estates by over-cropping when prices were high, than all they derived from the restrictions.

5. Duties on Importation.—A duty may be equitably imposed on imported corn, for two objects; that is, either for the sake of revenue, or to balance any excess of taxes laid on the agriculturists over those laid on the other classes.—(See the *Treatise on Taxation* by the Author of this work, 2nd. ed. pp. 193—203.) With respect, however, to a duty imposed for the sake of revenue, it may be doubted whether corn be a proper subject for taxation. At all events, a duty for such an object should be exceedingly moderate. It would be most inexpedient to attempt to add largely to the revenue by laying heavy duties on the prime necessary of life.

If it be really true that agriculture is more heavily taxed than any other branch of industry, the agriculturists are entitled to demand that a duty be laid on foreign corn when imported corresponding to the *excess* of burdens affecting them. It has been doubted, however, whether they are in this predicament. But though the question be not quite free from difficulty, it would be easy to show, were this a proper place for such inquiries, that, owing to the various local and other direct and indirect burdens laid on the land, those occupying it are really subjected to heavier taxes than any other class. It is difficult, or rather, perhaps, impossible to estimate with any degree of precision what the *excess* of taxes laid on the agriculturists beyond those laid on manufacturers and merchants may amount to: but we have elsewhere shown, that if we estimate it as making an addition of *5s.* or *6s.* to the quarter of wheat, we shall probably be beyond the mark.—(*Treatise on Taxation, ubi suprà.*)

When a duty is laid on the importation of foreign corn, for the equitable purpose of countervailing the peculiar duties laid on the corn raised at home, an *equivalent drawback* should be allowed on its exportation. "In allowing this drawback, we are merely returning to the farmer a tax which he has already paid, and which he must have, to place him in a fair state of competition in the foreign market, not only with the foreign producer, but with his own countrymen who are producing other commodities. It is essentially different from a bounty on exportation, in the sense in which the word bounty is usually understood; for by a bounty, is generally meant a tax levied on the people for the purpose of rendering corn unnaturally cheap to the foreign consumer; whereas what I propose is, to sell our corn at the price at which we can really afford to produce it, and not to add to its price a tax which shall induce the foreigner rather to purchase it from some other country, and deprive us of a trade which, under a system of free competition, we might have selected."—(*Ricardo on Protection to Agriculture*, p. 53.)

A duty accompanied with a drawback, as now stated, would not only, under the circumstances supposed, have been an equitable arrangement, but it would have been highly for the advantage of the farmers, without being injurious to any one else. The radical defect, as already shown, of the system followed from 1815 down to 1846, in so far, at least, as respected agriculture, was, that it forced up prices in years when the harvest was deficient, while it left the market to be glutted when it was abundant. But while a constant duty of *5s.* would have secured to the home growers all the increase of price which the regard due to the interests of others should allow them to realise in a bad year, the drawback of *5s.*, by enabling them to export in an unusually plentiful year, would have prevented the markets from being overloaded, and prices from falling to the ruinous extent that they have occasionally done Such a plan would have rendered the businesses of the dealers in and growers of corn comparatively secure; and would, therefore, have provided for the continued prosperity of both. It is surprising the agriculturists did not take this view of the matter. If they were really entitled to a duty on foreign corn, on account of their being more heavily taxed than the other classes of their fellow citizens (and they had no title to it on any other ground), they were also entitled to a corresponding drawback. And it admits of demonstration, that *their* interests, as well as those of the community, would have been better promoted by such a duty and drawback, than they ever could have been by any system of mere duties how high soever they might be carried.

III. British Corn Trade.

1. Quantity of Corn consumed in Great Britain.—Attempts have sometimes been made to estimate the quantity of corn raised in a country, from calculations founded on the number of acres in tillage, and on the average produce per acre; but it is plain that no perfectly accurate account can ever be framed of the extent of land under cultivation. It is perpetually changing from year to year; and the amount of produce varies not only with the differences of seasons, but also with every improvement of agriculture. This method, therefore, is now rarely resorted to, and the growth of corn is generally estimated from the *consumption*. The conclusions deduced from this crite-

rion must indeed be subject to error, as well from variations in the consumption, occasioned by variations in the price of corn, as from the varying extent to which other food is used. But supposing the prices of corn to be reduced to an average, if the consumption of a considerable number of persons, of all ranks and orders, and of all ages and sexes, were accurately determined, we should be able, supposing the census of the population to be nearly correct, to make a pretty close approximation to the total consumption of the country. Mr. Charles Smith, the well-informed and intelligent author of the Tracts on the Corn Trade, made many curious investigations, with a view to discover the mean annual consumption of corn; and reducing it to *the standard of wheat*, he found it to be at the rate of about *a quarter for each individual*, young and old. This estimate has been confirmed by a variety of subsequent researches; and among others, by inquiries made during the scarcity of 1795 and 1796, by the magistrates of Suffolk, in 42 different parishes, in the view of ascertaining the average consumption of each family, which they found to correspond very closely with Mr. Smith's estimate. It is also worthy of remark, that M. Paucton, the intelligent author of the *Metrologie*, estimates the mean annual average consumption in France, when reduced to the standard of wheat, at about 10 bushels for each individual; and as the French consume more bread and less animal food than the English, this estimate affords a strong proof of the correctness of that of Mr. Smith.

Having taken the population of England and Wales in 1765 at 6,000,000, Mr. Smith reckoned the consumers of each kind of grain, the quantity consumed by each individual, and hence, the whole consumed by man, to be as follows:—

Estimated Population of England and Wales.	Average Consumption of each Person.	Consumed by Man. Qrs.
3,750,000 consumers of wheat, at 1 quarter each		3,750,000
739,000 do. of barley, at 1⅝ do.		1,016,125
888,000 do. of rye, at 1¼ do.		999,900
623,000 do. of oats, at 2⅞ do.		1,791,225
Consumed by man		7,556,350
In addition to this, Mr. Smith estimated the wheat distilled, made into starch, &c.		90,000
Barley used in malting, &c.		3,417,000
Rye for hogs, &c.		31,000
Oats for horses, &c.		2,461,500
Total of home consumption		13,555,850
Add excess of exports over imports		398,624
		13,954,474
Add seed (one tenth)		1,395,447
Total growth of all kinds of grain in England and Wales in 1765		15,349,921

This estimate, it will be observed, does not include either Scotland or Ireland; and later inquiries have rendered it probable that Mr. Smith underrated the population of England and Wales by nearly 1,000,000. The most eminent agriculturists seem also to be of opinion that the allowance for seed ought to be stated as high as a *sixth* or a *seventh*.

Mr. Chalmers, availing himself of the information respecting the numbers of the people furnished under the Population Act of 1800, estimated the total consumption of the different kinds of grain in Great Britain at that epoch at 27,185,300 quarters, whereof wheat constituted 7,676,100 quarters. The crops of 1800 and 1801 being unusually deficient, the importation in these years was proportionally great; but excluding these scarcities, the total average excess of all sorts of grain imported from Ireland and foreign countries into Great Britain over the exports had previously amounted to about 1,000,000 quarters, which, deducted from 27,185,300, leaves 26,185,300, to which, if we add *one sixth* as seed, we shall have 30,549,516 quarters as the average growth of Great Britain in 1800.

According to Dr. Colquhoun, the consumption of corn in Great Britain and Ireland, in 1814, amounted to about 35,000,000 quarters. We subjoin his estimate.

Species of Grain.	Estimated Average of the Population of Great Britain and Ireland.	Each Person averaged.	Consumed by Man.	Consumed by Animals.	Used in Beer and Spirits.	Used in various Manufactures.	Total Quarters.
		Quarters.	*Quarters.*	*Quarters.*	*Quarters.*	*Quarters.*	
Wheat	9,000,000	1	9,000,000	- -	- -	170,000	9,170,000
Barley	1,500,000	1¼	1,875,000	210,000	4,250,000	- -	6,335,000
Oats	4,500,000	1½	6,750,000	10,200,000	- -	- -	16,950,000
Rye	500,000	1¼	625,000	59,000	- -	1,000	685,000
Beans and peas	500,000	1	500,000	1,360,000	- -	- -	1,860,000
Totals	16,000,000		18,750,000	11,829,000	4,250,000	171,000	35,000,000

But though this estimate be compiled with greater care, and is entitled to more confidence than most of those put forth by its author, it is in some respects extremely inaccurate. There can, for example, be no manner of doubt that the consumption of oats is underrated by at least 2,250,000 quarters, or by ½ quarter in the quantity assigned to each of the 4,500,000 individuals Dr. Colquhoun supposed were fed on them. And besides underrating the consumption of oats, the learned Dr. has made no allowance for seed, though it be unnecessary to say that the expenditure of corn as seed is as indispensable, and its consumption as effectual, as if it were employed in the feeding of men or of horses. Adding, therefore, to the 37,250,000 quarters which Colquhoun's estimate should have amounted to, 1-6th for seed, we have on his data, 43,458,000 quarters for the total consumption of corn in the U. Kingdom in 1814.

But instead of a population of 16 millions, which is assumed as the basis of the above estimate, the U. Kingdom had, in 1858, a population of above 29,000,000. If, therefore, the estimate of Dr. Colquhoun were accurate, and the consumption, as compared with the population, were about the same as in 1814, it should now amount to above 78,000,000 quarters. But, during the last 30 years, the proportion of wheat used as food has been materially increased; and at present the consumers of barley certainly amount to nothing like 1,500,000 individuals; probably to not more than 500,000. The consumption of oats has, also, increased very materially, partly and principally from the great increase in the number of horses and their better keep, and partly, also, from the increase of population in Ireland; but it is abundantly certain that the expenditure of corn on the lower animals, and in breweries, distilleries, &c., does not now amount to anything like twice the quantity at which it was estimated by Colquhoun.

On the whole, we are inclined to think that the consumption of the various kinds of corn in the U. Kingdom, exclusive of seed, might, in 1858, have been estimated as follows:—

	Qrs.	Total Qrs.
I. Consumed by man:—		
Wheat	16,000,000	
Oats, rye, and maslin (a mixture of rye and wheat)	10,000,000	
Barley for malting, food, &c.	6,000,000	
Beans and peas as meal	1,000,000	
		33,000,000
II. Consumed by the lower animals:—		
Corn (principally oats), beans and peas used in feeding of horses and other animals, in distillation, manufactories, &c.		16,000,000
Total consumed by man and the lower animals, &c.		49,000,000

But it appears from No. VIII. of the subjoined tables that at an average of the 7 years ending with 1858, the annual entries of foreign corn for home consumption were, wheat and wheat flour 4,593,801 quarters, barley 915,982 do.; oats and oatmeal, 1,243,618 do., rye 41,518 do., peas 118,541 do., and beans 359,751 do.; making an aggregate importation of 7,273,211 or 7,000,000 quarters a-year. And, therefore, if from the annual consumption by man and the lower animals, amounting to 49,000,000 quarters, we deduct the above average annual importation, we have 42,000,000 quarters for the portion of such consumption supplied by the native corn of the U. Kingdom; and adding to the latter a reasonable allowance for seed, we have about 50,000,000 quarters for the total average annual growth of all sorts of corn in the U. Kingdom.

The total entries of foreign corn in 1858 amounted to 9,513,276 quarters, being the largest quantity ever entered in any single year, with the exception of 1849. But as this quantity amounts to little more than 1-6th part of the entire corn raised at home, it would seem as if the greatest importation could have but a very slight influence over prices; but it has been already shown that a very large proportion of the corn produced in the empire is never brought to market, but is partly consumed by the agriculturists, and partly used as seed and in the feeding of farm horses, &c. And allowing for this, an importation of 9,000,000 quarters may be supposed to be equal to from 1-4th to 1-3rd part of the corn brought to market in ordinary years, and could not, therefore, fail to have a very powerful influence in alleviating the pressure of scarcity, and in reducing prices. It is also to be observed, that these importations are exclusive of very large importations of Indian corn and meal. In consequence of the all but total failure of the potato crop in Ireland, and its partial failure in Great Britain in 1846, and of the efforts of government to supply the deficit, the imports in 1847, inc. those of Indian corn, afford no fair criterion, or rather no criterion at all, of their probable amount in ordinary years. But the average aggregate imports during each of the last 7 years may, perhaps, represent with tolerable accuracy, their amount for some years to come. On the whole, however, the probability seems to be that they will be increased.

We give (see page 428.) an estimate of the extent of land under the different descriptions of crops in the different divisions of the U. Kingdom; of the average produce per acre of such crops; with their total value, &c.

This estimate has been partly founded on official returns, and is partly conjectural. We doubt, however, whether the former be entitled to the weight that might be supposed to be due to them. As respects England, returns, which are mostly very defective, have been obtained only from 11 counties; and these do not give anything like a fair average of the kingdom. In Scotland the returns are nearly complete. We con-

Account of the Extent of Land in the United Kingdom under the principal Descriptions of Crops; the average Rate of Produce per Acre; the total Produce; the Amount of Seed; the Produce under Deduction of Seed; and the total Value of such Produce.

	Crops.	Acres in Crop.		Produce per Acre.	Total Produce.		Seed (1-7th of Produce).	Produce under Deduction of Seed.		Price per Quarter.	Total Value.

fess, however, that we are inclined to doubt whether they have been compiled with due care and attention. Some very competent judges have expressed the conviction, in which we entirely concur, that the extent of land under wheat has been considerably underrated; and few, we apprehend, will be inclined to believe that its produce in Renfrew and Lanark is as great as in East Lothian. The Irish returns are, perhaps, more to be depended upon; but even they are very unsafe guides.

Agricultural Statistics. — Perhaps we may be excused for adding that the advantages to be derived from what are called "Agricultural Statistics" have been ridiculously exaggerated. The extent of land under different crops may be learned with tolerable precision. But it is the merest hallucination to imagine that the produce of any harvest can ever be known with anything approximating to accuracy, till it be thrashed out. Supposing, however, that it were otherwise, and that it was officially announced in September that the wheat crop was, (say) 2,000,000 quarters under an average: The first effect of this announcement would be to raise the price of wheat in every foreign port; and where is the gain to set off against this disadvantage? The return would give no additional security to the speculations of the importers; for, though A. knows that 2,000,000 quarters are required to make up the stated deficiency, he cannot know how much has been or may be ordered by B., C., D., and his 10,000 other competitors here and abroad. The existing system is in all respects preferable. At present the great corn merchants are in the habit of sending intelligent agents through the country to examine into and report on the state of the crops. If they see reason to apprehend an unusual deficiency, their principals purchase accordingly. But they are not such simpletons as to communicate their peculiar information to the public. That might be a very generous, but it would, at the same time, be a very foolish proceeding. And yet this communication of information useful to the foreigner would be the first and principal result of such official statements as to the state of the crops as were of any authority.

Regulations under which the Corn Trade of the U. Kingdom was conducted previously to 1846. — These regulations were embodied in the act 5 Vict. 2. sess. c. 14., some clauses of which still continue in force (see *post*). This act imposed a scale of duties on wheat and other descriptions of corn when imported from a foreign country, which varied inversely according to their prices, being greatest when prices were lowest, and least when prices were highest. (See a Table of the duties in the former editions of this work.)

From the extreme difficulty of forming any thing like correct conclusions in regard to the state of the crops at any given period in an extensive country, and still more of estimating the supply and probable price of corn at any future period, though but a little remote, the risk attending the corn trade is proverbially great. Under such circumstances, if government interfere at all, it should certainly be to lessen such hazards; and, at all events, it should take especial care to do nothing to increase them. Hence, if a duty be imposed on importation, it should be constant, so that its influence may always be estimated beforehand; for if the amount of duty depend on accidental circumstances, or on any thing so fluctuating and incapable of previous estimation as the prices in the home market, it must necessarily, by increasing the hazard of all speculations in corn, tend to augment those inequalities in its supply and price, that should, in as far as possible, be diminished. To show the direct influence of such duties, it may suffice to mention that if, under the above law, a merchant had commissioned a quantity of wheat when the home price was between 64*s.* and 65*s.* a quarter, he would, in the event of the price falling to 60*s.* before the importation took place, have lost 9*s.* a quarter by the transaction, viz. 4*s.* a quarter by the fall of price, and 5*s.* a quarter by an increase of duty.

It may, perhaps, be said that if, on the one hand, the late scale of duties was injurious to the merchant when prices were falling, and when importation was consequently either unnecessary or of less advantage, it was, on the other hand, equally advantageous to him when prices were rising, and when the public interests required that importation should be encouraged: but the prices in the view of the merchant when he gives an order are always such as he supposes will yield a fair profit; and if they rise, this rise will, supposing the trade free or the duty constant, yield such an extra profit as will make him increase his imports to the utmost. If it were possible to devise a system that should diminish the losses incurred in unfavourable speculations, by making a proportional deduction from the profits of such as were unusually successful, something, perhaps, might be found to say in its favour. But the system we acted upon of late years proceeded on quite opposite principles: its effect was not to diminish risks, but to increase them; it added to the loss resulting from an unsuccessful, and to the profit resulting from a successful speculation!

There are other considerations that serve to set the pernicious operation of a fluctuating duty in a still more striking point of view. Should a tract of unfavourable weather occur before harvest, and a deficient crop be anticipated, prices rise, and the duty falls to next to nothing: But now suppose that the weather becomes fine, and

that the anticipations of a short crop are dispelled, and observe what, under such circumstances, is the operation of the sliding-scale. In such a case, prices immediately give way, and, to avoid the consequent increase of duty, every bushel of foreign corn warehoused in the country, and, indeed, in every contiguous foreign port, is forthwith entered for consumption, and thrown upon a falling market! With no duty, or with a fixed duty, merchants distribute the supply of corn according to the best estimate they can form of the real wants and necessities of the people. But the operation of a sliding-scale goes far to exclude such considerations. Besides doubling the hazards of the trade, it tempts merchants, when prices are rising, to hold back, in the expectation of being able to enter their corn at a reduced duty; and when, on the other hand, a fall of prices is anticipated, the market, as already seen, is overloaded, and prices ruinously depressed by the supplies forced upon it to escape the increase of duty! It is thus alternately injurious to the manufacturing and the agricultural classes; entailing the severest privations on the former, by making the importers withhold their corn from market till the price attains to a ruinously high level; and, on the latter, by making the same parties throw it on a market which is already depressed. The extreme low prices of 1821 and 1822, and of 1833, 1834, and 1835, were, no doubt, in part occasioned by the excess of the foreign entries for consumption arising out of the circumstances now mentioned.

Now that our ports are constantly open, supplies, whether of native or of foreign growth, are only furnished when necessary, and are limited by the necessity; and when prices are low, or falling, a large proportion of the imports are warehoused in anticipation of a future rise. But formerly there was no room for consideration or combination; everything had to be done on the moment, and by fits and starts. We might not have brought a bushel of wheat from the Baltic for a year or two; but our prices having risen, and the duty having fallen still more rapidly, we had an instantaneous demand for all the corn that could be had! Not being expected, no provision could be made for meeting such sudden and capricious demands; and prices rose to such a degree as to make our presence in the foreign markets hateful to every one, except the few who might happen to have on hand stocks of corn. It is plain, too, that a commerce conducted in this way could not be carried on by an interchange of goods for corn, as it would have been had the ports been constantly open. We had a demand one year for perhaps ten times the quantity of Polish corn that we required another year; but the Poles could not reciprocate by taking off corresponding quantities of our cottons, woollens, and hardware. Under ordinary circumstances, an increase of imports is always accompanied by a corresponding increase of exports; but, to bring this about, the increase must neither be sudden nor excessive; for, if so, the chances are ten to one that the foreign demand for our products will not increase to an equal extent. Corn is the principal means which the Poles and Russians have of paying for English goods; and, as we frequently shut it wholly out, their imports from England were unavoidably below even the average amount of their exports; so that when we have had an extraordinary demand for corn, the greater part of the excess had to be paid for in bullion; and, instead of being benefited by its occurrence, our commercial and manufacturing interests were deeply injured.

But it is unnecessary to dwell on what is so well known. Fortunately we did not require to import any foreign corn in 1835 and 1836; for no one, either in the Bank of England or out of it, acquainted with the circumstances, can doubt that, had it been then necessary to make the same payments for foreign corn we had to make in 1830 and 1831, and in 1838 and 1839, the Bank must have stopped payments; and a shock would have been given to the credit and financial interests of the country, from which they would not easily have recovered. The severe pressure on the money market in 1839 mainly originated in the same circumstances; and that pressure was productive of far greater loss and inconvenience to the agriculturists than any advantage they gained by the rise of prices in that year.

It must not, however, be supposed, from anything now said, that we mean to state or insinuate that it is possible, by any contrivance, or by the utmost possible degree of freedom, to avert all fluctuations in the supply and price of corn. Any such idea would be alike chimerical and absurd. Variations of the harvests, in so rich and populous a country as Great Britain, must always, and under any circumstances, have a powerful influence over prices, not only here, but also in those foreign markets whence we are in the habit of drawing a portion of our supplies. But it admits of demonstration, that importation without any, or with constant duties, is the best means by which to mitigate the influence of variations of harvests, and to secure the greatest steadiness of price. Under the existing system, the merchants of this and other countries are able to form their plans without the fear of their being overturned by accidental or contingent circumstances; and the fact that we every now and then require a large supply of foreign corn make capitalists, here and elsewhere, warehouse, in abundant years, large supplies, in anticipation of the demand when a deficiency occurs. The merchant has

now to deal only with real wants and necessities; and these it is comparatively easy to provide against.

Besides its mischievous operation in other respects, the late corn law was highly inimical to the public interests from the convenient handle which it afforded for all sorts of agitation, misrepresentation, and abuse. Its deleterious influence was greatly exaggerated; and it seemed to be supposed that its repeal would be a sovereign panacea for all sorts of grievances. But though, for the reasons previously stated, the new system has given us greater steadiness of prices, and has, in consequence, been of much public advantage, its influence in the reduction of prices has not been so great as has been expected, both by the agriculturists and by the other classes. The extraordinarily favourable seasons and productive harvests that prevailed, both in Europe and America, in 1848 and 1849, led to an unusually large importation, and consequently, also, to a considerable fall of prices. But this fall not having been by any means so great as might have been anticipated from the magnitude of the imports, shows that the greater portion, at least, of the latter had been required to meet the increased demand of the country. In 1852, the price of wheat amounted to 40*s.* 9*d.* a quarter; and we incline to think that this will prove to be about the lowest point in the descending scale, and that the probability is that prices will be considerably higher. There must, no doubt, be in all cases much uncertainty in prospective estimates of prices. We are still, however, disposed to abide by our former conclusion, that the probable future average price of wheat in this country, under the new system, may be estimated at about 48*s.* or 50*s.* a quarter; and if so, agriculture will not be affected by the change.

If, however, it should turn out differently, and there should be at any time so very abundant a season in this country and in the north of Europe, as to threaten such a fall of prices as might give a serious shock to the industry of the husbandman, the crisis may be averted or mitigated by some temporary expedient. But it is not very probable that it will be necessary to interpose in this way. Instead of being unfavourable to the agriculturists, they have already gained, and the chances are that they will continue to gain, by the new system; they have greater capital, skill, and industry than those of any other country; and being aware that they must now wholly rely on them to preserve their place in society, and not on custom-house regulations and parliamentary majorities, the continued improvement of agriculture may be confidently expected: and, apart from this powerful stimulus, the existing system has the further advantage that it gives the agriculturists increased security, and identifies their interests in opinion, as well as in fact, with those of the public.

At the same time we are ready to admit that, had it been practicable, we should have preferred seeing this great question settled by the adoption of a measure for opening the ports, under a fixed duty of 5*s.* or 7*s.* a quarter on wheat, accompanied with a corresponding drawback. We make this statement on general grounds, and without any reference to the peculiar burdens that affect the agriculturists, though these should neither be forgotten nor overlooked. It would be easy to show that in scarce years a duty of this amount would fall wholly on the foreigner, without affecting prices, or narrowing importation; while, in years of unusual plenty, the drawback would facilitate exportation, and would, consequently, tend to hinder prices from falling so low as to injure the farmer and obstruct improvement. And in a matter of such immense importance it is the part of a wise government to be cautious how they take any step, of the consequences of which they are not fully assured, or which may expose any great interest to serious vicissitudes. But, even if our limits permitted, it would be to little purpose to insist on these or any similar considerations. The pertinacity with which the agriculturists opposed every approach to a more liberal system roused a spirit which would not be satisfied with anything short of a complete abandonment of restrictions. The time for compromise and arrangement being allowed to go by, government had to deal with an unreasoning necessity: *Cum ventre humano tibi negotium est, nec rationem patitur, nec æquitate mitigatur, nec ulla prece flectitur populus.*—(Seneca, de Brev. Vitæ, c. 18.) What was practicable became of more consequence than what was either just or proper. And even had it been possible to effect an arrangement of the question in the way now stated, the pernicious trade of agitation would most likely have continued to flourish; the object and influence of the duty would have been misrepresented; and neither landlords nor farmers would have felt any confidence in the permanence of the new arrangements. Under these circumstances, their unconditional repeal was, if not really, at all events practically, the best, or rather the only safe course that could be adopted in dealing with the corn laws.

Regulations under which the Corn Trade of the U. Kingdom is now conducted. — These are embodied in the act 9 & 10 Vict. c. 22., of which we subjoin an abstract:—

Duties payable under this Act. — From and after the passing of this act, there shall be levied and paid on all corn, grain, meal, and flour already or hereafter to be imported into the U. Kingdom or the Isle of Man from parts beyond the seas, and entered for home consumption, the duties set forth in the schedule to this act annexed; viz.—

If imported from any Foreign Country.

	s.	d.	
Wheat. — Whenever the average price of wheat, made up and published in the manner required by law, shall be under 48*s.* the duty shall be -	10	0	per qr.
48*s.* and under 49*s.* - - -	9	0	
49*s.* — 50*s.* - -	8	0	
50*s.* — 51*s.* - -	7	0	
51*s.* — 52*s.* - -	6	0	
52*s.* — 53*s.* - -	5	0	
53*s.* and upwards - -	4	0	
Barley, Bear or ***Bigg.*** — Whenever the average price of barley, made up and published in the manner required by law, shall be under 26*s.* the duty shall be - - -	5	0	
26*s.* and under 27*s.* - -	4	6	
27*s.* — 28*s.* - -	4	0	
28*s.* — 29*s.* - -	3	6	
29*s.* — 30*s.* - -	3	0	
30*s.* — 31*s.* - -	2	6	
31*s.* and upwards - - -	2	0	
Oats. — Whenever the average price of oats, made up and published in the manner required by law, shall be under 18*s.* the duty shall be -	4	0	
18*s.* and under 19*s.* - -	3	6	
19*s.* — 20*s.* - -	3	0	
20*s.* — 21*s.* - -	2	6	
21*s.* — 22*s.* - -	2	0	
22*s.* and upwards - - -	1	6	

Rye, Pease, and ***Beans.*** — For every quarter a duty equal in amount to the duty payable on a quarter of barley.

Wheat, Meal, and ***Flour.*** — For every barrel being 196lbs. a duty equal in amount to the duty payable on 38½ gallons of wheat.

Barley Meal. — For every quantity of 217½lbs. a duty equal in amount to the duty payable on a quarter of barley.

Oatmeal and ***Groats.*** — For every quantity of 181¼lbs. a duty equal in amount to the duty payable upon a quarter of oats.

Rye Meal and ***Flour.*** — For every barrel being 196 lbs. a duty equal in amount to the duty payable upon 40 gallons of rye.

Pea Meal and ***Bean Meal.*** — For every quantity of 272lbs. a duty equal in amount to the duty payable on a quarter of peas or beans.

If the produce of and imported from any British Possession out of Europe.

Wheat, barley, bear or bigg, oats, rye, pease, and beans, the duty shall be - - - -	1	0	per qr.
Wheat meal, barley meal, oatmeal, rye meal, pea meal, and bean meal, the duty shall be -	0	4½	per cwt.

But the above duties ceased on the 1st of February, 1849; and on, from, and after the said 1st of February, 1849, the following duties have been charged on corn entered for consumption, viz. —

	s.	d.	
Upon all wheat, barley, bear or bigg, oats, rye, peas, and beans - - -	1	0	per qr.
And so in proportion for a less quantity.			
Upon all wheat meal and flour, barley meal, oatmeal, rye meal and flour, pea meal, and bean meal - - - -	0	4½	per cwt.
And so in proportion for a less quantity.			

Clause 2. enacts that the duties shall be levied pursuant to 8 & 9 Vict. c. 90.

Clause 3. enacts that the duties payable in the Isle of Man shall be levied pursuant to 8 & 9 Vict. c. 94.

Clause 4. enacts that average prices are to continue to be made up according to 5 & 6 Vict. 2 sess. c. 14. (*see below*) and the duties under this act to be regulated thereby.

Clause 5. repeals that part of the 5 & 6 Vict. c. 14. which prohibits the importation into the U. Kingdom for consumption there of any corn ground.

We subjoin an abstract of those parts of the 5 & 6 Vict. 2 sess. c. 14. which are referred to in the above act, and which are yet in force.

Regulations to be observed on shipping Corn from any British Possession out of Europe. — No corn, grain, meal, or flour shall be shipped from any British possession out of Europe as the produce of any such possession until the owner or proprietor or shipper thereof have made and subscribed, before the collector or other chief officer of customs at the port of shipment, a declaration in writing, specifying the quantity of each sort of such corn, grain, meal, or flour, and that the same was the produce of some British possession out of Europe to be named in such declaration, nor until such owner or proprietor or shipper shall have obtained from the collector or other chief officer of the customs of the said port a certificate, under his signature, of the quantity of corn, grain, meal, or flour so declared to be shipped; and before any corn, grain, meal, or flour shall be entered at any port or place in the U. Kingdom as being the produce of any British possession out of Europe, the master of the ship importing the same shall produce and deliver to the collector or other chief officer of customs of the port or place of importation a copy of such declaration, certified to be a true and accurate copy thereof, under the hand of the collector and other chief officer of customs at the port of shipment before whom the same was made, together with the certificate, signed by the said collector or other chief officer of customs, of the quantity of corn so declared to be shipped; and such master shall also make and subscribe, before the collector or other chief officer of customs at the place of importation, a declaration in writing that the several quantities of corn, grain, meal, or flour on board such ship, and proposed to be entered under the authority of such declaration, are the same that are mentioned and referred to in the declaration and certificate produced by him, without any admixture or addition; and if any person shall in any such declaration wilfully and corruptly make any false statement respecting the place of which any such corn, grain, meal, or flour was the produce, or respecting the identity of any such corn, grain, meal, or flour, such person shall forfeit and become liable to pay to her Majesty the sum of 100*l.*, and the corn, grain, meal, or flour to such person belonging on board any such ship shall also be forfeited; and such forfeiture may be sued for, recovered, and applied in the same manner in all respects as any forfeiture incurred under and by virtue of the said act 3 & 4 Will. 4. c. 58.—§ 5.

Accounts of Corn imported, &c. to be published monthly. — The commissioners of customs shall once in each month publish in the London Gazette an account of the total quantity of each sort of corn, grain, meal, and flour respectively imported into the U. Kingdom, and also an account of the total quantity of each sort of corn, grain, meal, and flour upon which duties of importation have been paid in the U. Kingdom during the month next preceding, and of the several rates of duty which shall from time to time during such month have been payable upon each sort of corn, grain, meal, and flour respectively, with an account of the total quantity of each sort of corn, grain, meal, and flour remaining in warehouse at the end of such next preceding month. —§ 7.

Section 8. enacts that if any foreign state subject British vessels, goods, &c. to any higher duties or charges than are levied on the vessels of other countries, &c. her Majesty may prohibit the importation of corn from such state.

Section 9. enacts, that weekly returns of purchases and sales of corn shall be made in the places named in the schedule annexed to the act.

Section 10. gives her Majesty power of appointing a comptroller of corn returns.

Section 11. enacts that the comptroller shall execute his office in person, but that a deputy may be appointed to act in certain cases.

Sections 12. and 13. authorise the Lord Mayor and aldermen to appoint an inspector of corn returns for the city of London, under the same conditions as the general comptroller.

Section 14. authorises the chancellors of the universities of Oxford and Cambridge to appoint and remove inspectors of corn returns for the said city and town.

Section 15. enacts that no person dealing in corn, flour, or malt be appointed inspector or deputy-inspector of corn returns for the cities of London or Oxford, or town of Cambridge.

Section 16. enacts that the appointments of inspectors for London, Oxford, and Cambridge be enrolled.

Dealers in Corn in and near London to deliver in a Declaration to the Lord Mayor, &c.—Every person carrying on trade or business in the city of London, or within 5 miles from the Royal Exchange in the said city, as a corn factor, or as an agent employed in the sale of British corn, and every person who shall sell any British corn within the Corn Exchange in Mark Lane in the said city, or within any other building or place which is or may hereafter be used within the city of London, or within 5 miles from the Royal Exchange in the said city, for such and the like purposes for which the said Corn Exchange in Mark Lane hath been and is used, shall, before he or they shall carry on such trade or business, or sell any corn in manner aforesaid, make and deliver to the Lord Mayor, or one of the aldermen of the city of London, a declaration in the following words; (that is to say,)

"I *A. B.* do declare, that the returns to be by me made, conformably to an act passed in the fifth year of the reign of her Majesty Queen Victoria, intituled [*here set forth the title of this act*], of the quantities and prices of British corn which henceforth shall be by or for me sold or delivered shall, to the best of my knowledge and belief, contain the whole quantity, and no more, of the corn *bonâ fide* sold and delivered by or for me within the periods to which such returns respectively shall refer, with the prices of such corn, and the names of the buyers respectively, and of the persons for whom such corn shall have been sold by me respectively, and to the best of my judgment the said return shall in all respects be conformable to the provisions of the said act."

Which declaration shall be in writing, and shall be subscribed by the person so making the same; and the Lord Mayor or alderman aforesaid of the city of London for the time being shall, and is hereby required to deliver a certificate thereof, under his hand, to the inspector of corn returns for the city of London, to be by him registered in a book to be provided and kept for that purpose.—§ 17.

Dealers in Corn to make Returns to Corn Inspector.—Every corn factor and other person as aforesaid who is herein-before required to make, and who shall have made such declaration as aforesaid, shall, and he or she is hereby required to return or cause to be returned, on Wednesday in each and every week, to the inspector of corn returns for the city of London, an account in writing, signed with his or her own name, or the name of his or her agent duly authorised in that behalf, of the quantities of each sort of British corn by him or her sold during the week ending on and including the next preceding Tuesday, with the prices thereof, and the amount of every parcel, with the total quantity and value of each sort of corn, and by what measure or weight the same was sold, and the names of the buyers thereof, and of the persons for and on behalf of whom such corn was sold; and it shall be lawful for any such inspector of corn returns to deliver to any person making or tendering any such returns a notice in writing requiring him or her to declare and set forth therein where and by whom and in what manner any such British corn was delivered to the purchaser or purchasers thereof: and every person to whom any such notice shall be so delivered shall, and he or she is hereby required to comply therewith, and to declare and set forth in such his or her return, or in a separate statement in writing, the several particulars aforesaid.—§ 18.

Section 19. enacts that the present comptroller, deputy-comptroller, and inspectors of corn returns for London, Oxford and Cambridge continue in office, and that the appointments of the other inspectors of returns shall cease on the 24th day of June next after the passing of this act.

Section 20. enacts that in cities and towns, other than London, Oxford, and Cambridge, officers of excise are to act as corn inspectors, and attend at places appointed.

Section 21. enacts that the commissioners of excise shall make known the place to be appointed for delivering returns of corn purchased.

Section 22. authorises the commissioners of treasury to continue, if they think fit, the present inspectors of corn returns in their offices.

Dealers in Corn in Cities and Towns to make Declaration.—Every person who shall deal in British corn at or within any city or town named in the prefixed list of towns, excepting the city of London, or who shall at or within any such city or town engage in or carry on the trade or business of a corn factor, miller, maltster, brewer, or distiller, or who shall be the owner or proprietor, or part owner or proprietor of any stage coaches, waggons, carts, or other carriages carrying goods or passengers for hire to and from any such city or town, and each and every person who, as a merchant, clerk, agent or otherwise, shall purchase at any such city or town any British corn for sale, or for the sale of meal, flour, malt, or bread made or to be made thereof, shall, before he or she shall so deal in British corn at any such city or town, or shall engage in or carry on any such trade or business as aforesaid, or shall purchase any British corn for any such purpose as aforesaid, at or within any such city or town, make and deliver a declaration in the following words; (that is to say,)

"I *A. B.* do declare, that the returns to be by me made, conformably to the act passed in the fifth year of the reign of her Majesty Queen Victoria, intituled [*here set forth the title of this act*], of the quantities and prices of British corn which henceforward shall by or for me be bought, shall, to the best of my knowledge and belief, contain the whole quantity, and no more, of the British corn *bonâ fide* bought for or by me within the periods to which such returns respectively shall refer, with the prices of such corn and the names of the sellers respectively, and to the best of my judgment the said returns shall in all respects be conformable to the provisions of the said act."

Which declaration shall be in writing, and shall be subscribed with the hand of the person so making the same, and shall by him or her, or by his or her agent, be delivered to the mayor or chief magistrate, or to some justice of the peace for such city or town, or for the county, riding, or division in which the same is situate, who are hereby required to deliver a certificate thereof to the officer of excise acting as inspector of corn returns for such city or town as aforesaid, or to such continuing inspector of corn returns as aforesaid for such city or town (as the case may be), to be by such officer or inspector registered in a book to be provided and kept for that purpose.—§ 23.

Section 24. authorises the inspectors of corn returns to require the above declaration from corn dealers.

Corn Dealers to make Returns in Writing to Inspectors of the Corn bought by them.—All persons who are herein-before required to make and who shall have made such declaration as aforesaid shall, and they are hereby required, on the first market day which shall be holden in each and every week within each and every city or town named in the said schedule hereunto annexed, except the city of London, at or within which they shall respectively deal in corn, or engage in or carry on any such trade or business as aforesaid, or purchase any corn for any such purpose as aforesaid, to return or cause to be returned to the officer of excise acting as inspector of corn returns for such city or town, at the place appointed for receiving such returns, or to the continuing inspector of corn returns for such city or town, or to the inspector of corn returns for the city of Oxford, or the town of Cambridge (as the case may be), an account in writing, signed with their names respectively, of the amount of each and every parcel of each respective sort of British corn so by them respectively bought during the week ending on and including the day next preceding such first market day as aforesaid, with the price thereof, and by what weight or measure the same was so bought by them, with the names of the sellers of each of the said parcels respectively, with the names of the person or persons, if any, other than the person making such return, for or on account of whom the same was so bought and sold; and it shall be lawful for any officer of excise acting as inspector of corn returns, or any continuing inspector of corn returns as aforesaid, to deliver to any person making or tendering any such return a notice in writing requiring him or her to declare and set forth where and by whom and in what manner any such British corn was delivered to him or her; and every person to whom any such notice shall be so delivered shall, and he or she is hereby required to comply therewith, and to declare and set forth in such his or her return, or in a separate statement in writing, the several particulars aforesaid.—§ 25.

Inspectors to enter Returns made to them in a Book, &c.—The inspector of corn returns for the city of London, the city of Oxford, and the town of Cambridge, and every officer of excise acting as inspector of corn returns for the several other cities and towns aforesaid, and every continuing inspector of corn returns for any of such other cities or towns as aforesaid, shall duly and regularly enter in a book, to be by him provided and kept for that purpose, the several accounts of the quantities and prices of corn returned to him by such persons respectively as aforesaid; and every inspector of corn returns for any of the cities and towns enumerated in the said schedule shall in each and every week return to the comptroller of corn returns an account of the weekly quantities and prices of the several sorts of British corn sold in the city of London, or in the city or town for which he shall be or act as inspector, according to the returns so made to him as aforesaid, and in such form as shall be from time to time prescribed and directed by the said comptroller of corn returns; and the said returns shall be so made to the said comptroller by the inspector of corn returns for the city of London on Friday in each week, and by the respective inspectors of corn returns for the city of Oxford and the town of Cambridge, and by the respective officers of excise acting as inspectors of corn returns, and by the respective continuing inspectors of corn returns for the several other cities and towns aforesaid, within three days next after the first market day holden in each and every week in any such city or town.—§ 26.

Section 27. enacts that inspectors shall not include returns until they have ascertained that the persons making them have taken the declaration required.

Average Prices to be made up and published every Week.—The average prices of all British corn, by which the rate and amount of the said duties shall be regulated, shall be made up and computed on Thursday in each week, in manner following; (that is to say,) the said comptroller of corn returns shall on such Thursday in each week, from such returns as shall be received by him during the week next preceding, ending on and including the Saturday in such preceding week, add together the total quantities of each sort of British corn respectively appearing by such returns to have been sold, and the total prices for which the same shall thereby appear to have been sold, and shall divide the amount of such total prices respectively by the amount of such total quantities of each sort of British corn respectively, and the sum produced thereby shall be added to the sums in like manner produced in the 5 weeks immediately preceding the same, and the amount of such sums so added shall be divided by 6, and the sum thereby given shall be deemed and taken to be the aggregate average price of each such sort of British corn respectively, for the purpose of regulating and ascertaining the rate and amount of the said duties; and the said comptroller of corn returns shall cause such aggregate weekly averages to be published in the next succeeding Gazette, and shall on Thursday in each week transmit a certificate of such aggregate average prices of each sort of British corn to the collector or other chief officer of the customs at each of the several ports of the U. Kingdom, and to the said functionary at the port of Douglas in the Isle of Man; and the rate and amount of the duties to be paid under the provisions of this act shall from time to time be regulated and governed at each of the ports of the U. Kingdom by the aggregate average prices of British corn at the time of the entry for home consumption of any corn, grain, meal or flour chargeable with any such duty, as such aggregate average prices shall appear and be stated in the last of such certificates received by the collector or other chief officer of customs at such port.—§ 28.

How Quantities of Corn are to be computed.—In the returns to be made as aforesaid to the comptroller of corn returns, and in the publications to be made from time to time in the London Gazette, and in the certificate to be transmitted to the said comptroller of corn returns to collectors or other chief officers of customs, the quantities of each sort of British corn respectively shall be computed and set forth by, according, and with reference to the imperial standard gallon, as the same is declared and established by the act 5 Geo. 4. cap. 74. amended or altered by the act 6 Geo. 4. cap. 12., and by the act 5 & 6 Will. 4. cap. 63.—§ 29.

Until sufficient Number of Returns are made, Comptroller may use the present Averages.—Until a sufficient number of weekly returns have been received by the said comptroller of corn returns under this act to afford such aggregate average prices of British corn as aforesaid, the weekly average prices of British corn published by him immediately before the passing of this act shall be used and referred to in making such calculations as aforesaid, in such manner as if the same had been made up and taken under this act.—§ 30.

What shall be deemed British Corn.—All corn or grain the produce of the U. Kingdom shall be deemed and taken to be British corn for the purposes of this act.—§ 31.

Any Corn Returns believed fraudulent may be omitted in the Computation.—If the said comptroller of corn returns shall at any time see cause to believe that any return made to any inspector of corn returns is fraudulent or untrue, the said comptroller is hereby required, with all convenient expedition, to lay before the Lords of the Committee of Privy Council (for Trade) a statement of the grounds of such his belief; and if upon consideration of any such statement the said Lords of said Committee shall direct the comptroller to omit any such return in the computation of such aggregate weekly average price, then and in that case, but not otherwise, the said comptroller of corn returns shall be authorised to omit such return in the computation of such aggregate weekly average price.—§ 32.

Section 33. enacts that corn dealers having made the declaration previous to this act shall transmit returns, and comply with the rules hereby required.

Comptroller to issue Directions respecting the Inspection of Books of Inspectors.—The comptroller of corn returns is hereby authorised from time to time, in pursuance of any instructions which he shall receive in that behalf from the Lords of the Committee of Privy Council (for Trade), to issue to the inspectors of corn returns for the city of London, the city of Oxford, and the town of Cambridge respectively, any general or special directions respecting the inspection by any person or persons of the books so directed as aforesaid to be kept by such inspector of corn returns; and no such inspectors for the city of London, the city of Oxford, or the town of Cambridge, shall permit or suffer any person to inspect any such book, or to peruse or transcribe any entry therein, except in compliance with some such general or special directions from the said comptroller of corn returns.—§ 34.

Copy of last Return to be affixed on Market Place on each Market Day.—The inspector of corn returns for every city or town other than the city of London shall and is hereby required, on each and every market day, to put up or cause to be put up in the market place of the city or town for which he shall act as inspector, or if there shall be no market place, then in some other conspicuous place therein near to where the corn market is usually held, a copy of the last return made by him to the comptroller of corn returns, omitting the names of the parties who may have sold and bought the said corn; and every such officer or inspector shall also again put up such account on the market day immediately following that on which it shall first have been put up, in case the same shall from accident or any other cause have been removed, and shall take due care that the same shall remain up for public inspection until a new account for the ensuing week shall have been prepared and set up.—§ 35.

Sections 36, 37, 38. relate to the payment of comptrollers and inspectors.

Section 39. imposes a penalty on corn dealers who do not make declarations or returns.

Section 40. relates to the recovery and application of penalties.

Sections 41, 42. relate to the penalties to be imposed on witnesses for non-attendance, and the punishment to be inflicted on those who make false returns.

Section 43. declares that the act shall not affect the practice of measuring or privileges of the city of London.

Substitution of Wheat Flour or Biscuit for bonded Wheat.—Our readers are, no doubt, generally aware, that of late years efforts were occasionally made in the House of

Commons to get a law enacted authorising the delivery of bonded wheat from the warehouse, on the substitution in its stead of a proportional quantity of wheat flour or biscuit. But this proposal encountered the hostility of the more zealous partisans of the corn laws, principally on the alleged ground that it would open a door to fraud, and lead to the clandestine introduction of large quantities of foreign wheat. In the course, however, of 1842, the project was again introduced by Mr. Gladstone, and, having been supported by government, was passed into a law, *5 & 6* Victoria, cap. 92. It enabled millers, bakers, and others in this country to take advantage of such openings in the home and foreign markets as may offer for the manufacture and sale of flour and biscuit; and to make such changes in the nature of their stocks as may be thought most advantageous. There do not seem to be any very good grounds for thinking that it afforded any considerable facilities for the commission of fraud by the introduction of wheat without a countervailing deposit of flour; but supposing it did, no one was injured by such introduction. We subjoin an abstract of the act now referred to.

Warehoused Wheat to be delivered Duty free upon substituting an equivalent Quantity of Wheat Flour or Biscuit. — Whereas it will be of advantage to the trade and commerce of the country that wheat may be delivered duty-free from the warehouse or from the vessel, upon the deposit in the warehouse, or due exportation therefrom, of an equivalent quantity of wheat flour and biscuit; be it therefore enacted, that it shall be lawful for the principal officer of customs having charge of any warehouse, in which wheat may be warehoused without payment of duty upon the first entry thereof, to deliver any quantity thereof duty-free upon there being deposited in warehouse in lieu thereof fine wheat flour or biscuit, as under.

For every 96 lbs. of kiln-dried wheat, or for every 100 lbs. of wheat not being kiln-dried, not less than 78 lbs. of fine wheat flour, or 68 lbs. of captain's biscuit, or 80 lbs. of biscuit of the standard of the biscuit supplied to her Majesty's navy, or 118 lbs. of common ship's biscuit; and so in proportion for any less quantity than 96 lbs. of kiln-dried wheat, or 100 lbs. of wheat not kiln-dried; such flour or biscuit having been manufactured in the U. Kingdom, or such flour having been duly imported and the duty thereon having been paid —§ 1.

Section 2. enacts that fine wheat flour and biscuit may be deposited in warehouse, and certificate of such deposit granted, to entitle the holder to an equivalent quantity of warehoused wheat duty-free any time within six weeks of the date thereof.

Section 3. enacts that persons making deposits of flour and biscuit be entitled to have equivalent quantities of wheat entered duty-free from the vessel.

Section 4. orders that three days' notice in writing be given to the collector of the quantity of wheat required to be delivered from the warehouse and of the day of delivery.

Section 5. orders that no wheat shall be delivered duty-free until the substituted article has been deposited and the certificate duly examined.

Section 6. enacts that substituted flour and biscuit shall be subject to the warehousing laws, but shall not be taken out for home consumption.

The Eton Account of Prices commenced in 1595; the accuracy of the returns in the first years cannot however be so implicitly relied on, as those quoted above.—Bishop Fleetwood and Sir F. M. Eden have collected, with great industry, almost all the existing information respecting the state of prices in England during the last *six hundred* years.

* From this year, inclusive, the account at Eton College has been kept according to the bushel of 8 gallons, under the provision of the act 31 Geo. 3. c. 20. § 82.

IV. Foreign Corn Trade.

Polish Corn Trade. — Dantzic has hitherto supplied us with large quantities of the finest wheat, and as it will most probably continue to be one of the principal sources of our imports in time to come, it is of importance to ascertain the cost of wheat in that emporium, and the expense of its importation into this country.

According to the data collected by Mr. Jacob in his report on the agriculture and corn trade of the north of Europe, the ordinary price of wheat at Dantzic free on board would amount to about 40*s.* a quarter, made up as follows: —

	28*s.*	0*d.* per quarter.
Cost of wheat at Warsaw		
Conveyance to the boats, and charges for loading and stowing, and securing it with mats	0	6
Freight to Dantzic	5	0
Loss on the passage by pilfering, rain, &c.	3	0
Expenses at Dantzic in turning, drying, screening, warehousing, and loss of measure	2	0
Profit or commission, as the case may be, to the merchant in Dantzic.	1	6
Cost at Dantzic, exclusive of shipping charges, which amount to about 10*d.* a quarter	40	0

Now, if to this we add 7*s.* or 10*s.* a quarter for the expense of importing the wheat into England, including the profit of the importer, it is plain that it could not, supposing Mr. Jacob's estimate of the cost to be nearly accurate, be sold in London, free of duty, for less than 47*s.* or 50*s.* a quarter.

It has, no doubt, been alleged that the cost of wheat in Dantzic is overrated in the above estimate; and in seasons when there is little or no demand for corn from abroad, this allegation is certainly well founded. But this estimate is not meant to apply to such years, but to those when there is some considerable foreign demand; and whenever this is the case, it will be found, though some of the items which go to make up the cost may vary, that the result is nearly correct; and that there are really no good grounds for supposing that corn could, in the seasons in question, be shipped from Dantzic for less than about 40*s.* a quarter.

In further corroboration of this statement we may mention that owing to the deficient harvest of 1845, the average price of wheat in January, 1846, in Warsaw, exceeded 40*s.* a quarter, and it is stated in a despatch from the consul in that city, that at an average of the twenty years ending with 1845, prices had been as follows, viz.: wheat from 26*s.* 6*d.* to 30*s.* per imp. quarter; barley 17*s.* 10*d.* to 20*s.* 6*d.* per do.; and oats 8*s.* 6*d.* to 10*s.* per do. It is plain, therefore, that Mr. Jacob's estimate of the cost of wheat at Warsaw is but little, if it be in any degree, overstated; and we are well assured that this also is the case with his estimate of the expense of conveying it down the Vistula to Dantzic.

Mr. Grade, of Dantzic, furnished the Agricultural Committee of 1831 with the following Table of the average prices of corn in that city, free on board, in decennial periods from 1770 to 1820.

Average Price from Ten to Ten Years, of the different Species of Corn, free on board, per Quarter, in Sterling Money, at Dantzic.

	Wheat.	Rye.	Barley.	Oats.
	s. *d.*	*s.* *d.*	*s.* *d.*	*s.* *d.*

Aggregate average price of 49 years. -	45 4	27 2	20 10	13 10

It appears from this table, that, at an average of the 20 years ending with 1819, the price of corn in Dantzic was no less than 57*s.* 8*d.* a quarter! But it is to be observed that these prices were powerfully influenced by the scarcity and high price in this country in 1800 and 1801, and by the obstructions which the war threw in the way of agriculture, and of the conveyance of corn to Dantzic. But the prices of wheat at this great emporium have not latterly been subject to any such disturbing influences. The countries whence Dantzic draws her supplies of corn have enjoyed an all but uninterrupted tranquillity during the last 20 or 30 years; and though during some of these years we have made large importations, we have not, in others, brought away a single bushel of corn; so that the average prices of this period may be taken as pretty correctly representing the prices of corn in Dantzic in seasons when the export is rather under a medium.

Account exhibiting the Lowest, the Highest, and the Average Prices of Wheat in Dantzic, in Sterling Money, per Imperial Quarter, in Each of the 11 Years, from 1831 to 1841, both inclusive, with the Averages for the whole Period.

Years.	Lowest Prices ℔ Quarter.	Highest Prices ℔ Quarter.	Average Prices ℔ Quarter.	Years.	Lowest Prices ℔ Quarter.	Highest Prices ℔ Quarter.	Average Prices ℔ Quarter.
	s. *d.*	*s.* *d.*	*s.* *d.*		*s.* *d.*	*s.* *d.*	*s.* *d.*
1831	41 1	51 6	46 3½	1839	31 9	61 1	46 5
1832	32 5	43 7	38 0	1840	39 0	62 9	50 10½
1833	28 5	32 9	30 7	1841	45 9	57 0	51 4½
1834	25 1	29 11	27 6				
1835	21 0½	26 3½	23 8	Average of 11 Years from 1831 to 1841.	30 8¾	45 2	37 11
1836	22 3	35 7	28 11				
1837	24 9	34 8¾	29 8¾				
1838	26 6½	61 9	44 1½				

It appears from this table that the average price of wheat in Dantzic during the 11 years ending with 1841 was 37*s.* 11*d.* a quarter; making, with the addition of 10*d.* a quarter for shipping charges, its average price, free on board, 38*s.* 9*d.* a quarter. Now if to this last sum we add 7*s.* or 10*s.* for the expense of its importation and delivery to the millers in London, it is plain, judging from the experience of these 11 years, that the average cost of Dantzic wheat in England, independent of duty, may be estimated, in round numbers, at from 45*s.* to 49*s.* a quarter.

It is material, however, to bear in mind that no very large quantity could be shipped at the above prices. They represent only average years: and whenever there is any unusual demand for corn, or when from 200,000 to 300,000 quarters are wanted for this country, the price immediately rises, as seen above, to from 45*s.* to 50*s.* a quarter and upwards. During the course of 1846 the average prices of the wheat shipped at Dantzic exceeded 48*s.* a quarter.

That the charges on importation into England, warehousing here, and then delivering to the millers, exclusive of duty and profit, would amount to about 10*s.* a quarter appears from the following statements*:—

Account of the Ordinary Charges on 100 Quarters of Wheat, shipped from Dantzic on Consignment, and landed under Bond in London.—(*Parl. Paper* No. 333. Sess. 1827, p. 28.)

				245	13	8

According to this statement, the cost of importation would be 9*s.* 1½*d.* a quarter; but to this has to be added an allowance for waste, and for profit.

We are well convinced that it is not possible successfully to controvert these statements; and such being the case, we are entitled to say that nothing can be more perfectly unfounded than the notions so prevalent in this country as to the extreme cheapness of corn in Dantzic. The truth is, that no considerable quantity of corn can be derived from her without resorting to Gallicia and other provinces from 500 to 700 miles inland. The corn is thence conveyed to the city in boats suited to the navigation of the rivers; but, owing to the uncertain supply of water in the latter, the communication is sometimes entirely broken off, and it is always very tedious and expensive. In proof of this, we may mention that, in November, 1838, when wheat sold in Dantzic for 41*s.* 6*d.* a quarter, it was selling in Lemberg, the principal corn market of Gallicia, for 15*s.*; the difference, amounting to 26*s.* 6*d.*, being the measure of the cost and risk of conveyance from Lemberg to Dantzic! It is, in fact, quite nugatory to suppose that any large supplies should be furnished by Dantzic, were the shipping price under 30*s.* or 40*s.* But, supposing that we could in ordinary years ship considerable supplies for 34*s.*, still it is pretty obvious it could not be sold in London, with a profit, for less than 45*s.* or 47*s.*, or perhaps, 48*s.* a quarter.

It is difficult to draw any conclusions on which it would be safe to place much reliance as to the supplies of corn that may be obtained from Dantzic, and Prussia generally, now that our ports are constantly open under a nominal duty. Mr. Jacob states that the lengthened period of 166 years ending with 1825 gives an "annual export of wheat and rye of 279,794 quarters." And this surplus may, he thinks, be "fairly considered as the nearest approach that can be made, with existing materials, to what is the usual excess of the produce of bread corn above the consumption of the inhabitants, when no extraordinary circumstances occur to excite or check cultivation."—(*Report*, p. 49.)

But there can be no doubt that Mr. Jacob greatly underrated the capabilities of improvement of the countries traversed by the Vistula, the Bug, &c. And while our ports are open with a duty of 1*s.*, we may, supposing our average prices not to fall below 45*s.* or 55*s.* a quarter, safely reckon upon getting from Dantzic an annual supply of from 250,000 to 350,000 quarters. It should, however, be observed, that Mr. Meek, who visited the N. of Europe in the latter part of 1841 and early in 1842, concurs with Mr. Jacob in thinking it improbable that any considerable increase of exportation would take place from Dantzic under any modification of our corn laws.—(*Parl. Paper*, No. 7. Sess. 1842, p. 31.) But it was difficult to believe that such should be the case. Down to a comparatively late period, owing to the fluctuating and capricious nature of our demand, it proved of little advantage to the Polish cultivators; and but little corn was raised in the expectation of its finding its way to England. But now that our ports are always open it is quite a different matter. The supply of our markets has become an object of importance to the Polish agriculturists, who are endeavouring to extend and improve their tillage, and the means of bringing corn to market. At the same time, it is right to observe that the stimulus given to Polish agriculture, and to the tillage of foreign countries generally, by the change in our corn laws, must wholly depend on the extent of our demand; and if it should, in ordinary seasons, be more limited than is commonly supposed, it will have proportionally less influence. We subjoin an

For an account of the shipments, &c. of wheat from Dantzic in 1853 and 1854, see DANTZIC.

Quality of Dantzic Wheat.—The price of wheat in Dantzic is usually about 7*s.* a quarter above its average price in Hamburgh, and about 2*s.* above the average of Amsterdam. This difference is entirely owing to the superior quality of the Dantzic wheat. Though small grained, and not so heavy as several other sorts, it is remarkably thin-skinned, and yields the finest flour. Some of the best white, or, as it is technically termed, "high mixed" Dantzic wheat, is superior to the very best English; but the quantity of this sort is but limited, and the average quality of all that is exported from Dantzic is believed to approach very nearly to the average quality of English wheat. Allowing for its superior quality, it will be found that wheat is, speaking generally, always cheaper in Dantzic than in any of the Continental ports nearer to London. There are but few seasons, indeed, in which Dantzic wheat is not largely imported into Amsterdam; and it frequently, also, finds its way into Hamburgh. But it is quite impossible that such should be the case, unless, taking quality and other modifying circumstances into account, it were really cheaper than the native and other wheats met with in these markets. When there is any considerable importation into England, it is of every day occurrence for merchants to order Dantzic wheat in preference to that of Holstein, or of the lower Elbe, though the latter might frequently be put into warehouse here for 18*s.* a quarter less than the former! It is, therefore, quite indispensable, in attempting to draw any inferences in regard to the comparative prices of corn in different countries, to make the requisite allowances for differences of quality. Unless this be done, whatever conclusions may be come to can hardly fail of being false and misleading; and when they happen to be right, they can only be so through the merest accident.

Dantzic being by far the greatest port for the exportation of wheat in the north of Europe, its price in her market may be assumed as the general measure of the price in the other shipping ports. At all events, it is certain, that when Dantzic is exporting, wheat cannot be shipped, taking quality into account, at a cheaper rate from any other place. The importer invariably resorts to what he believes to be, all things considered, the cheapest market; and it is a contradiction and an absurdity to suppose that he should burden himself with a comparatively high freight, and other charges for wheat in Dantzic, provided he could buy an equally good article in so convenient a port as Hamburgh at the same or a lower price. If, therefore, we are right in estimating the lowest price at which wheat may be profitably imported from Dantzic free of duty, in ordinary years, at about 45*s.* or 48*s.*, we may be assured that this is the lowest importation price. The greater cheapness of the imports from other places is apparent only; and is uniformly countervailed by a corresponding inferiority of quality.—(See the articles DANTZIC, KÖNIGSBERG, &c.) We subjoin an

Account of the Quantities, in Imperial Quarters, of the different Varieties of Corn imported into the U. Kingdom from Prussia in each of the 5 Years ending with 1857.

Russian Corn Trade.—Russia exports large quantities of wheat, rye, oats, and meal. The wheat of the Northern provinces is of various qualities; but the greater portion is small-grained, coarse, brown, and badly dressed. The hard, or Kubanka, is the best; it keeps well, and is in considerable demand for mixing with other wheats that are old or stale. Russian oats are thin; but being dried in the straw, they weigh better than could be expected from their appearance, and are reckoned wholesome food. Our imports from Russia in 1839 amounted to 371,693 quarters wheat, 316,823

do. oats, and 14,000 do. rye. But though this was far above the then average importation, it has since been greatly exceeded, principally in consequence of the extraordinary increase of the exports from the Southern provinces. In 1853, for example, we imported 612,432 quarters wheat from Russia, of which 451,926 quarters were from ports on the Black Sea. During the same year we imported from all parts of the empire 997,505 qrs. oats, and 327,282 do. barley.—(The reader will find notices of the N. Russian corn trade under the articles ARCHANGEL, PETERSBURG, and RIGA. For an account of the corn trade of the Black Sea, see *post*, and the articles GALACZ, ODESSA, and TAGANROG.)

Danish Corn Trade.—The export of wheat from Denmark Proper, that is, from Jutland and the islands, especially the latter, has, within these few years, been much increased, and the quality of the grain greatly improved. Considerable quantities of wheat, barley, and other grain, as well as of butter, cheese, beef, &c., are exported from Sleswick and Holstein. But, as already stated, the wheat of the latter is inferior; for, though it looks plump, it is coarse and damp. Kiel is the chief Danish port for shipping corn; but large quantities are also shipped from Holbeck and other ports in the islands. In 1858 we imported from Denmark 301,463 qrs. wheat, 340,787 do. barley, 180,164 do. oats, with considerable quantities of peas and pea-meal, and beans and bean-meal. The quantities and values of the entire corn, flour, beans, &c. exported from Denmark and the Duchies, in 1847, were as follows, viz.—

Articles.	Danish Weights and Measures.	British Weights and Measures.	Value when shipped.
Wheat	442,122 tonder	211,541 qrs.	£318,171
Rye	125,192 —	193,871 —	182,336

Corn Trade of the Elbe, &c.—After Dantzic, Hamburgh is one of the greatest corn markets in the north of Europe, being a depôt for large quantities of Baltic corn and for the produce of the extensive countries traversed by the Elbe. The exports of wheat from Hamburgh amounted, at an average of the 11 years ending with 1841, to 210,871 quarters a year. The price of wheat, as already stated, is frequently less in Hamburgh than in Dantzic; but this lowness of price is altogether ascribable to the inferiority of the Holstein and Hanover wheats, which are generally met with in great abundance in Hamburgh. Wheat from the Upper Elbe is of a better quality. Bohemian wheat is occasionally forwarded by the river to Hamburgh; but the charges attending its conveyance from Prague amount to full 14*s.* a quarter, and prevent its being sent down, except when the price is comparatively high. In 1849, the shipments of wheat from Hamburgh amounted to 286,209 quarters, of which 226,864 were for England. Perhaps we may be able, should our prices average about 47*s.* or 50*s.*, to import in ordinary years from 200,000 to 300,000 quarters of wheat from the countries intersected by the Weser and the Elbe. We subjoin an

Dutch Corn Trade.—Amsterdam is an important depôt for foreign corn, every variety of which may be found there. Only a small part of its consumption is supplied by corn of native growth; so that the prices in it are for the most part dependent on those at which corn may be brought from Dantzic, Kiel, Hamburgh, and other shipping ports. The corn trade of Holland was formerly conducted under a low fixed duty. In 1835, however, a sliding scale of duties, varying inversely according to the fluctuations of the home prices, was adopted. This scale continued in force till 1845, when the potato rot, which made its appearance here as well as in Ireland, occasioned its repeal, and the imposition of fixed duties of 1*s.* 5*d.* per quarter on wheat, 1*s.* 1*d.* per do. on rye, 10*d.* per do. on barley, and 9*d.* per do. on oats. It was provided, in 1847, that this scale should be revised in 1850–51. And its practical operation having been found to be highly

satisfactory, government introduced a bill by which it has been perpetuated. At an average of the 3 years ending with 1850 the prices in the Netherlands were, wheat 36*s.* 11*d.*, rye 23*s.* 10*d.*, barley 18*s.* 4*d.*, oats 12*s.* 10*d.*, and buck-wheat 23*s.* 9*d.* per Imp. quarter.

Rotterdam is a very advantageous port for warehousing foreign corn, being conveniently situated, and the warehouse rent low, not exceeding 2*d.* or 2¼*d.* per quarter per month. We subjoin an

Account of the Quantities of Wheat and of the other Varieties of Corn imported from the Netherlands into the U. K. in each of the 5 Years ending with 1857.

French Corn Trade. — It appears, from the accounts given by Garnier in the last edition of his translation of the *Wealth of Nations*, that the price of the *hectolitre* of wheat in the market of Paris amounted, at an average of the 19 years ending with 1819, to 20 fr. 53 cents. And Chaptal, in his valuable work, *Sur l'Industrie Française* (tom. i. p. 226.) published in 1819, estimated the ordinary average price of wheat throughout France at 18 fr. the hectolitre. But it is seen from the subjoined table that the price of wheat in France, at an average of the half century ending with 1850, amounted to 20 fr. 20 cents the hectolitre, equivalent to 45*s.* 7*d.* the imperial quarter.*

Average Price per Hectolitre of Wheat in France in each Year from 1800 to 1850, both inclusive.

Average price of the entire period, 20 fr. 20 cents the hectolitre.

Owing to the deficient harvest of 1846, prices were occasionally higher in France than in England; and considerable quantities of wheat were taken out of bond in London and other British ports for shipment to France. The various expenses attending the importation of a quarter of French wheat into London and its delivery to the millers may be taken, at a medium, at about 7*s.* a quarter. France had formerly but little surplus produce to dispose of; so that it would have been impossible for us to import any considerable quantity of French corn without occasioning a great advance of price; but, as will be immediately seen, a considerable change has taken place in this respect of late years, and, when the harvests are abundant, France has latterly sent us large supplies.

The mean of the different estimates framed by Vauban, Quesnay, Expilly, Lavoisier, and Arthur Young, gives 61,519,672 septiers, or 32,810,000 quarters, as the total average growth of the different kinds of grain in France.— (*Peuchet, Statistique Élémentaire*, p. 290.) We, however, took occasion formerly to observe (*Supp. to Encyc. Brit.* art. *Corn Laws*) that there could not be a doubt that this estimate was a great deal too low; and the more careful investigations of late French statisticians fully confirm this remark. The annual produce of the harvest of France was lately (1843) estimated, from returns obtained under official authority, at 69,558,000 hectolitres of wheat, and 112,958,000 do. of other sorts of grain; making in all 182,517,000 hectolitres, or 62,740,000 Imp. quarters. Of this quantity it was supposed that about 16 per cent. was consumed as seed, 19 per cent. in the feeding of different species of animals, and 2 per cent. in distilleries and breweries.

The reader will not fail to observe that, according to this statement, the consumption of corn in France, which has a population of about 35,000,000, is not more than equal to that of the U. Kingdom, the population of which may be taken at 29,000,000. And we have no doubt that such is the fact; for, though the consumption of corn in France materially exceeds its proportional consumption in Ireland, it is far below the proportional consumption of Great Britain. The corn expended in this country in the keep of horses and in distilleries would, of itself, suffice to feed a third part of the people of France.

The foreign corn trade of France was regulated till within these few years by a law which forbade exportation, except when the home prices were below certain limits; and which restrained and abso-

* The hectolitre is equal to 2·7512 imperial bushels, and the quarter to 2·82 hectolitres.

lutely forbade importation except when they were above certain other limits. The prices regulating importation and exportation differed in the different districts into which the kingdom was divided. Latterly, however, importation has been at all times allowed under graduated duties, which, like those recently existing in this country, become prohibitory when the prices sink to a certain level. The frontier departments are divided into 4 separate districts, the prices in each district governing the duties on importation into it, so that it sometimes happens that corn warehoused in a particular port, where it is not admissible except under a high duty, has been carried to another port in another district, and admitted at a low duty. An official announcement is usually issued on the last day of each month, of what the duties are to be in each district during the succeeding month. But the law is sometimes suspended for longer or shorter periods; and the probability is that it will, at no distant period, be either repealed or materially modified.

Account of the Quantities of Wheat and Wheat Flour respectively, imported from France into the U. Kingdom during each of the 27 Years ending with 1857.

The increase in the interval between 1848 and 1853 of the imports of wheat and flour, but more especially the latter, is quite unprecedented. It was occasioned, in part at least, by the superior quality of French flour; for, how singular soever it may appear, the business of grinding corn was then better understood and in a more advanced state in France than in England. This may, perhaps, be accounted for by the mill-stones of La Brie, which are in common use in France, being better suited to their work than those commonly employed in England, and by the greater hardness of the French wheat, and the greater care taken in the sorting of the flour into various qualities. Latterly, however, very great improvements have been effected in the English mills.

But by far the greater part of the extraordinary increase in the imports of French wheat and flour in the period referred to is, no doubt, to be ascribed to the very low prices that then ruled in France. And the regular succession in that country for many years past of cycles of 5 or 6 years of scarcity and abundance, is a very striking phenomenon. In proof of this, we beg to subjoin the following

Account, compiled from Official Documents, of the Excess of the Imports over the Exports, and of the Exports over the Imports, of Wheat into and from France, and of its Price per Hectolitre, in Periods of Scarcity and Abundance, from 1816 to 1856 inc.*

	Excess of Imports over Exports.	Excess of Exports over Imports.	Average Price per Hectolitre.
6 years of scarcity (1816-21) - - - -	6,248,000 *hect.*	- -	26 *fr.* 22 *c.*
6 „ abundance (1822-27) - - - -	- -	1,250,000 *hect.*	15 65
5 „ scarcity (1828-32) - - - -	9,528,000	- -	22 11
5 „ abundance (1833-37) - - - -	- -	945,000	15 83
5 „ medium (1838-42) - - - -	1,126,000	- -	20 88
5 „ scarcity (1843-47) - - - -	18,696,000	- -	25 75
5 „ abundance (1848-52) - - - -	- -	16,237,000	15 45
4 „ scarcity (1853-56) - - - -	20,207,000	- -	27 98
41 years	55,805,000	18,432,000	

Hence, in these 41 years, there have been imported 55,805,000 hectolitres, and exported 18,432,000; leaving an excess of imports of 37,373,000 hectolitres.

Inasmuch, however, as the imports are made when prices are high, and the exports when they are low, the excess of the value of the former over that of the latter is greater than in proportion to the difference of their quantities, and is estimated, for the above period, at 1160 millions fr. And this deficit in the amount of the harvests will not certainly be filled up by clinging to the worst parts of the protective system, that is, by allowing importation, and preventing or fettering exportation, and such like expedients. But it would be speedily got rid of were a really free trade in corn established, and the agriculturists permitted to buy their tools and implements wherever they found them cheapest and of the best quality. No doubt, also, a modification of the existing law of succession would be very desirable; for, in addition to the stimulus which it gives to subdivision, the obstructions which it throws in the way of the consolidation of properties and the increase of farms, make it a formidable barrier to the progress of agriculture.

According to a law passed in November 1858, the bakers in all the principal towns of the empire are bound to keep on hand a stock of grain or flour equal to three months of their ordinary consumption. But it is not to be supposed that an act of this sort

* From the *Revue Commerciale* of Messrs. Conninck of Havre for 1858; a valuable and trustworthy publication.

should be really carried out; it will either fall into desuetude, or degenerate into a mere instrument of abuse.

Spanish Corn Trade.—The exportation of corn from Spain was formerly prohibited under the severest penalties. But in 1820, grain and flour were both allowed to be freely exported; and in 1823, this privilege was extended to all productions (*frutos*), the growth of the soil. There is now, in fact, no obstacle whatever, except the expense of carriage, to the conveyance of corn to the sea-ports, and thence to the foreigner. Owing, however, to the corn-growing provinces being principally situated in the interior, and to the extreme badness of the roads, which renders carriage to the coast both expensive and difficult, the exports are reduced within comparatively narrow limits: the same difficulty of carriage frequently gives rise to very great differences in the prices in markets, in all parts of the country, only a few leagues distant. Were the means of communication improved, and anything like security given to the husbandman, Spain would, in no long time, become one of the principal exporting countries of Europe. Old Castile, Leon, Estremadura, and that part of Andalusia to the south and east of Seville, are among the finest corn countries of Europe, and might be made to yield immense supplies. But owing to the disturbed state of the country, and the want of a market for their produce, they can hardly be said to be at all cultivated. And yet such is their natural fertility, that in good seasons the peasants only reap those fields nearest to the villages!

The imports of wheat and wheat-flour into this country from Spain, in the 5 years ending with 1857, have been

			1853.	1854.	1855.	1856.	1857.

Corn Trade of Odessa.—Odessa, on the Black Sea, is now the principal corn shipping port of S. Europe. Inasmuch, however, as but little of the corn sent from Odessa is raised in the province of Kherson in her neighbourhood, the exports depend in great degree on the price; a comparatively high price being necessary to pay the cost of conveying corn from Podolia and Kief, whence only large supplies can be derived, to the port. The navigation of the Dnieper, which intersects these provinces, and would otherwise be a most important channel of communication, is unluckily interrupted in the lower part of its course by cataracts, so that a very large portion of the corn brought at present to Odessa is conveyed to it in carts drawn by oxen; and the supply depends almost as much on the number of cattle that may be employed for this purpose as on the productiveness of the harvests. A portion, also, though but a small one, of the supplies for Odessa is brought by coasters from the Sea of Azof, and from some of the smaller ports on the Black Sea. It appears from an official statement published in Odessa, that the total quantity of wheat brought to the town in the undermentioned years was—

1834	-	691,000 chets. *	1840	-	680,000 chets.	1845	-	1,981,930 chets.
1835	-	378,700	1841	-	720,372	1846	-	2,124,385
1836	-	878,700	1842	-	863,422	1847	-	2,775,837
1837	-	950,498	1843	-	1,170,245	1848	-	2,059,097
1838	-	1,241,000	1844	-	1,313,300	1849	-	1,714,741
1839	-	1,150,000						

This table shows the extraordinary increase that has taken place in the supplies of corn brought to Odessa. The exports in 1847 amounted to 2,016,672 quarters, being, we believe, the largest quantity of wheat ever shipped in a single season from a single port.

During the three years ending with 1840, the average price of the best Odessa wheat, which, however, is inferior to English, was 34*s.* 6*d.* on the spot; and it is the better samples only that are fitted for distant voyages, and for our markets. Owing to the length and tediousness of the voyage from Odessa, and the risk of the grain heating on the passage, the charges attending its importation, including insurance, &c., amount to from 14*s.* to 15*s.* a quarter. It is plain, therefore, that the Odessa wheat brought to England during the above three years must, speaking generally, have cost the importer about 50*s.* a quarter, exclusive of profit; and, supposing the price of the best wheat in Odessa to be reduced under a system of free intercourse to from 25*s.* to 30*s.* a quarter (its price in 1849), it could not be sold in London for less than from 40*s.* to 45*s.* a quarter. And though in 1853 the imports of wheat from Southern Russia amounted to 818,930 quarters, they are usually much less. In 1857, they were only 409,409 quarters. Constantinople, Genoa, Marseilles, and other Mediterranean ports, are the great markets for the wheat of the Black Sea.

The shipments of grain, other than wheat, from Odessa, are generally but inconsider-

* A chetwert is about 5·8 bushels.

able. In 1847, 240,390 quarters rye were exported. Indian corn is raised in Bessarabia, but not in quantities to admit of any great exportation.

For farther details as to the corn trade of Southern Russia, and of the countries on the Lower Danube, see the articles ODESSA, TAGANROG, and GALACZ.

Both soft and hard wheat are exported from Odessa; but the former, which is by far the most abundant, is only brought to England. Despite the preference given to English wheat in this country, in the Mediterranean Odessa wheat is more esteemed, and fetches a higher price.

The hard wheat brought from the Black Sea comes principally from Taganrog. It is a very fine species of grain, being full 10 per cent. heavier than British wheat, with not more than half the bran: latterly, however, soft wheat is beginning to be exported. The hard wheat is used in Italy for making maccaroni and vermicelli, and things of that sort; very little of it has found its way to England.

The voyage from Odessa to Britain is of uncertain duration, but generally very long. It is essential to the importation of the wheat in a good condition, that it should be made during the winter months. When the voyage is made in summer, unless the wheat be very superior, and be shipped in exceedingly good order, it is almost sure to heat; and has sometimes, indeed, been injured to such a degree as to require to be dug from the hold with pickaxes. Unless, therefore, means be devised for lessening the risk of damage during the voyage, there is little reason to think that Odessa wheat will ever be largely imported in ordinary seasons into Britain.—(See the evidence of J. H. Lander, Esq. and J. Schneider, Esq. before the Lords' Committee of 1827, on the price of foreign corn.) We subjoin a

Statement of the probable Cost of importing 2,000 Chetwerts or 1,453 Quarters of Wheat from Odessa to London.

Charges in London.	£	s.	d.	£	s.	d.	£	s.	d.
Policy duty on 1,200*l.* at ½ per cent.	3	0	0						
Insurance on 1,150*l.* at 2*l.* 2*s.* per cent.	24	3	0						
				27	3	0			
Commission do. ½ per cent.				5	15	0			
Freight on 1,453 quarters wheat at 12*s.* per quarter	871	10	0						
Primage, 10 per cent.	87	3	7						
Gratification	10	10	0						
				969	9	7			
Charterparty, 1*l.*; custom-house entries, 10*s.*				1	10	0			
Metage on ship, at 4*s.* 3½*d.* per last				31	3	7			
Lastage				1	4	2			
Lighterage of 1,453 quarters at 4*d.*				24	4	4			
Landing, wharfage, housing, and delivering, at 9*d.*				54	9	8			
Rent 4 weeks, at 5*s.* per 100 quarters per week				14	10	7			
Metage, &c. ex granary				7	5	0			
				£1,136	15	0			
				Or per quarter			0	15	8

And in addition to the above, the charge for probable damage on the voyage may be estimated at 2*s.* a quarter.
And the factorage in London at 1*s.* per quarter.

American Corn Trade.—The prices of wheat at New York and Philadelphia may be taken, at an average, at from 35*s.* to 40*s.* a quarter; and as the cost of importing a quarter of wheat from the United States into England amounts to from 10*s.* to 12*s.*, it is seen that no considerable supply could be obtained from that quarter, were our prices under 45*s.* or 50*s.* It should also be remarked, that prices in America are usually higher than in the Baltic; so that but little can be brought from the former, except when the demand is sufficient previously to take off the cheaper wheats of the northern ports.

The exports of wheat from the U. States are, however, comparatively trifling; it being in the shape of flour that most part of their exports of that grain are made. The shipments of this important article from Baltimore, Philadelphia, New York, New Orleans, and other ports, have occasionally been very large, though down to 1839 they had been for some years rather decreasing. Occasionally, indeed, considerable quantities of corn and flour have been sent from Europe to the U. States. In 1837, for example, no fewer than 3,921,259 bushels of foreign wheat were imported into the U. States, of which 792,675 bushels were from England. This, however, was a rare instance; and in years like 1847 and 1849, when there was at once an extraordinarily abundant crop in the States, and an unusually large demand and high prices in Europe, the exports are very large. We subjoin an

Account showing the Quantities of Wheat, Wheat-Flour, Indian Corn, and Indian Meal, exported from the U. States during the Year ended the 30th of June, 1858, specifying the Countries to which they were sent, and the Quantities and Values of the Supplies sent to each.

Whither Exported.	Wheat.		Wheat-Flour.		Indian Corn.		Indian Meal.

And exclusive of the above, considerable quantities of rye and rye meal, pulse, and other grains, ship's bread, &c. were exported in the course of the above year.

It has, however, been doubted, whether this exportation can be maintained. Speaking generally, agriculture is little known as a science in any part of America, and but imperfectly understood as an art; and it could not rationally be expected that it should be otherwise. In all those countries in which, as in the greater part of America, portions of fertile and unoccupied land may be obtained for little more than a nominal price, the invariable practice is, after clearing and breaking up a piece of land, to subject it to a course of continuous cropping; and when it is exhausted, to resort to some other tract of new ground, leaving that which has been abandoned to recover itself by the aid of the *vis medicatrix naturæ!* But in those parts of the Eastern or Atlantic States that have been long settled, and are fully occupied, this scourging system can no longer be advantageously followed; and there, consequently, a better system of agriculture is beginning to be introduced; and a rotation of crops, and the manuring of land, are practised sometimes with more and sometimes with less success. Still, however, it is certain that even in the best farmed districts agriculture is in a very backward state; and, except where the land is naturally of a very superior quality, the produce is scanty indeed, compared with what is obtained in this country. In illustration of what is now stated we beg to subjoin an

Account of the average Produce per Acre of the Corn Crops in the State of New York, as published in a late Report by the "State Agricultural Society," in Contrast with what is believed to be the Produce of similar Crops in this Country.

Produce.	New York.	England.
Wheat - - - - - - - bushels per acre	14	30 or 32
Barley - - - - - - - - - -	16	32
Oats - - - - - - - - - -	26	40
Indian corn - - - - - - - - -	25	none

It results from this statement that the returns per acre are about twice as great in this country as in New York, which has some of the best corn growing land in the Union. In Ohio, which is supposed to be the most productive of all the states, the results are similar, the produce of wheat and barley in it being respectively 15¼ and 24 bushels an acre. It is true, no doubt, that these returns may be increased; but this can only be done, if it be done at all, by the employment of greater capital and skill in the culture of the land. And in the meantime the New York farmers, and those of the other Atlantic States, have to withstand the competition of their neighbours in the newly-formed states on the Mississippi and Missouri, where the best land is subjected to the scourging treatment already referred to. But in these states, though the land be cheap, the produce per acre is, in most cases, very small. In Michigan, for example, it appears, from a return published by the state legislature in 1849, that the average produce of wheat per acre does not exceed 10 and 1-5th bushels, being less than 9 bushels an acre when seed is deducted! It would further appear from the best attainable information on the subject, that if we take the produce of the new states generally at 15 or 16 bushels per imp. acre, we shall not be within, but beyond, the mark. And though it be very difficult and, perhaps, impossible, to anticipate with any degree of confidence what may be the ultimate result of this infertility, or in what degree it may be defeated or modified by future discoveries and improvements, we are, in the meantime, disposed to concur with Mr. Johnston* in thinking that the wheat-producing powers of the U. States have been much exaggerated; but we doubt whether it be possible to exaggerate their capacities for producing Indian corn.

In the course of 25 years from this date the pop. of the Union will most likely amount to or exceed 60,000,000; and what with this enormous increase in the demand for corn, and the abusive treatment to

* See his *Notes on N. America, Agricultural, Economical, and Social*, i. 172., ii. 334., &c.; see, also, Mr. Russell's work on *N. America, its Agriculture and Climate*, pp. 92. 123. 129. 153., &c. The latter is the most important and valuable work that has hitherto appeared on that continent. The statements it embodies with regard to slavery have shed a new and powerful light on all that relates to that momentous and difficult subject.

which the land is subjected, the fears so generally entertained in regard to the injury to be inflicted on the agriculture of Europe, and especially on that of England, by the importation of American corn, have, perhaps, no good foundation. It is not so much, indeed, in the importations of wheat and flour as in those of maize or Indian corn, that the importance of the American supply has latterly been manifested. And these have been mainly occasioned by the failure of the potato crops, and the wretched state to which the pop. dependent on them has been reduced. Very few of those who had been consumers of wheat, barley, or oats, have resorted to Indian corn. And the presumption is that it will rarely be imported in large quantities, except when the potato is deficient, or to supply those who have no means of obtaining the higher-priced varieties of corn.—(See *Geographical Dictionary*, ed. 1851, art. U. STATES.)

All sorts of flour, whether made of wheat, rye, Indian corn, &c., exported from the U. States, must previously be submitted to the inspection of officers appointed for that purpose. The law further directs, that the barrels, in which it is shipped, shall be of certain dimensions, and that each barrel shall contain 196 lbs. of flour, and each half barrel 98 lbs. The inspector, having ascertained that the barrels correspond with the regulations as to size, weights, &c., decides as to the quality of the flour; the first or best sort being branded *Superfine*; the second, *Fine*; the third, *Fine Middlings*; and the fourth, or lowest quality, *Middlings*. Such barrels as are not merchantable are marked *Bad*; and their exportation, as well as the exportation of those deficient in weight, is prohibited. Rye flour is divided into 2 sorts, being either branded *Superfine Rye Flour*, or *Fine Rye Flour*. Maize flour is branded *Indian Meal*; flour made from buck-wheat is branded *B. Meal*. Indian meal may be exported in hhds. of 800 lbs. Flour for home consumption is not subjected to inspection. The inspection must take place at the time and place of exportation, under a penalty of 5 dollars per barrel. Persons altering or counterfeiting marks or brands forfeit 100 dollars; and persons putting fresh flour into barrels already marked or branded, or offering adulterated wheaten flour for sale, forfeit in either case 5 dollars for each barrel.

The fees of branding were reduced in 1832. They amount, in New York, to 3 cents for each hogshead, and 1 cent for each barrel and half barrel of full weight. A fine of 30 cents is levied on every barrel or half barrel below the standard weight, exclusive of 20 cents for every pound that is deficient.

Every barrel of wheaten flour imported is deemed equivalent to 38½ gallons of wheat, and, under the old law, was charged with a corresponding duty.

The usual price of wheat in Canada, when there is a demand for the English market, is about 30*s.* a quarter; and adding to this 10*s.* a quarter for the expenses of carriage and warehousing, it will make its price in Liverpool, when delivered to the consumer, 40*s.*; and being spring wheat, it is not so valuable by 5*s.* a quarter as English wheat.

Mr. Reuss (p. 120.) gives the following *pro formâ* account of the expenses attending the importation of a cargo of 5,000 bushels of wheat from New York, supposing it to cost 1 dol. 12 cents a bushel.

Inferences from the above Review of Prices.—We may, we think, satisfactorily conclude, from this pretty lengthened review of the state of the foreign corn trade, that now that all restrictions on importation are abolished, the price of foreign wheat of about the same quality as average English wheat will, in ordinary years, be about 45*s.* or 47*s.* a quarter. But supposing it were to fall so low as 40*s.*, it is easy to see that even the latter is a price at which agricultural improvements may be successfully carried on. The price of wheat in England, at an average of the ten years ending with 1820, was no less than 87*s.* 6*d.* a quarter; while its average prices during the ten years, and the five years ending with 1845, were respectively 57*s.* 11*d.* and 54*s.* 9*d.* a quarter. And yet, notwithstanding this tremendous fall of 32*s.* 9*d.* a quarter, an extraordinary improvement has taken place in agriculture since 1820, as is evinced by the fact of rents having risen greatly in the interval, and by our now providing for a very large additional population. And such having been the case, despite a fall of 32*s.* 9*d.*, it was childish to suppose that a farther fall of 12*s.* or even of 15*s.* a quarter in the average price of corn should have any very disastrous influence over agriculture. And in truth and reality improvements of all sorts have been more vigorously prosecuted since the final repeal of the corn laws in 1849 than at any former period. And there is nothing in our present condition, or in that of the countries whence we derive a portion of our supplies, to warrant the expectation that it will be otherwise in time to come.

We feel pretty confident that these statements cannot be successfully controverted. A great deal of uncertainty must, no doubt, always attach to prospective estimates of prices; but in as far as a conclusion may be drawn beforehand on such a subject, the landlords and farmers may dismiss their fears and apprehensions, if they entertain any, of ruin from a free trade in corn. They have triumphantly weathered far

greater difficulties than there is any probability of its entailing upon them. Their prosperity does not depend on restrictive regulations, but is the effect of the fertility of the soil which belongs to them, of the absence of all oppressive feudal privileges, and of the number and wealth of the consumers of their produce. *

COTTON (Ger. *Baumwolle*; Du. *Katoen*, *Boomwol*; Da. *Bomuld*; Sw. *Bomull*; Fr. *Coton*; It. *Cotone*, *Bambagia*; Sp. *Algodon*; Port. *Algodao*; Rus. *Chlobtschataja bumoja*; Pol. *Bawelna*; Lat. *Gossypium*, *Bombax*; Arab. *Kutun*; Sans. *Kapasa*; Hind. *Ruhi*; Malay, *Kapas*), a species of vegetable wool, the produce of the *Gossypium herbaceum*, or cotton shrub, of which there are many varieties. It is found growing naturally in all the tropical regions of Asia, Africa, and America, whence it has been transplanted, and has become a most important object of cultivation, in the southern parts of the U. States, and to some extent also in Europe.

Cotton is distinguished in commerce by its colour, but more especially by the length, strength, and fineness of its fibre. White is usually considered as characteristic of secondary quality. Yellow, or a yellowish tinge, when not the effect of accidental wetting or inclement seasons, is considered as indicating greater fineness.

There are many varieties of raw cotton in the market, their names being principally derived from the places whence they are brought. They are usually classed under the denominations of *long and short stapled*. The best of the first is the *sea-island* cotton, or that brought from the shores of Georgia; but its qualities differ so much that the price of the finest specimens is often three times as great as that of the inferior. The superior samples of Brazil cotton are reckoned among the long-stapled. The cottons of the U. States, with the exception of sea-island, belong to the short-stapled variety, as do those of India.

The estimation in which the principal kinds of cotton wool are held may be learned from the following statement of their prices in Liverpool in different years. The inferiority of Surat cotton is sometimes ascribed to the defective mode in which it is prepared; but a great authority, Mr. Horace H. Wilson, doubts whether it can be grown in India of a better kind.

Statement of the extreme Prices of Cotton Wool at Liverpool, per lb., in 1810, 1830, 1845, 1850, 1855, and 1858.

The manufacture of cotton has been carried on in Hindostan from the remotest antiquity. Herodotus mentions (lib. iii. c. 106.) that in India there are wild trees that produce a sort of wool superior to that of sheep, and that the natives dress themselves in cloth made of it. And similar statements are made by Strabo (lib. xv. § 10.), Arrian (*Indic.* c. 16.), and Mela (lib. iii. c. 7.). But though certainly referring to cotton, it is evident that the authors of these statements had no very distinct ideas either in regard to the wool itself or its manufacture. The latter obtained no footing worth mentioning in Europe till last century.

1. *Rise and Progress of the British Cotton Manufacture.*—The rapid growth and prodigious magnitude of the cotton manufacture of Great Britain are, beyond all question, the most extraordinary phenomena in the history of industry. Our command of the finest wool naturally attracted our attention to the woollen manufacture, and paved the way for that superiority in it which we long since attained: but when we undertook the cotton manufacture, we had comparatively few facilities for its prosecution, and had to struggle with the greatest difficulties. The raw material was produced at an immense distance from our shores; and in Hindostan and China the inhabitants had arrived at such perfection in the arts of spinning and weaving, that the lightness and delicacy of their finest cloths emulated the web of the gossamer, and seemed to set competition at defiance. Such, however, has been the influence of the stupendous discoveries and inventions of Hargreaves, Arkwright, Crompton, Cartwright, and others, that we have overcome all these difficulties—that neither the extreme cheapness of labour in Hindostan, nor the excellence to which the natives had attained, has enabled them to withstand the competition of those who buy their cotton; and who, after carrying it

* For farther and full details with respect to the progress of agriculture since the peace, the rise of rent, and the influence of the depreciation of the currency on prices, see *Descriptive and Statistical Account of the British Empire*, 3rd ed. vol. i. pp. 550—557., and pp. 532—584.

5,000 miles to be manufactured, carry back the goods to them. This is the greatest triumph of mechanical genius: and what perhaps is most extraordinary, our superiority is not the late result of a long series of successive discoveries and inventions: on the contrary, it has been accomplished in a very few years. A century has not elapsed since the British cotton manufacture was in its infancy; and it *now* forms the principal business carried on in the country,—affording an advantageous field for the accumulation and employment of millions upon millions of capital, and of thousands upon thousands of workmen! The skill and genius by which these astonishing results have been achieved, have been one of the main sources of our power: they have contributed in no common degree to raise the British nation to the high and conspicuous place she now occupies. Nor is it too much to say that the wealth and energy derived from the cotton manufacture powerfully assisted in carrying us triumphantly through the tremendous struggle with revolutionary France, at the same time that it materially contributes to that strength by which we are able, without difficulty, to sustain burdens that would have crushed our fathers, and could not be supported by any other people.

The precise period when the manufacture was introduced into England is not known; but it is most probable that it was some time in the early part of the 17th century. The first authentic mention of it is made by Lewis Roberts, in his *Treasure of Traffic*, published in 1641, where it is stated, "The town of Manchester, in Lancashire, must be also herein remembered, and worthily for their encouragement commended, who buy the yarne of the Irish in great quantity, and weaving it, returne the same again into Ireland to sell. Neither doth their industry rest here; for they buy cotton wool in London that comes first from Cyprus and Smyrna, and at home worke the same, and perfect it into fustians, vermillions, dimities, and other such stuffes, and then return it to London, where the same is vented and sold, and not seldom sent into foreign parts, who have means, at far easier termes, to provide themselves of the said first materials."—(Orig. ed. p. 32.) It is true, indeed, that mention is frequently made by previous writers, and in acts of the legislature passed at a much earlier period *, of "Manchester cottons," "cotton velvets," "fustians," &c.; but it is certain that these articles were *wholly composed of wool*, and had most probably been denominated cottons from their having been prepared in imitation of some of the cotton fabrics imported from India and Italy.

From the first introduction of the cotton manufacture into Great Britain down to the comparatively late period of 1773, the weft or transverse threads of the web, only, were of cotton; the warp, or longitudinal threads, consisting wholly of linen yarn, principally imported from Germany and Ireland. In the first stage of the manufacture the weavers, dispersed in cottages throughout the country, furnished themselves as well as they could with the warp and weft for their webs, and carried them to market when they were finished: but about 1760 a new system was introduced. The Manchester merchants began about that time to send agents into the country, who employed weavers, whom they supplied with foreign or Irish linen yarn for warp, and with raw cotton, which being carded and spun, by means of a common spindle or distaff, in the weaver's own family, was then used for weft. A system of domestic manufacture was thus established; the junior branches of the family being employed in the carding and spinning of the cotton, while its head was employed in weaving the linen and cotton yarn into cloth. This system, by relieving the weaver from the necessity of providing himself with linen yarn for warp and raw cotton for weft, and of seeking customers for his cloth when finished, and enabling him to prosecute his employment with greater regularity, was an obvious improvement on the system that had been previously followed; but it is at the same time clear that the impossibility of making any considerable division among the different branches of a manufacture so conducted, or of prosecuting them on a large scale, added to the interruption given to the proper business of the weavers, by the necessity of attending to the cultivation of the patches of ground which they generally occupied, opposed invincible obstacles to its progress, so long as it was conducted in this mode.

It appears from the Custom-house returns, that the total quantity of cotton wool annually imported into Great Britain, at an average of the *five* years ending with 1705 amounted to only 1,170,881 lbs. The accounts of the imports of cotton from 1705 to 1770 have been but imperfectly preserved; but until the last half dozen years of that period the manufacture increased very slowly, and was of very trifling amount. Dr. Percival, of Manchester, who had the best means of being accurately informed on the subject, states that the entire value of the cotton goods manufactured in Great Britain, at the accession of George III. in 1760, was estimated to amount to only 200,000*l.* a

* In an act of 5 & 6 Edw. 6. (1552), entitled, for the true making of WOOLLEN cloth, it is ordered, "*That all cottons called Manchester, Lancashire, and Cheshire cottons*, full wrought for sale, shall be in length," &c. This proves incontestably, that what were then called cottons were made wholly of wool.

year, and the number of persons employed was quite inconsiderable: but in 1767, a most ingenious person, James Hargreaves, a carpenter of Blackburn in Lancashire, invented the *spinning jenny*. At first this admirable machine enabled *eight* threads to be spun with the same facility as one; and it was subsequently brought to such perfection, that a little girl was able to work no fewer than from *eighty* to *one hundred and twenty* spindles.

The jenny was applicable only to the spinning of cotton for weft, being unable to give to the yarn that degree of firmness and hardness which is required to the longitudinal threads or warp: but this deficiency was soon after supplied by the introduction of the *spinning-frame*,—that wonderful piece of machinery which spins a vast number of threads of any degree of fineness and hardness, leaving to man merely to feed the machine with cotton, and to join the threads when they happen to break. It is not difficult to understand the principle on which this machine is constructed, and the mode of its operation. It consists of two pairs of rollers, turned by means of machinery. The lower roller of each pair is furrowed or fluted longitudinally, and the upper one is covered with leather, to make them take a hold of the cotton. If there were only one pair of rollers, it is clear that a carding of cotton passed between them would be drawn forward by the revolution of the rollers, but it would merely undergo a certain degree of compression from their action. No sooner, however, has the carding, or *roving* as it is technically termed, begun to pass through the first pair of rollers, than it is received by the second pair which are made to revolve with (as the case may be) 3, 4, or 5 times the velocity of the first pair. By this admirable contrivance, the roving is drawn out into a thread of the desired degree of tenuity; a twist being given to it by the adaptation of the spindle and fly of the common flax-wheel to the machinery.

Such is the principle on which Sir Richard Arkwright constructed his famous spinning frame. It is obvious that it is radically and completely different from the previous methods of spinning, either by the common hand-wheel or distaff, or by the jenny, which is only a modification of the common wheel. Spinning by rollers was an entirely original idea; and it is difficult which to admire most — the profound and fortunate sagacity which led to so great a discovery, or the consummate skill and address by which it was so speedily perfected, and reduced to practice.*

Since the dissolution of Sir Richard Arkwright's patent, in 1785, the progress of discovery and improvement in every department of the manufacture has been most rapid. The *mule-jenny* — so called from its being a compound of the jenny and the spinning frame—invented by Mr. Crompton, and the *power-loom*, invented by the Rev. Mr. Cartwright, are machines that have had the most powerful influence over the manufacture; and in consequence of their introduction, and of innumerable other inventions and improvements, the prices of cotton cloth and yarn have gone on progressively diminishing. But as the demand for cottons has been, owing to their extraordinary cheapness, extended in a still greater degree, the value of the goods produced, and the number of persons employed in the manufacture, are now decidedly greater than at any previous period.

2. *Imports of Cotton Wool. Countries whence it is imported. Prices, Duties, &c.*—The following Tables have been partly taken from official documents, and partly from the accounts of merchants of great experience. We believe they may be relied on as approaching as near to accuracy as it is possible to attain to in such matters.

Cotton Wool imported, exported, and entered for Consumption, from 1820 to 1841.

* There is, in the new edition of the *Encyclopædia Britannica*, a pretty full account of the life of Sir Richard Arkwright. The question as to his merit as an original discoverer is still undecided. Recently, however, it has been ascertained that a patent for spinning by rollers, revolving with different degrees of velocity, was taken out by Messrs. Wyatt and Paul, so early as 1738.—(See the *History of the Cotton Manufacture*, by Edward Baines, Esq.) But it does not appear that the inventors had been able to give effect to their happy idea, and all traces of the invention seem to have been lost. The statements in the case printed by Sir Richard Arkwright and his partners in 1782 show that he was aware of the attempts made in the reign of George II. to spin by machinery; but there is no evidence to prove that he was acquainted with the principle on which these attempts had been made, or that he had seen the patent referred to. Undoubtedly, however, the probability seems to be that he had. But, admitting this to be the case, it detracts but little from the substantial merits of Sir Richard Arkwright. If the

Previously to 1790, North America did not supply us with a single pound weight of raw cotton. A little had, indeed, been raised in some of the Southern States, for domestic use, before the revolutionary war, but the quantity was quite inconsiderable. In 1791, it began, for the first time, to be exported; the trifling quantity of 189,316 lbs. having been shipped in the course of that year, and 138,328 lbs. in 1792. Such was the late and feeble beginning of the American cotton trade. There is nothing in the history of industry to compare with its subsequent increase, unless it be the growth of the manufacture in this country.

American cotton, which is of two kinds, is generally known by the names of *sea-island* and *upland*. The first, which is the finest cotton imported into Great Britain, grows on the small sandy islands and along the low sandy shores of Carolina and Virginia. It is long in the staple, of an even silky texture, and is easily separated from the seed. Unluckily, however, it can be raised only in certain situations; so that its quantity is limited, and has not, in fact, been increased since 1805. The upland, of which the supply may be considered as unlimited, though of varying qualities, is all short-stapled; and its separation from the seed is so very difficult, that if it be done by the hand, the cotton is hardly worth the labour. This, however, was the only way in which it could be made available for home use, or exportation, previously to 1793; and had any one then ventured to predict that 10,000,000 lbs. of upland cotton would ever be exported, he would have been looked upon as a visionary dreamer. But the genius of Eli Whitney did for the planters of the Southern States what the genius of Arkwright and Watt did for the manufacturers of England. He invented a machine by which the wool of the upland cotton is separated from the seed with the greatest facility and expedition, and by so doing laid the foundation of a new and most important branch of industry, and doubled the wealth and means of employment of his countrymen! — (*Pitkin's Statistics of the U. States*, p. 109., ed. 1835.) Whitney's invention came into operation in 1793, and in 1794, 1,601,760 lbs. and in 1795, 5,276,300 lbs. of cotton were exported. And so astonishing has been its growth in the interval that the exports of cotton from the United States in 1858 amounted to the prodigious aggregate of 1,118,624,012 lbs.! of which only 12,101,058 lbs. were Sea-Island. The value of this vast quantity is estimated, in the official accounts, at 131,386,661 doll.! being nearly half the entire exports (293,758,279 doll.) of the U. States during the same year.

It was for many years the practice to levy a duty on cotton wool, when imported. The policy of such a duty is, however, very questionable; and it is indispensable that, if imposed at all, it should be kept at a low rate. For a number of years previously to 1831, it amounted (on foreign cotton) to 6 per cent. *ad valorem*; but, in order to make up, in part at least, for the loss of revenue caused by the repeal of the duty on printed cottons (see CALICO), it was raised in that year to *5s.* 10*d.* a cwt. Such a duty would, however, have materially affected the imports of the inferior species of cotton and the price of coarse goods; and being, in consequence, justly objected to, it was reduced in 1833 to *2s.* 11*d.* a cwt. But the imposition of any duty on the raw material of so important a manufacture being deemed objectionable, it was finally abolished in 1845. It had previously produced between 600,000*l.* and 700,000*l.* a-year.

The subjoined table, taken from the carefully compiled and comprehensive annual statement of Messrs. George Holt and Co., eminent cotton brokers of Liverpool, dated 31st of December, 1858, shows in a very striking manner the progress of the manufacture in this country, and the fall in the price of cotton wool. The manufacture declined in 1847, but that was wholly owing to the decrease in the supplies of raw cotton from the U. States in 1846-47, and the consequent rise in its price. (See next page.)

3. *Proportion of Coarse to Fine Goods.*—During the 20 years ending with 1846, the cotton manufacture underwent a singular change in respect of the average fineness of its products. As successive improvements were made in the construction and management of machinery, and in the experience and manual skill of the work-people, the proportion of fine to coarse yarns and fabrics might have been expected to make a corresponding increase, whereas it was, on the contrary, very greatly diminished. During the period referred to the consumption of cotton increased nearly *four-fold*; but

N.B.—Messrs. Holt and Co. estimate the average weight of the packages imported in 1858 at 4·6 lbs. per bag Upland; 452 lbs. Orleans and Alabama; 330 lbs. Sea Island; 181 lbs. Brazil; 355 lbs. Egyptian; 387 lbs. East Indian; and 180 lbs. West Indian.

the quantity of fine yarn produced (*i. e.*, of yarn above sixty hanks to the pound), instead of keeping pace with the increased consumption of cotton, really underwent a positive and by no means inconsiderable reduction. For a number of years no new establishments for the production of fine yarns were formed; but in Manchester alone about twenty mills that had been employed chiefly or entirely in fine spinning were given up, or devoted to the production of coarse yarns. To some extent, no doubt, the diminution of produce arising from the cause was countervailed by an increase in the speed of the machinery at work; but after making all reasonable allowances on that score, there can be no doubt that the total produce of fine yarn was materially decreased. This conclusion is strengthened by the falling off which took place in the imports of Sea Island cotton, which is used almost exclusively in the production of very fine yarn.

This change in the average fineness of cotton fabrics could not be ascribed to foreign competition, for fine spinning is precisely that branch of the trade in which English cotton-spinners most excel their rivals abroad; and the tariffs of most foreign countries are framed in the view of excluding coarse rather than fine fabrics. It was sometimes attributed to one of those capricious changes of taste and fashion which frequently operate disadvantageously on particular manufacturing pursuits; but it was too long in operation, and proceeded too gradually and uniformly, to be so accounted for; and it is abundantly certain that powerful natural causes must have been in operation, otherwise so extensive an alteration could not have been brought about in the average fineness of the yarn produced. These causes are by no means obvious; but we incline to think that the reduction which has taken place in the price of silk, and still more the prodigious improvements which have been made in various descriptions of worsted fabrics, have had no inconsiderable influence in lessening the demand for fine cottons. The main cause, however, will, no doubt, be found in the great reduction which took place in the price of raw cotton during the ten years ending with 1846, and the consequent greater cheapness of stout and serviceable fabrics. And this conclusion has been fully verified by the circumstances under which the trade has been placed since 1846. The supplies of cotton in 1847 and 1850 were at once deficient in quantity and high-priced. The cost of the heavier fabrics, which contain comparatively large quantities of cotton, consequently rose in a nearly corresponding proportion. The spinners endeavoured to obviate these effects, partly by ceasing to produce some of the coarsest fabrics, and partly by generally increasing the fineness of their yarn; and it is astonishing to what an extent they are thus able to countervail a rise of prices. It is found, in fact, that

an advance of a penny per pound in the price of the material speedily and invariably causes an increase of two or three hanks in the average produce and fineness of the yarn per pound.

4. *Value of the British Cotton Manufacture in* 1857. *Amount of Capital, and Number of Persons employed in it.* — It would be very desirable to be able to form a tolerably accurate estimate of the present value of the cotton manufacture, and of the number of persons employed in its different departments; but the data on which such estimates are founded being necessarily very loose, it is impossible to arrive at anything like precision. Perhaps, however, the following calculations may not be very wide of the mark.

In 1817, Mr. Kennedy, a well-informed manufacturer, in a paper published in the *Manchester Transactions*, estimated the number of persons employed in the *spinning* of cotton in Great Britain at 110,763; the aid they derived from steam engines as equal to the power of 20,768 horses; and the number of spindles in motion at 6,645,833. Mr. Kennedy further estimated the number of hanks of yarn annually produced at 3,987,500,000; and the quantity of coal consumed in their production at 500,479 tons. We subjoin Mr. Kennedy's statement for the year 1817; —

Raw cotton converted into yarn in the U. Kingdom	110,000,000 lbs.	
Loss in spinning estimated at 1¼ oz. per lb.	10,312,500	
Quantity of yarn produced		99,678,500 lbs
Number of hanks, taking the average at 40 per lb.		3,987,500,000
Number of spindles employed, each spindle being supposed to produce 2 hanks per day, at 300 working days in the year		6,645,833
Number of persons employed in spinning, supposing each to produce 120 hanks per day		110,763
Horse power employed, equal in number to		20,768

Four ounces and a half of coal estimated to produce one hank of No. 40.; and 130 lbs. of coal per day equal to one horse power.

But the cotton manufacture has increased immensely since 1817. Mr. Huskisson stated in his place in the House of Commons, in March, 1824, that the total value of the cotton goods and yarn then annually manufactured in Great Britain amounted to 33½ millions sterling! But there can be no manner of doubt that this estimate was greatly overrated; and we do not think we should be warranted in estimating the whole annual value of the products in question in 1857 and 1858 at more than 52 millions sterling. If, indeed, we took the increase in the imports of the raw material as any test of the increase in the value of the manufacture, we should estimate it a great deal higher. But the improvements that have been made in the different processes, and the fall in the price of raw cotton, have had so powerful an influence in reducing the price of the goods brought to market, that, notwithstanding the increase of their quantity, it is probable that their total value has increased but little for a considerable time past.

The average annual quantity of cotton wool imported, after deducting the exports, may be taken at about 850,000,000 lbs. weight. It is supposed, that of this quantity about 100,000,000 lbs. are used in a raw or half manufactured state, leaving a balance of 750,000,000 lbs. for the purposes of manufacturing, the cost of which may be taken, at an average, at 6*d.* per lb. Deducting, therefore, from the total value of the manufactured goods, or 52,000,000*l.*, the value of the raw material, amounting to about 18,750,000*l.*, there remains 33,250,000*l.*; which, of course, forms the fund whence the wages of the persons employed in the various departments of the manufacture, the profits of the capitalists, the sums required to repair the wear and tear of buildings, machinery, &c., the expense of coals, oil, flour for dressing, &c., must all be derived. If, then, we had any means of ascertaining how this fund is distributed, we should be able, by taking the average of wages and profits, to form a pretty accurate estimate of the number of labourers, and the quantity of capital employed. But here, unfortunately, we have only probabilities and analogies to guide us. It may, however, be confidently assumed, in the first place, that in consequence of the extensive employment of highly valuable machinery in all the departments of the cotton manufacture, the proportion which the profits of capital, and the sum to be set aside to replace its wear and tear, bear to the whole value of the manufacture, must be much larger than in almost any other department of industry. We have heard this proportion variously estimated, at from a third to two thirds of the total value of the manufactured goods, exclusive of the raw material; and as the weight of authority seems to be pretty much divided on the subject, we shall take an intermediate proportion. Assuming, therefore, that the profits of the capital employed in the cotton manufacture, the wages of superintendence, &c., the sum required to replace the wear and tear of machinery, buildings, &c., and to furnish flour, coals, &c., amount together to half the value of the manufactured goods, exclusive of the raw material, or to 16,625,000*l.*, a sum of 16,625,000*l.* will remain as the wages of the spinners, weavers, bleachers, &c. engaged in the manufacture; and taking, inasmuch as a large proportion of women, and children under 18 years of age, are employed, the average rate of wages at only 32*l.* a year, we shall have (dividing 16,625,000 by 32) nearly 520,000 as the total number of persons directly employed in the different departments of the manufacture.

We should mistake, however, if we supposed that this number, great as it certainly is, comprised the whole number of persons to whom the cotton manufacture furnishes subsistence, exclusive of the capitalists. Of the sum of 16,625,000*l.* set apart as the profit of the capitalists, and the sum required to furnish coal, and to defray the wear and tear of machinery, &c., a large proportion must annually be laid out in paying the wages of engineers, machine-makers, iron-founders, smiths, joiners, masons, bricklayers, &c. It is not easy to say what this proportion may amount to; but taking it at 3,000,000*l.*, and supposing the rate of wages of each individual to average 50*l.* a year, the total number employed in the various capacities alluded to will be (3,000,000 divided by 50) 60,000; and a sum of 13,625,000*l.* will remain to cover the profits of the capital employed in the various branches of the manufacture, to repair the different parts of the machinery and buildings as they wear out, and to buy coal, flour*, drugs, &c. The account will, therefore, stand as under: —

	£	£
Total value of every description of cotton goods annually manufactured in Great Britain		52,000,000
Raw material, 750,000,000 lbs. at 6*d.* per lb.	£ 18,750,000	
Wages of 520,000 weavers, spinners, bleachers, &c. at 32*l.* a year each	16,625,000	
Wages of 60,000 engineers, machine makers, smiths, masons, joiners, &c. at 50*l.* a year each	3,000,000	
Profits of the manufacturers, wages of superintendence, sums to purchase the materials of machinery, coals, &c.	13,625,000	
		52,000,000

The capital employed may be estimated as follows: —

Capital employed in the purchase of the raw material	4,000,000
Capital employed in payment of wages	8,000,000
Capital vested in spinning-mills, power and hand-looms, workshops, warehouses, stocks on hand, &c.	40,000,000
	£52,000,000

Now, this sum of 52,000,000*l.*, supposing the interest of capital, inclusive of the wages of superintendence, &c., to amount to 10 per cent., will yield a sum of 5,200,000*l.*; which being deducted from the 13,625,000*l.* profits, &c., leaves 8,425,000*l.*, to defray the waste of capital, the flour required for dressing, the coals necessary in the employment of the steam engines, to effect insurances, to purchase printing, dyeing, and bleaching drugs, and to meet all other outgoings.

The aggregate amount of wages, according to the above estimate, is 19,625,000*l.*; but there are not many departments of the business in which wages have to be advanced more than 6 months before the article is sold. We, therefore, incline to think that 8,000,000*l.* is a sufficient (perhaps too great) allowance for the capital employed in the payment of wages.

It may be said by some that this estimate is under, and by others that it is overrated; but we believe it will be found to be nearly correct, though, if any thing, it may, perhaps, be a little in excess. Misled by Mr. Huskisson's authority, we estimated, in a former edition of this work, the value of the cotton stuffs and yarn produced in the United Kingdom in 1834, at 34,000,000*l.*; but farther inquiry has convinced us that that estimate was beyond the mark; and it is to be borne in mind, that though the consumption of raw cotton has vastly increased since 1834, there has been in the interval a very considerable fall in its price, and in the prices of the manufactured articles. The declared value of the cotton goods and yarn exported in 1857 amounted to 39,073,420*l.*; and deducting this sum from the assumed value of the manufacture (52,000,000*l.*), we have 13,000,000*l.* for the value of the cottons consumed at home. And we are inclined to think that this is pretty near the mark. It has been said that the value of the home consumption does not amount to 1-3rd part of the exports; and though, if we refer only to the weight of cotton exported and retained at home, this assertion may be nearly correct, it is to be borne in mind that the great bulk of the goods for home use are of a superior fabric, and more costly than those sent abroad. On the whole, therefore, we are disposed to believe that in estimating the present value of the products of the British cotton manufacture at 52,000,000*l.* a year, which leaves 13,000,000*l.* for the value of those consumed at home, we shall not commit any very serious error; and moderate as this estimate may appear, as compared with others put forth on the same subject†, it strikingly evinces the value and importance of the manufacture.

Allowance being made for old and infirm persons, children, &c., dependent on those actually employed in the various departments of the cotton manufacture, and in the construction, repair, &c. of machinery and buildings required to carry it on, it must furnish, on the above hypothesis, subsistence for from 1,000,000 to 1,200,000 persons!

* This is a much more important item than might be at first supposed. Flour is indispensable in the dressing of webs; and we are well assured that its consumption in this way is not less than 300,000 barrels a year!

† Mr. Bazley, M. P., of Manchester, estimated (in a Paper read before the British Association in 1858) the value of the cottons consumed at home at 24,000,000*l.*, making the entire value of the manufacture 63 or 64 millions. But, despite the deference due to such an authority, we have no doubt that this is a very great exaggeration.

And for this new and most prolific source of wealth we are indebted partly and principally, as already shown, to the extraordinary genius and talent of a few individuals; but, in a great degree, also, to that security of property and freedom of industry which give confidence and energy to all who embark in industrious undertakings, and to that universal diffusion of intelligence which enables those who carry on any work to press every power of nature into their service, and to avail themselves of productive capacities of which a less instructed people would be wholly ignorant.

The effect that the sudden opening of so vast and profitable a field for the employment of capital and labour has had on the population of the different towns of Lancashire and Lanarkshire, the districts where the cotton manufacture is principally carried on, has been most striking. In 1774, for example, the townships of Manchester and Salford were estimated to contain 27,246 inhabitants—a number which was swelled in 1831 to 182,812; the entire population of the *boroughs* of Manchester and Salford having amounted in that year, to 227,808, and in 1851 to 367,232. The population of Preston, in 1780, is said not to have exceeded 6,000; whereas it amounted, in 1851, to 69,542. In like manner, the population of Blackburn increased from 11,980, in 1801, to 46,536, in 1851; that of Bolton increased, in the same period, from 17,416 to 61,171; that of Wigan from 10,989, to 31,941, &c. But the progress of Liverpool is most extraordinary, and can be matched only by the progress of one or two cities in the United States. Liverpool is not properly one of the seats of the cotton manufacture; but she is, notwithstanding, mainly indebted to it for the unparalleled rapidity of her growth. She is the grand emporium of the cotton district—the port where almost all the raw cotton, and the various foreign articles required for the employment and subsistence of the persons engaged in the manufacture, are imported, and whence the finished goods are exported to other countries. She has, therefore, become a place of vast trade, and is now, in that respect, superior even to London. In 1700, according to the best accounts that can be obtained, the population of Liverpool amounted to only 5,145; in 1750 it had increased to 18,450; in 1770 it amounted to 34,050. The cotton manufacture now began rapidly to extend, and, in consequence, the population of Liverpool increased, in 1801, to 77,653; in 1821, to 118,972; in 1831, to 165,175; and in 1851, it amounted to 375,955. The progress of population in Lanarkshire and Renfrewshire has been equally striking. In 1780, the city of Glasgow contained only 42,832 inhabitants; in 1801, that number had increased to 77,385; in 1841 to 274,533; and in 1851 to 347,001.

Though command of power and readiness of access be powerful requisites to the success of most manufactures, the localities in which peculiar businesses are established would seem to depend as much on accident as on anything else. Why, for example, should Manchester be the great seat of the cotton, Birmingham of the hardware, Bradford of the worsted, and Leeds of the cloth trade? We apprehend that no better answer can be given to this question than that, from accidental or inappreciable circumstances, the businesses referred to happened to be early established in these towns, and that their situation having been found to be peculiarly well fitted for the improved processes of later times, they have preserved their early superiority. Had they been situated in districts without coal, or comparatively inaccessible, their early proficiency, though it might have enabled them to struggle for a while with the greater advantages enjoyed by their competitors in other districts, would not have been sufficient to secure their continued lead, or even existence. They must, like the iron works which were formerly carried on in Kent, have been in the end abandoned. But having the good fortune to possess, in addition to early and peculiar skill in their respective trades, all the means and appliances required to secure their farther advancement, their progress has been continuous and extraordinary, and their supremacy is at present more undisputed than at any former period.

Of 2,046 cotton factories which existed in England and Wales in 1856, no fewer than 1,480 were situated in Lancashire; Manchester being the metropolis of the trade. The remaining factories were principally situated in the West Riding of Yorkshire, Cheshire, and Derbyshire.

The cotton trade of Scotland, which at the epoch referred to had 152 factories, is mostly restricted to the counties of Lanark and Renfrew, and that of Ireland (which is trifling) to Antrim. But while the business has of late years been very greatly extended in England, it has been nearly stationary in Scotland, and has fallen off in Ireland, in which, indeed, it never had any considerable footing.

The embroidery of muslins, a branch of the cotton trade which is highly deserving of attention, was commenced in Scotland about 1825, and is almost wholly carried on by Glasgow houses. It is now of much importance, its increase not having been surpassed by that of any other branch of industry, and equalled by very few. In all, about fifty houses are engaged in the trade; and the total sum paid as wages to females

in the Western parts of Scotland, and in Ireland, amounted, very recently, to about 750,000*l.* a year. The embroidery is entirely executed by hand, the attempts to execute it by machinery having failed, or been found to be too expensive. The webs to be embroidered pass between engraved cylinders, driven by steam engines, which mark in faint lines the embroidery to be executed, and they are then sent to agents, who distribute them among the peasantry, who are paid by the piece or job. It is not easy to exaggerate the advantages resulting to the female part of the population from this employment. After being embroidered, the webs are returned to Glasgow, where they are bleached and dressed, and sometimes made up into different articles. A large proportion of the goods are exported to the United States and Canada.

Account of the Official Value of the Cotton Manufactures exported, in different Years, from Great Britain, from 1697 to 1797.

Years.	Official Value of Exports.	Years.	Official Value of Exports.	Years.	Official Value of Exports.
	£		£		£
1697	5,915	1765	248,348	1790	1,662,369
1701	23,253	1766	220,759	1791	1,875,046

5. Exports of Cotton Goods and Yarn. Fall of Prices, &c.— Down to 1750, the exportation of cotton goods, or rather, of goods consisting partially of cotton, was so very inconsiderable that they hardly attracted the least attention from any of our commercial writers. But after the inventions of Arkwright began to come into general operation, the exports increased with unprecedented rapidity. At the commencement of the present century they were nearly as large as the exports of woollens, the produce of the old and staple manufacture of the country. But though the exports of woollen goods has increased considerably since 1800, that of cotton goods and yarn has increased so much more that it is now about *three* times the amount of the other; and constitutes, indeed, above 1-3rd part of the total exports of the U. Kingdom.

Account of the Total Quantities and Declared Values of British Cotton Manufactured Goods, Twist, and Yarn exported from the United Kingdom in each Year from 1820 to 1857, both inclusive.

1850	1,558,132,941	20,520,435	1,343,262	131,370,568	6,383,701	28,257,101
1851	1,545,161,789	22,049,202	1,405,608	151,587,577	6,634,026	30,088,836
1852	1,521,256,914	21,648,458	1,574,974	129,385,924	6,654,655	29,878,087
1853	1,594,591,659	23,901,940	1,995,309	129,190,507	6,805,633	32,792,902
1854	1,692,899,122	23,481,506	1,573,022	147,125,498	6,691,330	31,745,858
1855	1,937,734,025	26,123,477	1,455,262	165,493,598	7,200,395	34,779,141
1856	2,035,274,969	28,521,559	1,682,007	181,495,805	8,092,575	38,232,741
1857	1,984,459,137	28,822,466	1,599,090	175,746,586	8,691,853	39,113,409

Nothing can set in a clearer light than this table the astonishing fall that has taken place in the price of cotton goods since 1820. In that year our exports of wove cotton fabrics amounted to 250,000,000 yards, their declared value being 13,209,000*l.*; whereas in 1856 the exports of wove fabrics had increased to 2,035,000,000 yards, and their declared value to 28,522,000*l.*! It appears, therefore, that while the exports

of wove cottons have increased about 8 times, or 800 per cent., their value has only increased in the ratio of about 13·2 to 28·5, that is, about 216 per cent.: Hence, supposing 100 yards calico to have cost 13*s.* 2*d.* in 1820, 400 yards may now be had for little more than 14*s.*!

This extraordinary fall has been brought about partly by the heavy fall that has taken place in the price of cotton wool, partly by the public taste setting more in favour of coarser fabrics, and partly and principally by the wonderful improvements made in the manufacture. In consequence of these concurring circumstances, cotton goods are now so cheap, that there is hardly an individual so very poor as to be unable to supply himself or herself abundantly with them. This has improved the dress and added to the comfort of the great bulk of the female part of the population, not merely of this, but also of other countries, in a degree and to an extent not easily to be imagined.

It should farther be borne in mind that it is to the fall in the price of its products that the unprecedented extension of the manufacture in this country is to be ascribed. And it is satisfactory to know that, notwithstanding the fall of prices, neither the wages nor profits of those engaged in the business have been diminished, while their numbers have been prodigiously augmented.

The following Table is interesting, from its exhibiting the state of our trade in wrought cottons with the different countries of the world.

An Account of the Quantities and Declared Value of British Cotton, Manufactured Goods, and Yarn, exported from the U. Kingdom, distinguishing the Description of Goods and the various Countries whereto the same were exported, in the Year 1856.

Such being the vast extent and importance of the cotton manufacture, the probability of our preserving our ascendency in it becomes a very interesting topic of inquiry. But it is obvious that a great deal of conjecture must always insinuate itself into our reasonings with respect to the future state of any branch of manufacturing industry. They are all liable to be affected by so many contingent and unforeseen circumstances,

that it is impossible to predicate, with anything like certainty, what may be their condition a few years hence. It is not to be denied that a business which depends in so great a degree on foreign demand, and which may, consequently, be materially influenced, not only by foreign legislation and foreign discoveries and inventions, but also by the mutations of fashion at home and abroad, is in rather a perilous situation; and that those dependent on it must necessarily be exposed to the most trying vicissitudes. These, no doubt, are natural to all businesses of this description; and may not be of a kind to shake the stability of the manufacture, or to endanger our superiority in it, provided they do not disturb tranquillity at home. But when a vast number of persons depend on a manufacture, the privations to which many of them are not unfrequently exposed, and the efforts that are made to inflame their prejudices, by representing their sufferings (which in nine out of ten instances spring from accidental or uncontrollable causes) as the result of vicious legislation, the tyranny or selfishness of their masters, and bad institutions, may easily lead them to commit outrages. And if that feeling of security which has led to the investment of such immense sums in mills and machinery should once be seriously impaired, the fall of the manufacture might be even more rapid than its rise. Anything that tends to keep alive and encourage disaffection and agitation is the bane of every country, but especially of one so deeply engaged in manufactures as this: and while, therefore, it is the bounden duty of government to endeavour, by modifying or suppressing prohibitions, and repealing all unjust or partial laws, to give freedom to industry, and to take away all good cause for agitation, every individual interested in the public welfare should endeavour, by every means in his power, to discourage the efforts of those who, to advance their own unworthy ends, endeavour to keep alive a spirit of discontent among the labouring classes, that cannot fail, in the long run, to be subversive alike of good order, industry, and prosperity.

But, abstracting from the influence of such considerations, and of national struggles and commotions, which can neither be foreseen nor estimated, we do not think that there is anything in our state, or in that of the different commercial and manufacturing countries of the world, that should lead us to anticipate that the gloomy forebodings of those who contend that the cotton manufacture of England has reached its zenith, and that it must now begin to decline, will be realised. The natural capabilities we possess for carrying on the business of manufacturing are, all things considered, decidedly superior to those of any other people. But the superiority to which we have already arrived is, perhaps, the greatest advantage in our favour. Our master manufacturers, engineers, and artisans are more intelligent, skilful, and enterprising, than those of any other country; and the extraordinary inventions they have already made, and their familiarity with all the principles and details of the business, will not only enable them to perfect the processes already in use, but can hardly fail to lead to the discovery of others. Our establishments for spinning, weaving, printing, bleaching, &c. are infinitely more complete and perfect than any that exist elsewhere; the division of labour in them is carried to an incomparably greater extent; the workmen are trained from infancy to industrious habits, and have attained that peculiar dexterity and sleight of hand in the performance of the separate tasks, that can only be acquired by long and unremitting application to the same employment. Why, then, having all these advantages on our side, should we not keep the start we have already gained? Every other people that attempt to set up manufactures must obviously labour under the greatest difficulties as compared with us. Their establishments cannot, at first, be sufficiently large to enable the division of employments to be carried to any considerable extent, at the same time that expertness in manipulation, and in the details of the various processes, can only be attained by slow degrees. It appears, therefore, reasonable to conclude that such new beginners, having to withstand the competition of those who have already arrived at a very high degree of perfection in the art, must be immediately driven out of every market equally accessible to both parties; and that nothing but the aid derived from restrictive regulations and prohibitions will be effectual to prevent the total destruction of their establishments in the countries where they are set up.

6. *Progress of the Manufacture in other Countries.*— But notwithstanding what has now been stated, a notion seems to be spreading abroad, that we shall have no little difficulty in maintaining our ground against the competition of the Americans, Swiss, Austrians, French, &c., and a good deal of evidence upon this subject was taken before the committee of the House of Commons appointed in 1833 to inquire into the state of manufactures, commerce, and shipping. Such apprehensions appear to us to be quite destitute of any real foundation. Provided we have no agitation, that public tranquillity and security in fact and opinion be maintained unimpaired, we need be under no sort of uneasiness as to any competition to which we may be exposed. Duties on imports have forced cotton, woollen, iron, and other manufactures into a premature existence in the

United States; but excepting the coarser fabrics, and those in which the value of the raw material bears a large proportion to the value of the manufactured article, we have nothing to fear from the Americans. Neither has their progress in the manufacture of this description of goods been at all remarkable; for the official accounts published by order of congress show that the value of all descriptions of cotton goods exported from the United States during the year ended the 30th of June, 1858, amounted to only 5,651,504 doll., or about 1,250,000*l.*, of which the raw material most probably amounted to more than a half.

Among the singular statements that have been put forth as to the cotton manufactures of America, one is, that the wages of labour are lower there than here! To dwell on the absurdity of such a statement would be an insult to the reader. But though it were true that wages were as low in Massachusetts as in England, that would afford no real ground for anticipating any formidable competition from America in this department. The price of cottons depends more on the profits of stock than on the wages of labour; and, so far as we know, it has not yet been alleged that the former are lower in America than here. Suppose an English and an American manufacturer have each 100,000*l.* vested in cotton mills, and in the floating stock required to carry on the business; if profits in England be 1 per cent. less than in America, the English manufacturer can afford, *cæteris paribus*, to sell his goods for 1,000*l.* less than the American. We are very far from insinuating or believing that this lowness of profit is an advantage; but whatever may be its influence in other respects, so long as it continues, it gives our manufacturers a decided superiority over those of every other country where profits are higher, in the manufacture and sale of all articles, such as cotton yard and stuffs, principally produced by machinery. It is ludicrous, indeed, to suppose that a half-peopled country like America, possessed of boundless tracts of unoccupied land of the highest degree of fertility, should be able successfully to contend in manufacturing industry with an old settled, fully peopled, and very rich country like Great Britain. The government which encourages such a misdirection of the public capital and industry, and those who suppose it can end in anything else than ruin to the parties, are ignorant of the merest elements of the science of wealth.

The following statement, though not official, is said to represent with considerable accuracy the consumption of cotton in the American manufactures in the following years ending with 1857.

1850	595,269 bales.	1854	715,571 bales.
1851	464,108 —	1855	678,584 —
1852	678,029 —	1856	770,239 —
1853	761,009 —	1857	819,133 —

Little as we have to fear from American, we have still less to fear from Swiss or Saxon competition. America has some advantage over England in the greater cheapness of the raw material; but Switzerland and Saxony, situated almost in the centre of Europe, can only draw their supplies of raw cotton by a distant land carriage by way of Hamburgh, Marseilles, and Genoa; and we have the best authority for affirming, that a bale of cotton may be conveyed at a less expense from Charleston to Manchester, than from Genoa, Amsterdam, or Hamburgh, to Switzerland or Saxony. Switzerland is altogether destitute of coal; all that she does is done by water-power, and that is said to be nearly exhausted. It is not, however, to be wondered at that the Swiss and Saxons should have succeeded in supplying their own markets, and some of those immediately contiguous, with certain species of yarn; or that they should export hosiery and such other articles as they can manufacture on a small scale, in their cottages; but it is idle to suppose that they should ever be able to do much more than this.

It was stated before a committee of the House of Commons, in 1833, that the French cotton manufacture had increased, between 1812 and 1826, in the ratio of 310 per cent., while in England its increase was only 270 per cent. This statement was, we believe, accurate as far as it went; and yet it was eminently calculated, though, no doubt, without being so intended, to mislead. In 1812, and for some years previously, it was hardly possible to import cotton wool into France, and its price was quite excessive. When, therefore, the manufacturers got wool after the return of peace at an ordinary price, it was impossible, seeing that foreign cottons are excluded from France, but that the manufacture should increase with extraordinary rapidity, until the home demand was pretty well supplied. An advance of this sort is assuredly no proof of the capacity of any country to prosecute the manufacture with advantage, or to export cottons without the aid of a bounty. Had the manufacture gone on increasing in the above ratio down to the present time, the circumstance might have justly excited attention; but such has not been the case. No doubt it has made a considerable progress in the interval; but not so much as might have been expected, seeing the increase of wealth and population in France, and seeing also the peculiar facilities which the French enjoy for smuggling cotton stuffs and other prohibited products across the Pyrenees into Spain, where they

are taken off in large quantities. The truth is, that until the French government reduces or repeals the duties on raw cotton, and on foreign iron and other articles indispensable to the cheap construction of cotton factories, it were idle to suppose that the French should be formidable competitors in the production of cottons.

It is supposed by some, that the competition we have to fear from the Continent does not consist so much in the spinning as in the weaving of cotton: and that the probability is, that our exports of yarn will increase, and our exports of manufactured goods diminish. We do not, however, imagine there is much in this. Our power looms are superior to those of any other country; and there is not, in fact, with the exception of the dyes, a single particular connected with the cotton manufacture in which we have not a manifest superiority over the Swiss, Saxons, French, Prussians, and every continental nation. Certainly, however, we are inferior to some of them in the brilliancy and durability of their dyes; and this circumstance has occasioned a considerable demand for German and Swiss printed cottons in many parts of the East, where vivid colours are held in the highest estimation. But even there, the greater cheapness of our goods is proving an overmatch for the greater brilliancy of those of our rivals.

On the whole, therefore, we see no reason to think that the British cotton manufacture has reached, much less passed, its zenith. At the same time, however, it can hardly be necessary to observe, considering the vast importance of the trade, that while, on the one hand, nothing should be left undone that may serve to strengthen its foundations, and to promote its prosperity, on the other, nothing should be attempted that may, by possibility, have an opposite effect. The subsistence of 1,200,000 people is not to be endangered on slight grounds. The abuses even of such a business must be cautiously dealt with, lest, in eradicating them, we shake or disorder the whole fabric. No doubt, however, the state of children employed in the cotton factories called fairly for legislative interference; and we believe that the regulations that have been enacted, carried out, as they have been, under the superintendence of the inspectors, have been productive of much good.

We borrow from the circular of Messrs. Dufay and Co., of Manchester, one of the most valuable published in the empire, the following statements in regard to the cotton trade of this and other countries.

Estimate of the Quantities of Raw Cotton consumed in the chief Manufacturing Countries, from 1836 to 1857 inclusive (in millions of Pounds weight).

Countries.	1836.	1840.	1846.	1850.	1852.	1853.	1854.	1855.	1856.	1857.
Great Britain (millions of lbs.) -	350	473	604	584	745	734	780	835	920	786
Russia, Germany, Holland, & Belgium	57	72	97	133	172	185	190	144	256	209
France - - - - -	118	157	159	142	199	194	201	190	211	179
Spain - - - - -	-	-	-	29	44	42	43	45	48	36
Countries bordering on the Adriatic -	28	28	39	45	55	45	45	34	39	30
United States of North America -	86	111	175	188	237	266	243	236	262	281
Sundries, Mediterranean, &c. -	-	-	-	-	29	58	37	69	56	56
Total - -	639	841	1,074	1,132	1,481	1,503	1,539	1,553	1,795	1,557

It is seen from this table that Great Britain has continued to maintain her customary ascendency in this department with little variation from 1836 down to the present time. In truth and reality, however, our progress has been a good deal greater than it appears to have been from the above statement, for the object of our manufacturers of late years has very generally been to produce better and more valuable goods, leaving to others to produce those of a coarser description, requiring a larger quantity of the raw material in proportion to their value.

Estimate, by Messrs. Dufay & Co., of the Difference in Pounds Sterling of the Sums accruing to the Cotton Manufactures during 1845, 1850, 1852, 1853, 1854, 1855, 1856, and 1857, to pay for the Expenses of Fuel, Machinery, Drugs for Dyeing, Printing, Bleaching, Interest of Capital, and every kind of Wages, Profits, &c., after deducting the actual Cost of the Raw Material.

	1845.	1850.	1852.	1853.	1854.	1855.	1856.	1857.

Of manufactured goods	18,816,000	21,432,000	22,795,500	25,259,800	24,428,000	27,025,900	29,632,000	29,912,726
Estimated in the same proportion as the declared value of the exported goods, plus ⅓	19,252,000	22,186,000	31,594,000	24,040,000	24,632,000	24,446,000	23,200,000	17,100,000
Total value of production	45,056,000	50,438,700	61,550,000	56,749,300	56,276,200	59,257,800	61,484,000	56,212,909
Deduct the cost of cotton, as above	10,175,400	17,574,000	16,819,300	18,365,000	18,200,000	19,739,000	23,958,000	26,200,000
Sums remaining to be distributed as stated above	34,880,600	32,864,700	44,730,700	38,384,300	38,076,200	39,518,800	37,526,000	30,012,909

"The progress which our table shows to have taken place in the trade of the country since 1845, is too striking to call for any remarks from us, nor is it necessary again to trace its origin to the salutary changes effected in our commercial code in 1846. We ventured to predict the effects of these changes at the time, and now only hope that the example of England will be followed by our continental neighbours in the adoption, so far as practicable, of those principles of trade which have now fully proved their soundness in the test of a series of years, and which have led in so marked a manner to the prosperity of this country. The commercial treaty recently concluded between Austria and Prussia seems to afford an excellent opportunity for revising and ameliorating their respective tariffs. The latest and surest benefit of unrestricted trade, namely, an increasing home consumption, has now also as incontrovertibly been attained in England. We are no longer afraid of foreign importations, and though there may be articles in which this country cannot compete with neighbouring ones, there are numbers of others produced here which excel foreign productions. We cannot take largely from any country, without sending our commodities in return. If, therefore, French wines, or anything else, be admitted in larger quantities, that is, at a lower duty, an increased trade will be the consequence, whether such reduction be based on reciprocity or not."

In a former circular, Messrs. Dufay and Co. observed that, "Of all the cotton-consuming countries, France has made the least progress in this branch of industry, considering the advantages which an advanced state of science and mechanics afford. Not only in her cotton trade, but also in the increase of her population, France keeps behind other nations; it is well known, also, that the population of that country has been stationary, compared with that of other European states.

"For some time past, we have taken pains to ascertain the number of spindles at work (1845) here and elsewhere, and have great pleasure in submitting the result to our friends. The returns were procured from the trade, as regards Great Britain, and have been carefully collated and revised. The information of the productive power of foreign states has been derived from the best authorities, and well informed quarters. The estimate of the number of spindles at work in the principal foreign cotton manufacturing countries is, according to the latest accounts received from abroad, as follows, viz.:—

"In the States comprised in the German Customs League, viz. —

Saxony	500,000	
Prussia	130,000	
Baden	95,000	together 815,000 spindles.
Wurtemburg	30,000	
Other States	60,000	
In Austria and Italy	1,500,000	
France	3,500,000	
Belgium	420,000	
Switzerland	650,000	
Russia	700,000	
United States of America	2,500,000	
Together	10,085,000	

"The quantity of cotton consumed in 1845 is estimated in round numbers, at 600 millions of lbs.; and it appears that this quantity (after deducting the usual per centage for loss, the cotton used in the raw state, for waddings and other purposes) has been reduced into yarns by 13 millions of mule spindles, and 4½ millions of throstles spindles, in all 17½ millions. Of these —

	Mule Spindles.	Throstles.
Ireland possesses	159,333	56,170
Scotland	1,476,083	253,795
England and Wales	11,364,584	4,190,035
Spindles	13,000,000	4,500,000

"The spinning process is carried to a high degree of perfection in this country. There is very little loss of material in reducing cotton into yarns; the waste of the finer numbers is respun into a second quality, and this process is going on, down to the lowest material. The speed in spinning has been much increased of late years, which accounts for the comparatively small number of spindles required to reduce the large quantity of cotton into yarn. In 1834 about 10,904,000 spindles were requisite to reduce 300 million lbs. of cotton into yarn; at present we require only 17½ millions of spindles to work up double the quantity of cotton. The coarser numbers which are produced now account partly for this, but only in a very small degree."

But since 1845, to which these statements refer, the number of spindles has increased to 30,000,000 or upwards.

7. Statutory Regulations in regard to the Employment of Children in Factories.

No statutory restrictions respecting the employment of children in the mills and factories of the U. Kingdom existed until 1802, when the 42 Geo. 3. was passed for the preservation of the health and morals of apprentices and others employed in cotton and other factories, and directing the local magistrates to report whether the factories

were conducted according to law, and to adopt such sanitary regulations as they might think fit. This act was followed, in 1816, by the act generally called Sir Robert Peel's Act, imposing various regulations on the employment of children in cotton-mills.

Both of these acts were repealed in 1831, by the 1 & 2 Will. 4. c. 39., commonly called Sir John Hobhouse's Act, which provided that, in cotton factories, to which it alone related, no child could legally be employed till it had attained the age of 9 years; and that no person under 18 years should be permitted to remain in the factories more than 12 hours in one day; and that on Saturdays they should only be employed in the factories for 9 hours.

Sir John Hobhouse's Act was repealed in 1833, by the 3 & 4 Will. 4. c. 103.; and this last-mentioned statute, with the 7 & 8 Vict. c. 15., and the 10 & 11 Vict. c. 29. (commonly called the 10 hours act), enact the following provisions relative to persons employed in all processes incident to the manufacture of cotton, wool, hair, silk, flax, hemp, jute or tow, separately or mixed together, or mixed with any other material, or any fabric made thereof, with the exception of factories used solely for the manufacture of lace, hats, or paper, or solely for blenching, dyeing, printing, or calendering.

1. That no person under 18 years of age shall be allowed to work in the night, *i. e.* from ½ past 8 in the evening to ½ past 5 in the morning, nor on Saturday for any purpose after ½ past 4 in the afternoon, the hours to be regulated by a public clock, marked on a notice put up in each factory.
2. That no child under 8 years of age shall be employed, and that no child between 8 and 13 years old shall be employed more than 6 hours and 30 minutes in any one day, unless the dinner-time of the young persons from 13 to 18 years old in the factory shall begin at 1 o'clock; in which case, the children beginning to work in the morning may work for 7 hours; but any child above 11 years of age employed solely in the winding and throwing of silk may work for 10 hours a day. And any occupier of a factory restricting the labour of young persons between 13 and 18 years old to 10 hours a day, may, on certain conditions, employ any child 10 hours on 3 alternate days of every week, provided that such child shall not be employed in any manner in the same or any other factory on 2 successive days.
3. That no child under 13 years of age shall work in the night for any purpose.
4. That every child under 13 years of age must have a surgical certificate of age, and must attend some school, on 5 days of every week for certain specified periods, and obtain a weekly certificate of attendance from the schoolmaster, which may be annulled by the inspector on account of the unfitness of the schoolmaster.
5. That no young person of the age of 13, and under the age of 18, shall be allowed to work for more than 10 hours in any one day, nor more than 58 hours in any one week.
6. That every young person under 16 years of age must have a surgical certificate of his age.
7. That no female above the age of 18 years shall be employed in any factory save for the same time and in the same manner as young persons in factories, *i. e.* for 10 hours in the day and 58 hours in the week, and under the above conditions as to night work, certificates of age not, however, being necessary for females above 18 years of age.
8. That in factories, in which any part of the machinery is moved by water, and time lost by stoppages from want of water or too much water, children or young persons may, under certain conditions, be employed one hour additional, except on Saturday; and that when from the same causes any part of the manufacturing machinery driven by the water-wheel has been during any part of a day stopped, the young persons who would have been employed at such machinery, may under certain conditions recover such lost time during the night following the said day, unless the said day be Saturday.
9. That the inspector of the district, one of the four inspectors appointed under the acts, shall have power to appoint a sufficient number of certifying surgeons to examine the children and young persons, and to give certificates of age to children and young persons under 16 years of age, according to certain forms and directions, but which certificate may be annulled by the inspectors or sub-inspectors appointed under the acts, provided they believe the real age of the persons mentioned in the certificates to be less than that mentioned in them, or provided the certifying surgeon of the district deems such persons to be of deficient health or strength at the time when the certificates are annulled.
10. That not less than 1½ hour shall be allowed every day for meals to every young person, to be taken between ½ past 7 A. M. and ½ past 7 P. M., and 1 hour at least before 3 P. M.: and that no child or young person shall be employed more than 5 hours before 1 P. M. without an interval for meal-time of at least 30 minutes, and that all the young persons shall have the meal-times at the same period of the day.
11. That all children and young persons shall have not fewer than 8 half-holidays in the year, 4 of such half-holidays between 15th March and 1st of October, and that no child or young person shall be allowed to work in any factory on Christmas Day or Good Friday, in England or Ireland, and in Scotland on any day the whole of which is set apart by the Church of Scotland for the observance of the sacramental fast in the parish in which the factory is situated.

The acts embody other regulations respecting the appointment of inspectors to carry out these provisions, &c.: but these, though of importance to the parties interested, by whom they must be carefully attended to, being of little public importance, need not be inserted in this place.

COWHAGE, OR COWITCH (Hind. *Kiwach*), the fruit or bean of a perennial climbing plant (*Dolichos pruriens*, Lin.). It is a native of India, as well as of several other Eastern countries, and of America. The pod is about 4 or 5 inches long, a little curved, and contains from 3 to 5 oval and flattish seeds, the outside is thickly covered with short, bristly, brown hairs, which, if incautiously touched, stick to the skin, and occasion intolerable itching. (*Ainslie's Materia Indica.*)

COWRIES (Ger. *Kauris*; Du. *Kauris*; *Fr. Coris, Cauris, Bouges*; It. *Cori, Porcellane*; Sp. *Bucios Zimbos*) are small shells brought from the Maldives, which pass current as coin in smaller payments in Hindostan, and throughout extensive districts in Africa. They used to be imported into England previously to the abolition of the slave trade, in which they were subsequently employed. They are an article of trade at Bombay. The best are small, clean, and white, having a beautiful gloss; those that are yellow, large, and without lustre, should be rejected. The freight is calculated at 20 cwt. to the ton. — (*Milburn's Orient. Com.*)

CRANBERRIES, OR RED WHORTLEBERRIES, the fruit of a moss plant,

the *Vaccinium oxycoccus* of Linnæus. The berries are globular, about the size of currants; are found in mossy bogs in different parts of Scotland, but not in great numbers: they were once common in Lincolnshire, and the northern parts of Norfolk; but since the bogs have been drained and cultivated, they are rarely met with. Cranberries have a peculiar flavour, and a sharp, acid, agreeable taste; they are easily preserved, and are extensively used in making tarts. They are very abundant in North America, and in the northern parts of Russia; the latter being of a superior quality. We import from 30,000 to 35,000 gallons annually. It is said that some very fine ones have recently been brought from New South Wales.

CRAPE (Fr. *Crêpe*; Ger. *Flohr, Krausflohr*; It. *Espumilla, Soplillo*; Rus. *Flior*; Sp. *Crespon*), a light transparent stuff, in manner of gauze, made of raw silk, gummed and twisted on the mill and woven without crossing. It is principally used in mourning. Crape was originally manufactured in Bologna; but that made in this country is now deemed superior to any made in Italy.

CREAM OF TARTAR. See ARGAL.

CREDIT, the term used to express the trust or confidence placed by one individual in another, when he assigns him money, or other property in loan, or without stipulating for its immediate payment. The party who lends is said to give credit, and the party who borrows to obtain credit.

Origin and Nature of Credit. — In the earlier stages of society, credit is in a great measure unknown. This arises partly from the circumstance of very little capital being then accumulated, and partly from government not having the means, or not being sufficiently careful, to enforce that punctual attention to engagements so indispensable to the existence of confidence and credit. But as society advances, capital is gradually accumulated, and the observance of contracts is enforced by public authority. Credit then begins to grow up. On the one hand, those individuals who have more capital than they can conveniently employ, or who are desirous of withdrawing from business, are disposed to lend, or to transfer, a part or the whole of their capital to others, on condition of their obtaining a certain stipulated premium or interest for its use, and what they consider sufficient security for its repayment; and, on the other hand, there are always individuals to be met with, disposed to borrow, partly (and among merchants principally) in order to extend their business beyond the limits to which they can carry it by means of their own capital, or to purchase commodities on speculation, and partly to defray debts already contracted. These different classes of individuals mutally accommodate each other. Those desirous of being relieved from the fatigues of business find it very convenient to lend their capital to others; while such as are anxious to enlarge their businesses obtain the means of prosecuting them to a greater extent.

It is plain, that to whatever extent the power of the borrower of a quantity of produce or a sum of money, to extend his business, may be increased, that of the lender must be equally diminished. The same portion of capital cannot be employed by two individuals at the same time. If A. transfer his capital to B., he necessarily, by so doing, deprives himself of a power or capacity of production which B. acquires. It is most probable, indeed, that this capital will be more productively employed in the hands of B. than of A.; for the fact of A. having lent it shows that he either had no means of employing it advantageously, or was disinclined to take the trouble; while the fact of B. having borrowed it shows that he conceives he can advantageously employ it, or that he can invest it so as to make it yield an interest to the lender, and a profit to himself. It is obvious, however, that except in so far as credit contributes, in the way now mentioned, to bring capital into the possession of those who, it may be fairly presumed, will employ it most beneficially, it conduces nothing to the increase of wealth.

The most common method of making a loan is by selling commodities on credit, or on condition that they shall be paid for at some future period. The price is increased proportionally to the length of credit given; and if any doubt be entertained with respect to the punctuality or solvency of the buyer, a further sum is added to the price, in order to cover the risk that the seller or lender runs of not receiving payment, or of not receiving it at the stipulated period. This is the usual method of transacting where capital is abundant, and confidence general; and there can be no manner of doubt that the amount of property lent in Great Britain, the Netherlands, and most other commercial countries, in this way, is infinitely greater than all that is lent in every other way.

When produce is sold in the way now described, it is usual for the buyers to give their bills to the sellers for the price, payable at the period when the credit is to expire; and it is in the effects consequent to the negotiation of such bills that much of that magical influence that has sometimes been ascribed to credit is believed to consist. Suppose, to illustrate this, that a paper-maker, A., sells to a printer, B., a quantity of paper, and that he gets his bill for the sum, payable at 12 months after date: B. could not have entered

into the transaction had he been obliged to pay ready money; but A., notwithstanding he has occasion for the money, is enabled, by the facility of negotiating or discounting bills, to give the requisite credit, without disabling himself from prosecuting his business. In a case like this, both parties are said to be supported by credit; and as cases of this sort are exceedingly common, it is contended that half the business of the country is carried on by its means. All, however, that such statements really amount to is, that a large proportion of those engaged in industrious undertakings do not employ their own capital, but that of others. In the case in question, the printer employs the capital of the paper-maker, and the latter employs that of the banker or broker who discounted the bill. This person had most likely the amount in spare cash lying beside him, which he might not well know what to make of; but the individual into whose hands it has now come, will immediately apply it to useful purposes, or to the purchase of the materials, or the payment of the wages of the workmen employed in his establishment. It is next to certain, therefore, that the transaction will have been advantageous. But still it is essential to bear in mind that it will have been so, not because credit is of itself a means of production, or because it can give birth to capital not already in existence; but because, through its agency, capital finds its way into those channels in which it has the best chance of being profitably employed.

The real advantage derived from the use of bills and bank notes as money consists, as has been already shown, in their substituting so cheap a medium of exchange as paper, in the place of one so expensive as gold, and in the facilities which they give to the transacting of commercial affairs. If a banker lend A. a note for 100*l.* or 1,000*l.*, the latter will be able to obtain an equivalent portion of the land or produce of the country in exchange for it; but that land or produce was already in existence. The issue of the note did not give it birth. It was previously in some one's possession; and it will depend wholly on the circumstance of A.'s employing it more or less advantageously than it was previously employed, whether the transaction will, in a public point of view, be profitable or not. On analysing any case of this kind, we shall invariably find that all that the highest degree of credit or confidence can do, is merely to change the distribution of capital — to transfer it from one class to another. These transfers are occasionally, too, productive of injurious results, by bringing capital into the hands of spendthrifts: this, however, is not, except in the case of the credit given by shopkeepers, a very common effect; and there can be no doubt that the vast majority of regular loans are decidedly beneficial.

Abuses of the present Credit System in Great Britain. Means of obviating them. — The previous observations refer rather to the credit given to individuals engaged in business, who mean to employ the capital which they borrow in industrious undertakings, than to that which is given to individuals not so engaged, and who employ the advances made to them in supporting themselves and their families. In neither case is credit of advantage, unless it be granted with due discrimination, and with reference to the character, condition, and prospects of those receiving it. In this country, however, these considerations have been in a great measure lost sight of, in the granting of credit by shopkeepers and tradesmen of all descriptions. Owing to the competition of such persons, their extreme eagerness to secure customers, and the general indolence of opulent persons, which disinclines them to satisfy every small debt when it is contracted, the system of selling upon credit has become almost universal. Few among us think of paying ready money for any thing; seven tenths of the community are in the constant practice of anticipating their incomes; and there is hardly one so bankrupt in character and fortune as to be unable to find grocers, bakers, butchers, tailors, &c. ready to furnish him upon credit with supplies of the articles in which they respectively deal. We look upon this facility of obtaining accommodations as a very great evil. They are not, in one case out of five, of any real advantage to the parties receiving them, while they are productive of very pernicious results. The system tempts very many, and sometimes even the most considerate individuals, to indulge in expenses beyond their means; and thus becomes the most fruitful source of bankruptcy, insolvency, and bad faith. To guarantee themselves from the extraordinary risk to which such proceedings expose them, tradesmen are obliged to advance the price of their goods to a most exorbitant height; so that those who are able, and who really mean to pay the debts they contract, are, in fact, obliged to pay those of the hosts of insolvents and swindlers maintained by the present system. Many tradesmen consider themselves as fortunate, if they recover from two thirds to three fourths of the sums standing in their books, at the distance of several years.

The extraordinary extent to which the credit practice is carried may be learned from the inquiries of the Parliamentary Committee on Small Debts. It appears from them, that hatters, shoemakers, &c. in the metropolis, have often 4,000*l.* and upwards on their books in debts below 10*l.*, and that *five sixths of their book debts are below that sum!* A large proportion of these debts are irrecoverable; but owing to the artificial enhance-

ment of prices, those that are good are sufficient to indemnify the traders for the loss of the bad.

It is not easy, we think, to imagine any system better fitted to generate improvidence and fraud. The vast majority of those who become insolvent, or are imprisoned for debt, consist of labourers, artisans, half-pay officers, clerks in public and other offices, annuitants, &c. — persons whom no prudent shopkeeper would ever allow to get permanently into his debt. The following Table exhibits some of the effects resulting from this system : —

Number of Persons committed for Debt to the several Prisons of the Metropolis in the Year 1842, and the Sums for which they were committed.

	For Sums above 100*l.*	For Sums between 50*l.* and 100*l.*	For Sums between 20*l.* and 20*l.*	For Sums under 20*l.*	Total.	In Custody January 1. 1843.
Queen's Bench prison	132	72	96	160	460	288
Fleet prison	59	23	26	12	120	
Marshalsea prison	2	5	29	70	106	
Whitecross Street prison	183	255	570	1929	2937	399
Horsemonger Lane prison	28	55	127	146	356	74
Total	404	410	848	2317	3979	761

It is time, certainly, that something effectual were done to put an end to such flagrant abuses — to a system that sends 1,929 persons to a single prison for debts under 20*l.* ! We do not mean to say or insinuate that credit may not frequently be given to the labouring classes with the best effects : but it is of its abuse that we complain, — of its being indiscriminately granted to every one ; to those whom it encourages to continue in a course of idleness and profligacy, as well as to those industrious and deserving persons to whom it may occasionally be of the greatest service. To secure the advantages of credit to the public, free from the enormous evils that result from its abuse, is an object of the highest importance ; and few things, we believe, would do so much to secure it, as the taking from creditors the power to arrest and imprison for debt. — (See BANKRUPTCY.)

It was stated in the House of Commons, (19th of February, 1827,) that in the space of 2½ years, 70,000 persons were arrested in and about London, at an expense to the parties, it may be estimated, of between 150,000*l.* and 200,000*l.* ! In 1827, in the metropolis and two adjoining counties, 23,515 warrants to arrest were granted, and 11,317 bailable processes were executed. Hence it may be concluded, that in this single year, within the above limits, no fewer than 12,000 persons were deprived of their liberty, on the mere allegation of others, without any *proof* that they owed them a farthing ! Well might Lord Eldon say that "*the law of arrest is a permission to commit acts of greater oppression and inhumanity than are to be met with in slavery itself,* and that the redress of such a grievance would not be attended with any fatal consequences to the country."

The following Table, which shows that 1,078 persons were committed to Horsemonger Lane prison, in 1842, for debts amounting, in all, to only 2,321*l.* 16*s.* 9¾*d.*, being, at an average, no more than 2*l.* 3*s.* 8¼*d.* each, proves that the discussions which have taken place with respect to the law of arrest and imprisonment, have not, in any material degree, lessened its mischievous operation. Whatever else may be dear in England, the fact that thousands of people are annually imprisoned for such miserable trifles shows that personal liberty is, at all events, abundantly cheap.

A Return from Horsemonger Lane Gaol of the Number of Debtors committed to the said Gaol, on Process out of Courts of Request, during the Year ending 1st of January, 1843 ; stating separately the aggregate Amount of Debts and Costs ; showing, in Classes, the Number confined from One to less than Ten Days, for Ten Days and less than Thirty, Fifty, Seventy, and One Hundred Days ; and stating, also, the Amount paid out of the County or other Rates, for the Maintenance and Support of such Prisoners, as accurately as possible.

Number committed in the year			1,078
Aggregate amount of debts	£	s.	d.
	2,321	16	9¾
costs	618	12	11
Number confined from 1 to less than 10 days			423
for 10 and 30			402
30 - 50			160
50 - 70			44
70 - 100			15
100 days and more			34
Amount paid out of the county rate for the maintenance and support of such prisoners, viz. : —			
For dietary	£	s.	d.
	256	17	0
Proportionate share of expenses of the gaol, for salaries of officers, bedding, fuel, water, rent, &c.	506	3	1

We defy any one to show that the law of arrest and imprisonment has a single good consequence to be placed as a set-off against the evils of which it is productive. Tradesmen depend, as is clearly evinced by the above statements, upon the despotical

power which it puts in their hands, to get them out of scrapes; and believe that the fear of being subjected to arrest will stimulate even the most suspicious portion of their debtors to make payment of their accounts. The records of our prisons, and of our insolvent and other courts, show how miserably these expectations are disappointed. We believe, indeed, that we are warranted in affirming that the more respectable classes of shopkeepers and tradesmen are now generally satisfied that the present system requires some very material modifications. The law of arrest and imprisonment is, in fact, advantageous to none but knaves and swindlers, and the lowest class of attorneys, who frequently buy up small accounts and bills, that they may bring actions upon them, and enrich themselves at the expense of the poor, by the magnitude of their charges. Such oppressive proceedings are a disgrace to a civilised country. Were the law in question repealed, credit would be granted to those only who deserved it; for, generally speaking, tradesmen, supposing they had nothing to trust to but their own discretion, would not deal, except for ready money, with those of whose character and situation they were not perfectly informed; and the difficulty under which all idle and improvident persons would thus be placed of obtaining loans, would do much to wean them from their vicious courses, and to render them industrious and honest. "Those," says Dr. Johnson, "who have made the laws, have apparently considered that every deficiency of payment is the crime of the debtor. But the truth is, that the creditor always shares the act, and often more than shares the guilt, of improper trust. It seldom happens that any man imprisons another but for debts which he suffered to be contracted in hope of advantage to himself, and for bargains in which he proportioned his profit to his own opinion of the hazard; and there is no reason why one should punish another for a contract in which both concurred."

The power of taking goods in execution for debts is also one that requires to be materially modified. At present, the household furniture of every man, and even the *implements used in his trade*, should there be nothing else to lay hold of, may be seized and sold in satisfaction of any petty claim. It seems to us quite clear that some limits should be set to this power; and that such articles as are indispensable either to the subsistence or the business of any poor man ought to be exempted from execution, and, perhaps, distress. The present practice, by stripping its victims of the means of support and employment, drives them to despair, and is productive only of crimes and disorders.

We are glad to observe that there seems to be a growing conviction among mercantile men, of the inconveniences arising from the present practice. A petition against imprisonment for small debts, subscribed by many of the most eminent merchants, manufacturers, bankers, &c. of the city of Glasgow, was presented to the House of Commons in 1833. It contains so brief, and at the same time so forcible, an exposition of the evils resulting from the present system, that we shall take the liberty of laying it before our readers.

"Your petitioners have been long and seriously impressed with the belief that very great evils have arisen and do arise from the imprisonment of debtors in Scotland, especially for small sums.

"The petitioners will not here question the policy of the existing laws which authorise the imprisonment of debtors for considerable sums, nor do they intend to object to the creditor retaining the fullest power over the property and effects of his debtor; but they are humbly of opinion that, in so far as these laws give creditors the power to imprison debtors for small sums, such as for 8*l.* and under, they are not only injurious to the public, and ruinous to the debtor, but even hurtful to the creditor himself.

"It would be a waste of time to dwell upon the hardship of subjecting debtors to imprisonment for small debts, contracted sometimes certainly under circumstances of real distress, but more frequently from the improper use of credit, with which they are too readily supplied. The creditor takes care that his profit shall be commensurate with his risk; and the debtor is induced to purchase freely, and at any price, that which he is not immediately called upon to pay: the creditor coolly and cruelly calculates upon the power which the law has granted him over the person of his debtor if he fail to discharge his debt to him, while the debtor forgets that, by the credit so imprudently afforded him, he is preparing the way for his own ruin, and that of all who have any dependence upon him.

"The total number of debtors imprisoned in the gaol of Glasgow alone, for debts of 8*l.* and under, was, in the year 1830, 353; in 1831, 419; and in 1832, 437; while the whole number of incarcerations in that gaol for sums of every description were, in the year 1830, 557; in 1831, 630; and in 1832, 696; the proportion of sums of 8*l.* and under being nearly two thirds of the whole on the average of these 3 years.

"To remedy these evils, your petitioners humbly submit that means should be adopted for the repeal of the laws at present in force, in so far as they sanction the recovery of small debts by imprisonment, reserving their effect in every other respect; the result of which would be, that credit for small sums would be greatly limited, if not entirely extinguished, and the poorer classes rendered more provident; and by purchasing with money at a cheaper rate what they now buy at an extravagant price, they would be enabled to procure for themselves additional comforts, from the more economical employment of their small incomes.

"May it therefore please your Honourable House to take this matter into your consideration, and to adopt such means as you in your wisdom shall see proper, to prevent the incarceration of debtors for sums under 8*l.*, and thereby remove or greatly mitigate the evils of improvidence on the part of the debtor, and of oppression on the part of the creditor, which necessarily arise under the present system."

So reasonable a proposal, supported by such conclusive statements, could not fail to make a deep impression; and a bill was soon after introduced, and passed into a law, (stat. 6 & 7 Will. 4. cap. 70.) taking away the power of imprisonment in Scotland for debts under 8*l.* 6*s.* 8*d.* over and above interest and expenses, except in cases of fraud. This bill is admitted to have been eminently beneficial; and it is to be hoped that the

advantages of which it has been productive may lead to the extension and general application of its principle.

Propriety of placing all small Debts beyond the Pale of the Law. — The taking away the power of arrest and imprisonment, except in the case of fraudulent bankruptcy, would certainly be a material improvement upon the existing system. But we are satisfied that it does not go far enough; and that by far the most desirable and beneficial reform that could be effected in this department would be *to take away all action for debts under a given sum, as 50l. or 100l.* The only exception to this rule should be in the case of *claims for wages*, or labour done under executory contracts. To prevent the measure from being defeated, no action should be granted on bills under *50l.* or *100l.*, except upon those drawn by or upon regular bankers. This would be a radical change certainly; but we are fully satisfied that it would be highly advantageous to every class of the community, and most of all to labourers, retail dealers, and small tradesmen. It would protect the former from oppression, at the same time that it would tend powerfully to render them more provident and considerate; it would teach the latter to exercise that discretion in the granting of credit which is so very indispensable; and it would be publicly beneficial, by strengthening the moral principle, and making the contraction of debts for small sums, without the means of paying them, at once difficult and disgraceful.

We agree entirely in opinion with those who think that it is to no purpose to attempt to remedy the defects now pointed out, by multiplying courts and other devices for facilitating the speedy recovery of small debts. This is beginning at the wrong end; or rather it is attempting to obviate the influence of one abuse by instituting another. No wise statesman will ever be easily persuaded to fill the country with petty local courts; for these, when not absolutely necessary, are the merest nuisances imaginable; and he would, at all events, exert himself, in the first instance, to do away, in so far as possible, with the circumstances that make individuals resort to them. But it is certain that nine tenths of the cases in county courts originate in questions as to simple contract debts under *50l.*; and were such debts placed, as they ought to be, beyond the pale of the law, the courts would be wholly unnecessary. Our object ought not to be to provide means for enforcing the payment of trifling debts, but *to prevent their contraction.* We believe, indeed, that, instead of lessening, the multiplication of district courts will materially aggravate, all the evils of the present credit system. The belief that they may readily enforce their claims by resorting to them will make shopkeepers and tradesmen still more disposed than at present to give credit, while the unprincipled, the inconsiderate, and the necessitous will eagerly grasp at this increased facility. What there is of caution amongst our retail dealers is in no inconsiderable degree owing to the want of those petty tribunals so many are anxious to have universally established. The more they are increased, the less will caution prevail. But instead of diminishing this virtue, — for such it really is, — it cannot be too much increased. Nothing will ever deter those who ought not to obtain credit from taking it while in their power; but those who give it may be made to exercise greater discretion; they may be made to know that it is a private transaction between themselves and those to whom they grant it; and that in the case of petty debts they have only their own sagacity to look to, such transactions not being cognizable by law. A measure of the sort here proposed would not, as some appear to imagine, annihilate credit. It would, no doubt, annihilate that spurious indiscriminating species of credit, that is as readily granted to the spendthrift and prodigal, as to the frugal and industrious individual; but to the same extent that it deprived the former of the means of obtaining accommodation, it would extend those of the latter. Nothing short of this — nothing but the placing all small debts beyond the pale of the law — will ever fully impress tradesmen with a conviction of the vast advantages that would result to themselves from their withdrawing their confidence from courts and prisons, and preventing every one from getting upon their books, of whose situation and circumstances they are not fully aware; nor will anything else be able completely to eradicate the flagrant abuses inherent in the present credit system, and which have gone far to render it a public nuisance.

One of the worst consequences of the present system is the sort of thraldom in which it keeps thousands of labourers and other individuals, whom the improper facilities for obtaining credit originally led into debt. Such persons dare not leave the shops to which they owe accounts; and they dare neither object to the quality of the goods offered to them, nor to the prices charged. Dr. Johnson has truly observed, that "he that once owes more than he can pay, is often obliged to bribe his creditor to patience by increasing his debt. Worse and worse commodities at a higher and higher price are forced upon him; he is impoverished by compulsive traffic; and at last overwhelmed in the common receptacles of misery by debts which, without his own consent, were accumulated on his head." By taking away all right of action upon small debts, this system of invisible but substantial coercion would be put an end to. The tradesman would

take care who got, in the first instance, upon his books; and instead of forcing articles upon him, would cease to furnish him with any unless he found he was regular in making his payments; while the customer to whom credit was of importance would know that his only chance of obtaining it would depend upon his character and reputation for punctuality. The abuses of the sort now alluded to, that grew out of what has been denominated the truck system, justly occasioned its abolition; but these were trifling compared with those that originate in the bringing of petty debts within the pale of the law.

When the former edition of this work was published we were not aware that it had been previously proposed to take away all action for debts under 50*l.* or 100*l.*; but we have since met with a pamphlet, entitled *Credit Pernicious*, published in 1823, in which this plan is proposed and ably supported. There are also some valuable remarks and observations on the topics now treated of, in the *Treatise on the Police, &c. of the Metropolis*, by the author of the "Cabinet Lawyer," pp. 114—134.

CREW, the company of sailors belonging to any ship or vessel. Formerly no British ship could be navigated except by a crew ¾ths of which were British subjects, besides the master; and every ship of 80 tons burden and upwards had to carry to sea a certain number of apprentices in proportion to her tonnage. But these regulations have been abandoned.—(See NAVIGATION LAWS). The crews of British ships may now consist wholly of Englishmen, or wholly of foreigners, or they may be mixed together in any proportion; and it is no longer necessary to carry to sea a single apprentice. The duties and rights of seamen are explained under the articles SEAMEN and MERCANTILE MARINE ACT in this work. Ready obedience to the lawful orders of their superiors, ability to discharge their duties, and alacrity in their performance, at all times and under the most perilous circumstances, are the distinguishing characteristics of good seamen.

CUBEBS (Ger. *Kubeben*; Fr. *Cubebes*; It. *Cubebi*; Sp. *Cubebas*; Rus. *Kubebü*; Lat. *Piper Cubeba*; Arab. *Kebābeh*; Javan. *Kumunkus*; Hind. *Cubab-chinie*), the produce of a vine or climber extensively grown in Java. It is a small dried fruit, like a pepper-corn, but somewhat longer. Cubebs have a hot, pungent, aromatic, slightly bitter taste; and a fragrant agreeable odour. They should be chosen large, fresh, sound, and the heaviest that can be procured. A duty on their importation, after being reduced in 1842 from 6*d.* to 1*d.* per lb., was repealed in 1845. During the 3 years ending with 1852 the average annual imports and exports of cubebs amounted respectively to 56,945 and 25,993 lbs., leaving about 31,000 lbs. for consumption. Their price in London varied, in Sept. 1853, from 5*l.* 10*s.* to 7*l.* per cwt.

CUCUMBER, a tropical plant, of which there are many varieties, largely cultivated in hothouses in England.

CUDBEAR, a purple or violet coloured powder used in dyeing violet, purple, and crimson, prepared from a species of lichen (*Lichen tartareus* Lin.), or crustaceous moss, growing commonly on limestone rocks in Sweden, Scotland, the north of England, &c. About 130 tons of this lichen are annually exported from Sweden. It commonly sells in the port of London for about 20*l.* per ton; but to prepare it for use it must be washed and dried; and by these operations the weight is commonly diminished a half, and the price, in effect, doubled. Though possessing great beauty and lustre at first, the colours obtained from cudbear are so very fugaceous, that they ought never to be employed but in aid of some other more permanent dye, to which they may give body and vivacity. In this country it is chiefly used to give strength and brilliancy to the blues dyed with indigo, and to produce a saving in that article; it is also used as a *ground* for madder reds, which commonly incline too much to yellow, and are made *rosy* by this addition. The name cudbear was given to this powder by Dr. Cuthbert Gordon, who, having obtained a patent for the preparation, chose in this way to connect it with his own name.—(*Bancroft, Philosophy of Permanent Colours*, vol. i. pp. 300—304.)

CUMMIN SEED (Ger. *Kumin*; Fr. *Cumin*; It. *Comino, Cumino*; Sp. *Comino*; Arab. *Kemun*), the seeds of an annual plant (*Cuminium Cyminum* Lin.), a native of Egypt, but extensively cultivated in Sicily and Malta. They have a strong, peculiar, heavy odour, and a warm, bitterish, disagreeable taste. They are long and slender.

CURRANTS (Fr. *Raisins de Corinthe*; Ger. *Korinthen*; It. *Uve passe di Corinto*; Lat. *Passulæ Corinthiacæ*; Rus. *Korinka, Opoek*; Sp. *Pasas de Corinto*), a small species of grape, largely cultivated in Zante, Cephalonia, and Ithaca, of which islands they form the staple produce; and in the Morea, in the vicinity of Patras. The plant is delicate: and as 6 or 7 years must elapse, after a plantation has been formed, before it begins to produce, its cultivation requires a considerable outlay of capital. The crop is particularly liable to injury from rains in harvest, and is altogether of a very precarious description. After being dried in the sun, the currants are exported packed in large butts. They are in extensive demand in this country; and, when mixed with flour and suet, make a dish that is peculiarly acceptable to the lower classes. But, as if it had been intended

to put them beyond the reach of all but the richest individuals, they were burdened, down to 1834, with the exorbitant duty of 44*s.* 4*d.* a cwt. In that year, however, the duty was reduced a half, or to 22*s.* 2*d.* a cwt., and their importation was in consequence very materially increased. We, however, observed in a former edition of this work that as the price of currants in bond varied from 20*s.* to 35*s.* a cwt., a duty of 22*s.* 2*d.* a cwt. was a great deal too high; and that it was, no doubt, owing to its amount that the consumption of currants was not materially greater. Sir Robert Peel, we are glad to say, took this view of the matter, and reduced the duty on currants, in 1844, to 15*s.* a cwt. The result has been such as had been anticipated. At an average of the 3 years ending with 1842, 183,836 cwts. currants were annually entered for consumption, producing an annual revenue of 212,894*l.* But, at an average of the years 1849 and 1850, no fewer than 419,846 cwts. were entered for consumption, while the annual revenue was increased to 330,241*l.* ! This, therefore, is one of the most memorable instances of the advantage of a judicious reduction of an excessive duty on an article in extensive demand. Besides increasing the comforts of the public and the amount of the revenue, it has given a considerable stimulus to the trade with Greece and the Ionian Islands, currants being the principal product which they have to export.

No abatement of duties is made on account of any damage received by currants.

A Treasury letter of the 30th of March, 1816, directs the following tares to be allowed, with liberty to the merchant and officers to take the actual tare when either party is dissatisfied. Currants in casks from Zante 13 per cent., Leghorn 10 per cent., Trieste 10 per cent.

CUSTOM-HOUSE, the house or office where commodities are entered for importation or exportation; where the duties, bounties, or drawbacks payable or receivable upon such importation or exportation are paid or received; and where ships are cleared out, &c.

For information as to the proceedings necessary at the Custom-house on importing or exporting commodities, see the article IMPORTATION AND EXPORTATION.

The principal British Custom-house is in London; but there are Custom-houses subordinate to the latter in all considerable sea-port towns.

CUSTOMS, are duties charged upon commodities on their being imported into or exported from a country.

Customs duties seem to have existed in every commercial country. The Athenians laid a tax of a fifth on the corn and other merchandise imported from foreign countries, and also on several of the commodities exported from Attica. The *portoria*, or customs payable on the commodities imported into, and exported from, the different ports in the Roman empire, formed a very ancient and important part of the public revenue. The rates at which they were charged were fluctuating and various, and little is now known respecting them. Cicero informs us, that the duties on corn exported from the ports of Sicily were, in his time, 5 per cent. Under the Imperial government, the amount of the *portoria* depended as much on the caprice of the prince as on the real exigencies of the state. Though sometimes diminished, they were never entirely remitted, and were much more frequently increased. Under the Byzantine emperors, they were as high as 12½ per cent.

Customs duties existed in England previously to the Conquest. They appear to have derived their name from having been immemorially or customarily charged on certain articles when conveyed across the principal ferries, bridges, &c. within the kingdom, and on these and other articles of native and foreign produce, when exported from or imported into the kingdom. In 1206, the entire customs revenue of England, including that derived from tolls and fairs, amounted to only 4,958*l.* 7*s.* 3½*d.* ! It is not, therefore, true, as has sometimes been stated, that the king's first claim to the customs was established in the reign of Edward I. But that able and politic prince, by rendering the levy of the old duties more effectual, and procuring the sanction of parliament to the imposition of new duties, was the first who made the customs revenue of any material importance. The duties were, at first, principally laid on wool, woolfels (sheep-skins), and leather when exported. There were also extraordinary duties paid by aliens, which were denominated *parva costuma*, to distinguish them from the former, or *magna costuma*. The duties of tonnage and poundage, of which mention is so frequently made in English history, were customs duties; the first being paid on wine by the tun, and the latter being an *ad valorem* duty of so much a pound on all other merchandise. When these duties were granted to the Crown, they were denominated *subsidies*; and as the duty of poundage had continued for a lengthened period at the rate of 1*s.* a pound, or 5 per cent., a subsidy came, in the language of the customs, to denote an *ad valorem* duty of 5 per cent. The *new subsidy* granted in the reign of William III. was an addition of 5 per cent. to the duties on most imported commodities. — (*Treatise on Taxation*, by the author of this work, 2d. ed. p. 234.)

The various customs duties were collected, for the first time, in a book of rates published in the reign of Charles II.; a new book of rates being again published in the reign of George I. But, exclusive of the duties entered in these two books, many more had been imposed at different times; so that the accumulation of the duties, and the complicated regulations to which they gave rise, were productive of the greatest embarrassment. The evil was increased by the careless manner in which new duties were added to the old; a percentage being sometimes added to the original tax; while at

other times the commodity was estimated by a new standard of bulk, weight, number, or value, and charged with an additional impost, without any reference to the duties formerly imposed. The confusion arising from these sources was still further augmented by the special appropriation of each of the duties, and the consequent necessity of a separate calculation for each. The intricacy and confusion inseparable from such a state of things proved a serious injury to commerce, and led to many frauds and abuses.

The Customs Consolidation Act, introduced by Mr. Pitt in 1787, did much to remedy these inconveniences. The method adopted was, to abolish the existing duties on all articles, and to substitute in their stead one single duty on each article, equivalent to the aggregate of the various duties by which it had previously been loaded. A more simple and uniform system was, at the same time, introduced into the business of the Custom-house. These alterations were productive of the best effects. But the many changes in the customs duties and regulations which took place during the lengthened struggle terminated in 1815, having again introduced a great deal of complexity into the business of the Custom-house, a new consolidation was effected in 1825. The numerous statutes relating to the customs, amounting, including parts of statutes, to about 450, were repealed and compressed into some half dozen statutes of a reasonable bulk, and drawn up with a commendable degree of perspicuity.

The numerous reforms effected by Sir Robert Peel occasioned further changes. And these, and the various reforms effected by the present Chancellor of the Exchequer (Mr. Gladstone), made it necessary again to consolidate the Customs laws. This was accomplished by the Customs Consolidation Act of 1853, the 16 & 17 Vict. c. 107. This statute, which was drawn up under the direction of James Wilson, Esq., Secretary to the Treasury, is at once brief, comprehensive, and so clear as to be level to the comprehension of those least acquainted with such matters. It comprises the whole law respecting the importation, exportation, warehousing, smuggling, &c., of goods, with the regulations to be observed in the coasting and colonial trades, &c. This, however, is only a part of its merit: for, besides condensing and simplifying the various customs laws, it has introduced some most important improvements. It has, for instance, made an end, in so far at least as the customs is concerned, of the unjust regulation which, by exempting the Crown from the payment of costs, obliged a party in a suit with the commissioners, even when successful, to pay his own expenses. It also relieves all goods seized, on the allegation of their not having paid the proper duty, from seizure on the importer depositing the amount claimed by the Customs, till the point is inquired into and properly decided, when, if the Customs are found to have made an overcharge, a corresponding part of the sum deposited is to be returned to the merchant, with interest at the rate of 5 per cent., and the expenses of suit. The act further provides that an importer who considers himself aggrieved by a decision of the Board of Customs, may, if he choose, have the case inquired into in open court before a Commissioner, where he may meet the officer making the accusation face to face, and learn by examination and otherwise the nature of the evidence by which it is supported, and the real facts of the case. The Commissioner who conducts an inquiry of this sort reports the evidence so taken to the Board, who may, thereupon, confirm or modify their decision; it being optional with the merchant either to abide by it or to carry the case before a competent tribunal. And in the event of the duty or penalty claimed being under 100*l.*, or of the case being of a simple kind, it may be tried before magistrates, county courts, and other inferior tribunals, so that the public will no longer be debarred from asserting their rights by the heavy expense attending trials in the Exchequer Court and at the assizes. The most important portions of this statute are given under the various heads to which it refers. (See COASTING TRADE, COLONIES AND COLONY TRADE, IMPORTATION AND EXPORTATION, SMUGGLING, &c.) But every merchant will do well to supply himself with the statute; and to make its provisions the subject of careful study.

Customs duties, like all duties on particular commodities, though advanced in the first instance by the merchant, are ultimately paid by those by whom they are consumed. When a government lays a duty on the foreign commodities which enter its ports, the duty falls entirely on such of its own subjects as purchase these commodities; for the foreigners would cease supplying its markets with them, if they did not get the full price of the commodities, exclusive of the tax; and, for the same reason, when a government lays a duty on the commodities which its subjects are about to export, the duty does not fall on them, but on the foreigners by whom they are bought. If, therefore, it were possible for a country to raise a sufficient revenue by laying duties on exported commodities, such revenue would be wholly derived from others, and it would be totally relieved from the burden of taxation, except in so far as duties might be imposed by

foreigners on the goods it imports from them. Care, however, must be taken, in imposing duties on exportation, not to lay them on commodities that may be produced at the same, or nearly the same, cost by foreigners; for the effect of the duty would then be to make the market be supplied by others, and to put an entire stop to their exportation. But in the event of a country possessing any decided natural or acquired advantage in the production of any sort of commodities, a duty on their exportation would seem to be the most unexceptionable of all taxes. If the Chinese chose to act on this principle, and had the power, they might derive a considerable revenue from a duty on exported teas, which would fall entirely on the English and other foreigners who buy them. The coal and tin, and perhaps, also, some of the manufactured goods produced in this country, seem to be in this predicament.

The revenue derived from the customs duties in 1590, in the reign of Elizabeth, amounted to no more than 50,000*l.* In 1613, it had increased to 148,075*l.*; of which no less than 109,572*l.* were collected in London. In 1660, at the Restoration, the customs produced 421,582*l.*; and at the Revolution, in 1688, they produced 781,987*l.* During the reigns of William III. and Anne, the customs revenue was considerably augmented, the nett payments into the exchequer in 1712 being 1,315,423*l.* During the war terminated by the peace of Paris in 1763, the nett produce of the customs revenue of Great Britain amounted to nearly 2,000,000*l.* In 1792, it amounted to 4,407,000*l.* In 1815, at the close of the war, it amounted to 11,360,000*l.*; and last year (1852) it amounted to 20,048,744*l.* 11*s.* 4*d.*, and including Ireland, to 22,137,120*l.* 1*s.* 11*d.*

Astonishing, however, as the increase of the customs revenue has certainly been, it is not quite so great as it appears. Formerly the duties on some considerable articles, such as sugar, brandy, wine, &c. imported from abroad, were divided partly into customs duties charged on their importation, and partly into excise duties on their being taken into consumption. But these duties have since been wholly transferred to the customs; the facilities afforded, by means of the warehousing system, for paying the duties in the way most convenient for the merchant, having obviated the necessity of dividing them into different portions.

It will be seen from various articles in this work—(see BRANDY, GENEVA, SMUGGLING, TEA, TOBACCO, &c.)—that the exorbitant amount of the duties which have been laid on various articles imported from abroad leads to much smuggling and fraud; and requires, besides, an extraordinary expense in many departments of the customs service, which might be avoided were these duties reduced within more reasonable limits. This, however, is the business of government, and not of those intrusted with the management of the customs; and it would be unjust to the latter not to mention that this department has been essentially improved, during the last forty years, in respect of economy, whatever may be thought of its efficiency. The following extracts from a letter to the Right Hon. H. Goulburn, ascribed to a late chairman of the Board of Customs (R. B. Dean, Esq.), give a brief but satisfactory view of the improvements that have been effected:—

"As regards the department of customs in 1792, the principal officers engaged in the receipt of the duties in the port of London were patent officers.

"The first Earl of Liverpool was collector inwards.

"The late Duke of Manchester, collector outwards.

"The Duke of Newcastle, and afterwards the Earl of Guilford, comptroller inwards and outwards.

"Lord Stowell, surveyor of subsidies and petty customs.

"These noblemen took no part in the official duties, but merely exercised the right of appointing deputies and clerks.

"Both principals and deputies were remunerated by fees. The patentees received the fees denominated patent, and the deputies retained the fees called the fees of usage for their own use. In addition to these fees, both deputies and clerks received fees for despatch.

"The same system prevailed throughout the whole department. The salaries of the officers were nominal; and the principal proportion of all official income was derived from fees. These fees were constantly varying both in rate and amount, and formed a continual source of dispute and complaint between the merchant and the officer.

"This system (after having been repeatedly objected to by various commissions of inquiry, and finally by the committee of finance in 1797,) was put an end to in the year 1812, by the act 51 Geo. 3. c. 71., by which all patent offices and fees were abolished, and compensation allowances granted to the patent officers, and fixed salaries established.

"The additional salaries granted under this arrangement amounted to about 200,000*l.*, and the temporary compensation allowances to about 40,000*l.* per annum.

"The fees abolished, and from which the public were relieved, amounted to about 160,000*l.* per annum.

"In addition to the amount of fees from which the public were relieved, various allowances made by the Crown to officers for quarantine, coal poundage, poundage on seizures, and many other incidental allowances, which did not appear on the establishment, were also abolished, and the salaries of every officer placed at one view upon the establishment.

"The effect of these salutary measures has been to give a great apparent increase to officers' salaries since 1791; and, upon a mere comparison of the establishment of 1792 with 1830, without the above explanation, it would appear that the pay of the officers had been most materially augmented, whereas, in point of fact, the difference is in the mode of payment; and the incomes of the officers at the present period (as compared with 1792) are in general less; and, consequently, the public are less taxed for the performance of the same duty *now* than in 1792.

"In the year 1792, the warehousing system had not been established. Officers were admitted at all ages, and there was no system of classification or promotion. The officers at the out-ports and in London were generally appointed through local influence; and were too often persons who had failed in trade, or had been in menial service, and who regarded their situations rather as a comfortable provision for their families than as offices for which efficient services were required. The superintendence and powers of the Board were cramped and interfered with by circumstances and considerations which prevented the enforcement of wholesome regulation. The whole system was so imperfect, so far back only as 1818, that a special commission was appointed to inquire into the department; and, upon the recommendation of that commission, various regulations have been adopted.

"The age of admission has been limited; a system of classification and promotion of officers, and a graduated scale of salaries, established throughout the whole department; and, by this means, local interference in the promotion of officers has been abolished; the attendance of officers increased, regulated, and strictly enforced; holidays reduced from 46 in the year to 3, viz. Good Friday, the King's birthday, and Christmas day; useless oaths, and bonds and forms of documents of various kinds, discontinued; increased facility and dispatch afforded to the merchants' business; the accounts kept in the different offices, and returns of all kind, revised, simplified, and reduced; and various minor regulations of detail established; the whole machinery of the department remodelled, and adapted to the trade and commerce of the country.

"In Ireland, the number of officers employed at all the ports, in the year ended the 5th of January, 1830, and the salaries and charges, did not much exceed the number and expense at the port of Dublin alone in 1818; and within the space of 11 years, nearly two thirds of the officers employed at the ports in Ireland have been discontinued; the number having been, in 1818, 1755; in 1829, 544; and an annual reduction in salaries and charges has been effected to the extent of 173,724*l.*; the amount having been, in 1818, 285,115*l.*; in 1829, 111,391*l.* (103,813*l.* of that amount having been reduced between the years 1823 and 1828), upon an expenditure of 285,115*l.*; and the receipts were nearly equal, in 1827, to those of 1818 and 1823, notwithstanding the total repeal of the cross Channel duties, amounting to about 340,000*l.* per annum, subsequent to the latter period.

"Influence is no longer allowed to prevail; and in many cases which have recently occurred, and in which the patronage of government might have been fairly exercised, it has been at once abandoned, in order to give way to arrangements by which the services of some very intelligent and highly respectable officers, whose offices had been abolished, could be again rendered available with a material saving to the public.

"By an order from the Lords of the Treasury, of the 20th of February, 1830, the salaries of the commissioners, and of other officers, have been prospectively reduced, and directions given to revise the whole establishment in the spirit of that order, with a view to every possible reduction."

Defects and Improvement of the Customs Establishment. — The above are great improvements, and reflect credit alike on the government and the Board of Customs. But the latter has, notwithstanding, been less efficient than might have been expected. A few years ago it was found that extensive frauds had been carried on in the port of London for a lengthened period, in the entry of silks, gloves, and other highly taxed articles, through the connivance of the customs officers. The origin, no doubt, of these, as of most similar frauds, may be traced to the exorbitancy of the then existing duties, and to the consequent temptation which they held out to smuggling on the part of the importers and the corruption of the officers. But, admitting this, it is, at the same time, abundantly clear that had anything like an efficient supervision and check been exercised by the commissioners and their superior officers, these frauds could not have been carried on so long, or to such an extent. The commissioners could not but be aware that frauds of no common magnitude were taking place in the entry of goods in the Thames. Private parties had assured them that such was the case; and, independently of this, the fact must have been established to the conviction of every reasonable person by comparing the accounts given by the French custom-house of the exportation of silks, gloves, &c. from France for England, with the entries of the same in our customs returns. And it was the duty of the commissioners, on seeing this extraordinary discrepancy, to have themselves immediately entered into a searching inquiry into its origin, and not to have devolved that duty on others, or waited till the frauds were discovered by the confessions of some of those engaged in carrying them on.

We hope it will not be supposed, from anything now stated, that we have any wish to extenuate the guilt of the officers who participate in the plunder of the revenue; but, how much and how deservedly soever we may blame them, we need not be surprised, considering their situation in life, the smallness of their salaries, and the carelessness of their superiors, that they should sometimes yield to the powerful temptations to which they are exposed.

In 1851 the Commissioners of Customs were so ill-advised as to institute numerous actions, some of them of a very paltry description, against two of the principal London Dock Companies. We mentioned in the last edition of this work, that it was most probable that these actions, even if the Commissioners were successful, would do little more than establish some irregularity or neglect of duty on the part of the Dock Companies, whose interests, in as far as the collection of the revenue is concerned, are, in effect, identical with those of the government. The result has more than justified these anticipations. The proceedings against the Companies, which were of a most vexatious, costly, and oppressive character, terminated in their substantial acquittal. The irregularities (for they amounted to nothing more) of which they were convicted, were venial in the extreme, and, in truth, quite unworthy of public notice.

This, however, is a case in which good was educed out of evil. The extraordinary proceedings now referred to, coupled with the delays and other annoyances experienced by merchants in transacting business with the Customs, rendered that department extremely unpopular. A very general demand was in consequence made for an effectual reform of the practices followed in the Custom-house, and for a reconstruction of the Board. The subject was carefully investigated by a committee of the House of Commons. And we are glad to be able to say that the most important object, or the simplification of the business conducted by the Customs, and the placing it on a more equitable footing, was in great measure effected by the Consolidation Act to which we have already referred. The Board was not, indeed, amended. But there are fewer Commissioners now than formerly, so that the responsibility attaching to each is increased, though the general opinion seems to be that they are still too numerous. It is believed that in future, when new Commissioners are appointed, they will be selected, more frequently than hitherto, from among the officers of the establishment, and the mercantile body. And this, it is probable, notwithstanding the contrary opinion of the Commissioners, would be an improvement.

The smuggling that is still carried on is principally occasioned by the high duties on tea (now in course of being reduced), tobacco, especially the latter, and a few other articles. The coast guard, and the preventive water guard, costing together about 450,000*l.* or 500,000*l.* a year, might be dispensed with, were the duties now referred to adequately reduced.*

In Scotland, separate Custom-houses seem to be multiplied to a useless extent. It is true that some years ago a very considerable change for the better was effected in the Scotch Customs department; but it is still susceptible of, and should be subjected to, great curtailment. Why should a collector, comptroller, clerks, &c. be employed to transact business that in many instances would not afford half employment for a single officer?

The reader will find, in the accounts of most imported articles of any consequence given in this work, statements of the customs duty paid on their importation. It may be useful, however, to have them all brought together in one point of view, as in the following Table.

An Account of the Gross and Nett Produce of the Customs Revenue of the U. Kingdom, distinguishing between Great Britain and Ireland, in the Year ended 31st March, 1858; showing the Amount collected on each Article usually contributing 100*l.* or more to the Annual Revenue of the U. Kingdom.

During the same year the expense of collecting the Customs revenue, ex. the land guard and preventive water guard, amounted to 843,757*l*.

N. B. The Board of Customs have issued two Annual Reports on the state of the

Customs Department, which embody a great deal of useful information. The first Report, which gives an account of the history and progress of the department, is especially interesting.

An Account, showing the Gross Receipt and Nett Produce of the Customs Revenue of the United Kingdom in each Year from 1807 to 1858, with the Charges of Collection thereon, and the Rate per Cent. of Collection on the Gross Receipt and Nett Produce respectively.

The following clauses of the Customs Consolidation Act, the 16 & 17 Vict. c. 107., refer to the appointment of customs officers.

Appointment of Officers.—It shall be lawful for the Commissioners of the Treasury, or, under their authority, the Commissioners of Customs, to appoint proper persons for the management and collection of the customs, and the performance of all duties connected therewith, under the control and direction of the Commissioners of Customs, and to grant to such persons such salaries or allowances, or to permit them to receive such emoluments for executing the duties of their respective offices, as may be proper, and to require of such persons such securities for their good conduct as the said Commissioners of the Customs shall deem necessary; and such persons shall hold their offices during the pleasure of the Commissioners of the Treasury or of the Commissioners of Customs; and all salaries or allowances granted to any officer or other person in the service of the customs shall be paid without any deduction on account of any duties imposed by any act of parliament, unless expressly charged thereon; and when any sum of money shall have been or shall be granted annually or otherwise to any person who has been or shall have been employed in the service of the customs as a superannuation allowance upon the retirement of such person from such service, or as a compensation for past services, it shall not be lawful for the grantee of such allowance or compensation to assign or dispose of the same to any person or persons whomsoever, and any such assignment or disposition shall be void to all intents and purposes, and shall not be enforced in any court of law or equity.—§ 1.

Persons employed on Service of the Customs shall be deemed Officers for such Service.—Every person employed on any duty or service relating to the customs, trade, or navigation, either in the U. K., the

Channel Islands, or any of H. Majesty's possessions abroad, by the orders or with the concurrence of the Commissioners of Customs (whether previously or subsequently expressed), shall be deemed to be the officer for that duty or service; and every act required by law to be done by or with any particular officer nominated for such purpose, if done by or with any person appointed by the Commissioners of Customs to act for such particular officer, shall be deemed to be done by or with such particular officer; and every act required by law to be done at any particular place within any port, if done at any place within such port appointed by the Commissioners of Customs for such purpose, shall be deemed to be done at the particular place so required by law; and all commissions, deputations, and appointments granted to any officers of the customs in force at the commencement of this act shall continue in force as if the same had been granted under the authority of this act, and all bonds or other securities which shall have been given by or for any such officers and their respective sureties for good conduct or otherwise shall remain in full force. — § 2.

Clause 3rd enacts that any officer taking fee or reward not authorized by law shall be dismissed.

Declaration on Admission to Office. — Every person who shall be appointed to any office or employment in the customs, under the control and direction of the Commissioners of Customs, shall on his admission thereto make the following declaration: —

'I *A. B.* do declare, that I will be true and faithful in the execution, to the best of my knowledge and power, of the trust committed to my charge and inspection in the service of H. Majesty's Customs; and that I will not require, take or receive any fee, perquisite, gratuity, or reward, whether pecuniary or of any sort or description whatever, either directly or indirectly, for any service, act, duty, matter, or thing done or performed or to be done or performed in the execution or discharge of any of the duties of my office or employment, on any account whatever, other than my salary and what is or shall be allowed me by law, or by any special order of the Commissioners of H. Majesty's Treasury, or the Commissioners of H. Majesty's Customs for the time being.'—§ 4.

Hours of Attendance, &c. — The Commissioners of the Treasury may, by their warrant from time to time appoint the hours of attendance of the commissioners and officers of customs, and of other persons in the customs service, at their proper offices and places of employment; and the Commissioners of Customs may appoint the times during such hours at which any particular parts of the duties of any such officers and other persons shall be performed. — § 5.

Holidays. — No day shall be kept as a public holiday by the customs except Christmas Day and Good Friday, and such other days as may be appointed to be kept as such by proclamation, and, so far as regards Scotland, such days as shall be appointed to be so kept by authority of the General Assembly, and also such days as shall have been or may be appointed for the celebration of the birthdays of H. Majesty and her successors, and such days shall be kept as public holidays by the officers and servants of the dock companies in the U. K. — § 6.

Officers of Customs not to serve in public Offices. — No commissioner, officer, clerk, or other person acting in the management or collection of the customs shall be compelled to serve in the militia, or on any jury or inquest, or to assume the office of a mayor or sheriff, or to act in any corporate, parochial, or other public office. — § 7.

Office of Inspector General of Imports and Exports. — The office of inspector general of imports and exports was established in 1696. The accounts of the trade and navigation of the country, annually laid before parliament, are furnished by this office; and from the ability of the officers, and the improved manner in which these accounts are now made out, they have become of great public importance. Their accuracy must, of course, depend on the accuracy of the entries; but as respects articles on which the duties are reasonable, or low, and in which, consequently, there is no great temptation to clandestine importation, they may be regarded as nearly accurate. It is now usual to give statements of the quantities of the principal articles, exported and imported, as well as of their declared or real values; which is a great improvement.

CUTLERY, a term used to designate all manner of sharp and cutting instruments made of iron or steel, as knives, forks, scissors, razors, shears, scythes, &c. Sheffield is the principal seat of the cutlery manufacture; but the few knives and other articles made in London are said to be of superior quality.

The act 59 Geo. 3. c. 7. gives the manufacturers of cutlery made of *wrought* steel, the privilege of marking or stamping them with the figure of a hammer; and prohibits the manufacturers of any articles of cutlery, edge tools, or hardware, *cast or formed in a mould*, or manufactured otherwise than by means of a hammer, from marking or impressing upon them the figure of a hammer, or any symbol or device resembling it, on pain of forfeiting all such articles, and 5*l.* for every dozen. A penalty of 10*l.* per dozen, exclusive of forfeiture, is also imposed upon every person having articles of cutlery in his possession for the purpose of sale, marked with the words *London* or *London made*, unless the article so marked have been really manufactured within the city of London, or a distance of 20 miles from it.

Cutlery is included in the customs returns under the same head as hardware, which comprises stoves, fenders, fire-irons, with a long list of other articles. The declared value of the exports of both descriptions of articles, which has rapidly increased, amounted in 1857 to 4,016,230*l.*

CYPRESS, a forest tree of which there are many varieties, the species denominated the evergreen cypress (*Cupressus sempervirens*) and the white cedar (*Cupressus Thyoides*) being the most celebrated.

The cypress is indigenous to the southern parts of Europe, to several parts of Asia, and to America. It grows to a great size, and is a most valuable species of timber. It is never attacked by worms; and exceeds all other trees, even the cedar, in durability. Hence the Athenians, when desirous to preserve the remains of their heroes and other great men, had them enclosed in cypress coffins; and hence, also, the external covering of the Egyptian mummies is made of the same enduring material. The cypress is said to live to a great age; and this circumstance, combined with its thick dark green foliage, has made it be regarded as the emblem of death and the grave.

In his *Geography and History of the Western States of America*, Mr. Timothy Flint has given the following account of the cypress trees found in the southern parts of the valley of the Mississippi:—"These noble trees rear their straight columns from a large cone-shaped buttress, whose circumference at the ground is, perhaps, 3 times that of the regular shaft of the tree. This cone rises from 6 to 10 feet, with a regular and sharp taper, and from the apex of the cone towers the perpendicular column, with little taper after it has left the cone, from 60 to 80 feet clear shaft. Very near the top it begins to throw out multitudes of horizontal branches, which interlace with those of the adjoining trees, and, when bare of leaves, have an air of desolation and death, more easily felt than described. In the season of vegetation the leaves are short, fine, and of a verdure so deep as almost to seem brown, giving an indescribable air of funeral solemnity to this singular tree. A cypress forest, when viewed from the adjacent hills, with its numberless interlaced arms covered with this dark brown foliage, has the aspect of a scaffolding of verdure in the air. It grows, too, in deep and sickly swamps, the haunts of fever, mosquitoes, moccassin snakes, alligators, and all loathsome and ferocious animals, that congregate far from the abodes of man, and seem to make common cause with nature against him. The cypress loves the deepest, most gloomy, inaccessible swamps; and south of 33° is generally found covered with sable festoons of long moss, hanging, like shrouds of mourning wreaths, almost to the ground. It seems to flourish best when water covers its roots for half the year. Unpromising as are the places and circumstances of its growth, no tree of the country where it is found is so extensively useful. It is free from knots, is easily wrought, and makes excellent planks, shingles, and timber of all sorts. It is very durable, and incomparably the most valuable tree in the southern country of this valley."—(Vol. i. p. 62.)

D.

DAMAGED GOODS, in the language of the customs, are goods, subject to duties, that have received some injury either in the voyage home or in the bonded warehouses.

It is enacted by the 16 & 17 Vict. c. 107., that no claim for any abatement of duty in respect of any goods imported into the U. K., shall be allowed on account of damage, unless such claim be made on the first examination thereof, and in such form and manner as the commissioners of customs shall direct, nor unless it be proved to the satisfaction of the commissioners of customs or their officers, that such damage was sustained after such goods had been shipped in the importing ship, and before the landing thereof in the U. K.; and all goods derelict, jetsam, flotsam, and wreck brought or coming into the U. K., and all droits of admiralty sold in the U. K., shall at all times be subject to the same duties as goods of the like kind on importation into the same part of the U. K. are subject to, unless it shall be shown to the satisfaction of the commissioners of customs, that such goods are the growth, produce, or manufacture of any country or place, by virtue whereof the same may be entitled to be admitted at less than the foreign duty, or duty free, or that the same, if liable to duty, are entitled to an abatement in respect of such damage; and the damage sustained by such goods, whether so imported or derelict, jetsam, flotsam, or wreck as aforesaid, shall be assessed by the officers of the customs, if competent thereto, but if not, or if the commissioners of customs, or the collector or comptroller of the port into which the same shall be imported or brought as aforesaid, shall entertain any doubt as to the amount of such damage, they may call upon two indifferent merchants to examine the goods, and certify to what extent, in their judgment, the same are lessened in value by such damage, whereupon the officers of the customs may make an abatement not exceeding $\frac{3}{4}$ths of the duty originally chargeable thereon, but no allowance shall be made for damage on cocculus indicus, nux vomica, rice, guinea grains, lemons, spirits, corn, grain, meal and flour, opium, sugar, cocoa, oranges, tea, coffee, pepper, tobacco, currants, raisins, wine, and figs.—§ 76.

DAMAR, a kind of indurated pitch or turpentine exuding spontaneously from various trees indigenous to most of the Indian islands. Different trees produce different species of resin, which are designated according to their colour and consistence. "One is called *Damar-batu* in Malay, or *Damar-selo* in Javanese, which means hard or stony rosin; and another in common use, *Damar-Puteh*, or white rosin, which is softer. The trees which produce the damar yield it in amazing quantity, and generally without the necessity of making incisions. It exudes through the bark; and is either found adhering to the trunk or branches in large lumps, or in masses on the ground under the trees. As these often grow near the sea-side, or on the banks of rivers, the damar is frequently floated away, and collected in distant places as drift. It is exported in large quantities to Bengal and China; and is used for all the purposes to which we apply pitch, but principally in paying the bottoms of ships. By a previous arrangement, almost any quantity may be procured at Borneo, at the low rate of $\frac{1}{2}$ dollar per picul."—(*Crawfurd, East. Archip.* vol. i. p. 455., vol. iii. p. 420.)

DAMASK (Ger. *Damasten Tafelzeug*; Du. *Damaskwerk*; Fr. *Venise, Damas*; It. *Tela damaschina*; Sp. *Tela adamascada*; Rus. *Kamtschatnüä salffthi*), a species of table linen.—(See LINEN.)

DANTZIC, one of the principal emporiums of the north of Europe, in West Prussia, lat. 54° 20′ 48″ N., lon. 18° 38′ E. Population, in 1855, 63,461. It is

situated on the left or western bank of the Vistula, about 4 miles from its embouchure. The harbour, Neufahrwasser, at the mouth of the river, is defended on each side by pretty strong forts. The town is traversed by the small river Motlau, which has been rendered navigable for vessels drawing 8 or 9 feet water.

Roads, Port, &c.—The road or bay of Dantzic is covered on the west side by a long, narrow, low, sandy tongue of land, extending from Reserhoft Point (on which is a light-house), in lat. 54° 50½', lon. 8° 23' 15", upwards of 20 miles in an E. by S. direction having the small town of Heela, or Heel, near its termination. A light-house, elevated 123 feet (Eng.) above the level of the sea, has been erected within about ¼ a mile of the extremity of this point. The flashes of the light, which is a revolving one, succeed each other every ½ minute. Dantzic lies about S. ¼ W. from the Heel; its port being distant about 4 leagues. There is good anchorage in the roads for ships of any burden; but they are exposed, except immediately under the Heel, to the north and north-easterly winds. There are harbour lights at the entrance to the port. All ships entering the Vistula must heave to about a mile off the port, and take a pilot on board; and pilots must always be employed in moving ships in the harbour, or in going up and down the river. The usual depth of water at the mouth of the river is from 12 to 13 feet (Eng.); in the harbour, from 13 to 14 feet; at the confluence of the Motlau with the Vistula, from 9 to 9½ feet; and in town, from 8 to 9 feet. Moles have been erected on both sides of the entrance to the harbour: that on the eastern side, which is most exposed, is constructed of granite, but is not yet completed; the other is partly of stone and partly of timber.

Trade of Dantzic.—Next to Petersburg and Stettin, Dantzic is the most important commercial city in the N. of Europe. It owes its distinction in this respect to its situation; the Vistula, with its important tributaries the Bug, Narew, &c., giving it the command of a great internal navigation, and rendering it the *entrepôt* where the surplus products of West Prussia, Poland as far as Hungary, and part of Lithuania, are exchanged for those imported from the foreigner. The exports of wheat from Dantzic are generally greater than from any other port, Odessa excepted. There are four sorts of wheat distinguished here; viz., *white, high-mixed, mixed* and *red*, according as the white or red predominates. The quality of Dantzic wheat is for the most part excellent; for, though small in the berry, and not so heavy as many other sorts, it is remarkably thin skinned, and yields the finest flour. The white Polish wheat exported here is the best in the Baltic. Rye is also very superior, being both clean and heavy; the exports are considerable. The exports of barley and oats are comparatively inconsiderable, and the qualities but indifferent. Very fine white peas are exported. Next to grain, timber is the most important article of export from Dantzic, but latterly the supply has been diminishing, and the quality is said not to be so good as formerly.—(*Meek.*) The principal supply of fir timber, masts, &c., is brought by the River Narew, which, with its branches, rises in Old Prussia and Lithuania, and falls into the Bug near the confluence of the latter with the Vistula. Oak planks, staves, &c., are brought down from the higher parts of the Vistula, and the tributary streams of Dunajetz, Wieprez, &c. Salted pork, weed ashes, linseed and rapeseed, mats, bones, zinc, spruce beer, feathers, &c., are also exported.

The imports consist principally of iron and steel, herrings, wine, sugar, coffee, cotton and cotton yarns; spices, salt, coal, tobacco, dyewoods, spirits, rice, &c.; but their value is seldom more than half that of the exports.

Account of the Exports of Grain from Dantzic in 1857:—

Wheat	337,031 quarters.	Peas and beans	31,205 quarters.
Rye	132,692 ,,	Linseed	6,534 ,,
Barley	25,370 ,,	Rapeseed	13,980 ,,
Oats	8,716 ,,		

Prices fluctuated a good deal throughout the year, but in general they were very high, those of wheat being estimated at an average at from 45*s.* to 60*s.* a quarter.

Exports of Wood from Dantzic to different Countries in 1857.

Wood Articles.	To Britain.	To France.	To Holland, Belgium, &c.	Stock on December 31st.
Pieces of square fir timber, full-sized	138,818	17,489	19,080	110,970
,, small-sized fir timber	9,895	7,270	6,429	49,871
Fir deck deals, deals, and deal-ends	67,791	42,957	266,096	
Pieces of oak timber and crooks	18,674	6,948	5,043	82,807
,, plank and ends	44,473	53,534	12,108	48,961
Sleepers and sleeper logs	472,585	. .	153,079	
Fathoms of lathwood	4,792			
Masts and spars	347	1,708	1,308	
Shocks of oak staves	10,036	4,315	3,776	6,837
Pieces of roundwood fir timber	. .	. .	. .	206,849
,, whitewood	. .	. .	. .	15,527

The value of the wood exported in 1857 may be estimated at from 550,000*l.* to 575,000*l.*

The merchants of Dantzic are but little given to speculation; and the value of the imports into the city seldom exceeds half the value of the exports.

In addition to the royal or government bank, mentioned in a subsequent part of this article, a private joint stock bank was established in 1857.

Shipping.—In 1857 there arrived at Dantzic 1,888 ships, of which 318 were British; but many of the vessels arriving at the port were of very small burden. Some large

and fine ships are built at Dantzic. In 1856 there were upon the stocks 11 sailing ships and 2 screw steamers. Steamers from Hull and London arrive here almost every week; and steamers are now to be found in all the navigable parts of the Vistula. We avail ourselves of this opportunity to lay before the reader the following details with respect to the mercantile marine of this and other Prussian ports.

Prussian mercantile Navy, 1st January, 1858.

Ports.	Steamers.			Sailing Vessels.		Total.

Money. — Accounts used formerly to be wholly kept in guldens, guilders, or florins of 30 groschen. The rixdollar = 3 florins = 90 groschen = 270 schillings = 1,620 pfennings. The florin or guilder = 9*d.* sterling, and the rixdollar = 2*s.* 5*d.* A new system was, however, introduced into all parts of the Prussian dominions, conformably to the decrees of the 30th of September, 1821, and of the 22nd of June, 1823.

The Cologne mark (containing 3,609 Eng. grains) is the weight at present used in the Prussian mint in weighing the precious metals. The fineness of the coins is not determined, as previously, by carats or loths, but the mark is divided for this purpose into 288 grains. Accounts are now kept in the public offices in thalers or dollars (R.), silver groschen, and pfennings: 1 dol. = 30 sil. gr. = 12 pf.

The only silver monies now coined are dollars and ½ dollar pieces; but smaller coins are in circulation, of former coinages. The Prussian silver coins have ½ of alloy; and as the mark is coined into 14 dollars, each should contain 257·68 Eng. grains pure silver, and be worth about 2*s.* 11½*d.* sterling; but the assays do not always strictly coincide with the mint valuation.

The gold coins are Frederick d'ors, double, single, and half pieces. The mark of 288 grains, having 260 grains of fine gold, is coined into 35 Fred. d'ors. The Fred. d'or is worth from 5 dol. 18 sil. gr. to 5 dol. 22 sil. gr. according to the demand.

Weights and Measures.—The commercial weights are,

32 Loths = 1 Ounce.
16 Ounces = 1 Pound.
16½ Pounds = 1 Lispound.
20 Pounds = 1 Small stone.
33 Pounds = 1 Large stone.

110 lbs. = 1 centner; 3 centners = 1 shippound (330 lbs.); 100 lbs. of Dantzic = 105·3 lbs. avoirdupois = 46·85 kilog. = 94·7 lbs. of Amsterdam = 96·6 lbs. of Hamburg.

The liquid measures are, for beer,

5 Quarts = 1 Anker.
4 Ankers = 1 Ahm.
1½ Ahm = 1 Hhd.
2 Hhds. = 1 Both.
2 Both = 1 Fuder.
2 Fuder = 1 Last = 620·4 Eng. wine gallons.

In wine measure, which is less than beer measure, the ahm = 59⅜ Eng. gallons. The pipe = 2 ahms.

The last of corn = 5⅓ malters = 60 scheffels = 240 viertels = 960 metzen; and weighs 4,680 lbs. Dantzic weight in rye. The scheffel = ·547 of a hectolitre = 1·552 Winchester bushel. Hence the last of 60 scheffels = 11 quarters 3 bushels; the last of 56½ scheffels = 10 quarters 7 bushels.

The Dantzic foot = 11·3 Eng. inches, or 100 Dantzic feet = 94·16 Eng. feet. The ell is 2 feet Dantzic measure. The Rhineland or Prussian foot = ·3138 French metres, or 12·356 Eng. inches: hence 100 Prussian = 102·8 English feet. The Prussian or Berlin ell has 25½ Prussian inches = 26·256 Eng. ditto. 100 Berlin ells = 72·93 Eng. yards; and 137·142 Berlin ells = 100 Eng. yards. 14½ Prussian miles are equal to 15 geographical miles.

Oak planks, deals, and pipe staves are sold by the schock of 60 pieces; wheat, rye, &c. are sold by the last of 56½ scheffels. —(*Kelly's Cambist; Nelkenbrecher, Manual Universal.*)

Corn Trade of Dantzic.—The reader will find under the head Corn Laws and Corn Trade (p. 440, &c.), a pretty full account of the Polish corn trade. But the importance of the subject will excuse our giving a few additional details. Grain is almost wholly brought to Dantzic by water, in flat-bottomed boats suited to the navigation of the Vistula, Bug, &c. Mr. Consul Gibson estimated the expense of the conveyance of wheat and rye hither, including the duty at Thorn and the charges of turning on the river, till put into the granary, as follows: —

	Per Imp. qr.	
	s.	*d.*
From the upper provinces on the Bug, a distance of from 700 to 500 miles - - -	9	2 to 7 10
From the provinces of Cracow, Sendomir, and Lublin, 550 to 350 miles - - -	6	6 - 5 4
From Warsaw and its neighbourhood, about 240 miles - - - - -	4	9 - 3 11
From Wlaclaweck and its neighbourhood, about 140 miles - - - -	4	2 to 3 5
From Grandentz, a distance of about 70 miles, no duty at Thorn, and when not turned on the river - - - - -	0	10 - 0 9

N.B. — These are the ordinary charges; but they are higher when there is any unusual demand for exportation.

The Bug has many windings, and its navigation, which is tedious and uncertain, can only be attempted in the spring, when the water is high. It is the same, though in a less degree, with some of the rivers that fall into the Vistula before it reaches Warsaw; and towards Cracow the Vistula itself is frequently

unnavigable, especially in dry seasons, except in spring, and after the midsummer rains, when the snow melts on the Carpathian mountains. The navigation of the Polish rivers in some seasons is more than usually bad. The corn from the upper provinces does not reach Dantzic till from 2 to 4 months later than usual, and is burdened with a very heavy additional expense. In fact, the supplies of grain at Dantzic depend quite as much on the abundance of water in the rivers, or on their easy navigation in summer, as on the goodness of the harvests.

"There are," says Mr. Jacob, "two modes of conveying wheat to Dantzic by the Vistula. That which grows near the lower parts of the river, comprehending Polish Russia, and part of the province of Plock, and of Masovia, in the kingdom of Poland, which is generally of an inferior quality, is conveyed in covered boats, with shifting boards that protect the cargo from the rain, but not from pilfering. These vessels are long, and draw about 15 inches water, and bring about 150 quarters of wheat. They are not, however, so well calculated for the upper parts of the river. From Cracow, where the Vistula first becomes navigable, to below the junction of the Bug with that stream, the wheat is mostly conveyed to Dantzic in open flats. These are constructed on the banks, in seasons of leisure, on spots far from the ordinary reach of the water, but which, when the rains of autumn, or the melted snow of the Carpathian mountains in the spring, fill and overflow the river, are easily floated.

"Barges of this description are about 75 feet long, and 20 broad, with a depth of 2½ feet. They are made of fir, rudely put together, fastened with wooden treenails, the corners dovetailed and secured with slight iron clamps, — the only iron employed in their construction.

"A large tree, the length of the vessel, runs along the bottom, to which the timbers are secured. This roughly cut keelson rises 9 or 10 inches from the floor, and hurdles are laid on it, which extend to the sides. They are covered with mats made of rye-straw, and serve the purpose of dunnage; leaving below a space in which the water that leaks through the sides and bottom is received. The bulk is kept from the sides and ends of the barge by a similar plan. The water which these ill-constructed and imperfectly caulked vessels receive, is dipped out at the end and sides of the bulk of wheat.

"Vessels of this description draw from 10 to 12 inches water, and yet they frequently get aground in descending the river. The cargoes usually consist of from 180 to 200 quarters of wheat.

"The wheat is thrown on the mats, piled as high as the gunwale, and left uncovered, exposed to all the inclemencies of the weather, and to the pilfering of the crew. During the passage, the barge is carried along by the force of the stream, oars being merely used at the head and stern, to steer clear of the sand banks, which are numerous and shifting, and to direct the vessel in passing under the several bridges. These vessels are conducted by 6 or 7 men. A small boat precedes, with a man in it, who is employed sounding, in order to avoid the shifting shoals. This mode of navigating is necessarily very slow; and during the progress of it, which lasts several weeks, and even months, the rain, if any fall, soon causes the wheat to grow, and the vessel assumes the appearance of a floating meadow. The shooting of the fibres soon forms a thick mat, and prevents the rain from penetrating more than an inch or two. The main bulk is protected by this kind of covering, and, when that is thrown aside, is found in tolerable condition.

"The vessels are broken up at Dantzic, and usually sell for about ⅓ of their original cost. The men who conduct them return on foot.

"When the cargo arrives at Dantzic or Elbing, all but the grown surface is thrown on the land, spread abroad, exposed to the sun, and frequently turned over, till any slight moisture it may have imbibed is dried. If a shower of rain falls, as well as during the night, the heaps of wheat on the shore are thrown together in the form of a steep roof of a house, that the rain may run off, and are covered with a linen cloth. It is thus frequently a long time after the wheat has reached Dantzic, before it is fit to be placed in the warehouses.

"The warehouses (*speichers*) are very well adapted for storing corn. They consist generally of 7 stories, 3 of which are in the roof. The floors are about 9 feet asunder. Each of them is divided by perpendicular partitions, the whole length, about 4 feet high, by which different parcels are kept distinct from each other. Thus the floors have 2 divisions, each of them capable of storing from 150 to 200 quarters of wheat, and leaving sufficient space for turning and screening it. There are abundance of windows on each floor, which are always thrown open in dry weather to ventilate the corn. It is usually turned over 3 times a week. The men who perform the operation throw it with their shovels as high as they can, and thus the grains are separated from each other, and exposed to the drying influence of the air.

"The whole of the corn warehouses now left (for many were burnt during the siege of 1814) are capable of storing 500,000 quarters of wheat, supposing the quarters to be large enough to fill each of the 2 divisions of the floors with a separate heap; but as of late years it has come down from Poland in smaller parcels than formerly, and of more various qualities, which must of necessity be kept distinct, the present stock of about 280,000 quarters is found to occupy nearly the whole of those warehouses which are in repair, or are advantageously situated for loading the ships. Ships are loaded by gangs of porters, with great despatch, who will complete a cargo of 500 quarters in about 3 or 4 hours." — (*First Report.*)

Mr. Meek gives, in his excellent Report on the Prices of Corn and other Articles in the N. of Europe, the following details with respect to Dantzic: —

"Wheat of moderate quality in ordinary seasons cannot be brought from Poland and delivered at Dantzic at less than 35*s.* per quarter, and that only when no excitement exists in the foreign markets. Some time since a very large accumulation of grain had in the course of several years taken place in the granaries at Dantzic; but the great export which has occurred during the last 3 or 4 years has so reduced the magazines, that the stock at the close of the present season (1841) was not expected to exceed from 80,000 to 100,000 quarters. The demand has been so great during the last 2 or 3 years, that every effort has been made to collect in Poland all the supplies that were available, and to bring them to Dantzic for exportation. If the corn trade in England was so modified as to be constantly open at a moderate duty, it is not likely, under such circumstances, that shipments of wheat from Dantzic would materially exceed that of the last 2 or 3 years. Not more than 5,000 quarters are consumed annually in Dantzic, by a population of 60,000 persons, the people generally preferring and living upon rye bread. Of the corn exported from Dantzic, one-third comes from that part of Poland which belongs to Prussia, and the remaining two-thirds from the Russian territory. Apprehensions were expressed here, as in other places, of the competition of Odessa and America, in the event of any material reduction of the duty on corn in England. The party making the observation, who is a leading corn merchant in Dantzic, said he had at that moment a cargo of Odessa corn in London which stood him in 49*s.* per quarter, and that he could purchase there Odessa wheat of similar quality at 48*s.* per quarter. The same apprehensions were expressed by others as to Odessa, exports from which place having already been largely made to Italy and other parts of the Mediterranean; and recently, it was added, several cargoes had been shipped to England. On pressing one of the most intelligent merchants in Dantzic to state what price was paid to the landed proprietor or farmer in Poland for a quarter of wheat on the estate where it was grown, or at the nearest market to that estate, he replied, that it was generally bought by the Jews upon the estates from the landowners or their agents, and afterwards sold by the former to the merchants at Dantzic, deliverable at Dantzic; that in some instances the princes and great landowners sent their own commissioners to Dantzic to effect sales to the merchants; that a Russian prince, who had 10,000 serfs, had acted upon the principle very recently; that under such circumstances it would not be right to take less than 35*s.* per quarter, as the price at which wheat, when there was a fair average crop, could be delivered at Dantzic, from which, deducting 12*s.* per quarter for the expense of bringing it from the place of growth to Dantzic, including waste, which is generally very considerable, cost of the boats, which are broken up and sold for a trifle compared with their original cost (amounting, perhaps, to 400 or 500 thalers, whereas they are only sold for about 40), the expense of the peasants and other persons navi-

gating them for a voyage, sometimes of 3 or 4 months, and returning back to Poland on foot, there would be left 23*s.* per quarter, as the price paid to the proprietor at the place of growth; out of which he had to bear the expense of cultivation, to pay the interest and redeem the capital of any mortgage which might exist, the residue being what would remain for rent and interest of capital embarked in the soil. He added, that this was generally considered as an average estimate of the expenses; but that they would vary a little, dependent upon the distance, either greater or less, from which the corn was brought. A considerable quantity of bones are exported from Dantzic to Great Britain, many of which are collected and sent down from Cracow. Complaint was made to the Consul by the merchant chiefly employed in this trade, that a heavy transit duty of 2*s.* per cwt. had recently been levied for the nominal purpose of repaving the turnpike road, that it was a heavy tax in proportion to the value, and that a representation from England was alone necessary to obtain its repeal.

"Of the timber and staves shipped at Dantzic, nearly the whole comes from Russian Poland. Prussian timber is becoming scarce; and even that from the Russian territory, that is of good quality, is much reduced, and has of late not been so good as formerly. This is owing, principally, to most of the good timber that could be conveniently got afloat having been felled. There is, it is said, but little of good quality now to be had without going much farther back from the shipping places, which the discouragement given by the present timber duties prevents. It will hence be obvious, that whenever any alteration takes place either in the corn trade or timber duties, Russia will be much more benefited than Prussia, so far as relates to the export of corn and timber from Dantzic."

Timber Trade, Brack.—Fir timber is usually brought down in its natural state, and is squared into logs, or sawn into planks, in winter, when the labourers cannot be otherwise employed. The staves shipped here are carefully assorted, and are reckoned superior to those of America.

The expenses of the water conveyance of squared timber, including duty at Thorn, are—

	Per piece.	
	s. d.	*s. d.*
From the Bug	from about 6 0	to 5 9
Wieprez (above Warsaw)	- 4 6	- 4 4
Vistula (above do.)	- 3 0	- 2 4

Being higher when the demand is unusually great, or when hands are scarce.

At Dantzic, as well as at Petersburg (which see), Riga, and several other Baltic ports, sworn inspectors (*brackers*) are appointed by authority to examine certain articles intended for exportation, and to classify them according to their qualities. Staves and timber of all sorts, with the exception of pine wood, is subjected to the brack. Prime quality is branded *Krohn* or *Crown*; second-quality, *Brack*; and the third or lowest quality, *Bracks Brack*. All unmerchantable articles are rejected by the brackers, and are not allowed to be exported.

The gauge for crown pipe staves, which the bracker has always in his hand, is 4½ inches broad, 1¼ thick, and 64 inches in length, which they must be at least; but they are expected to be larger in every respect.

Pipe staves are from 64 to 68 inches long; 6, 5, and 4½ at least, broad; and from 1½ to 3 inches thick.

Brandy staves are at least 54 to 58 inches long, as thick and broad as pipe staves.

Hogshead staves are 42 to 45 inches long, as thick and broad as pipe staves, all English measure.

The quality is ascertained by marks, to distinguish each sort, as follows:—

Crown pipe staves, stamped at the end, K.
— brack, in the middle, I.
— bracks brack, II.
Hogshead crown, at the end, O K.
— brack, in the middle, I.
— bracks brack, II.
Brandy hogshead crown, at the end, B K.
— brack, in the middle, ⋈.
— bracks brack, ⋈⋈.

Oak planks are assorted in the same manner. Crown plank is marked in the middle, C. Brack, in the end and middle, B. Bracks brack, B B.

To distinguish 1¼ from 2, and 2½ from 3 inches, the 1¼ are marked with I, and 2½ ⋈.

At the end, in rough strokes, with coloured paint, brack is yellow I; bracks brack, white II; crown, red III.

Ashes are subjected to the brack. The calcined are opened and the crust taken off; others are not examined unless there be any suspicion of their quality, or the staves of the hogshead be supposed to be too thick. Every cask of potashes is opened.

Shipping Charges and Duties.

Charges upon the Shipment of 1000 Quarters of Corn at Dantzic in English Money.

	£ *s. d.*
Metage in granary	- 5 0 0
Delivery	- 1 4 6
Porterage down	- 9 0 0
Meters' fee	- 2 0 0
Town dues	- 3 15 0
Lighterage	- 10 0 0
Expenses to the roads	- 2 10 0
	£33 9 6

Exclusive of commission, 2 per cent.

The above are the charges if bought and shipped from the granary; but if bought and warehoused previously to shipping, the following additional charges are incurred:—

Metage from craft.

Porterage up, meters' fees, and town dues, are the same.

Additional.

Granary rent - 3*d.*
Labourers - - 6
Turning - - 7½
} per last of 10½ quarters per month.
Screening - -

Exclusive of insurance against fire.

Charges on the Shipment of—

	R. s. gr.	
Pearlashes	about 0 10 per shippound of 330 lbs	
Weed ashes	— 0 6 — barrel	do.
Fir timber	— 0 10 — load.	
On Deck deals, Short deals, Deal ends	*R. s. gr.* about 0 25½ per load.	
Lathwood	— 1 0 — fathom.	
Clapboards	— 2 0 — shock of 60 pieces	
Oak plank, Oak ends	— 1 10 — load	
Staves	— 45 10 — mille pipe.	
Black or spruce beer	0 7½ — last of 11 kegs.	
Feathers	— 2 0 — 100 lbs.	

N.B.—The Prussian pound is about 3½ per cent. heavier than the English pound. The expenses of sending goods down are taken at about an average rate; but if the whole or the greater part of the cargo were loaded in the Fairwater or roads, the expenses would be somewhat more.

Port Charges.—The charges on a ship of 200 lasts, or about 300 tons burden, are—

	R. s. g. ng.
Harbour money	- 88 26 8
Ditto in gold (say in Fred. d'ors, reckoned at 5 r., in which this must be paid)	- 14 6 8
River money	- 0 0 0
Commercial contribution	- 3 10 0
Expedition expenses	- 13 10 0
Captain's allowance for expenses on shore	- 16 20 0
Tracking the ship into the harbour (Fairwater)	- 2 0 0
Ballast money, &c.	- 10 24 0
Pilot to the ballast wharf	- 4 0 0
Ditto moving the ship in Fairwater	- 2 15 0
Police passport	- 3 5 0
Clearing the vessel in and out	- 16 20 0
Making 25*l.* 6*s.* 6*d.* sterling, at the exchange of 6 r. 28 s. gr.	- 175 17 4

The charges on the ships of all countries having reciprocity treaties with Prussia (which is generally the case) are the same, only Dantzic captains receive no allowance for shore expenses. River or stream money is only paid by vessels that bring goods to town, or load in the Motlau (above the blockhouse): if a ship remain in the Fairwater or Vistula, the river money is levied on the craft carrying the goods, and falls on the latter.

Dantzic is a favourable place for ships careening and repairing, and for obtaining supplies of all sorts of sea stores at a reasonable rate.

There belonged to the port in 1842, 80 ships, measuring 14,886 lasts. They are employed in foreign trade. The port has no fishery, and no coasting trade worth mentioning. The wages of Dantzic seamen vary from 30*s.* to 32*s.* per man per month.

Custom-house Regulations.—The shipmaster must, within 24 hours after arrival in port, make a declaration of the cargo on board, and of the ship's provisions, and he incurs a severe penalty if the declaration do not prove correct. The ship's hatches (if goods are on board) are sealed on arrival, and an additional declaration is accepted before they are unsealed; but no *later* declaration, supplementary or explanatory of the first, and no submitting the goods to investigation by the officers, is received or allowed. If the shipmaster be unable to make a complete declaration on arrival, a Custom-house officer is put on board, who remains until the ship is unloaded, at an expense to her of about 2*s.* per day and night. The cargo can only be discharged in presence of a customs officer.

The shipmaster, and not the receiver of the goods, is made responsible, if the *contents* of the packages do not correspond with his declaration; and he is only exonerated from this by solemnly averring, on making the declaration, that the contents are unknown to him. An evident mistake or oversight is treated as rigorously as an intentional fraud.

On commencing to *load*, the shipmaster receives a blank loading list, in which he must daily note the articles he takes on board, or he is liable to fine; but this regulation is not very rigidly enforced. On clearing out, this list is compared with the goods entered by the vessel, when the sea passport is given.

Ballast can be discharged only at stated places, on pain of the shipmaster being fined.

It is material, however, to observe, that the whole Custom-house business of the shipmaster is conducted by Custom-house brokers, so that he is never at a loss, being informed by the one he selects what he has to do. Alterations are frequently made in the Custom-house regulations.

The shipmaster receives, on arrival, from the pilot commodore, a copy of the harbour regulations, in his own language, with instructions how to act as to ballast.

Warehousing.—Such goods as pay a higher duty than ½ a dollar per centner (about 1*s.* 5½*d.* for about 113 lbs. English) may be placed in the king's stores (nowhere else), and remain there for 2 years without payment of duty. No allowance is made for waste or damage in these stores. Other goods, not capable of being changed, may be placed in private stores, under the king's lock; but not elsewhere, without permission. No rent is charged for goods in the king's stores, during the first 3 months; afterwards about 1½*d.* monthly rent is charged for the first, and about 3*d.* monthly for the second year, per centner of about 113 lbs. English.

In private warehouses, the monthly rent for 10 quarters of wheat or other grain is from about 3½*d.* to 7*d.*, or more, according as warehouse room is abundant or otherwise. Other goods do not usually pay by the piece, but part of a store is hired for them, and the rent generally comes somewhat higher in proportion.

The cost of rent and turning grain is from 1*s.* 2*d.* to 1*s.* 6*d.* monthly, for 10 quarters, according to the season of the year and other circumstances; but more when granary room is scarce, and wages high.

Banking Establishments.—There is none such here, excepting a branch of the Royal or Government Bank of Berlin. This was founded partly in the view of receiving deposits of money under litigation in the courts of the province; monies the property of minors and charitable institutions, the former until disposable or placed on good security; and monies belonging to individuals not merchants, and at times, also, those of the latter. Interest is paid on such deposits as follows: viz.—

3 per cent. on sums belonging to minors.
2½ do. do. charitable institutions,
churches, and sums deposited by the courts of justice, and
2 do. all other deposits.

The principal is demandable at pleasure, unless otherwise stipulated. The bank makes advances on grain and some other kinds of goods at 5 per cent. interest; discounts bills with 3 signatures, not having more than 2 months to run, at 6 per cent., and sometimes, when money is plenty, at a lower rate. It also makes advances at 4 per cent. on deposits of Fred. d'ors and certain foreign monies; and it occasionally buys bills for account of, and sells bills on, the Berlin bank. It does not issue notes. The amount of its capital is not fixed; but government guarantees its transactions. It is relieved from the payment of postage on money, and it is not required to use the stamps fixed by law, on bills for its deposit transactions, but only those of 10 s. gr. (about 11¾*d.*); while individuals must use stamps for such bills of 5 s. gr. for every 400 r., of not longer date than 3 months, and for every 200 r. of longer date.

On negotiable bills, however, the bank must use the stamps fixed by law, say of 5 s. gr. (about 5¾*d.*) for sums of 50 dol. to 400 dol., and at the same rate for every additional sum between 100 dol. and 400 dol.

Bills from and on foreign places, negotiated at Dantzic, are not subject to the stamp duty.

The affairs of the bank are not made public. Being a government concern, there are no dividends. It is not supposed to be very profitable, at least in the present circumscribed state of trade, although enjoying the advantages of exemption from postage of monies, and paying less stamp duty. It is true, however, that the direct advantage of the lower stamp duty is enjoyed by the borrower.

Credit, Brokerage, &c.—Very few goods are consigned from abroad for sale, for such consignments rarely turn to good account. Imports are seldom sold for cash, but generally a 1, 2, and 3 months' credit, or longer. The discount allowed for cash payments, when sold on time, is usually 6 per cent., but it varies according as money is plentiful or otherwise.

Any person, being a burgher of the town (which any one of good character may become), may transact business as a commission merchant or factor; but brokers must be chosen by the elders of the Corporation of Merchants, approved by the regency of the province, and sworn in by the magistracy of the town.

The usual rates of commission are—

3 per cent. on wood articles } exported,
2 do. other goods }
2 do. goods imported,

with from 1 to 2 per cent. on do. for *del credere*, or guarantee of debts.

The corn factor receives r. 1·7 (about 4*s.* 9*d.* sterling) per last (of 60 scheffels) of all grain, from the buyer, and 1 per cent. from the seller.

The rates of brokerage are—

12½ s. gr. (nearly 1*s.* 2½*d*) per 100*l.*
7½ — (— 8·7*d.*) per 100*l.*
3¾ — (— 4·3*d.*) per 100 r.
1 per mille for bills on Berlin, Warsaw, and Paris.
½ per cent. on monies placed at interest, for a period not less than 6 months, from the borrower, and
1 per mille from the lender.
1 per mille usually for short discounts, from both parties.
1 per cent. on the actual or the computed amount of transactions in public funds, from both parties.
½ per cent. usually (sometimes more or less) for merchandise.

On grain for exportation, the brokerage is recently fixed at 1 per cent., to be paid by the seller, the buyer refunding to him 5 s. gr. per last of 36½ scheffels.

Burghers, being merchants, may act as brokers, without direct authority, in the purchase from, and sale of goods to, Poles, receiving ½ per cent. on goods bought, and 1 to 2 per cent. on goods sold, according to circumstances.

Bankruptcies are not of frequent occurrence here. Their most prevalent sources at present are speculations in grain. Bankrupts cannot obtain a discharge except by private composition, without which they always remain responsible to each individual creditor, who can attach them at any time, if he can show that they possess property, although their affairs have been settled by judicial authority. This, and the tediousness of settlements in court, make both debtor and creditor desirous of settling by composition; and hence few insolvents are made bankrupt by their affairs being brought into court. It is to be observed, that creditors, having claims by bills in force, must by law be paid to the full, before those with only book claims receive any thing; but to avoid the tardiness of the court, bill creditors here generally agree to let book creditors receive half as much in composition as they themselves get. It is, however, difficult to arrange a composition, as each creditor can make his own terms; and those who hold out, generally get more, at least privately, than the ostensible rate of composition offered by the debtor.

If a private composition cannot be effected, and the insolvent is regularly made bankrupt, by his affairs being put into court, the law prescribes that, if a small portion of the creditors will not accept the dividend with which the greater portion are satisfied, the latter can require the former to consent, or become responsible for the estate producing as much finally; but so many objections may be made, that this compulsive measure is very seldom resorted to. A private composition is, however, generally preferred by all parties, more particularly by the debtor, as being the only means by which he can become entirely free, and get a general discharge.

Honest bankrupts, whose affairs are brought into court, may be freed from personal arrest by faithfully delivering up all their property. Dishonest ones, upon conviction, are punished by being sent to the House of Correction; but they often escape punishment, from the too great laxity in enforcing the laws in criminal matters.

The creditors of a bankrupt estate brought into court, rank under 8 different classes, each prior class enjoying a precedency of claim over those following, to the full amount. The, two most considerable classes, in general, are the 6th and 7th, the former being that of the bill, the latter that of the book, creditors.

Tares, &c.—The duties are in general payable on the gross weight; a fixed allowance being made, in many cases, according to the packages; in others, there is no allowance. The tariff specifies the particular regulations on this point. The tare on goods in single sacks is 4 lbs. per centner (about 113 lbs. English), it being left to the option of the receiver to have the nett weight ascertained.

In trade there are fixed rates of tare only on the following goods; viz.

Potashes, 6 per cent., when sold by a merchant.

Dyewood, ground, 8 to 11 per bale.			
Currants	14 per cent.	-	- in whole butts.
——	16 —	-	- half do.
——	18 —	-	- ¼ and ⅛th do.
Figs and raisins	10 —	-	- casks.
Olive oil	16 —	-	- whole and half butts.
——	18 to 20 —	-	- ¼ and ⅛th.
——	16 —	-	- pipes.

Seed oil, latterly the tare is ascertained.
Pepper, English, in double bags, 7 lbs.
Danish, in bags and mats, 11 lbs.
Orange and lemon peel, 6 per cent., or tare ascertained.
Rice from England or Hamburg, the tare as on the casks, less 2 lbs. per cask on that from England, and in proportion to the weight on that from Hamburg. Danish should give 10 per cent. tare, but the buyers are in general not satisfied with this.
Tallow, 10 per cent., or nett tare.
Tea, Danish bohea, 78 lbs. if in linen and mats.
— 24 lbs. in chests above 100 lbs.
— 22 lbs. — of about 80 lbs.
Most frequently the tare is ascertained.
Vitriol, 10 per cent.
Raw sugar, 12 to 16 per cent., according to the size of the chests.
Candied sugar, tare by invoice, adding in that proportion for the difference in the weight usually heavier.
Syrup in whole casks, 10 per cent.
— in ½ ditto, and barrels, 12 per cent.

On the sale of imports, 1 per cent. on the nett weight (called good weight) is allowed in favour of the buyer.

Insurance.—There are no insurance companies nor private insurers here; but there are agents of insurance companies in Hamburg for ships, and of those of London and other places for houses and lives.

Wages of common Labourers in Dantzic vary from 9*d.* to 11*d.* a day, and those of carpenters, masons, &c., from 1*s.* 6*d.* to 2*s.* Wages in all the large Prussian towns are higher than in the small towns of the country, from the price of flour, bread, and butchers' meat being higher in them. This is occasioned partly by the latter being subject to *octrois* or excise duties on entering the great towns, from which the country districts and smaller towns are exempted. The king receives ⅔ of these duties, and the towns the other ⅓. This duty is a great obstacle to the free intercourse of the country.

(We have derived these details from different sources, but principally from *Consular Returns*; *Meek's Report*; and information supplied by the Prussian Government.)

DATES (Ger. *Datteln*; Fr. *Dattes*; It. *Datteri*; Sp. *Datiles*), the fruit of the palm tree (*Phœnix dactylifera* Lin.). This tree is abundant in Egypt, Barbary, Arabia, Persia, and the adjacent countries, particularly on the confines of the desert, and wherever there is sufficient moisture. It is a tall majestic tree; and repeated references are made to it in the sacred writings (Ecclus. xiv. 14.), and in the Koran. Mohammed, in one of his sayings, beautifully compares the upright and generous man to the palm tree. "He stands erect before his Lord; in his every action he follows the impulse received from above, and his whole life is devoted to the welfare of his fellow-creatures." But the veneration in which the palm tree is held in the East is to be ascribed more to its utility than to its beauty. Dates form the principal part of the subsistence of the inhabitants of many parts of Arabia and Barbary, and they are held in the highest estimation wherever they are met with. "They are," says Burckhardt,

"by far the most essential article of food for the lower classes of Medina; their harvest is expected with as much anxiety, and attended with as much general rejoicing, as the vintage in the south of Europe; and if the crop fails, which often happens, as those trees are seldom known to produce abundantly for 3 or 4 successive years, or is eaten up by the locusts, universal gloom overspreads the population, as if a famine were apprehended."—(*Travels in Arabia*, vol. ii. p. 214.)

There is an endless variety of dates. Generally, however, they may be described as being somewhat in the shape of an acorn, but usually larger, consisting of a thick fleshy substance, including and freely separating from an oblong stone or kernel, having a furrow on the one side. Their taste is agreeably sweet, accompanied with a slight astringency. The new fruit is called by the Arabs *rutab*. When the dates are allowed to remain on the tree till they are quite ripe, and have become soft and of a high red colour, they are formed into a hard solid paste or cake called *adjoue*. This is formed by pressing the ripe dates forcibly into large baskets, each containing about 2 cwt. "In this state," says Burckhardt, "the Bedouins export the adjoue: in the market it is cut out of the basket, and sold by the pound. It forms part of the daily food of all classes of people; in travelling it is dissolved in water, and thus affords a sweet and refreshing drink. During the monsoon, the ships from the Persian Gulph bring adjoue from Bussorah to Djidda for sale in small baskets weighing about 10 lbs. each: this kind is preferred to every other. Ships bound from Arabia for India take with them a considerable quantity of adjoue, which is readily disposed of amongst the Mohammedans of Hindostan."—(*Travels in Arabia*, vol. i. p. 57.)

The Arabians and Egyptians use the leaves of the tree in the preparation of bags and baskets; the boughs, the outer and inner bark of the trunk, and the fleshy substance at the root of the leaves, where they spring from the trunk, have all their respective uses; and besides this, the kernels of the fruit, notwithstanding their hardness, are used as food for cattle; they are soaked for two days in water, when they become softened, and are given to camels, cows, and sheep, instead of barley: they are said to be much more nutritive than that grain. There are shops at Medina in which nothing else is sold but date kernels; and the beggars are continually employed in all the main streets in picking up those that are thrown away.—(*Burckhardt*, vol. ii. p. 212.)

All the refinements of Arabian cookery are exhausted in the preparation of dates; and the Arabs say that a good housewife will daily supply her lord, for a month, with a dish of dates differently dressed.

Palm trees are raised by shoots; and Dr. Shaw mentions that they arrive at their vigour in about 30 years, and continue so 70 years afterwards, bearing yearly 15 or 20 clusters of dates, each of them weighing 15 or 20 lbs.: after this period, they begin to decline.—(*Travels in the Levant*, p. 142. 4to ed.)

The best dates imported into Great Britain are said to come from Tunis, but they are most commonly brought from Smyrna and Alexandria. They should be chosen large, softish, not much wrinkled, of a reddish yellow colour on the outside, with a whitish membrane betwixt the flesh and the stone. Those that are dry and hard are of little value.

DEALS, OR DEAL BOARDS (Ger. *Dielen*; Du. *Deelen*; Da. *Dæler*; Sw. *Tiljor*; Fr. *Planches minces*; It. *Tavole, Piane*; Rus. *Dorshi*; Pol. *Tarcice*), a thin kind of fir planks, much used in carpentry: they are formed by sawing the trunk of a tree into longitudinal divisions, of greater or less thickness, according to the purposes they are intended to serve. They are imported from Dantzic, Petersburg, Narva, and many other ports in the Baltic, and from North America; but those from Christiania, the capital of Norway, are the best, and bring the highest price. They are distinguishable from those produced in the contiguous provinces of Norway; their superiority has been said to depend principally on their being more perfectly sawed; but it really depends on the greater care with which the sap-wood and other defective portions of the timber are cut away, and on the quality of the timber.

A Russian standard deal is 12 feet long, 11 inches wide, and 1½ inch thick; 400 feet of 1½ inch plank make a load.

A Christiania standard deal is 11 feet long, 9 inches wide, and 1¼ inch thick. There is another standard of Norway deals at Dram, 10 feet long, 9 inches wide, and 1¼ inch thick.—(See CHRISTIANIA.)

DEBENTURE, a term used at the Custom-house to signify the *certificate* subscribed by the customs officers, and given to the exporter of goods on which a drawback is allowed, bearing that the exporter has complied with the required regulations, and that he is entitled to such drawback.

It is enacted by the 16 & 17 Vict. cap. 107., that the person entitled to any drawback on any goods duly exported, or his agent authorised by him for that purpose, shall make and subscribe a declaration upon the debenture that the goods mentioned therein have been actually exported, and have not been relanded, and are not intended to be relanded, in any part of the U. Kingdom, and that such person at the time of entry and shipping was and continued to be entitled to the drawback thereon, and the name of such person shall be stated in the debenture, which shall then be delivered to such person or his agent, and the receipt of such person on the debenture, countersigned by the holder of such debenture, if the same shall have been transferred in the meantime, shall be the discharge for such drawback when paid.—§ 131.

No debenture for any drawback allowed upon the exportation of any goods shall be paid after the expiration of 2 years from the date of the shipment of such goods.—§ 132.

For these and the other clauses in the act relating to debentures, see IMPORTATION AND EXPORTATION.

A stamp duty is laid on debentures of 1*s.* when the drawback to be received does not exceed 10*l.*; of 2*s.* 6*d.* when it exceeds 10*l.* and does not exceed 50*l.*; and of 5*s.* whenever it exceeds 50*l.*

DELFT, OR DELF (Ger. *Fayence, Unachtes Porzellan*; Du. *Delfs porcelyn*; Fr. *Faience*), a coarse species of porcelain originally manufactured at Delft, whence its name. It is now rarely used in this country.

DEMURRAGE, in commercial navigation, is an allowance made to the master or owners of a ship by the freighter, for detaining her in port longer than the period agreed upon for her sailing. It is usually stipulated in charterparties and bills of lading, that a certain number of days, called running or working days, shall be allowed for receiving or discharging the cargo, and that the freighter may detain the vessel for a further specified time, or as long as he pleases, on payment of so much *per diem* for such over-time. When the contract of affreightment expressly stipulates that so many

days shall be allowed for discharging or receiving the cargo, and so many more for over-time, such limitation is interpreted as an express stipulation on the part of the freighter, that the vessel shall in no event be detained longer, and that if detained he will be liable for demurrage. This holds even in cases where the delay is not occasioned by any fault on the freighter's part, but is inevitable. If, for example, a ship be detained, owing to the crowded state of the port, for a longer time than is allowed by the contract, demurrage is due; and it is no defence to an action for demurrage, that it arose from port regulations, or even from the unlawful acts of the Custom-house officers. Demurrage is not, however, claimable for a delay occasioned by the hostile detention of the ship, or the hostile occupation of the intended port; nor is it claimable for any delay wilfully occasioned by the master, or owners, or crew of the vessel. The claim for demurrage ceases as soon as the ship is cleared out and ready for sailing, though she should be detained by adverse winds, or tempestuous weather. — (*Chitty's Commercial Law*, vol. iii. pp. 426 — 431.)

DENARIUS, a Roman coin, estimated by Dr. Arbuthnot to have been worth 7$\frac{2}{4}$*d.*; but its value differed at different periods.

DENIER, a small French coin, of which there were 12 to a sol.

DIAMOND (Ger. Du. Da. and Fr. *Diamant*; Sw. *Demant*, *Diamant*; It. Sp. and Port. *Diamante*; Rus. *Almas*; Pol. *Dyamant*; Lat. *Adamas*; Hind. *Hira*), a precious stone which has been known from the remotest ages. Pliny has described it (*Hist. Nat.* lib. 37. § 4.); but his account is, in many respects, inaccurate. It has been found in different parts of India and in Borneo; but not hitherto except within the tropics. At present, however, and for many years past, Europe has been entirely dependent on Brazil for supplies of diamonds. The diamond is the most beautiful and most valuable of precious stones. Its most common colours are white and gray of various shades. It occurs also red, blue, brown, yellow, and green. The colours are commonly pale. It is always crystallised, but sometimes so imperfectly that it might pass for amorphous. It is the hardest body in nature. External lustre from splendid to glimmering; internal always splendid. It is brittle; its specific gravity is 3·5. When rubbed, it becomes positively electric, even before it has been cut by the lapidary, which is not the case with any other gem. — (*Thomson's Chemistry.*)

According to Mr. Milburn (*Orient. Com.*), the colour should be perfectly crystalline, resembling a drop of clear spring water, in the middle of which you will perceive a strong light playing with a great deal of spirit. If the coat be smooth and bright, with a little tincture of green in it, it is not the worse, and seldom proves bad; but if there be a mixture of yellow with the green, then beware of it — it is a soft, greasy stone, and will prove bad.

Tests of Diamonds. Cutting, &c. — To ascertain whether any specimen is a true diamond or not, a fine file may be used; and if the surface of the stone be the least abraded or scratched by its action, it is not a diamond. The difference will also appear upon close examination without this instrument; the rays of light easily pass through other gems, but in the diamond they are refracted to the surface, which occasions its superior brilliancy. If the specimen under examination be very minute, it may be placed between 2 half-crowns, or other flat metallic surfaces, and pressed with the thumb and finger: if a diamond, it will not be injured; but if otherwise, it will break and fall to powder. On account of the extreme hardness of the diamond, the art of cutting and polishing it was for a long time unknown in Europe. But, in 1456, a young man of the name of Louis Berghen, a native of Bruges, is said to have constructed a polishing wheel for the purpose, which was fed with diamond powder instead of *corundum*, which the Chinese and Hindoos had been long accustomed to employ. Berghen was led to this discovery by observing the action produced by rubbing 2 rough diamonds together. Diamonds are cut into brilliants and rose diamonds: the former being, for the most part, made out of the octahedral crystals, and the latter from the spheroidal varieties. — (*Joyce's Practical Mineralogy*; *Rees's Cyclopædia*, *&c.*)

"*Commercial Value of Diamonds.* — In the great or wholesale trade there is but little fluctuation in the price of those diamonds which may be termed *stones in general demand*. I will begin with brilliants from 1 grain to 2$\frac{3}{4}$ grains each. — Such brilliants, double cut, and what may be termed fine, are worth from 7*l.* to 8*l.* per carat. Needy sellers may take 10 per cent. less for cash; but this is the general average price for a lot of 10, 20, or 50 carats of well-made stones, if the quality be good.

"Brilliants, from 2 grains to 3, may be bought in lots, at from 7*l.* 7*s.* to 8*l.* per carat. It is to be understood, that diamonds in a lot are never all quite free from faults; hence there may arise a difference of 10 per cent. in the price. Stones of 3 grains, if fine and perfect, are always in demand, at 8*l.* or 9*l.* per carat.

"Brilliants, from 3 grains to 4, if very fine and well proportioned, are worth from 8*l.* to 9*l.* per carat. Those of a carat each, if very fine and well selected, are worth 9*l.* or 10*l.* Three years ago I offered 12*l.* each for 8; and could not obtain them.

"Brilliants, from 5 grains to 6, if pure, are worth from 13*l.* to 14*l.*; if perfectly fine, and of the full weight of 6 grains, they are worth from 17*l.* to 18*l.* each: I have, for such, paid 20*l.*

"Brilliants, of 2 carats each, are worth from 27*l.* to 30*l.* Stones of this weight, if well proportioned, are considered of a fine size, and well calculated for pins, or the centre of clusters; indeed, well proportioned diamonds, from 6 grains to 2 carats each, are always in demand, and are retailed at from 20*l.* to 35*l.* each, according to their degree of perfection, or as the retailer may think fit to charge them.

"For brilliants of 3 carats, if fine and well formed, from 70*l.* to 80*l.* may be obtained. Stones of this size, and larger, are more liable to capricious fluctuations of price than the smaller ones before named, being chiefly required for the centre stones of saleable necklaces.

"Brilliants of 4 carats, if fine, are worth from 100*l.* to 130*l.* I have sold stones, single cut, a little *off colour*, of this weight, at 80 guineas. I possessed one of 17 grains, perfectly white, having a surface as large as that of a 7 carat stone ought to be; it was, consequently, very thin, but being much in request, on account of its great *spread*, or surface, it was sold for 160*l.*

"Brilliants of 5 carats are not frequently met with in general trade, and are valuable in price; as the dealers exact more if they know that such stones are wanted, than they would in the regular course of business. The prices may be said to vary from 180*l.* to 200*l.*

"Brilliants of 6 carats, as before stated, are not common; they are suitable for centre stones of expensive necklaces, and single stone rings; if perfect and well shaped, they sell for 230*l.* to 250*l.* or more.

"For estimating the value of peculiarly fine diamonds, there is no fixed standard. Rough diamonds, selected as fine, and well formed for cutting, may be estimated as follows:—Square the weight of the stone, multiply the product by 2, and the result will be the value in pounds sterling. Brilliants, if fine, may be estimated by squaring the weight in carats, and multiplying the product by 8, which will give the amount in pounds sterling.

"As a very large property, both in this kingdom and in other countries of Europe, is vested in diamonds, it may be interesting to be informed, that not only the price of these gems has for several years been, upon the whole, gradually rising, but that it is likely to continue on the advance. At the present time, indeed, and for the last few years, there has been a dull sale of diamonds in England, nor did the coronation occasion a demand worth notice; but on the Continent the trade has been steady, and rough diamonds have been constantly rising in price. That this advance will be progressive may be assumed from the fact, that the best diamond ground now known, the Serro do Frio in Brazil, has assuredly passed the zenith of its prosperity. I went over the greater part of what is yet reserved, and still remains to be worked, and I conceive that there would be no difficulty in calculating the length of time in which the present number of workmen may reduce it to a state of exhaustion, like that of the far-famed Golconda. The average annual produce of future years may be estimated by the amount obtained from that portion which has been already worked. Brazil may be said to furnish Europe with 25,000 or 30,000 carats *per annum* of rough diamonds, which, if reduced to brilliants, may make an influx into the market of 8,000 or 9,000 carats annually."—(*Mawe's Treatise on Diamonds*, 2nd ed. pp. 9—14. and p. 60.)

The latter part of this statement must now (1859) be very materially modified.—In 1845 one of the most productive diamond-fields, of which we have any authentic account, was discovered at Paraguassu, about 130 miles W. from Bahia in Brazil. And such has been the influence of this discovery, that an industrious population of above 120,000 has been collected in the neighbourhood, which, from very little better than a desert, has become a flourishing district. It is difficult to acquire any accurate information in regard to the supplies of diamonds furnished by this new ground; but it is believed that the value of those exported from Bahia, to which they are mostly sent, may be safely estimated at from 550,000*l.* to 600,000*l.* a year, or upwards.—(*See Abstract Reports of Ministers and Consuls, &c.*, No. 6, p. 23.)

The rule stated by Mr. Mawe, and adopted by the jewellers, for estimating the value of diamonds (multiply the square of the weight in carats by 2, and the product is the value in pounds sterling,) can only hold in the case of those that are of a small size, or do not weigh more than 20 carats. The value of the largest diamonds, which are exceedingly rare, (*non nisi regibus et iis admodum paucis cognitus*, Pliny,) can, it is clear, depend upon nothing but the competition of the purchasers. The diamond belonging to the Emperor of Brazil is the largest in the world. It is still uncut, and weighs 1,680 carats; so that, according to the jewellers' rule, it must be worth the enormous sum of 5,644,800*l.*! It may, however, be doubted, whether his Imperial Majesty would have any disinclination to part with it for the odd sum of 644,800*l.* The famous diamond belonging to the Emperor of Russia, which the jewellers tell us is worth 4,804,000*l.*, did not cost 150,000*l.*

Diamonds are not used exclusively as articles of ornament or luxury. They are frequently employed with great advantage in the arts. "Bad, discoloured diamonds," says Mr. Mawe, "are sold to break into powder, and may be said to have a more extensive sale than brilliants, with all their captivating beauty. In many operations of art they are indispensable; the fine cameo and intaglio owe their perfection to the diamond, with which alone they can be engraved. The beauty of the onyx would yet remain dormant, had not the unrivalled power of the diamond been called forth to the artist's assistance. The carnelian, the agate, or cairngorm, cannot be engraved by any other substance; every crest or letter cut upon hard stone is indebted to the diamond. This is not all; for without it, blocks of crystal could not be cut into slices for spectacles, agate for snuff-boxes, &c."

Diamonds may be landed without report, entry, or warrant.—(3 & 4 *Will.* 4. c. 52 § 2.)

The carat grain used in weighing diamonds is different from the Troy grain, 5 diamond grains being only equal to 4 Troy grains.

DIAPER (Ger. *Drell*; Du. *Drel*; Fr. *Linge ouvré*; It. *Teli tessuta a opere*; Sp. *Manteles alemaniscas*; Rus. *Salfetotsschnoe*), a sort of fine flowered linen, commonly used for table-cloths, napkins, &c., brought to the highest perfection in the manufactories in the north of Ireland, in Germany, and Scotland.

DICE (Ger. *Würfel*; Du. *Taarlingen*; Fr. *Dés* (*à jouer*); It. *Dadi*; Sp. *Dados*; Rus. *Kosti*) cubical pieces of bone or ivory, marked with dots on each of their sides from 1 to 6, according to the number of the face.

The regulations as to the manufacture and sale of dice are the same as those with respect to CARDS (which see). Every pair of dice is to pay a duty of 20*s.* All pieces of ivory, bone, or other matter used in any game, having letters, figures, spots, or other marks denoting any chance, marked thereon, to be adjudged dice; and if more than 6 chances are signified on any one piece, then such piece to be charged with the full duty of a pair of dice.—(9 *Geo.* 4. c. 18.)

DIMITY (Fr. *Basin*; It. *Dobletto*; Sp. *Dimite*), a species of cross-barred stuff entirely composed of cotton, similar in fabric to fustian.

DISCOUNT, an allowance paid on account of the immediate advance of a sum of money not due till some future period. It is usually said to be of two kinds; viz. discount of bills, and discount of goods; but they are essentially the same.

When a bill of exchange is presented at a bankers for discount, it is the practice to calculate the simple interest for the time the bill has to run, including the days of grace, which interest is called the *discount*; and this being deducted from the amount of the bill, the balance is paid over to the presenter of the bill. This is the method followed by the Bank of England, the London and provincial bankers, and by commercial men in general. But it is, notwithstanding, inaccurate. The true discount of any sum for any given time is such a sum as will in that time amount to the interest of the sum to be discounted. Thus, if interest be *five* per cent., the proper discount to be received for the immediate advance of 100*l.* due 12 months hence is not 5*l.*, but 4*l.* 15*s.* 2¼*d.*; for this sum will, at the end of the year, amount to 5*l.*, which is what the 100*l.* would have produced. Those, therefore, who employ their money in discounting, make somewhat more than the ordinary rate of interest upon it; for a person discounting 100*l.* due at the end of a year, advances, supposing interest to be 5*l.* per cent., only 95*l.*; so that, as this 95*l.* produces 100*l.* at the period in question, the interest received has really been 5*l.* 5*s.* 3*d.* per cent.

The rule for calculating discount on correct principles is as follows:—

As the amount of 100*l.* for the given rate and time
Is to the given sum or debt;
So is 100*l.* to the present worth, or
So is the interest of 100*l.* for the given time
To the discount of the given sum.

Mr. Smart has calculated, on this principle, a Table of the discount of 1*l.* for any number of days, at 2, 2½, 3, 3½, &c. to 10 per cent., to 8 decimal places. But the simple interest of the sum being the only thing looked to in practice, such Tables are hardly ever referred to.

Bills in the highest credit are discounted on the lowest terms; the discount increasing according to the suspicions entertained of the punctuality or solvency of the parties subscribing the bills. During the war, the rate of interest, or, which is the same thing, of discount, was comparatively high; but since 1818, the rate of discount upon good bills has seldom been above 4, and has often been as low as 3 and even 2½ per cent.

Discount on merchandise takes place when, after making a purchase of goods at a fixed term of credit, the buyer finds means to make his payment before the expiration of that term, receiving from the seller a discount or allowance, which is commonly a good deal above the current rate of interest. The discount on goods varies, of course, according to the interest of money. During the late war, the loans to government were so large, and the facility of investing money was such, that the discount on goods was often as high as 5 per cent. for 6, and 10 per cent. for 12 months. Now, however, the discount on goods has fallen, with the fall in the rate of interest, to 7 or 7½ per cent. for 12 months: being about double the current interest arising from funded property, or the discount of good mercantile bills.

Long credits and discounts upon goods have, for a lengthened period, been usual in England. This arose from a variety of causes, but principally, perhaps, from the magnitude of our exports to the U. States, Russia, and other countries where there is a great demand for capital: but in whatever causes it originated, it has latterly been carried to what seems to be an injurious extent.—(See CREDIT.) In France and Germany, the manufacturers, in general bare of capital, are obliged to stipulate with the merchants for short credits. In Holland the *usage* of the exporting merchants has been to pay either in ready money, or at so short a date as to put discounting out of the question, the manufacturer setting at once the lowest price on his goods.

DIVI DIVI, the commercial name of the pod of the *Cæsalpinia coriaria*, a leguminous plant, found in low marshy situations in the north parts of South America, principally in Venezuela and New Granada, and in some parts of the West Indies. It is used both for dyeing and tanning, but chiefly for the latter purpose. The pod is from 2 to 3 inches in length by ¾ inch in breadth, and when in perfection is of a rich brown colour. It contains a few small seeds, but the only valuable portion is a resinous matter of a bright yellow colour, easily pulverised, which lies betwixt the outer skin and the husk that encloses the seed, and contains a large quantity of tannin. The imports in 1856, amounted to 4,186 tons, and in 1857 to 3,153 do., worth from 10*l.* to 11*l.* per ton. By far the greater portion is imported into Liverpool.

Maracaibo, Rio de la Hache, and Savanilla, are almost the only places whence this article is imported. That brought from Maracaibo is the best, that from Savanilla the most inferior.

Divi Divi is used by dyers, not for the colouring principle which it contains, but for its strong astringent qualities as a mordant. For this purpose it is at present used to some extent instead of sumach, which is scarce and dear, and hence the recent high price of the article.

In tanning it accelerates the process, and imparts to the leather a clean and healthy appearance.—(*Private information.*)

DIVIDEND, the name given to the payment made to creditors out of the estate of a bankrupt, and to the annual interest payable upon the national debt, and other public funds.

DJIDDA, a town of Arabia, on the Red Sea, about 21 miles from Mecca, of which it is the sea-port, in lat. 21° 29′ N., lon. 39° 14′ E. It is well built; the streets are unpaved, but spacious and airy; the houses high, and constructed, for the most part, of madrepores and other marine fossils. The supply of water is scanty, and its quality indifferent. Small vessels approach close to the quays; but large vessels are obliged to anchor in the roads, about 2 miles off, loading and unloading by means of lighters. The entrance to the roads is difficult, and should not be attempted without a pilot. Djidda is a place of considerable commercial importance. It is the *entrepôt* in which is centred the greater part of the commerce between India, Egypt, and Arabia. Many of its merchants possess large capitals; some of them as much as from 150,000*l.* to 200,000*l.* The trade in coffee brought from Mocha, and other ports in Yemen, is the most considerable, but it is said also to be the most hazardous. The returns are principally made in cash. The trade with India and the Gulph of Persia is safer than the coffee trade, and is very considerable. Djidda has also a good deal of intercourse with the ports of Cosseir, Souakin, and Massouah, on the opposite coast of the Red Sea. The imports from the last two principally consist of slaves, gold, tobacco, dhourra or barley, hides, butter (of which immense quantities are made use of in Arabia), mats, &c.; in return for which the Africans receive Indian goods suitable for their markets, dresses and ornaments for their women, dates (which are not produced in any part of Nubia), iron, &c. The principal article of import from Cosseir is wheat; and not only Djidda, but the whole Hedjaz, or Holy Land of Arabia, is almost entirely dependent upon Egypt for corn. Coffee is the principal article sent in return. Business is transacted at Djidda with ease and expedition. The number of ships belonging to the port is estimated at 250. Owing to the scarcity of timber, none of them are built at Djidda; those belonging to it being either purchased at Bombay or Muscat, or at Mocha, Hodeida, or Suez. For a considerable period each year, before and after the feast of Ramadhan, when pilgrims come from all quarters to visit Mecca, the town is thronged with strangers, and a great deal of mercantile business is transacted. Djidda is at present, and has been for a number of years under the government of the pacha of Egypt. The *moneys*, *weights*, and *measures* of the latter country (for which see ALEXANDRIA), are now generally used in Djidda, the commerce of which has been much improved and extended in consequence

of the comparative security and good order enforced by the pacha. — (We have gleaned these details from the different works of Burckhardt, particularly from his *Travels in Arabia*, vol. i. pp. 1—100.)

DOCKS are artificial basins for the reception of ships. The term has been supposed by some to be derived from the Greek δεκομαι, to receive; but it is obviously no other than the Teutonic *dock*, originally perhaps derived from *dekken*, to cover, enclose, or protect.

Docks are of two sorts — *wet* and *dry*. Wet docks are generally constructed with gates to retain the water. Ships are admitted at high water; and the gates being shut, they are kept constantly afloat. A dry dock is intended for the building, repairing, or examination of ships. The ships to be repaired or examined are admitted into it at high water; and the water either ebbs out with the receding sea, or is pumped out after the gates are shut.

Utility of Docks. — The construction of wet docks has done much to facilitate and promote navigation. A large vessel, particularly if loaded, could not be allowed to come to the ground, or to lie on the beach, without sustaining considerable injury, and perhaps being destroyed; and even the smaller class of vessels are apt to be strained, and otherwise hurt, if they are left dry, unless the ground be very soft. Hence, when large vessels have to be loaded or unloaded where there are no docks, and where the water close to the shore or quay is not sufficiently deep, the work can only be carried on during a particular period of each tide; it being necessary, in order to keep the vessel afloat, that she should leave the shore with the ebbing tide. Attempts have sometimes been made to obviate this inconvenience, by running jetties or piers to such a distance into the sea, that there might always be a sufficient depth of water at their heads: but this can only be done in peculiar situations; and it requires that the ship's position should be frequently changed. It is in most cases, too, impossible properly to protect the cargoes of ships loading or unloading at quays, or on the beach, from depredation. Previously to the construction of the wet docks on the Thames, the property annually pillaged from ships was estimated to amount to 500,000*l.* a year, though this is probably much exaggerated.

I. Docks on the Thames.

It is singular that notwithstanding the obvious utility of wet docks, and the vast trade of the metropolis, there was no establishment of this sort on the N. side of the Thames* till nearly a century after a wet dock had been constructed at Liverpool. The inconvenience arising from the crowded state of the river, at the periods when fleets of merchantmen were accustomed to arrive, the insufficient accommodation afforded by the legal quays and sufferance wharfs, the necessity under which many ships were placed of unloading in the river into lighters, and the insecurity and loss of property thence arising, had been long felt as almost intolerable grievances: but so powerful was the opposition to any change, made by the private wharfingers and others interested in the then existing order of things, that it was not till 1793 that a plan was projected for making wet docks, on anything like an adequate scale, for the port of London; and six years more elapsed before the act for the construction of the West India Docks was passed.

1. *West India Docks, now conjoined with the East India Docks.* — The West India Docks were the first, and continue to be the most extensive, of the great warehousing establishments formed in the port of London. Their construction commenced in February, 1800, and they were partially opened in August, 1802. They stretch across the isthmus joining the Isle of Dogs to the Middlesex side of the Thames. They originally consisted of an Import and Export Dock, each communicating, by means of locks, with a basin of 5 or 6 acres in extent at the end next Blackwall, and with another of more than 2 acres at the end next Limehouse: both of these basins communicate with the Thames. To these works were added, in 1829, the South Dock, formerly

* The Commercial Dock appears to have been opened so early as 1660.—See *post.*

the City Canal, which runs parallel to the Export Dock. This canal was intended to facilitate navigation, by enabling ships to avoid the circuitous course round the Isle of Dogs. It was, however, but little used for that purpose, and is now appropriated to the wood trade, for the greater accommodation of which a pond of 19 acres has been formed on the south side for the reception of bonded timber. The Export Dock, or that appropriated for ships loading outwards, is about 870 yards in length, by 135 in width; so that its area is near 25 acres: the North or Import Dock, or that appropriated for ships entering to discharge, is of the same length as the Export Dock, and 166 yards wide; so that it contains nearly 30 acres. The South Dock, which is appropriated both to import and export vessels, is 1,183 yards long, with an entrance to the river at each end; both the locks, as well as that into the Blackwall Basin, being 45 feet wide, are large enough to admit ships of 1,200 tons burden. At the highest tides, the depth of water in the docks is 24 feet; and the whole will contain, with ease, 600 vessels of from 250 to 500 tons. The separation of the homeward bound ships, which is of the utmost importance for preventing plunder, and giving additional security to the revenue and the merchant, was, for the first time, adopted in this establishment. The Import and Export Docks are parallel to each other, being divided by a range of warehouses, principally appropriated to the reception of rum, brandy, and other spirituous liquors. There are smaller warehouses and sheds on the quays of the Export and South Docks, for the reception of goods sent down for exportation. The warehouses for imported goods are on the four quays of the Import Dock. They are well contrived, and of great extent, being calculated to contain 160,000 hhds. of sugar, exclusive of coffee and other produce. There have been deposited, at the same time, upon the quays, under the sheds and in the warehouses belonging to these docks, 148,563 hhds. of sugar, 70,875 casks and 433,648 bags of coffee, 35,158 puncheons of rum and pipes of Madeira wine, 14,021 logs of mahogany, 21,350 tons of logwood, &c. The whole area occupied by the docks, warehouses, &c. includes about 295 acres; and the most effectual precautions are adopted for the prevention of fire and pilfering.

This spacious and magnificent establishment was formed by subscription, the property being vested in the West India Dock Company, the affairs of which were managed by 21 directors as a body corporate.

The West India Docks proved a very successful undertaking, and have been highly beneficial to the original shareholders as well as to the trade of the port. All West India ships frequenting the Thames were obliged to use them for a period of 20 years from their completion. The dividend on the Company's stock was limited to 10 per cent.; and after making dividends to the full amount, with the exception of the first half year, they had in 1819 an accumulated fund of near 400,000*l*. But they then diminished their charges, at the suggestion of a committee of the House of Commons; and having been since still more considerably reduced, the surplus has been absorbed. The nearest dock-gate is at Limehouse, and the other about ¼ mile farther from town.

The East India Docks, united with those now described in 1838, are situated at Blackwall, about 3½ miles from the Exchange, and were originally intended for the accommodation of ships employed by the East India Company, or in the East Indian trade; but they are now open to vessels from all parts. There are 2 docks; 1 for ships unloading inwards, and 1 for those loading outwards. The Import Dock contains about 18 acres, and the Export Dock about 9 acres. The entrance basin, which connects the docks with the river, contains about 2¾ acres: the length of the entrance lock is 210 feet, the width of the gates 48 feet clear. The depth of water in the East India Docks is never less than 23 feet; so that they can accommodate ships of greater burden than any other establishment on the river. There is attached to them a splendid quay fronting the river, nearly 700 feet in length, with water sufficient at all times of the tide to float the largest steam ships: and the Export Dock is furnished with a machine for masting and dismasting the largest ships.

Exclusive of the magnificent warehouses attached to the West India Docks, the East and West India Dock Company possess the East India warehouses in Billiter Street, Fenchurch Street, Jewry Street, and Crutched Friars; in which they warehouse and show tea, indigo, silk, drugs, spices, &c.

These docks have railway communications both with the N. London line and with the Blackwall line.

The capital of both establishments, or of the United Company, amounts to 2,065,668*l*., the dividend on which is at present 6 per cent. The management is vested in a board of 32 directors. The consolidation of the establishment was advantageous to the shareholders by reducing the expense of management, and to the public by giving a greater choice of accommodation to vessels frequenting the docks.

The inconvenience of the distance at which these docks are situated from the Exchange has been in a great degree obviated by the opening of the railway to Blackwall, and by the exhibition of samples in the Company's upper warehouses. Still, however, the charge on account of cartage is a little heavier on goods warehoused at the docks of this company than on those warehoused farther up the river. But, on the other hand, ships entering the East India or West India Docks avoid a considerable extent of troublesome, if not dangerous navigation, that must be undertaken by those bound for the London and St. Katherine's Docks.

Rules and Regulations to be observed, and Rates to be paid, by Shipping in the East and West India Docks.

Regulations for Shipping to be observed by Masters, Pilots, and other Persons having the charge of Ships, Vessels, Lighters, or Craft, coming into, lying in, and going out of, the East and West India Docks, pursuant to Act 2nd W. IV. cap. 52.

The Company's Moorings. — The moorings in the river, within 200 yards of each of the entrances at Blackwall, and that into Limehouse Basin, and within 150 yards of the Limehouse entrance of the South Dock, are reserved for the exclusive use of vessels entering into, or which have recently come out of the docks.

Pilots must not attempt to place ships inside the buoys, if other ships have previously brought up, but bring them to their berths in due succession on the outside, unless they shall be expressly ordered by the dock master to take a berth inside the tier for the convenience of docking.

Vessels about to enter and leave the Docks. Signals. — A *blue* flag will be kept flying at each entrance the whole time proper for docking and undocking; at high-water mark, the flag will be struck, after which no pilot must steer his vessel in, unless directed so to do by the dock master.

Preparing ships for admission. — No time should be lost in getting the anchors properly secured and stowed, sails furled, quarter boats lowered down, guns unloaded, gunpowder put out.

All ships are required to send down top-gallant yards and strike top gallant masts, and to have their jib and mizen booms rigged close in, bomkins, martingales and all outriggers unshipped, and the yard well topped up whenever ordered by the dock master.

Order of admission. — The dock masters have, under the Dock Acts, full powers to direct the mooring, unmooring, moving, or removing all ships, vessels, or craft, within the Company's limits, and will direct the docking of vessels generally in the order in which they arrive; but if any vessel shall attempt to gain admittance contrary to the directions given by the dock master, the owner, and the master, pilot, or other person in charge, must be responsible for all consequences.

Entering. — The ship must be ready to send good and sufficient warps to each pier, when directed by the dock master.

When within the piers, proper ropes will be handed on board when requisite to guide and check the vessel through the lock: the vessel must be hauled a-head by her own warps, and they are on no account to be cast off, unless ordered by the dock master.

Every pilot must bring his boat into the basin, or South Dock, as it is a most essential part of his duty to moor the ship.

Vessels about to leave the Docks. — Export vessels should be hauled down in sufficient time to be at the River Locks, at Blackwall, at low water; to prevent inconvenience during the time that other vessels are requiring admission, which must have the preference.

Vessels can only be let out after high water, upon the special request of the officers in charge of them.

Ships going into the river must use their own ropes, as they are out of the dock master's charge when clear of the outer gates.

Ships' Boats. — The Company take no charge of ships' boats, and are not responsible for them; it therefore rests with the owner of the ship to take such measures as will ensure their safety.

Discharging. — Two true copies of the manifest of the cargo must be delivered into the General Office, at the Dock House, in Billiter-square, within 12 hours after every vessel shall enter the docks, or after the cargo shall have been reported at the Custom House, which shall first happen. Penalty for refusal or neglect, any sum not exceeding five pounds. — 2nd W. IV. cap. 52, sec. 84.

No ships can be allowed to break bulk until their cargoes are duly entered.

All baggage or presents should be sent as promptly as possible to the baggage warehouse, where an authority from the master for the delivery thereof must be lodged.

Packages of bullion or specie (whether cargo or private property) must be delivered by the captain, under his own responsibility.

The delivery of goods overside will also rest with the master, and he must take such steps as he may think necessary to protect his owners in respect to their freight.

Eastern and Western Import, and Export Docks, the Basins, and South Dock. — All vessels entering or lying in these docks and basins continue in charge of the masters and owners.

It is the duty of the pilots, or officers and crews, to transport their respective vessels, except otherwise provided for by the table of rates, under their own responsibility, to or from the river, and to or from any part of the docks or basins, as directed by the dock master.

Light ships on entering from the river must be provided with sufficient hands to dock and transport them, and should move in due time into the dock; otherwise they will be removed by the dock master, and the owners charged with the expense.

Ships taking in cargoes will be moored at the quays in due rotation. Light ships not taking in goods must be moored in either of the docks or basins, as the dock masters may judge convenient.

While ships are lying at or moving to or from the quay, all out riggers should be got in and made snug; and sails are by no means to be loose while so moving or after day-light.

No ship must be removed from her berth without notice being given to the dock master, and his assent as to the time of removal being obtained.

Craft must be fastened to the ships from which they are receiving, or to which they may be delivering goods.

Convenient receptacles on the quays are provided, wherein all dust, ashes, and other refuse-matters are to be deposited, and which shall be cleared by the person appointed by the Company, and by no one else.

No vessel can be permitted to take in ballast after day-light, or before day-break.

Ships' provisions or stores cannot be permitted to pass the gates without an order signed by the captain or owner.

Neither caulking nor plumbers' work can be allowed without special permission, to be obtained from the principal of police.

Fire and Candle. — Special licences will be granted to use fire and candle in all the docks and basins, on application to the principal of the police, made by the master or owner of the vessel, specifying the names and capacity of the persons in charge of the ship, and engaging to be responsible for their attention to the regulations.

Every such licence will express the place in which fire may be kept, and the circumstances under which it may be used: upon the slightest infringement of the conditions the penalty prescribed by law will be rigidly enforced.

Opening and shutting the Gates. — The gates will be opened at 6 o'clock in the morning, and shut at 8 o'clock in the evening, from the 1st of March to the 10th of November; and from the 11th of November to the last day of February, opened at 7 in the morning and shut at 7 in the evening.

Captains and chief mates may be furnished with tickets upon applying at the police office, at the Eastern or Western Import Dock, which will entitle them to admission till 9 o'clock, p. m. But no person whatever can be allowed to go out after the hour for closing the gates.

Hours of Attendance. — The hours of attendance are, from 1st March to 31st October inclusive, 8 in the morning to 4 in the afternoon; from 1st November to the last day of February, inclusive, 9 in the morning to 4 in the afternoon; and there is to be no intermission of business during these hours.

No holidays are kept, except Sundays, Christmas Day, Good Friday, Fast Days appointed by Royal Proclamation, and the King's or Queen's Birth Days.

Tonnage Rates.

Sailing Vessels inwards discharged by the Company.

For docking, mooring, and removing within the docks and basins, unloading the cargo, and the use of the docks, for 4 weeks from the final discharge: * — viz.

	₰ ton reg. s. d.
Laden with sugar, otherwise than after-mentioned, or other goods packed in bales, bags, baskets, serons, casks, cases, chests or similar packages, (except oil direct from the fisheries, tallow, or ashes), metal, in pigs, bars, rods, plates, or similar pieces, wood in billets, such as dye woods †	1 6
And in addition, for every load or ton of blue gum wood, and the like; or oil in iron tanks	0 6
Laden with chests of sugar, 5 cwt. and upwards, including ship's cooperage	2 0
Laden entirely, or in part, with hhds. and tierces of sugar or molasses from the West Indies, including ship's cooperage	2 6
Laden with mahogany, cedar, or other furniture wood in logs or planks	2 6
Laden entirely with hemp or goods in bulk, or oil direct from the fisheries	1 9
And in addition for every ton of oil in tanks	0 6
Laden entirely with tallow	1 3
Laden with mixed cargoes, tallow, ashes or goods in bulk.	
For every ton of hemp	2 0
For every ton of tallow or ashes	1 3
For every ton in bulk, except guano	1 9
The total number of tons charged not to exceed the register tonnage.	
Laden with wood, the growth of the North of Europe, or the North American colonies, viz.	
Entirely with deals, staves, lath, or firewood	1 9
Entirely, or in part, with timber	1 9
And, in addition, for every load of hardwood or masts	0 6
For every load of pine or fir timber	0 3
Laden with timber from Africa, or the East Indies, or like timber cargoes	3 0
And, in addition, for every load discharged over side	1 0
Laden with guano	1 9

Sailing Vessels inward discharged by their own Crews.

For the use of the docks ‡ for any period from the date of entrance, not exceeding the undermentioned —

If from Hambro', Bremen, Embden, and the Mediterranean	6 weeks
If from any other port or place	4 weeks

	₰ ton reg. s. d.
Arriving from any port or place not otherwise specified	0 9
Arriving from any port in the United Kingdom, or European port outside the Baltic, between the North Cape and Ushant §	0 6
Delivering part of a cargo, and not remaining beyond one week per ton delivered	0 6

Exceptions.

Sloops and craft coastwise, with bricks, and vessels with broken granite, or paving stones, not remaining beyond one week	0 3

* The use of the docks is allowed from the date of entrance, for 6 weeks for vessels from Hambro', Bremen, Embden, or the Mediterranean, and 4 weeks for vessels laden with guano; and when the discharge by the Company of any vessel is postponed by desire of the owners, 6 weeks only are allowed free of rent.

† The expense of labour incurred, and of materials broken or injured in the discharge of cutch or gambier and other packages when they adhere together, will be charged in addition.

‡ The expense of mooring, unmooring, and removing, is not included.

§ If such vessels load outwards, 3d. per ton additional will be charged.

	℔ ton reg. s. d.
Colliers entering to await the sale of their cargoes, not remaining beyond two weeks - - -	0 3

Other vessels than colliers, coastwise, on landing goods in the docks equal to one-third of their register tonnage, to be exempted from payment of the tonnage rate, but rent to commence after one clear day from the final landing of the goods.

Vessels entirely corn laden, discharged in the docks, in lieu of tonnage rate, not remaining beyond two weeks,

	£ s. d.
If under 50 tons register each	1 1 0
If 50 and „ 100 „ „ „	1 11 6
100 „ „ 150 „ „ „	2 2 0
150 „ „ 200 „ „ „	3 3 0
200 „ „ 250 „ „ „	4 4 0
250 „ „ 300 „ „ „	5 5 0
300 „ „ 350 „ „ „	6 6 0
350 „ „ 400 „ „ „	7 7 0
400 „ „ 450 „ „ „	8 8 0
450 „ „ 500 „ „ „	9 9 0

and £2 2s. for every additional 50 tons register or less.

If corn vessels quit without unloading, rent to commence after one clear day from the date of entrance.

Vessels two-thirds laden with corn will be charged the usual tonnage rates on the other part of their cargoes, in proportion to their register tonnage.

If vessels to which the above exceptions apply load outwards, they will be charged the usual rate of 9*d.* per ton register.

Sailing Vessels outwards, or light Vessels, other than Steam Vessels.

	℔ ton reg. s. d.
Entering to load or lay up, not having discharged their import cargoes in the docks,	
The use of the docks for any period not exceeding 4 weeks from the date of entering * - - -	0 9

Vessels entering to load from the Import Warehouses only.

	℔ ton on the gross weight shipped. s. d.
For the use of the dock for one week - - -	0 6

The number of tons charged not to exceed the register tonnage.

Exceptions.

Vessels under 100 tons register loading corn or deals, fir timber, and like wood goods, and ships, from the Export or South Docks, which will be allowed to load without any addition to the rate to which they may be liable for the use of the docks.

Steam Vessels.

	℔ ton reg. s. d.
Entering to lay up, or to repair or fit their machinery.	
For the use of the docks for any period not exceeding 4 weeks from the date of entering - - -	1 6
Charges for getting out, landing, lifting, or shipping boilers and heavy machinery †:—	
Pieces under 2 tons each - - - per ton	5 0
2 tons, and not exceeding 5 tons each - ditto	6 6
Above 5 tons, and not exceeding 10 tons each ditto	7 6
Exceeding 10 tons each - - - ditto	10 0
Rent, per week, for boilers, funnels, cylinders, and the like - - - - - - ditto	0 3
Ditto for plates, shafts, and other gearing - ditto	0 1

Vessels entering only to adjust Compasses.

Steam vessels - - - - - -	0 6
Sailing vessels - - - - - -	0 4

Not to remain beyond one week; continuing beyond that period to pay the full rates on light vessels.

Dock Rent.

For remaining over the periods specified:—	
Sailing vessels - - - - per week	0 1
Steam vessels lying up, repairing, or fitting machinery	0 4

All vessels which re-enter after having been out for repair, will be allowed their privilege without reckoning the time they remained out.

For the more expeditious discharge of vessels unloaded by the Company ‡ every assistance may be obtained in clearing the decks, or stiffening them; coopering water casks and shipping them, when filled. Should the Company's moveable machinery be desired for such purpose, it will be lent upon application to the superintendent. The following charges will be made for such services:

	s. d.
For labourers hired to work under the direction of the commanding officer of the ship, each man per day, of the regulated hours of attendance - -	3 6

And not less than ½ day to be charged. Overtime will be charged in proportion.

Articles loaded, shipped, or struck down by the dock cranes or jiggers, under 2 tons - - - per ton	1 0
2 tons, and under 5 tons - - - - - „	1 8

and not less than one ton to be charged.

The use of the Floating Engine for washing ships, including the attendance of the man in charge, per day - - - - - - - - -	20 0

And not less than one day to be charged.

* The expense of mooring, unmooring, and removing, is not included.

† If the Company are required to find the slings and to sling, an additional charge of 10*s.* per cent. on value will be made on pieces 2 tons and upwards.

They do not undertake to lift or ship any weight exceeding 20 tons.

‡ Where inconvenient and unnecessary delay occurs in discharging or loading of ships, vessels, lighters, or craft, it shall be lawful for the Company to cause to be employed a sufficient number of fit and proper persons, and to make a reasonable charge for the same upon the owner or owners, consignee or consignees. — Sec. 94.

Whenever assistance is required for moving within the docks, it will be furnished by the dock master on the following terms, viz.:—

	s. d.
A boat with warp and two hands - -	10 0
A boat with warp and four hands - -	15 0

And for every additional hand employed, either on board, or in the boats, 6*d.* per hour.

The warps are only lent in aid of the ship's warps.

Water from the East London Water Works.

Supplied filtered, and delivered on board -	per ton 1 0
Unfiltered, from the tank - - -	„ 0 10

Table of Charges for Masting or Dismasting at the Mast-building.

	Main Mast.	Fore Mast.	Mizen Mast.	Bowsprit.

1,000 to 1,500 tons -	0 15 0	0 15 0	0 10 0
800 — 1,000 — -	0 10 0	0 10 0	0 5 0
500 — 800 — -	0 7 6	0 7 6	0 5 0
under 500 — -	in proportion.		

The prices of the above table are for each operation, which includes the use of masting-falls and slings.

Freight Books. — Abstract of cargoes, for the purpose of making up freight accounts, is supplied, on application at the Dock-house, Billiter-square, at the following charges:—

	s. d.
Each abstract, containing the weights, measurement, or quantities, of 10 marks or parcels, or under -	2 0
of 11 to 20, ditto - - - -	3 6

Upwards of 20, each mark or parcel, 2*d.*; but not to exceed 10*s.* 6*d.*, including an abstract of the certificates of damage.

Rates and Charges must be paid before the vessels leave the docks, either at the docks, or at the Dock-house in London.

Regulations, &c., regarding Merchandise.

No ship is allowed to break bulk until her cargo is duly entered; it is therefore important that consignees should give directions for the entry of their respective consignments at the Custom-house, as soon as the ship is reported.

Baggage and presents may be cleared at the baggage warehouses, after examination by the revenue.

Particular attention is necessary to the regularity of the indorsements of bills of lading, as the Company's officers cannot pass any bill on which the authority from the shipper to the holder is not deduced by a complete and accurate chain of indorsement.

Every bill of lading should be specially indorsed, so as to clearly designate the party to whose order the contents are to be delivered.

In all cases of informality in bills of lading from want of indorsement, &c., or of their being lost, application must be made to the court by letter, stating the circumstances, and enclosing any documents which will show the title to the goods: in every such case the applicant must engage to indemnify the Company, by bond or otherwise, as the court may direct.

When bills of lading are produced, which are at variance with the manifest as to the original consignee, the Company will not pass any delivery order founded thereon, until three clear days shall have elapsed.

The delivery of goods afloat will be the act of the captain or officer in charge of the vessel.

No order can be received until the manifest of the cargo, duly certified by the captain, has been deposited at the Dock-house; the orders of the importers of all goods intrusted to the East and West India Dock Company's management may then be passed.

When parties holding orders for delivery from the quays, wish the goods housed in their own names, or in the names of other parties, they must lodge the order indorsed to that effect, and warrants will be granted accordingly.

All merchandise warehoused under the care of the Company, is deliverable by warrant; but in the ordinary course of business, Muscovado sugar, wood (excepting ebony and dye wood from the East Indies), goods imported in bulk, and sundry other articles, according to custom, are deliverable by cheques, sub-orders. Warrants, however, will be granted at the desire of the proprietor, for any article warehoused in packages, or for the whole quantity of a bulk, as imported, or for any allotment of such bulk, on payment of the expense of separating it into distinct and corresponding parcels.

That the course of business may be fully understood, the attention of importers and purchasers of produce is particularly requested to the following memoranda:—

Warrants for goods which are usually sold without lotting, will be made out for such quantities as have been found generally convenient to the importers.

For goods which are lotted, made merchantable, &c., the warrants will be made out as soon as the operations are performed. When directions from the importer are required, notice will be given on the landing accounts, or otherwise.

The first warrants or cheques will be issued to the order of the importers, or their assigns, (provided there is no stop upon the goods for freight or otherwise), upon payment of the prime rates, or landing charges.

Such payments must include all charges incurred to the time of passing the order or issuing the warrants, or cheques, excepting rent; charges accruing subsequently, and the rent, must be paid by the holders of the warrants before delivery of the goods. The proprietors of goods may, however, clear the rent and incidental charges to any desired date, and have new warrants or cheques accordingly.

Weight or gauge notes, corresponding to the warrants, will be furnished, when required, at the charge of two-pence each.

The landing and consolidated rates are received at the Dock-house; rent and extra charges by the receivers at the docks, at the clearing office at Fenchurch street warehouse, and at the Billiter-street and Jewry-street warehouses, in whichever place the goods may be lodged.

When the assignment or removal of part of the goods only is intended, the warrants or cheques should be divided at the Dockhouse, in London, as hereafter provided. * If the delivery of the whole of the contents is directed, and the goods are not removed within two days, a new warrant or cheque, for the remainder of the parcel, must be taken out.

When the holders of warrants or cheques are desirous of assigning part of their contents, without delivery, re-weighing, re-housing, &c., new documents will be given in exchange, on lodging the originals, duly indorsed. The indorsement should specially direct the manner in which the contents are to be divided, and state the names of the parties in whose favour the warrants or cheques are to be issued, in the following form: — "Please to divide the within" or, when part is to be delivered, "Deliver to Bearer [state how many packages], and grant new _____ one for [state how many packages] in favour of _____ one for," &c.

Warrants may be exchanged or divided, without assigning the goods when desired by the holder, at the same rate of charge.

The original warrant granted to the importer is not charged for, but the charges for dividing or issuing new documents, or transferring, are —

For each warrant or transfer,

	d.		d.
1 or 2 packages or quantities	1	26 to 30	8
3 or 4	2	31 to 35	9
5 to 7	3	36 to 40	10
8 to 10	4	41 to 45	11
11 to 15	5	46 and upwards	12
16 to 20	6	Goods in bulk per ton	2
21 to 25	7	For every new cheque granted	2

If from the nature of the contract between the seller and buyer, re-weighing, &c., may be necessary, new warrants, if desired, will be issued on depositing the warrants, indorsed with directions to that effect, containing the landing weights and re-weights, as soon as the operations are completed.

When any alterations, such as re-packing, &c., are to be made (except when preparatory to immediate delivery), the warrants must be lodged; and others representing the goods correctly, issued in the same manner.

In the case of casks of liquids used to fill up others, the warrant must be lodged, and the proprietor may either have a new warrant for the remainder, or it may be delivered (if not required to be used again in the same way) to his order.

The warrants must likewise be lodged, on giving notices to wit; but if immediate shipment is not intended, new warrants will be issued as soon as the casks are re-filled.

In the four last-mentioned cases, the charges for performing the operations include the expense of the new warrants.

When warrants or cheques are lost or mislaid, the Company require that they should be advertised in the Public Ledger, the paper containing the advertisement, and an engagement to indemnify the Company by bond or otherwise, to be enclosed with the application for duplicates. The new documents will not be issued (unless the original shall be found and delivered up) until seven clear days shall have elapsed from the date of notice by advertisement. Upon notice of the loss, the goods will be stopped, and the original documents on no account be acted upon, unless first presented at the secretary's office.

Irregularities in the indorsements lessen the security of the proprietors of goods, and render the documents incomplete as authorities. The attention of the holders is therefore particularly called to that point, to prevent the impediments which must otherwise arise to the regular despatch of business. But they must not attempt to remove such impediments by indorsing any warrant, order, or cheque, without due authority.

* If the quantity to be assigned must be weighed or measured, to separate it from the bulk, the division cannot be made until the whole quantity has been re-weighed or re-measured.

Forms on which persons may be authorised to sign for others, may by obtained in the general office at the Dock-house; and as no signature but that of the party named on the warrant, delivery order, or cheque, can be acted upon, when goods are made deliverable to order, persons so authorised should adhere to the following form: —

"For (Name or Firm).
(Signature of the person authorised)."

Deposit Accounts. — To facilitate passing orders, and paying the charges due upon goods, the Company will open deposit accounts, upon request from the merchants, with such deposits as they think proper; when the balance is reduced below ten pounds, a further deposit must be made, ten pounds being the smallest sum which can be received at a time.

Parties having deposit accounts with the Company, must transmit a note of advice on the proper form with each deposit, and it will be necessary that they should invariably state on their orders or warrants whom the charges are to be paid by, thus: —

"Charges to the (date) to our account," (Signature.)

Or "Charges to be paid by the holder," (Signature.)

By opening such accounts the business of merchants with the Company, particularly where goods are upon rent, is much facilitated. The proper forms and pass books may be obtained on application at the Dock-house.

Orders for extra work. — The charges for re-packing, or preparing for exportation, and all work not comprised in these tables, will be fixed from time to time, with reference to the cost of labour and materials. No such work, however, can be done, but by the order of the proprietors of the goods, or parties duly authorised by them.

The charges under this head must be paid by the parties giving the order, or clearing the goods.

Goods prepared for Shipment. — When goods housed in the Import warehouses are prepared for shipment, and are not taken away within the fixed number of days, they will be re-housed at the expense of the proprietor, and the charge for such re-housal, and any additional rent which may have accrued, must be paid before delivery.

The time allowed to elapse before re-housing, or re-stowing, is as follows: — Mahogany and other measured wood, 4 clear working days; Dye-woods, and all other goods, 7 clear working days: when the export vessel loads in the docks, the time will be extended to the date of her departure.

Schedule of Rates on Goods Inwards.

The Landing Rate is charged upon the gross weight, and includes landing, wharfage, weighing or gauging, and housing, or piling on the quays, or loading therefrom, original warrants, accounts of landing weights, tales, or gauges, and strengths of spirits, surveying and furnishing certificates of damage. Goods not intended to be warehoused will be allowed four clear days from the final weighing of the parcel for removal, in default of which they will be housed or piled. If intended for immediate trans-shipment, they may remain on the quay, subject to the same regulations as goods prepared for shipment, paying rent as if housed at landing.

The Prime or Consolidated Rate includes all expenses for landing, wharfage, weighing or gauging at landing; coopering, or mending for housing; marking, sampling, housing, weighing for actual delivery and delivering; furnishing landing and delivery weights, tales, or gauges and strengths; surveying and furnishing certificates of damage, and rent for twelve weeks from the date of the ship's commencement of discharge, excepting where it is otherwise stated. It is charged upon the net weight, and on all goods to which it is affixed, unless notice be given previous to the final weighing or gauging by the importers of their desire to have them placed under the landing rate.

The Rates for

Re-weighing,	when not otherwise specified,	1-3rd of landing rate.
Re-housing,	do.	do.
Unpiling,	do.	do.
Repiling,	do.	do.
Unhousing or unpiling & loading,	do.	do.
Wharfage and shipping,	do.	2-3rds of landing rate.
Unloading and housing or piling,	do.	do.
Unhousing or unpiling, Wharfage and shipping,	do.	the same as the landing-rate.

The Warehouse Rent is chargeable on the gross weight, from the date of the ship's breaking bulk, or from first landing from craft.

A week's rent will be charged for any fraction of a week.

Before transfer by the Company, or delivery of any goods can take place, the charges on the quantity to be transferred or delivered must be paid.

RATES AND CHARGES ON RUM.

Landing Rate includes landing, wharfage, gauging, housing, or delivering from the quay, original warrants and accounts of gauges and strengths, as ascertained by the revenue, surveying and furnishing certificate of damage. Rum, not intended to be warehoused, will be allowed 4 clear days from the final gauging of the parcel for removal. If intended for immediate transhipment, it may remain on the quay 7 clear days from that period, and when the export vessel loads in the docks, until the date of her departure, paying rent and cooper's attendance as if housed at landing.

The Prime or Consolidated Rate includes all expenses for landing, wharfage, gauging, coopering for housing, marking, sampling, housing and delivery, furnishing gauges and strengths, as ascertained by the revenue, surveying and furnishing certificate of damage, and rent and cooper's care and attendance for 12 weeks from the ship's commencement of discharge. It is charged in all cases, unless notice be given by the importers, to place the goods under the Landing Rate.

	Prime Rate.	Landing Rate.	Rent per Week.
	s. d.	s. d.	s. d.
Rum per 100 galls.	10 0	*3 6	0 8 . leager 0 6 . butt 0 4 { half-butt, pipe, punch } 0 2 . hhd. 0 1½ barrel or quarter-cask
			For cooper's care and attendance per week. { leager, butt, half-butt, pipe or punch. } 0 0½
			Ditto { hhd., brl. or quarter-cask } 0 0½

* Includes delivery from the quay, either by land or water.

*** When rum is imported in casks made of proper oak, the company engages to be responsible for deficiencies in measure, which shall exceed one gallon per cask for each year or fraction of a year the goods remain in charge; but the company will not be answerable for deficiencies arising from the casks being made of other and inefficient material.

The Rates for

Unhousing and loading . . one-third of Landing Rate.
Wharfage and shipping . . two-thirds of Landing Rate.
Unloading and housing . . ditto
Unhousing, wharfage and shipping . . . . same as the Landing Rate.

Rent is chargeable from the date of the ship breaking bulk, or from the first landing from craft.

Before transfer by the company, or delivery, the charges on the quantity to be transferred or delivered must be paid.

Cooperage and Extra Charges on Rum.

Sampling, first and second, with vial, 1s. per cask.
Ditto ditto without vial, 6d. per cask.
Driving, 9d. per pun. or pipe; 6d. per hhd., barrel, or quarter-cask.
Taking off tins and re-tinning, 4d. per cask.
Starting bungs and re-bunging, 2d. per cask.
Measuring, 2s. per pun.; 1s. 6d. per hhd.
Filling up, not exceeding 5 gallons, 3d. per cask.
Overdrawing, 3d. per cask.
Racking, 9d. per pun. or hhd.
Lead patches, 6d. each.
Tins, plain, 1d. each.
Tins, marked, 2d. each.
New chimes, 6d. each.
Bung, or shive, 1d. each.
Tapeing and resealing, complete, 1s. per cask.
Ditto ditto across the bung only 4d. per cask.
Breaking out, and restowing, 1s. per pun.
Marking, with scribing-iron or ink, 1s. per cask.
Ditto with paint, 3d. per cask.
Ditto with branding-iron, 4d. per cask.
Ditto direction, with paint or cutting-in, 6d. per cask.

	New Heads, Per Head.	Iron Hoops, Per Hoop.	
	Rum.	New.	Old.
	s. d.	s. d.	s. d.
Puncheon (110 gallons and under) -	2 9	0 8	0 4
Half-butt - -	2 9	0 8	0 4
Hogshead - -	2 6	0 8	0 4
Quarter-cask - -	2 2	0 4	0 2
Half-quarter-cask -	2 2	0 4	0 2

No fee, perquisite, or reward, is to be taken by the company's officers or servants, other than their salary or wages. Penalty, forfeiture of the sum taken and 5*l.* for each offence.

2. *London Docks.* — These were the next undertaking of this sort set on foot in the Thames. They are situated in the parishes of St. George in the East, Wapping, and Shadwell, and were principally intended for the reception of ships laden with wine, brandy, tobacco, and rice. The western dock has a water area of above 20 acres, with a commodious jetty in the centre, 800 ft. in length; and the water area of the new or eastern dock covers about 7 acres. The tobacco dock, which lies between the above, and exceeds 1 acre in extent, is particularly adapted for the reception of tobacco ships. The warehouses are capacious and magnificent. The great tobacco warehouse, on the north side of the tobacco dock, is the largest, finest, and most convenient building of its sort in the world. It is fitted to contain 24,000 hhds. of tobacco, and covers the immense space of near *five* acres! This warehouse is wholly under the management of the officers of customs. The vaults, under the tobacco and other warehouses, include an area of the vast extent of about 18¼ acres, and, after allowing for gangways, &c., have stowage for 66,000 pipes of wine and spirits! These docks were opened in 1805. All ships bound for the Thames, laden with wine, brandy, tobacco, and rice (except ships from the East and West Indies), were obliged to unload in them for the space of 21 years: but this monopoly expired in January, 1826; and the use of the docks has since been optional. Hydraulic machinery is now in use alongside the quays and in many of the warehouses, and is being generally applied throughout the docks.

The entrances to the London Docks were formerly by the basins at Hermitage and Wapping. But in 1832 another entrance was effected by a basin constructed at Shadwell, about 3-4ths of a mile lower down the river than the Wapping entrance. And last year

(1858) this basin was farther enlarged so as to include a water area of above 6 acres; and it was then, also, furnished with a second, or new entrance lock, 350 ft. in length, and 60 ft. in width, having at spring tides a depth of 28 ft. water over the cill of the dock gates. This additional basin has been a most material improvement; for while it has rendered the docks more easily accessible to all sorts of ships, the new entrance lock admits those of the largest burden.

The Company's premises include, in all, a space of about 100 acres. The stock amounts at present (1859) to 4,910,393*l.* A considerable portion of this vast sum was required for the purchase of the houses that occupied the site of the docks.

Regulations regarding Shipping in the London Docks.

Lodgment of Manifest.—Every master of a ship is required to deliver at the superintendent's office, within twelve hours after the arrival of the vessel in the docks, or reporting at the custom-house (which shall first happen), a true copy of the manifest or report of the cargo, signed by himself.

Discharge of Vessels.—Vessels are not to break bulk without the permission of the superintendent, until entries have been passed for the whole of the cargo.

On application of the master, the Company will pass a warehousing entry for such goods as the owners or consignees may have neglected or refused to enter, or order lodged with the customs officer on board the vessel, within forty-eight hours from the date of the report.

No persons are allowed to work on board vessels, on the quays, or in the warehouses, unless engaged by the Company, without permission in writing from the superintendent (stowers of cargoes outward, excepted); but labourers may be hired of the Company, to work under the direction and responsibility of the master of the ship, the charge being 3*s.* 6*d.* per day for each man. In cases where the number of men employed is not sufficient for the timely discharge of the cargo, additional hands are provided by the Company at the expense of the vessel.

The decks are to be speedily cleared of such articles as impede the discharge of the vessel; and the master, mate, or some person duly authorised by the owner, is to remain on board during the unloading, which, it is understood, is performed under their direction.

Stops for Freight.—Goods landed will be retained for freight on due notice being given in writing by the owner, master, or other person interested therein. For such goods, transfer orders will not be received, nor warrants granted, until the stop has been withdrawn, or the freight deposited with the Company.

No stop for freight can be received after an order for transfer of the goods has been lodged, or a warrant granted for them.

Goods delivered into craft, to be landed elsewhere, cannot be detained for freight.

Vessels leaving the Docks for Repairs are not charged rent for the period they are absent; nor is any charge made for ballast, chalk, slate, or flints, received from or delivered into craft.

Abstracts of Cargoes, for the purpose of making up freight accounts, are supplied on application to the superintendent, at the following charge, viz.:—

		s.	*d.*
If the goods have	10 marks or under - -	2	0
„	11 to 20 marks - -	3	6
„	21 and upwards, 2*d.* each mark or parcel, but the total charge not to exceed 10*s.* 6*d.*, including an abstract of certificates of damage.		

Steam Boats are furnished by the Company inwards from Gravesend, in certain cases, to vessels (not laden with guano, hides, corn, timber, or provisions, and only to those vessels with nitrate of soda, when two-thirds or more of the cargo is to be landed) proceeding to these docks, arriving from North and South America, the West India Islands, the Cape of Good Hope, and all ports to the eastward thereof, on application to the secretary, the superintendent, or the agent of the Company; and also to such vessels outward bound, as far as Blackwall, being of the burden of 275 tons register, or upwards, and which have discharged their cargoes in the docks.

Vessels are only allowed to pass from the western to the eastern dock between the undermentioned hours, except in cases of emergency, notice of which must be given to the dock-master:—

From 15th February to 14th October - 8 till 5 o'clock.
„ 15th October to 14th February - 8 „ 4 „

Tonnage Rates on Sailing Vessels and Screw Steamers.

First Class.—Vessels from any port in the United Kingdom, Isle of Man, Jersey, Guernsey, Alderney, Sark, or other European ports outside the Baltic, between the North Cape and Ushant (Hamburg, Bremen, and Embden excepted, see *second class*), with liberty to reload for any port in this class, 6*d.* per register ton; rent, after 4 weeks from the date of entering the dock, if discharged by the crew of the vessel; from the date of final discharge, if discharged by the Dock Company, 1*d.* per register ton per week; or, if with part of a cargo, for every ton of goods delivered above 21 tons, 6*d.*; rent, after 1 week from date of entrance, 1*d.* per register ton per week.

Vessels loading for any of those ports, not having discharged their cargoes in the docks, 6*d.* per register ton; rent, after 4 weeks from date of entrance, 1*d.* per register ton per week.

Second Class.—Vessels from Hamburg, Bremen, and Embden, with liberty to reload for any port in this class, 6*d.* per register ton; rent, after 6 weeks from date of entrance, 1*d.* per register ton per week.

Vessels loading for any of those ports, not having discharged their cargoes in the docks, 6*d.* per register ton; rent, after 4 weeks from date of entrance, 1*d.* per register ton per week.

Third Class.—Vessels from Spain, Portugal, or France, laden with wine or brandy, or from any port in the Mediterranean, with liberty to reload for any port, 9*d.* per register ton; rent, after 6 weeks from date of entrance, 1*d.* per register ton per week.

Fourth Class.—Vessels from all other ports or places whatsoever (with the exception of those hereafter enumerated), with liberty to reload for any port, 9*d.* per register ton; rent, after 4 weeks from date of entrance, if the cargo be discharged by the crew; from date of final discharge if the cargo be discharged by the Dock Company, 1*d.* per register ton per week.

Vessels loading for any ports or places in the third or fourth classes, not having discharged their cargoes in the docks, 9*d.* per register ton; rent, after 4 weeks from date of entrance, 1*d.* per register ton per week.

Paddle-wheel Steam Vessels.—Steam vessels, 2*s.* per register ton; rent, after 4 weeks from date of entrance, 4*d.* per register ton per week.

Exceptions.

Vessels from any port in the United Kingdom, which land one third (or more) of their cargoes, will be admitted into the docks free of dues, with liberty to remain 24 hours after the final discharge; rent, after the expiration of that period, 1*d.* per register ton per week. Should the vessel load outwards, the usual tonnage rates, according to the port of destination, are charged.

Vessels from Spain or Portugal, with cargoes of wool, and cork, with liberty to reload for any port, 6*d.* per register ton; rent, after 3 weeks from date of entrance, 1*d.* per register ton per week.

Vessels to or from the southern whale fisheries, 1*s.* per register ton; all delivered into craft, 6*d.* per ton; rent, after 6 weeks from date of entrance, 1*d.* per register ton per week.

Vessels delivering part of their cargoes, not being equal in weight to their register tonnage:—

First or second class, 6*d.* per ton of goods landed.
Third or fourth class, 9*d.* „ „

Rent, after 1 week from date of entrance, 1*d.* per register ton per week.

Vessels loading part of their cargoes, above 21 tons:—

First or second class, 6*d.* per ton of goods taken on board.
Third or fourth class, 9*d.* „ „

Rent, after 1 week from date of entrance, 1*d.* per register ton per week.

Light vessels to lie up, on entering, 6*d.* for every register ton of the vessel; rent, after 4 weeks from date of entrance, 1*d.* per register ton per week.

Vessels which enter the docks to lie up, and afterwards load out, pay dues according to their port of destination.

Vessels wholly corn laden are exempt from tonnage rates, but are charged for docking and undocking as under:—

			£	*s.*	*d.*
If under 50 tons register	- -	-	1	1	0
If 50 and under 100 ditto	- -	-	1	11	6
100 „ 150 „	- -	-	2	2	0
150 „ 200 „	- -	-	3	3	0
200 „ 250 „	- -	-	4	4	0
250 „ 300 „	- -	-	5	5	0
300 „ 350 „	- -	-	6	6	0
350 „ 400 „	- -	-	7	7	0
400 „ 450 „	- -	-	8	8	0
450 „ 500 „	- -	-	9	9	0

and 2*l.* 2*s.* for every additional 50 tons register, or less; rent, after 14 days from date of entrance, 1*d.* per register ton per week; or, in the event of the vessel quitting the docks without unloading, rent, after 1 clear day from date of entrance, 1*d.* per register ton per week.

Vessels two-thirds laden with corn are charged tonnage rate on the proportion the remainder of the cargo bears to the register tonnage, in addition to the charge for docking and undocking. Should the vessel, in either of the above cases, load outwards, the usual tonnage rates, according to the port of destination, are charged.

Vessels leaving the dock after having discharged the corn, and subsequently return to load, the usual tonnage rates according to port of destination are charged. The charge for docking and undocking previously paid is not to be disturbed.

Vessels coal laden: if the coals are to be landed, for docking and undocking, 21*s.*; for every ton of coals landed, 6*d.*; if the coals are to be transhipped, 6*d.* for every ton of coals delivered*, with liberty to remain in the docks 24 hours after the final discharge of the cargo; rent, after the expiration of that period, 1*d.* per register ton per week.

NOTE.—Vessels are not permitted to leave the docks until the tonnage dues and other expenses have been paid; for which purpose the register must be produced at the superintendent's office, if the ship be British—or a certificate of admeasurement by the proper officer of the customs, if foreign—when a pass will be granted, which must be lodged with the dock-master on the vessel leaving the docks.

Rates for Discharging Cargoes when landed by the Company.

Cargoes, consisting either in the whole or in part of hogsheads or tierces of sugar or molasses, from the West Indies (including ship-cooperage), 1*s.* 9*d.* per register ton.

* No charge made on any quantity exceeding the register tonnage.

Cargoes consisting of sugar in chests of 5 cwt. and upwards (including ship-cooperage), 1s. 3d. per register ton.

Cargoes consisting of sugar in bags, mats, or chests under 5 cwt., or other goods (not being marble, tallow, hemp, ashes, corn, wood goods, pitch, tar, hay, or straw) contained in casks, bales, serons, chests, cases, bags, baskets, mats, bundles, or similar packages; also spelter or metal pigs, bars, rods, plates, &c. 9d. per register ton.

NOTICE.—Whereas packages of cutch have been found to adhere together, so as to cause extraordinary labour and expense in discharging the same, beyond that which would otherwise have been incurred had the packages continued separate, the extra expense for breaking it out, when it shall be found to be so adhering, will be charged to the ship over and above the rates to which the vessel would be otherwise liable, viz., the labour at 3s. 6d. per day per man, and the cost of repairing the implements used.

Cargoes consisting of mahogany, or other large wood in logs, 1s. 9d. per register ton.

Blue gum wood, or large timber, or oil in iron tanks, additional for every load or ton delivered, 6d.

Cargoes consisting of hemp only, or merchandise in bulk, 1s. per register ton.

Cargoes consisting of tallow only, 6d. per register ton.

Mixed cargoes: of hemp, 1s. 3d. per ton; tallow, 6d. per ditto; ashes, 6d. per ditto.

Mixed cargoes, the part which is in bulk, 1s. per ton.

No charge made for excess beyond the register tonnage.

NOTE.—The above work is performed under the direction of the master or chief officer, and vessels which discharge the whole, or the greater part of their cargoes into lighters, will be subject to such rates as shall be agreed upon between the shipowners or masters and the Company.

Regulations regarding Goods, and the Rates and Charges thereon.

Rent is charged on goods from the day on which the importing vessel breaks bulk, or from the first landing from craft.

Bills of Lading must be produced, in all cases, when goods have been landed by the Company (under the authority of the 114 and 116 secs. of the act 9 Geo. 4. c. 116), for want of entry by the importer, before they can be delivered to any party claiming the same; as also, when goods have been landed from places to the eastward of the Cape of Good Hope, with the exception of Van Diemen's Land and New South Wales.

Orders for Transfer or Delivery (the forms of which may be obtained at the superintendent's office), unless the goods are to be delivered from the landing scale, cannot be accepted until the goods have been landed.

Neither can such orders be received, until the charges on the goods composing the whole of the mark or parcel have been paid.

Orders for delivery cannot be acted upon unless signed by the party in whose name the goods stand in the Company's books, or by a person duly authorised in writing, under the hand of the principal, to sign them; and should any interlineation, erasure, or alteration have been made in an order, it can only be accepted with the name or initials of the party set against such alteration.

Receivers of Charges.—The only persons authorised to receive money, are, the collectors at the superintendent's office; the warehouse-keeper at the tobacco warehouse; and the warehouse-keepers at the eastern dock; except for consolidated rates, which may be paid at the London Dock House, in New Bank Buildings.

Deposit Accounts may be opened at the superintendent's office.

If an order does not specify the party by whom the charges due at the date thereof, or of the transfer, are to be paid, the amount will be placed to the deposit account of the party transferring.

Warrants and Transfers.—Warrants for goods in general are issued on written application at the dock in favour of such person as the party in whose name they stand in the Company's books may direct. The first are issued free of expense; on all subsequent warrants and transfers the charges are as follows:—

For each warrant or transfer containing	s.	d.
1 or 2 packages	0	1
3 — 4 „	0	2
5 to 7 „	0	3
8 — 10 „	0	4
11 — 15 „	0	5
16 — 20 „	0	6
21 — 25 „	0	7
26 — 30 „	0	8
31 — 35 „	0	9
36 — 40 „	0	10
41 — 45 „	0	11
46 and upwards	1	0
Goods in bulk, per ton	0	9
For every new cheque granted	0	2

The contents of one warrant may be divided into others for smaller quantities, at the will of the holder.

Application for duplicate warrants, in consequence of the originals being lost or mislaid, must be addressed to the secretary, at the London Dock House, in New Bank Buildings, who will make known the conditions on which they will be granted.

Weight Notes are issued at any time on or before the day of prompt, on authority in writing, entitling the holder to inspect and sample the goods; the charge is 2d. each.

Weights of Goods.—Duplicates are furnished on certain conditions, on reasonable cause for requiring them being assigned.

Samples.—When samples are required which can only be taken after the goods have been turned out of the packages, that operation will be performed without more specific directions from the owner.

When brokers are to inspect or sample goods, the authority of their principals must be registered at the superintendent's office.

Second Samples.—Orders for second samples, if the goods are for "exportation only," are issued at the superintendent's office, the proprietor paying the customs duty thereon.

Empty Casks and Packages, if not removed from the dock within 7 days from the date of their becoming empty, are sent to the Company's stores, and sold by the Company. The proceeds are paid to the owner, after deducting the sale charges *and other expenses, provided the same be claimed within* 12 months from the day of sale.

Goods which pay Duty on the Delivery Weight.—The customs duties for home consumption upon the following articles bonded, are chargeable only on the delivery weight: viz., tobacco, sugar, currants, figs, raisins, mahogany, hams, and cheese; and on the delivery gauge of wines, and the gauge and strengths of spirits. No duties are charged on deficiencies of bonded goods exported from the warehouses, vaults, &c., in the docks.

Cases in which the Company are not Liable.—The Company are not liable for deficiencies arising from natural causes; nor for any loss or injury sustained whilst goods are on board a vessel or craft; or in the breaking out, or slinging of the same on board; or when they are received into a ship by lighters, or discharged into lighters, unless the whole of the work of loading and discharging shall be executed by their servants; nor for any deficiencies or losses whatever, unless ascertained previously to the goods being removed from the dock premises.

Tares. — The warehouse-keepers will, on application in writing, attend the customs officer to settle allowances for tares; whenever this business is to be performed by the merchant or his clerk, an early appointment for that purpose should be made with the officer.

Goods worked for Sale.—The Company will proceed to the working for sale of all goods which require to be put in a merchantable state, immediately on their being landed, unless notice to the contrary be given by the owner or consignee.

Goods withdrawn from sale after being shown will be subject to an extra charge on being again shown.

When goods are prepared for shipment, and not taken away within the under-mentioned periods, they will be re-stowed at the expense of the proprietor:—

Dye wood	7 days.
Mahogany and other furniture or measured wood	4 „
Other goods	3 „

Memoranda.

The wicket gates at the north-west principal entrance, at Wapping, and at the eastern dock, are open for foot passengers, as under:—

		Open.	*Shut.*
From 1 Feb.	to last day of Feb.	7 o'clock.	6 o'clock.
1 March	„ 21 May	6 „	7 „
22 May	„ 21 August	6 „	8 „
22 Aug.	„ 21 September	6 „	7 „
22 Sept.	„ 20 October	6 „	6 „
21 Oct.	„ 30 November	7 „	6 „
1 Dec.	„ 31 January	7 „	5 „

The hours for the commencement of business, and opening and closing the barrier gate, are:—

		Open.	*Shut.*
From 1 March	to 31 October,	8 o'clock.	4 o'clock.
1 Nov.	„ last day of February	9 „	4 „

Visitors on Sundays or public holidays are admitted only under special circumstances.

A register book for ships inwards is placed in the superintendent's office for the use of merchants and others, in which are alphabetically arranged the names of vessels; where from, and where stationed; which also contains the particulars of ships' loading.

Letters and papers on dock business are conveyed hourly from the dock house to the dock.

The Company have also provided a letter box at the Commercial Sale Rooms in Mincing Lane, in which such papers may be deposited; from whence they will be conveyed at 11 o'clock, 1 o'clock, and 3 o'clock. This latter arrangement being entirely for the accommodation of the public, the Company are not responsible for letters, &c., so forwarded.

The London Docks contain 40 acres of water; and 13,165 feet of quay and jetty frontage; with four entrances from the river, of the following widths, viz., Hermitage and Wapping, 40 feet; Shadwell, 45 feet; and Shadwell new entrance, 60 feet; where the depth of water, at spring tides, is 28 feet.

Besides a numerous night watch, a floating fire engine is kept in constant readiness, which can be immediately set at work, and raises water at the rate of 200 gallons per minute.

3. *St. Katharine's Docks.* — The Company for the construction of these docks was incorporated by the act 6 Geo. 4. c. 105 (local), and they were partially opened on the 25th of October, 1828. They are situated immediately below the Tower, and are consequently the most contiguous of any to the city, the Custom-house, and other places where business is transacted. The capital stock amounts to 1,939,800*l.*; but an additional sum of about 700,000*l.* has been borrowed on the security of the rates, for the completion of the works and the purchase of extensive uptown warehouses, and of a freehold property with a river frontage from the Tower to the corner of Lower East Smithfield. A portion of this property has been appropriated to a steam packet wharf, where

passengers embark and land without the aid or risk of boat conveyance. The purchase of the numerous houses that stood upon the ground occupied by the docks proved, as in the case of the London Docks, a heavy item of expense. The space included within the outer wall is about 24 acres, nearly 11 of which are water. There are 2 docks communicating by a basin. The lock leading from the river is 180 feet long, and 45 broad; it is so constructed that ships of upwards of 600 tons burden may pass in and out 3 hours before high-water, so that outward-bound ships have the opportunity of reaching Blackwall before the tide begins to recede. Ships of upwards of 1,000 tons register are docked and undocked without difficulty. Vessels are also docked and undocked by night as well as by day,—an advantage peculiar to this establishment. A clear channel of not less than 300 feet in width is at all times kept in the pool; and vessels drawing 22 feet water may lie afloat at low water at the principal buoy off the dock entrance. The warehouses and vaults are upon a very large scale; far more so than one might be disposed to infer from the extent of water. The warehouses are well contrived and commodious, and owing to their being built partly on pillars (within which what is called the quay work of the other docks is transacted), close to the water's edge, goods are hoisted direct from the hold of the vessel, without its being necessary to land them on quays; so that in this way a saving of room, time, and labour is effected. The dividend on the company's stock is at present (1859) 4½ per cent.

The regulations to be observed by vessels using the St. Katharine's Docks are similar to those enforced in the East and West India and London Docks, to which we beg to refer.

4. *Commercial Docks.*—In addition to the docks already described, which are all on the north side of the river, there are on the south side the Commercial Docks, in the parish of Rotherhithe, in Surrey.

A portion of these docks appears to have existed so long ago as 1660, and consequently many years prior to the formation of any other wet dock in the British empire. It then bore the name of the Howland Great Wet Dock. At a later period it was called the Greenland Dock, being expressly prepared for the accommodation of Greenland whaling vessels. It was not until 1807 that it received its present title, and that the existing Commercial Dock Company was established. Large additions were at that time made to these docks, and they now cover a greater surface than any others belonging to the port of London.

They are adapted chiefly for the reception of vessels laden with timber, deals, and wood articles in general, corn, iron, tar, guano, and other bulky commodities. But by an act obtained in 1851 (14 & 15 Vict. c. 43.) the company acquired the privilege of landing and warehousing, if sanctioned by the customs, nearly every description of goods. Under the authority of this act, the company purchased the adjoining East Country Docks, and have made such alterations and improvements upon them as were required by the increasing trade of the port of London, and the greater size of the ships by which it is frequented. The docks, with their appurtenances, comprise an extent of about 120 acres, of which 70 acres are water. The entrance to the New South Dock from the river is 27 feet below Trinity *datum* over the cill of the gate and throughout the dock. The lock, which is 220 feet in length by 48 feet in width, has at neaps, or lowest tides, 22 feet water, admitting at spring tides vessels drawing more than 26 feet, which may at all times lie alongside the quays. Vessels of 1800 tons register have been received into this dock.

The number and tonnage of the vessels which entered the Commercial Docks last year (1858) were as follows, viz.

559 wood-laden	238,445	tons.
591 corn-laden	143,319	,,
49 variously laden	10,166	,,
23 light-laden	9,540	,,
1,222 ships	401,470	,,

A railway, laid round the docks, communicates with the various railways in the south of England, affording every facility for the transmission of guano, grain, timber, and other goods to the southern counties, and conversely. The company have large warehouses, with granaries sufficient for the storage of above 120,000 quarters of corn.

The timber ponds attached to the docks will float above 50,000 loads of timber, while the yards will hold about 4,000,000 pieces of deal, and staves *ad libitum*.

The company's stock at present (1859) amounts to 514,410*l.*, yielding a dividend of 5 per cent. The entire establishment is in a very efficient state, and does credit to the managers.

5. *The Victoria London Docks* are situated in the Plaistow marshes, on the N. side of the Thames, immediately below the East and West India docks. They comprise a half-tide basin of 16 acres, an inner dock of 74 acres, and a portion (12 acres) of the canal intended to intersect the eastern lands of the Company. The depth of water varies from 24 feet 6 inches to 26 feet 6 inches. The entrance from the Thames is at Bow Creek, by means of a lock 320 feet in length, 28 feet in depth, and 80 feet in width. There

are 6 jetties, on 5 of which are extensive warehouses. There are also several large warehouses on the N. side of the dock, one of which having an area of 4 acres of flooring is appropriated to the storage of tobacco. There are also sheds capable of containing upwards of 100,000 tons of guano; the entire London trade in this article being now carried on in these docks. A branch of the Eastern Counties Railway is brought into the docks, so that goods can be conveyed by means of this, the North-Western, and other railways, without change of carriage, from the ship's side to any part of the kingdom.

The Company's estate comprises about 650 acres of land, extending from Bow Creek to Gallion's Reach, a distance of nearly 3 miles. It is intended to continue the 74 acres dock by a wide canal through 450 acres of land to the eastward of the present dock, and to employ the water frontage on each side of the canal in providing various kinds of accommodation for shipping and trade, such as dry docks, warehouses, premises for steam ship companies, &c. &c. There have already been constructed by the Thames Graving Dock Company, on the south side of the 74 acre dock, graving docks on an entirely novel principle, in which ships are raised by hydraulic power on pontoons, floated into bays in shallow water, and there examined and repaired. Among the advantages of this plan are being able to accommodate a considerable number of ships at once, and the practicability of these docks being resorted to by shipping without the necessity for passing into the river, and irrespective of the state of the tide.

The Victoria Dock Company are owners of the steelyard warehouses in Upper Thames Street; and the lessees are occupiers of extensive warehouses in Royal Mint Street, which, being connected with the Blackwall Railway, communicate by railway with all parts of the kingdom.

The Company was created by act of parliament in 1850. By this and subsequent acts it is authorised to raise a share capital of 1,200,000*l.*, and to borrow 399,000*l.*, making its total powers of raising money 1,599,000*l.* Of the 1,200,000*l.* of capital, 800,000*l.* has been paid up in full, and converted into consolidated stock; and a farther issue of 100,000*l.* has been made, and is now (1859) in course of being called up. The entire expenditure of the Company on 31st of December, 1858, for land, works, and other purposes, amounted to about 1,000,000*l.*

The undertaking is leased to Messrs. Peto, Betts, and Brassey for 21 years from January, 1855, they paying as rent 5 per cent. on all capital up to 700,000*l.*, and 6 per cent. on all beyond that amount; also 2000*l.* per annum for the expenses of the Company's offices and management, with half the profits which may arise from the working of the undertaking after payment of rent. The lessees are bound to lodge security to the extent of 150,000*l.*, for the performance of the provisions of the lease.

The accounts for the half year ending 31st of December, 1858, showed that the nett earnings were fully sufficient to pay the rent as well as the interest of the lessees' capital employed in the business. The shareholders have hitherto received dividends at the rate of 5 per cent. per annum, and are hereafter to receive at the rate of 5¼ per cent. per annum. Owing to the comparatively low cost of construction the rates of charge upon the ships and cargoes accommodated at these docks are remarkably low.

The following statement shows the rapid progress of the business of the Victoria Docks since their opening in November, 1855.

Numbers and Tonnage of Ships which entered the Victoria Docks, for Years ending 31st December

6. *London Port Dues; Charges on account of Lights, Pilotage, &c., in the Thames; Shipping, &c. of London.*

It is highly desirable that expert pilots, brilliant lights, and every other means that it is possible to devise, should be afforded to render navigation safe and expeditious. But to secure these advantages, it is indispensable that the charges on their account should be moderate. If they be otherwise, navigators are not unfrequently tempted to resort to what are less expensive, though less secure, channels. This principle has not, however obvious, been always kept sufficiently in view either in this or in other countries. During the latter years of the war, and down to 1825, the charges on account of docks, lights, pilotage, &c. on ships in the Thames, and most other British ports, were exceedingly heavy, and would, no doubt, had they been maintained, have materially injured our commerce. Instead, also, of encouraging the resort of foreign ships to our ports, a contrary policy was adopted; the charges laid on them being usually about double those laid on British ships. This regulation was intended to promote the employment of the latter; but, as it led to reprisals in other countries, its real influence is believed to have been quite different; while, by driving away

foreigners, it injured the trade of the country, and prevented our ports from becoming, what they are so well fitted to be, the emporiums of the world. We are glad, however, to have to state that the circumstances now alluded to have been materially, or rather wholly, changed within the last 20 or 30 years. In 1825, the various dock monopolies expired; and a very great reduction has since been made in the charges on account of the docks, which, as already seen, are now very moderate indeed.

Exclusive of the dock duties, certain *port* or *tonnage duties* were imposed on ships frequenting the port of London, by the acts 39 Geo. 3. c. 69., 43 Geo. 3. c. 124., &c. partly to pay the harbour-masters, provide mooring chains, &c., and partly to create a fund for the improvement of the port, and in particular for defraying the cost of making a navigable canal across the Isle of Dogs. But this canal having been sold (*antè*, p. 492.) for 120,000*l.* to the West India Dock Company, under the 10 Geo. 4. c. 130., and the sums advanced by the public for the improvement of the port having been repaid, it was judiciously resolved to reduce the port duties to the lowest rates capable of defraying the necessary expenses. This was effected by the 4 & 5 Will. 4. c. 32., which imposes the following tonnage duties on vessels in the port: —

	Per Ton. *d.*
1*st Class.*—For every ship or other vessel trading coastwise between the port of London or any port or place in Great Britain, Ireland, the Orkneys, Shetland, or the Western Islands of Scotland, there shall be paid for every voyage in and out of the said port	½
2*d Class.*—For every ship, &c., entering inwards or clearing outwards from or to Denmark, Norway, or Lapland (on this side of the North Cape), or from Holstein, Hamburg, Bremen, or any other part of Germany bordering on or near the Germanic Ocean, or from or to Holland, or any other of the United Provinces, or Brabant, Antwerp, Flanders, or any other part of the Netherlands, or from or to France, (within Ushant,) Guernsey, Jersey, Alderney, Sark, or the Isle of Man, there shall be paid for every, &c., as above	½
3*d Class.*—For every ship, &c. entering inwards or clearing outwards from or to Lapland (beyond the North Cape), Finland, Russia (without or within the Baltic Sea,) Livonia, Courland, Poland, Prussia, Sweden, or any other country or place within the Baltic Sea, there shall be paid for every, &c., as above	½
4*th Class.*—For every ship, &c., entering inwards on clearing outwards from or to France (between Ushant and Spain, Portugal, Spain (without the Mediterranean) or any of the Azores, Madeira, or Canary Islands, or any of the U. States of America, or of the British colonies or provinces in N. America or Florida, there shall be paid for every, &c., as above	½
5*th Class.*—For every ship, &c., entering inwards or clearing outwards from or to Greenland, Gibraltar, France, or Spain, (within the Mediterranean), or any country, island, port, or place within or bordering on or near the Mediterranean or Adriatic Sea, or from the West Indies, Louisiana, Mexico, S. America, Africa, East India, China or any other country, island, port, or place within or bordering on or near the Pacific Ocean, or from any other country, island, port or place whatsoever, to the southward of 25° of north latitude, there shall be paid, &c., as above	½

Exemptions.—Ships of war, and ships the property of H. M. or any of the royal family.—Any vessel coming to or going coastwise from the port of London, or to any part of Great Britain, unless such vessel shall exceed 45 tons.—Any vessel bringing corn coastwise, the principal part of whose cargo shall consist of corn.—Any fishing smacks, lobster and oyster boats, or vessels for passengers.—Any vessel or craft navigating the Thames above and below London Bridge, as far as Gravesend only.—Any vessel entering inwards or outwards in ballast.

Owing to the distance of London from the sea, and the rather intricate navigation at the mouth of the river, the charges on account of lights and pilotage must necessarily be pretty heavy. They have, however, been very materially reduced of late years. The charges on account of the lights under the management of the Trinity House have been diminished, in almost every instance, as much as a half, and sometimes even more, since 1823.—(See LIGHT-HOUSES.) The practice of imposing discriminating light and pilotage dues on foreign vessels is still kept up; but owing to the general establishment of reciprocity treaties with foreign powers, the grievance thence arising has become rather nominal than real, and at present affects very few of the foreign vessels coming to our ports. For the rates of pilotage, see art. PILOTAGE.

The oppressive and troublesome charges in the port of London, imposed on alien goods under the names of package, scavage, &c. —(see PACKAGE) — were put an end to in 1833. At present, therefore, we believe we are warranted in affirming that, considering its distance from the sea, the public charges on shipping in the port of London are quite as reasonable as in any other port of the empire, or of the world. But we are inclined to think that further reductions may still be effected, particularly in the article pilotage.

The following statement shows the nature and amount of the various charges that are at present (1839) incurred by vessels in the port of London: —

Account of Charges that were paid on a Ship of about 480 Tons (from China) entering and departing the Port of London laden both ways, every thing being conducted with strict Economy, and excluding any Charge on account of extraordinary Despatch or superior Accommodation; and that would be paid by a Ship of 1000 Tons under the like Circumstances.

1841	4,642	999,259	1,999	317,608					

Amount of Shipping, &c., belonging to the Port of London.—According to the official accounts, there belonged to this port on the 31st December, 1857, 2,496 sailing vessels; of these 1,830 of the aggregate burden of 671,136 tons, were respectively above 50 tons register, while 666, of the aggregate burden of 22,878 tons, were respectively under 50 tons register. There then also belonged to the port 502 steam vessels of the burden of 165,126 tons. The crews of these ships, including steamers, amounted to above 30,000 men and boys! In 1819, the gross customs duty collected in the port of London, amounted to 7,749,463*l.*; in 1832, it amounted to 9,434,854*l.*; and in 1858, it had increased to 11,465,988*l.*! Excepting in New York and Liverpool, so vast an amount of shipping and commerce was never previously concentrated in any single port. London may be truly said to be *universi orbis terrarum emporium*. May her prosperity be as lasting as it is great!

II. Southampton Docks, Shipping, &c.

Southampton, at the embouchure of the Itchen, on the E. side of the large inlet of the sea called Southampton Water, opposite to the Isle of Wight, lat. 50° 53′ 59″ N., long. 1° 24′ W., may be regarded as one of the outports of the metropolis. It is situated about 70 miles (direct distance) W. S. W. from London, the journey between them being performed by means of the South-Western Railway, in from 2 to 3 hours. Southampton Water affords secure anchorage in all weathers to any number of the largest merchant ships, being completely protected from the seas that would otherwise be thrown in by south-easterly gales by the Isle of Wight, its natural breakwater. Ships resorting to this port, or anchoring in Spithead roads, or in the channel between the Isle of Wight and the mainland, may get to sea, in almost every wind, with comparative facility. Hence it is usual for ships from London bound for the Mediterranean, India, the West Indies, or America, to touch at Cowes, opposite to Southampton Water, to take on board passengers, who thus avoid the lengthened and difficult navigation round by the Forelands and Beachy Head, at the same time that they are all but certain of being immediately able to proceed on their voyage; and hence, also, Southampton has now become the central station of the West India Mail Packet Company, of the steamers for Lisbon and Alexandria, &c. Latterly, also, the great natural advantages of its situation have been, and are in the course of being, most materially improved. The channel of the Itchen has been deepened; and docks connected with it have been, and are to be, constructed on a large scale, and with every suitable accommodation by the dock company incorporated in 1836.

The docks are excavated on a tongue of land comprising about 175 acres, close to the terminus of the South-Western Railway. The first consists of an open dock or basin containing 16 acres water area. It has a depth of 18 feet at low water springs, the average rise of the tide being 13 feet; its quay-frontage extends to 3,300 feet, and it is surrounded by extensive bonded warehouses, vaults, sheds, and cellars.

The 2nd or close dock (the 1st of a series intended to comprise 3 others of still larger dimensions), contains a water area of 10 acres, with an average permanent depth of 28 feet water. It is surrounded, like the open dock, by bonded warehouses, sheds, vaults, and numerous cranes. Waggons, on lines from the adjacent railway terminus, run to and from the quays, alongside which the ships are berthed. In the open dock there are powerful shears tested to the weight of 50 tons for the shifting of boilers or other heavy machinery, for masting ships, &c.

Attached to the wet docks are three large graving or dry docks of the following dimensions, viz.:—

1. 450 feet in length, 80 feet gates, and 25 feet depth of water over blocks.
2. 344 feet in length, 66 feet gates, and 18 feet depth of water over blocks.
3. 250 feet in length, 51 feet gates, and 13 feet depth of water over blocks.

Large ships of from 1,000 tons in the smallest, up to 5,000 tons in the largest of these docks can be docked and undocked with a facility unknown in most other ports. This is owing to the 2½ hours' duration of high water which is peculiar to Southampton.

Four steam engines are employed in pumping out the water from these graving docks.

The charges for docking and undocking are fixed by a tariff varying from 2*l.* for vessels of 1,000 tons, to 10*l.* for vessels of 5,000 tons. Smaller vessels from 5*l.* for 150 tons, and so in proportion.

These rates include pumping, use of stages, shores, shore-ropes, sawpits, smithy, and pitch furnace. But in addition to the above rates, ships are charged with rent for each working-day at the rate of 1*l.* for the first 100 tons, and 2*s.* per day for each progressive 50 tons beyond.

Southampton is distant by rail from London 80 miles, and from Birmingham 140, Manchester 216, and Liverpool 229, by way of Basingstoke, Reading, Oxford, Banbury, and Warwick. By the Coast line of railway it is distant from Portsmouth 16 miles, Brighton 60, and from Dorchester (to the west) 60 miles.

By sea it is distant from Havre 102 miles; and by means of a combination with the Havre and Paris Railway, a system of through rates has been introduced, by which all the towns on the continent connected by railway with Paris may send goods to Southampton for transhipment, or for the supply of the London and Birmingham markets.

This, as already noticed, is the point of departure and arrival of the packet ships belonging to the steam companies which carry on the mail packet service, and the general trade with the Cape, Ceylon, the East Indies, and China; with Australia, America, including the West Indies and Brazil; and with the Peninsula, Mediterranean, Constantinople, and the Levant generally.

A new service by steam has recently been opened with Hamburg, New York, and the Havannah. And Southampton is daily becoming of more importance as a great continental *entrepôt*. In 1857 the declared value of the exports from Southampton amounted to 2,065,045*l.*; the customs revenue for the same year collected at the port being 86,689*l.*

The rates and charges which the dock company levy are generally a modification of those of the principal docks of the port of London.

Cargoes, consisting of guano, including filling into bags or baskets in ship's hold, and sewing bags or baskets — 0 6	

NOTE.—Vessels which discharge the whole or the greater part of their cargoes into lighters will be subject to such rates as shall be agreed upon between the ship owners and the company.

Separating such articles as cutch, India rubber, &c., in an adhesive state, will be charged for extra.

No charge upon excess of cargo landed beyond the ship's register tonnage.

When vessels are discharged by their own crews, labourers to assist may be hired of the company to work on board, at the rate of 3s. 6d. per day for each man; but they shall be under the directions and responsibility of the captains or representatives of the owners of vessels, both or either

The dues levied by the corporation of Southampton on shipping are 2d. per ton each voyage, and 5s. for each ship above 100 tons. Ballast (of fine dry gravel) 1s. 3d. per ton.

There are efficient boats belonging to a steam tug company, whose rates are very moderate.

The pilotage, under a sub-commission of the Trinity Board, from any place within the Isle of Wight to Southampton, is,

	s. d.

III. LIVERPOOL AND BIRKENHEAD DOCKS, SHIPPING, &c.

The rapid rise of the port of Liverpool to its present consequence, though no doubt principally owing, like that of the town itself, to the astonishing increase of manufactures and population in the extensive district of which it is the grand emporium, is also, in part, owing to the facilities that have been given to navigation and commerce by the construction of its wet and dry docks. The entrance to the æstuary of the Mersey is a good deal encumbered with sand banks, and the channel is crossed by a bar, which, however, has at low water spring tides, where deepest, 11 feet water; and as the tide rises 21 ft. at neap, and 31 ft. at spring tides, there is water for the largest ships; the channels, too, being well indicated by lighthouses and light ships, and marked with buoys, there is no difficulty in making the port. In fact, since the opening of the Victoria and Queen's Channels, vessels of the largest size cross the bar at quarter flood.

But the land around being low, ships in the river are exposed to risk from gales of wind; and to obviate this inconvenience, and to facilitate their loading and unloading, the docks have been constructed, which constitute the great glory of the town. The second wet dock in the British empire was constructed here under an act (8 Ann. c. 12.) passed in 1709, and another about half a century after, since which period, and especially of late years, many new docks and basins have been constructed, some of which are on a very magnificent scale, with entrances capable of admitting ships requiring a width of 100 feet, and furnished with all sorts of conveniences. The water area of the docks in use in 1858 amounted in all to 212⅓ acres, and that of the basins to 23¼ ditto. The quay space is of the enormous extent of above 16 miles. The dry docks include an area of more than 20 acres.

The docks are defended on the side next the river by a sea-wall above 5 miles in length, which, if we take into account the difficulties attending its formation, will be found to be one of the greatest works of modern times. It averages 11 feet in thickness, and 40 feet in height from the foundations: all the more modern part being faced with Scotch granite. Every precaution is taken to prevent the accumulation of mud in the docks by the use of steam dredging-machines; and strict rules, enforced by a vigilant police force, are established to maintain good order, and prevent fire and depredation.

The docks are all constructed on property belonging to the "Mersey Docks and Harbour Board," in whom is vested the dock estate, which is managed solely for the

THE RIVERS MERSEY AND DEE
ADJACENT COUNTRY, &c.

CHART OF THE MOUTHS OF
WITH A MAP OF THE

benefit of the public. To secure this result, the Board consists of 28 members, of whom 24 are chosen by parties who pay at least 10*l.* each a year dock dues, and who must themselves pay 25*l.* each of said dues. The other 4 members are nominated by the Conservators of the Mersey, that is, by the First Lord of the Admiralty, the Chancellor of the Duchy of Lancaster, and the Chief Commissioner of Woods and Forests for the time being. There were in 1858, 1451 dock-rate payers on the register; and they only have a voice in the administration of the dock affairs. (*Baines' Liverpool in* 1859, p. 79.) Whenever there is any considerable surplus revenue, after providing for current expenses and the interest of money borrowed, it is applied to the reduction of the dock rates. The bonding and other warehouses do not, however, generally belong to the dock estate, but are, for the most part, private property. Most of them are in the immediate vicinity of the docks, but some are at a considerable distance; and there is not in this respect the same accommodation, or, in some cases, the same security against fire and depredation, in the Liverpool as in the London docks, where the warehouses being built along the dock-quays, goods are loaded and unloaded with the greatest possible facility, and are subsequently under efficient protection. But in this respect there has latterly been a great improvement. For the numerous and destructive fires which formerly took place in private warehouses have led to the adoption of certain stringent rules for their management, which have proved so effectual that no fire of any consequence has occurred for several years, and that the premium of insurance on goods lodged in warehouses conducted according to the established regulations has been reduced from 35*s.* per cent. per annum, to 4*s.* per cent. on certified warehouses under private management, and to 3*s.* 6*d.* per cent. on dock warehouses.

And in addition to those belonging to private parties, warehouses belonging to the dock trust, on the London plan, have been built round the quays of the Albert Dock, Stanley Dock, New Wapping Dock, &c. All the dock quays have open sheds for the temporary deposit of goods alongside the ships, some of which are really magnificent structures. And besides these, there are, also, upon some of the dock quays, as in the Prince's Dock, Nelson Dock, &c., what are termed transit sheds, of one story, substantially built, and perfectly secured, into which ships can be discharged with unusual rapidity; the goods being removed to the proper warehouses at convenience.

Loading and Unloading of Ships.—In London this is effected by the servants of the different dock companies, whereas in Liverpool, except where the London system is introduced, it is effected by other parties under a plan introduced by the 9 & 10 Vict. c. 109., which has been found to answer entremely well. The owner of the ship, or the master in his behalf, unloads the cargo. And as the labour to accomplish this object depends on a variety of circumstances, such as the nature of the cargo, the magnitude of the ship, her proximity to the quay, &c., the charge is regulated accordingly. The practice is for the shipowner or master to make a special agreement with a master porter, or lumper (as he is commonly called) to execute the work. There are, however, in certain trades certain standard rates to which the terms in agreements usually approach. Thus, a Calcutta general cargo of 750 tons would be discharged for about 20*l.*; a tea cargo from China, of similar extent, for 16*l.* to 18*l.*; cotton (from U. States), 12*s.* per 100 bales; guano 6*d.* per ton, &c. &c. After the goods are delivered from the ship it is the duty of the principal consignee of the cargo, or if he decline, the second and so on, and failing them, of the shipowner, to receive them on the quay, and to dispose of them in the warehouse or otherwise as may be necessary. The work so undertaken is paid for according to a fixed and moderate tariff.

Charges at the Port of Liverpool, inwards and outwards, on a Ship of 500 Tons Register.

From the United States, and Westward generally.	£	s.	d.

Lights, 6¾*d.* per ton	11	19	7
Pilotage, 17 ft. at 4*s.*	3	8	0
Clearance	1	1	0
	53	18	7

From India, and Eastward generally.	£	s.	d.
Inwards.			
Pilotage, 17 ft. at 9*s.*	7	13	0
Row boat hire in the river, and warping into dock	1	5	0
Lights, 6¾*d.* per ton	13	0	5
Dock dues, 1*s.* 4¾*d.* per ton	34	7	6
Discharging cargo	20	0	0
	76	5	11
Outwards.			
Loading cargo, supposing ship to carry 750 tons, at say 1*s.* per ton	37	10	0
Lights, 6¾*d.* per ton	13	0	5
Pilotage, 17 ft. at 4*s.*	3	8	0
Clearance	1	1	0
	54	19	5

N.B. If steam is employed in docking, the charge is 2*l.* Steam tug hire outwards to sea (optional) 14*l.* 14*s.* There is no extra charge for dock dues until after *four* months from the ship's arrival. Thereafter the charge is 2*d.* per ton per month.

Ballast.—The descriptions of ballast most commonly in use, and adopted respectively, according to the nature of the cargo, are.

Stone ballast, costing generally about 2*s.* 6*d.* per ton
Copper dross " " 5*s.* 6*d.* "
Iron kentledge " at present 3*l.* and 3*l.* 5*s.* p. ton,
} laid down at the ship's side,

but fluctuating, of course, with the price of iron; and the charge for loading (including trimming in the ship's hold), and also for landing, is about 8*d.* per ton, each way; in, and from, "ordinary ships in a proper berth."

When a ship comes to port in ballast, she gets comparatively little for either stone ballast or copper dross. Indeed when the supply of the former is plentiful, which it frequently is from so many cotton ships frequenting the port, the dealers will hardly take it away for nothing.

Vessels discharging in the Albert, Stanley, or New Wapping Docks, are supplied by the Dock Trustees with the *temporary* use of iron kentledge, on the following terms; viz.—

For the first 2 weeks, including shipping and receiving back, 1*s.* per ton.
And for every week thereafter, 2*d.* additional.
Any *deficiency* to be paid for at the rate of 5*l.* per ton.

There is commonly so ample a supply of dry stone ballast here, that *sand* ballast is *hardly ever* used, except by coasters, who load and unload it themselves.

Birkenhead. — Vast as is the accommodation afforded by the docks of Liverpool, it has been greatly increased by the works undertaken at Birkenhead. The latter is situated in the co. Chester, on the West side of the Mersey, directly opposite to and about 1,200 yards distant from Liverpool, of which it should be regarded as a suburb, or as forming an integral and important portion. Its population, which amounted in 1841 to 8,233, had increased in 1851 to 24,285. This increase appears to have taken place partly in consequence of the docks and other works commenced there, and partly in anticipation of their progress. And it is not to be denied that from the contiguity of Birkenhead to Liverpool, and from the nature of the soil, it offered many advantages for the construction of docks. Wallasey Pool, a creek or inlet of the sea, extending over about 130 acres, has been formed into 2 gigantic wet docks or floats — one containing above 52 and the other above 59 acres, with various subsidiary docks and basins, embracing, in all, a water area of above 121 acres, with a quay space, which may hereafter be made available, extending to between 5 and 6 miles. Here, also, warehouses, with their appurtenances, planned on approved principles, and calculated to afford every facility for the loading and unloading of ships, the safe stowage of their cargoes, &c. have been in part constructed. The accompanying plan gives a good idea of the extent and character of these works. They appear, however, to have been set about without due consideration; and it is doubtful whether they will ever be completed on their original plan. The accommodation on the Liverpool side of the river might have been made adequate for the shipping frequenting the port, which is naturally drawn to it from its being the great seat of business. It is almost needless to add that the parties by whom the works at Birkenhead were undertaken were heavy losers by the speculation. The works were for some years at a stand-still; and they were not brought into their present state till after they had been purchased by the Liverpool corporation and included in the Dock trust.

Commerce.—Though extraordinary, the rise of Liverpool has not, perhaps, been quite so rapid as has been represented. In the reign of Henry VIII., she is noticed by Leland as a place to which merchants resorted because of her moderate customs, and as being a great mart for Irish yarn. At a later period she is described by Camden, as being "the most convenient and frequented passage to Ireland;" and "more celebrated for her beauty and populousness than for her antiquity."—(*Gough's Camden*, iii. 376. ed. 1806.) She was once joined for fiscal purposes with Chester, but she had more trade than the latter, and could not have been correctly described as "the little creek of Liverpool." In 1709, she had about 8,000 inhabitants, and 84 ships, of the burden of 5,789 tons; and in that year, as already seen, she applied for and obtained an Act for the construction of a wet dock. Since then her progress in commerce, and in the accumulation of wealth and population, has been quite extraordinary. It is not, however, difficult to discover the causes of the all but apparently miraculous progress of Liverpool. Much must be ascribed to the enterprise, sagacity, and persevering industry of her merchants; but she is, no doubt, mainly indebted for her rise and the vast magnitude of her commerce to her fortunate position, and, above all, to the increase of manufactures in Manchester and other towns in the contiguous district of Lancashire and W. Yorkshire.

The situation of Liverpool necessarily renders her a principal seat of the trade between Great Britain and Ireland; and as the population and trade of the latter increased, it could not fail proportionally to increase the trade of this port. The gradual filling up of the Dee, and the consequent decline of Chester as a harbour, has also proved of no little advantage to Liverpool, by rendering her the great mart for the salt of Nantwich, and other places in Cheshire, the exportation of which to foreign parts employs a great amount of shipping. Unquestionably, however, Liverpool would never have attained to half her present size or importance, but for the cotton manufacture. But being the port through which Manchester, Oldham, Bury, Bolton, Ashton, and other great seats of manufacture, could most conveniently obtain supplies of the raw material, and export their manufactured products, she has increased with every increase in this great department of industry; and it is no exaggeration to affirm, that the creative influence of the wonderful inventions and discoveries of Hargreaves, Arkwright, Crompton, Cartwright, and the other founders and improvers of the cotton manufacture, has been, though not so direct, quite as powerful in the docks and warehouses of Liverpool as in the mills of Manchester. She, also, exports large quantities of iron from the mining districts of Staffordshire and Wales, of earthenware from the Potteries, and of coal from the adjoining coal districts.

Four-fifths of the trade between the U K. and the U. States centres in Liverpool;

and she has a large share of the trade with South America and the West Indies. She also carries on a considerable trade with the East Indies and China, though in this department she is surpassed by London. Indeed the ships and products of Liverpool are to be found in every port, in every part of the world accessible to merchantmen.

In her earlier days, Liverpool took an active part in privateering, and was also largely connected with the slave trade from the Bight of Biafra. But the estimate formed of that trade previously to 1807 was very different from what it is now; and Liverpool has made the best reparation possible for the part she took in it; for she established in its stead, and has followed up, with zeal and perseverance, the trade in palm-oil, till it has become of the first importance. In proof of this statement it is enough to say that in 1858 no fewer than 42,740 tons palm oil, worth about 1,700,000*l.*, were imported from the W. coast of Africa into the U. Kingdom; and that of these 30,150 tons were imported into Liverpool, 26,060 being supplied by the countries round the Bight of Biafra! We are glad to have an opportunity of mentioning a circumstance of this sort, not so much because of the credit which it reflects on the enterprising merchants by whom the trade has been established, as because it will, if anything can, introduce civilisation among the blacks, and impress them with a just sense of the advantages of industry and commerce.

Account of the Entries and Tonnage of Ships in the Liverpool Docks, and of the Amount of Dock Dues in each Year since 1810.

* Dues reduced on cotton and various other articles to the extent of 40,000*l.* per annum.
† The chief cause of the falling off this year is the short supply of cotton, about 750,000 bales.
N.B.—The calculated reduction of the Dock Rates, which took place on the 25th of September, 1836, was about 38½ per cent. They were then entirely taken off arriving coastwise or from Ireland.
1st December, 1844.—A reduction of 33 per cent. was made in the Tonnage Dues on East India Voyages, of 18 per cent. on the aggregate Foreign Dues.
A reduction in the Dock Dues, amounting to 40,000*l.*, was made in 1848.

It is extremely difficult, or rather, we should say, quite impossible to form any correct estimate of the total amount of the trade of Liverpool. In 1857 the real or declared value of the produce and manufactures of the U. Kingdom exported from the port to foreign parts amounted to 55,173,756*l.*, as seen in the following statement.

Account of the Quantities and Values of the Principal Articles of British and Irish Produce exported from Liverpool in 1857, with the total Value of the Exports, and the Amount of Customs' Duty collected at the Port in the same Year.

The vast preponderance of Liverpool in the cotton trade is obvious from the following statement taken from the comprehensive and valuable table published by Messrs. Geo. Holt and Co., cotton brokers.

Account of the Quantities (in Packages) of the different Species of Cotton Wool imported into Great Britain from 1848 to 1858, both inclusive; specifying the whole Quantity imported into Liverpool.

Descriptions of Cotton.	1848.	1849.	1850.	1851.	1852.	1853.	1854.	1855.	1856.	1857.	1858.

The mercantile marine of Liverpool is inferior only to that of New York. There belonged to the port on the 31st of December, 1857, 2,393 ships, of which 2,136 were sailing vessels of the aggregate burden of 874,235 tons, manned by about 25,000 seamen, and 203 steamers of the aggregate burden of 61,838 tons. On the 31st of December, 1858, the agg. burden of the shipping of Liverpool had increased to 953,955 tons.

The gross customs revenue of Liverpool amounted in 1857 to 3,626,409*l.*, while that of London, in the same year, amounted to 11,465,988*l.* But it would be an unpardonable error to suppose that the trade of the metropolis exceeded that of Liverpool in this proportion. Cotton wool, and other raw materials for manufactures, on which no duty is paid, form the principal part of the foreign imports of Liverpool; whereas London imports comparatively few of these articles, her trade being principally in articles of direct consumption, as sugar, tea, coffee, wines, &c., on which high duties are paid. This circumstance accounts for the comparatively large amount of the customs revenue received in the latter. There cannot, indeed, be any doubt that the foreign trade of Liverpool is now considerably greater than that of London. Her exports, as already seen, amounted in 1857 to 55,173,756*l.*, whereas the exports from London during the same year amounted to only 42,824,879*l.*

Lines of Packets. — Few things have conduced more to the progress of the trade of Liverpool, and we may add, of the empire, than the establishment of a regular communication, by means of packet ships, between this great emporium and other British and foreign ports. These sail to almost all parts of the world. There are no fewer than three great lines of steam packets which maintain a regular intercourse with New York, Boston, Philadelphia, and other parts in the United States, and with Halifax in Nova Scotia, and Quebec. The rates of passage in the steamers vary, of course, according to the accommodation required; but in general they may be taken at from 21*l.* or 22*l.* to 26*l.* for the 1st, and at 16*l.* or 18*l.* for the 2nd, cabin to New York direct. The charge to Halifax is a little less. Steerage passengers in steamers to New York pay from 7*l.* 7*s.* to 8*l.* 8*s.*; and goods carried by them pay about 3*l.* 3*s.* per ton measurement. It is not too much to say, that these lines comprise the finest mercantile steam fleet in the world, and perform their voyages with surprising regularity.

But notwithstanding the numbers and the magnitude of the steam-ships employed in the American trade, its increase has been such that it continues to afford employment to numerous extensive lines of sailing packets. The ships of some of these lines sail regularly twice a week, or oftener if required,

for New York; and those of others sail at stated periods for Baltimore, Philadelphia, and New Orleans. These, which are first-class ships varying from 800 to 1600 tons burden, are all American built and owned. They are mostly resorted to by steerage passengers, who are carried to New York for from 3*l.* to 4*l.* But they are, also, not unfrequently preferred to the steam packets by the highest class of passengers. The cost of a cabin passage to New York by the best sailing packets varies from 18*l.* to 20*l.* or 21*l.*

N. B.—It may be stated generally, that for first cabin passengers everything is furnished, excepting wines, spirits, and malt liquors, which, however, may be had on board. This is also commonly the case with second cabin passengers.

For intermediate and steerage passengers, the ship provides provisions, &c. according to a given scale, not necessarily that indicated by the Passengers' Act, but varying according to circumstances, and forming part of the bargain for the passage. What is lacking the passengers must supply themselves; and they have also to find their own beds and bedding.

Exclusive of the North American lines, there are lines of steam-packets to South America, Australia, and other remote parts; and to the Baltic, Hamburgh, Rotterdam, Antwerp, Havre, and Bordeaux; to Oporto, Lisbon, and Cadiz; the east and south coasts of Spain and France, and the shores of Italy, and generally of the Mediterranean; touching at the Piræus, Constantinople, Syra, Smyrna, Alexandria, &c. And in addition to the regular traders, all descriptions of vessels, some of them of very large size, are constantly arriving at and leaving the port from and for all parts, whether near or remote. The trade with America, however, greatly exceeds that with any other quarter; and next to the British the flag of the United States is by far the most prevalent on the Mersey, and in the docks of Liverpool.

It may almost be said that the channel is bridged over by lines of steam-packets from Liverpool to Londonderry, Belfast, Dublin, Waterford, Cork, and other Irish ports; while other lines maintain a constant intercourse with the Clyde, Bristol, London, &c. And in addition to the steamers the channel trade affords employment to an immense number of the smaller class of sailing vessels.

Account of the Number and Tonnage of British and Foreign Ships that cleared out with Cargoes and in Ballast from the Port of Liverpool in 1857, specifying the Countries for which they sailed, and the Number for each.

Arrivals and Clearances Coastwise of Sailing and Steam Vessels at the Port of Liverpool in 1857.

	Sailing Vessels.		Steam Vessels.		Total.	
	Vessels.	Tons.	Vessels.	Tons.	Vessels.	Tons.
Arrivals	6,010	482,688	3,667	1,030,522	9,677	1,513,210
Clearances	6,878	467,330	3,631	1,017,476	10,509	1,484,806
Total	12,888	950,018	7,298	2,047,998	20,186	2,998,016

Of the above, about a half are supposed to be engaged in the Irish trade.

Dock Dues on Ships.—All Vessels entering inwards, or clearing outwards, at the port of Liverpool, pay for Dock Rates and Harbour Lights.

	Tonnage, per Ton.		Harbour Lights, per Ton.		Total.	
	s.	*d.*	*s.*	*d.*	*s.*	*d.*
Class 1.—Between St. David's Head and Carlisle, including the island of Anglesea	0	2½	0	0⅜	0	2⅞
Between Carlisle and the Mull of Galloway, including the Isle of Man	0	2½	0	0⅜	0	3⅛
Class 2.—Between the Mull of Galloway and Duncan's Bay Head, including the Orkney Isles, and all the islands on the western coast of Scotland, and between St. David's Head and the Land's End, including the Scilly Islands, and the east coast of Ireland, from Cape Clear to Malling Head	0	4½	0	0⅜	0	4⅞
Class 3.—All the parts of the east and southern coasts of Great Britain, between Duncan's Bay Head and the Land's End, including the islands of Shetland, and all parts of the west coast of Ireland, from Cape Clear to Malling Head, including the islands on that coast	0	5½	0	0⅜	0	6½
Class 4.—All parts of Europe to the northward of Cape Finisterre, and to the westward of the North Cape, and without the Cattegat and Baltic Sea, and including the islands of Guernsey, Jersey, Alderney, Sark, the Faro Isles, and Iceland	0	10	0	1½	0	11½
Class 5.—All parts within the Cattegat and Baltic, including the whole of Sweden, the White Sea, and all parts to the eastward of the North Cape, all parts in Europe, to the southward of Cape Finisterre, without the Mediterranean, Newfoundland, Greenland, Davis' Straits, Canaries, Western Islands, Madeira, and Azores	1	1½	0	1½	1	2⅝
Class 6.—All parts on the east coast of North America, the West Indies, the east coast of South America, to the northward of the Rio la Plata inclusive; all parts of the west coast of Africa, and islands to the northward of the Cape of Good Hope, and all parts within the Mediterranean, including the Adriatic; the Black Sea, and Archipelago, the islands of St. Helena, Ascension, and the Cape de Verde islands	1	4½	0	1½	1	6
Class 7.—All parts in South America, to the southward of the Rio la Plata, the Pacific Ocean, in Africa and Asia, to the eastward of the Cape of Good Hope	1	4½	0	1½	1	6

All vessels arriving at or clearing from the said port are to pay the said rates from or for the most distant port or place from or for which they shall trade; but vessels arriving from any parts in ballast do not pay dockage on entering inwards; and should such vessels proceed to sea again in ballast then only one half of the Dock rates are due, with the whole of the lights; but taking a cargo outwards subjects such vessels to full Dock dues.

N.B.—New vessels built in Liverpool are subject only to half the above rates on the first outward clearance.

Floating Light at the Entrance of the River Mersey.—Towards this light, the following rates are payable:—

All vessels sailing to or from Liverpool, to any port or place between Duncan's Bay Head and the Land's End, on the west side of Great Britain, and between Malling Head and Cape Clear on the east side of Ireland, ¼*d.* per ton.

All vessels sailing to or from Liverpool to any port or place between Duncan's Bay Head and the Land's End, on the east and southern coast of Great Britain, and between Malling Head and Cape Clear on the west coast of Ireland, ½*d.* per ton.

All vessels sailing to or from Liverpool to any port or place not being within the United Kingdom of Great Britain and Ireland, or the adjacent islands to the northward of the Cape of Good Hope, and the northward of Cape Horn, ¼*d.* per ton.

All vessels sailing to and from Liverpool to any port or place to the eastward of the Cape of Good Hope and the westward of Cape Horn, 1*d.* per ton.

N.B. In the day time, from sunrise to sunset, a blue flag, with the letters N W. in white will be hoisted at the main-mast head, and in thick and foggy weather, either by night or day, a bell will be kept constantly ringing to prevent vessels from running foul of the light-vessel.

Dock Regulations. Extracts from Acts of Parliament.—Any owner or master, or any person having the command, agency, or consignment of any vessel chargeable with dock duties, refusing to pay the same, is liable to have such vessel or goods seized.

Any person throwing any ballast or rubbish from out of any vessel upon any of the quays, &c., shall immediately cart or carry away the same: penalty 40*s.*

Every ship shall, before she comes within any of the piers, take down all her sails: penalty 5*l.*

Any person having the charge of any vessel in any of the Docks, refusing to remove the same, after 24 hours' notice in writing, shall forfeit 20*l.*, and pay the expenses of removal by the water bailiff.

Any person having the command of any vessel moored in the river, refusing to remove the same, when ordered by the water bailiff, shall forfeit 20*l.*

The master or other person having the command of any vessel from which any cannon or gun shall be fired whilst in the port, shall forfeit 10*l.*

Any person making payment of dock duties, who refuses to answer such questions as shall be put to him by the collector, or give a false or untrue answer, shall forfeit 10*l.*

Any master, &c., evading payment of the duties, shall forfeit and pay double the duties evaded; and by 53 Geo. 3. a sum of 20*l.* in addition thereto.

Whenever it shall be necessary, for the purpose of cleaning or repairing the Docks, to remove the vessels lying therein, the master, mate, or other person taking the command of such vessel, shall, within 3 days after notice given, remove such ship from such dock, on pain of forfeiting 10*l.*

Any master, &c. refusing to moor and remove the same in docks, according to the direction of the dock-master, will forfeit 5*l.*, together with the costs of removal by the dock master.

Any master, &c. acting contrary to the direction of the dock-master, will forfeit 20*l.*

Any master, &c. entering and giving false information of the draught of water of any ship to any of the dock-masters, shall forfeit 20*l.*

Any master, &c. bringing the same into the entrance basins, when a signal is hoisted on the pier, at the entrance of such basin, signifying that such dock is full of vessels, will forfeit 20*l.*

Any master, &c. bringing his vessel into any of the docks, contrary to the directions of the dock-master, will forfeit 20*l.*

Every master, or other person, damaging any of the dock-gates, bridges, piers, quays, &c. is liable to have the ship seized, and sold to compensate for damage done.

Any person opening or shutting any of the dock gates, sluices, or clews, is liable to forfeit 100*l.*; or opening or shutting any drawbridge, 20*l.*

Any owner, &c. leaving gunpowder, pitch, tar, &c., or combustible matter of any *kind*, on the quays of the docks, &c., or upon the deck of any vessel lying in any of the docks, for above 48 hours after passing the Custom-house officers, is liable to a penalty of 5*s.* an hour; on neglecting to watch such goods in the night time, to a penalty of 5*l.*

Any master, or other person, having the command of any ship, suffering any fire, candles, or lamp to be lighted and burning, on board: penalty 10*l.*

N.B.—Certain docks frequented by coasters and foreign ships, the crews of which live on board, are exempted from the operation of this clause.

Any owner, &c. landing, or causing to be landed and laid, any pumps, boats, anchors, cables, limestones, &c., or other things whatsoever, upon any of the dock quays, shall within 48 hours wholly remove the same from off such quay, or shall forfeit 5*s.* per hour above the 48.

Any person wilfully cutting, damaging, or destroying any cables &c., by which any vessel in the river or in any of the docks shall be fastened: penalty 50*l.*

Any person damaging or breaking any lamp, &c. set up near the docks: penalty for each lamp, 5*l.*

Any master, or other person, having the command of any vessel about which any offence shall have been committed, in relation to any of the docks, &c., is liable to the penalty imposed for such offence.

Any owner or master of any ship or vessel giving or offering a bribe to any officer employed in pursuance of the dock acts: penalty 20*l.*

Any owner, consignee, or master of any vessel arriving and departing in ballast without payment of dock duties, is liable to a sum equal to double the amount of dock duty which should have been paid, and the master liable to the penalty of 20*l.* in addition.

Every master, &c. wilfully throwing, casting, or putting any earth, stones, rubbish, &c. out of any ship, &c. into any part of the port: penalty 50*l.*

Any owner, &c. of any vessel laid up for sale, or which shall not be actually employed for two months, not removing the same within 24 hours' notice in writing from the harbour-master, or left on board: penalty 5*l.*, and costs of removal.

Any person discharging timber in any dock without having obtained the consent in writing of the chairman or deputy

chairman of the dock committee, or of some justice of the peace: penalty 10*l.*

Any person having consent, not removing the same therefrom within 24 hours, liable to a fine of 5*s.* an hour.

Any person damaging any ship, &c. in any of the docks, &c. or in the river, and refusing to make compensation, liable to have his goods, or the tackle of the ship, &c. doing the damage, seized.

Any justice of the peace for the county of Chester or borough of Liverpool, upon complaint made to them, may summon persons to appear before him, and may fix the amount to be paid to boatmen, and persons finding and taking possession of anchors, &c. in any part of the port of Liverpool.

Any person throwing, casting, or emptying any ballast, ashes, &c. out of any ship, &c. into the river Mersey, the Rock or Horse Channel, or Formby Channel, to the eastward of the Floating Light, or from any of the piers into the docks or basins, or into the river Mersey: penalty 10*l.*

That every vessel laden with a cargo consisting solely of limestones, paving stones, flintstones, gravel, and chalk, shall be charged tonnage rates as if coming in ballast.

Every owner or master, &c. of any vessel arriving at or departing from the said port, shall produce to the collector, upon demand, at the time of making entry, all books, accounts, &c. in relation to such vessel, or which show the weights and quantities of the goods, &c. In case of dispute, such owner, &c. shall produce a statement in writing, to be verified by oath, and showing the actual weights and quantities of such goods, &c. or the accuracy of the said books, &c.

In case the master, &c. of any vessel from which rubbish, ballast, dirt, or other refuse of any kind shall be landed, shall permit or suffer the same to be so landed, or laid within 3 yards from the margin of any such dock or basin, or of the river Mersey, and shall not cause such rubbish, &c. to be wholly removed from off such quays, &c. within 24 hours after the same shall be so landed or laid: penalty 5*l.*

Any owner, &c. of any boat or vessel permitting gunpowder, exceeding 10 pounds in weight, to be brought into any of the docks or basins, or any vessel or boat lying therein, without the previous consent in writing of a justice of the peace of the borough of Liverpool: penalty 100*l.*

That upon due proof on oath, to the satisfaction of any justice of the peace of the borough of Liverpool, or county of Lancaster, that any dealer in marine stores, within the said borough, or Toxteth Park, shall have been guilty of receiving stolen goods, or purchasing or receiving, &c., every such person shall forfeit 20*l.* for the first offence, 50*l.* for the second offence; and after conviction for such second offence, shall not carry on business as such dealer in marine stores within 200 yards from the margin or side of any dock or basin (exclusive of 40 yards prohibited by a former act) on pain of forfeiting the sum of 10*l.* for every day, he, she, or they shall carry on such trade or business.

In case any person or persons giving or accepting any bribe to or from any water-bailiff, harbour-master, &c. give information thereof, he or they shall be excused from the penalty of 20*l.* imposed by the 51 Geo. 3. for such offence, provided such information be given before any proceeding for punishing the said offence shall have commenced, or any information laid before any justice of the peace against such person in respect of the same.

Justices of the peace may, upon complaint made, summon parties and ascertain and award the amount of recompence, for any services rendered by boatmen, &c. to vessels in the said docks or basins, and in case of non-payment, may levy the sum so awarded by distress.

PILOTAGE RULES AND REGULATIONS.

Any person acting as a pilot in the port of Liverpool, without a licence, to forfeit 20*l.*

Pilots refusing to conduct ships, or assist ships in distress, to forfeit 10*l.* and lose their licence.

No coasting vessel, inward or outward bound, of the burthen of 100 tons or upwards, (unless she be in ballast,) is to refuse a pilot, as the master or owner, &c., must pay the full pilotage, if one is offered. No vessel is deemed a coaster, unless she has been six months in that trade, or sailed from Liverpool on a coasting voyage.

Masters of vessels forcibly taking pilots beyond the limits of the port, shall pay a forfeit not exceeding 20*l.*, nor less than 5*l.*

Pilots misbehaving to have their licence recalled, and if they act afterwards, to be liable to the same penalties as if they were not pilots.

That the master or commander of any ship or vessel inward-bound to the port of Liverpool, which shall be liable to pay pilotage, shall, on coming within the pilots' stations, display and keep flying the usual signal for a pilot to come on board, and every master or commander who shall omit so to do, shall forfeit and pay any sum not exceeding 5*l.*

Masters of vessels inward or outward bound refusing to take the first pilot who offers, to be liable to full pilotage.

Reward for pilots assisting ships in distress to be settled by the pilot committee.

Compensation to be made to pilots for taking vessels out of port which have been forced back, to be fixed by the committee.

Every master to give the pilot a true account of the draught of his ship, and pilot authorised to admeasure.

No pilot to be allowed to lay a vessel aground, without a written order from the master or owner. Penalty 5*l.*

Every master sending a pilot to take charge of a vessel exceeding that for which he is licensed, excepting in cases of necessity, shall be fined in a sum not exceeding 5*l.*

Second-class pilots are limited to vessels not exceeding 500 tons, and 15 feet draught of water.

Third-class pilots, formerly 12 feet, are limited to pilot vessels not exceeding 200 tons old measurement, without a reference to the draught of water such vessel may draw.

In consequence of a practice now too prevalent, it appears that persons not licensed, but representing themselves as such, are in the habit of taking charge of vessels as pilots: it is earnestly recommended that masters of vessels demand of all persons so representing themselves as pilots to take charge of vessels, to produce their licence, which is only in force twelve months from the date of such licence.

When it blows so strong as to prevent the pilots boarding a vessel with their small boat, the vessel should be steered with the wind on the quarter, the yards braced by, when the large boat sheers under the lee quarter, and the pilot jumps on board.

Stations of the Pilot-boats.—The boat having the turn to board displays a red and white flag at the masthead by day, and green and white lights horizontal, not less than 10 feet apart, by night, the white light on the bow, and green in the waist, and the other boats a green light only.

The two western boats cruise off Point Lynas, and as far to the westward as the Middle Mouse, and to the eastward until Priestholm Island bears S.S.W. by compass.

The third western boat cruises to the eastward of Point Lynas, to board any vessels that may pass the first and second boats, until the west end of Great Ormshead bears S.S.W. by compass.

The fourth western boat cruises from the west end of Great Ormshead, and eastward until the west end of the bar land bears S.S.W. by compass.

The fifth, or first Hoylake boat, cruises to the westward, so as to keep sight of the Northwest Lightship from the deck.

The sixth, or second Hoylake boat, to board vessels after they pass the line of the Northwest Lightship and Point of Air, when the first boat is not within a reasonable distance, and after high water to take pilots from vessels outward-bound.

The seventh boat follows outward-bound vessels, to receive their pilots and bring them to port.

Rates of Pilotage for British Vessels trading to Foreign Ports.

INWARD.	Per foot. s.	d.
From the length of the west end of the Great Ormshead, bearing S. by W., or before Penman Bachan be shut in with the Great Ormshead, at the rate of -	9	0
From the eastward of the Great Ormshead, as above -	8	0
From the only house now on Great Hilbre Island, bearing S.S.W. by the compass, or shall be piloted from the road of Hoylake only, or from the buoy of the Fair way in Formby Channel - - - -	4	0
OUTWARD.		
Whether through the Rock or Formby Channel - -	4	0

No British vessel, trading to foreign parts, inward or outward bound, is to refuse a pilot; but if such vessel has passed the Brazil buoy in the Rock Channel, or the Middle Patch buoy in Formby Channel, or if a pilot-boat falls in with a vessel in the narrow of the channels in stormy weather, that she cannot board her without imminent danger, the pilot shall then lead the way, and in either case be entitled to such pilotage as shall be awarded by the committee at their next meeting.

For Alien Ships and Vessels.

INWARD.	s.	d.
From the length of the Great Ormshead, as above, at the rate of - - - -	12	0
From the eastward of Great Ormshead, as above -	11	0
From the only house now on Great Hilbre Island, bearing S.S.W. by the compass, or shall be piloted from the road of Hoylake only, or from the buoy of the Fair Way in Formby Channel - - - -	5	6
OUTWARD.		
Whether through the Rock or Formby Channels -	7	0

An alien vessel, inward or outward bound, is not to refuse a pilot, as circumstances are described for English-foreign vessels, as above.

For Coasting Vessels, and those trading to and from Ireland, the Islands of Faro or Ferro, Jersey, Guernsey, Alderney, Sark, and Man.

INWARD.	s.	d.
From the length of the Great Ormshead, as above, at the rate of - - - -	4	6
From the eastward of the Great Ormshead, as above -	4	0
From the only house now on Great Hilbre Island, bearing S.S.W. by the compass, or shall be piloted from the road of Hoylake only, or from the buoy of the Fair Way in Formby Channel - - - -	2	0
OUTWARD.		
Whether through the Rock or Formby Channel -	2	0

No vessel to pay for less than eight feet of water, nor any vessel to pay for odd inches under half a foot.

EXTRA PAY.	Per day £	s.	d.
For every day of attendance whilst in the river, except the day of going to sea with such ships or vessels as shall be outward bound, and the day of returning from sea and the day of docking for such as shall be inward bound - - - - -		5	0
And if the attendance of a pilot-boat be requested -		42	0

Notwithstanding the pilot or the boat be not employed a whole day, to be paid for a day.

For docking or for transporting a vessel from dock to dock, 20*s.*; to or from Birkenhead, 30*s.*; to or from Garston, 40*s.* for each vessel.

N.B.—The pilot committee recommend to the merchants, &c., that when a pilot conducts a ship or vessel into the port to their satisfaction, the same pilot be employed to take the said vessel out again; but if he should be absent on duty, that one belonging to the same boat be employed.

The Liverpool Pilots' Committee.—This board, composed of some of the first shipowners of the port, formerly acted under a special act of parliament, but since January, 1859, they are under the Consolidated Mersey Docks and Harbour Act; and their proceedings are submitted weekly, for confirmation, to the general board of the Mersey Docks and Harbour.

Liverpool Life Boats.—The dock trustees have established five life-boat stations, viz. at Liverpool, on Waterloo pierhead, 2 boats; Magazines, 2 boats; Hoylake, 2 boats (Hoylake, 1 boat, Hilbre Island, 1 boat); Point of Air, 2 boats; Formby, 1 boat. The crews of the Liverpool and Magazines boats consist of a master and 10 men each, the boats on the other stations have a master and 12 men. The entire establishment is well conducted and efficient.

Dock Rates to be paid on the Principal Goods, Wares, and Merchandise, imported into the Port of Liverpool from Foreign Countries, or British Colonies, Plantations, or Settlements; or brought Coastwise from Ports or Places in the U. Kingdom, inc. the Islands of Jersey, Guernsey, Alderney, Sark, and Man; or exported from the said Port to Foreign Countries and British Colonies, Plantations, or Settlements.

N.B.—Books containing a complete list of the articles charged with dock rates, may be had at the docks for a mere trifle.

In compiling this article we have derived considerable assistance from the elaborate work of Mr. Thomas Baines, entitled a "History of the Commerce and Town of Liverpool," published in 1852; and from "Liverpool in 1859," a smaller but very useful work of the same author. But we have been indebted for the most valuable part of our information to communications obligingly sent us by some of the most intelligent merchants belonging to the town.

IV. Bristol Docks, Shipping, etc.

The great rise of tides in the Bristol Channel, and in the river Avon, on which Bristol is situated in lat. 51° 27′ 6″ N. long. 2° 35′ 28″ W., enables the largest ships to come up to the town. To obviate the risks and damage to which they were formerly exposed by grounding at ebb tide, a floating harbour equivalent to a dock,

was commenced in 1804 and finished in 1809, by changing the channel of the river. It extends about 3 miles, from the entrance at Rownham, to the dam at Templemeads, occupying the old bed of the Avon, and the bed of that branch of the Frome that lies between St. Augustine and St. Stephen's quays, and cost, in all, a very large sum. The present extent of quay frontage is 6000 feet, but the limits admit of any further extension that an increased trade may require. There are two half-tide basins for the temporary accommodation of vessels entering or leaving; one at Rownham for large ships, the other below the iron bridge at Bedminster, for vessels under 500 tons. There are several capacious graving-docks, and ship-building is carried on to some extent; the Great Western and Great Britain steam-ships, with the Severn, the Avon, and others of inferior dimensions having been built in the port. The tide in the Avon sets with great rapidity, especially between the high precipitous rocks of Clifton and Leigh, which seem rent asunder to admit its passage. In Kingroad the rise at springs is 44 feet, and at neaps above 23 feet: at the gates of the floating harbour it rises from 30 to 33 feet. Previously to the completion, in 1849, of the new lock or entrance to Cumberland basin, Rownham, vessels occasionally loaded and unloaded in Kingroad, at the mouth of the river, by means of lighters. But the entrance to the basin is now of dimensions sufficient to admit steamers and other ships of the largest class. The port and other dues, which it was formerly imperative to levy on all vessels frequenting the port, whether they entered the new harbour or not, may now be remitted at the discretion of the town council, to those that do not avail themselves of the latter.

Bristol early possessed, and continues to enjoy, a large share of the trade with the West Indies. Among her foreign imports the most important are colonial products, sugar, tea, tobacco, timber, grain of all sorts, flour, wine, brandy, tallow, fruits, wool, hemp, dye stuffs, oil, hides, &c. The exports consist principally of the produce of the various manufactures of the city, comprising refined sugar, brass and copper articles, spirits, glass, earthenware, &c., with salt, iron, coals, and culm, the produce of the neighbourhood; and cotton, linen, and woollen goods. Bristol carries on an extensive and growing trade with Ireland, from which she imports corn, butter, bacon, potatoes, cattle, horses, sheep, pigs, salmon, &c. She sends in return, tea, raw and refined sugar, cheese, wrought iron, tin plates, copper, glass, woollens, leather, &c. The imports, coastwise, consist mostly of iron, tin, coal, salt, agricultural produce, and foreign produce, brought from other ports under bond. The exports are chiefly foreign and colonial produce (especially groceries, spirits, and wines), and the various manufactures of the city. A steam communication for the conveyance of goods and passengers to Ireland was established in 1826, and has led to a great increase of the trade with that part of the empire. Bristol had the honour of being the first port in the empire to establish a regular communication by steam with the U. States. The first voyage by the Great Western steam-ship was performed in 1838.

The decline in the comparative importance of Bristol, as a trading emporium, has been chiefly manifested by contrasting her progress with that of Liverpool. The average customs duties of Bristol for the seven years ending with 1757, amounted to 155,189*l.*; those of Liverpool for the same period, to 51,136*l.* In 1784, the customs of Bristol had risen to 334,909*l.*, a great increase; but those of Liverpool had advanced, in the same year, to 648,684*l.*; and in 1846, while the customs duties of the former amounted to 919,149*l.*, those of the latter amounted to 3,622,057*l.* One of the chief causes that have been commonly assigned for this comparative slowness of progress is the excess of local taxation; the town and harbour dues having been much heavier than those of any other of the larger ports.

There can, however, be no doubt that too much stress has been laid upon this circumstance in accounting for the slower progress of the trade of this port. The real causes of the rapid rise of Liverpool, Glasgow, and some other sea-port towns is to be found, not in the lowness of their port charges, or in any peculiar advantages they individually enjoy, but in their having become the ports of the great manufacturing districts. The extraordinary growth of Liverpool is a consequence of the still more extraordinary growth of the cotton manufacture. Her rise has been dependent upon, and consequent to, the rise of Manchester, Bolton, Blackburn, &c. Still, however, it is not to be denied that the trade of Bristol was seriously injured by the high charges that were formerly imposed on the shipping frequenting her port. But that grievance, after having been mitigated by various reductions effected since 1835, has at length been wholly obviated; and the charges on shipping in the Avon are now remarkable for their moderation. This important reform took place in 1848, under the local act 11 & 12 Vict. c. 43 (30 June, 1848), which transferred the property of the docks from the former dock company to the citizens, and vested their management in the common council of the city. In consequence of this change, and of the reduction of the rates by which it has been followed, ships that formerly paid 2*s.* and 3*s.* per ton of dock dues now pay 1*s.* 2*d.* per do.; while those that paid 1*s.* now pay 7*d.*; and those that paid 8*d.* and 6*d.* now pay 5*d.* It is of importance, too, to observe that all former charges on ships and goods outwards have been wholly abolished; so that, as regards exports, Bristol is now an absolutely free port. And we are glad to have to state that, in consequence of these and other changes, the trade of the port, as shown by the annexed tables, has greatly increased.

DOCK RATES AND DUES ON SHIPPING ENTERING THE PORT OF BRISTOL, THOSE LEAVING THE SAME BEING FREE OF ALL PORT CHARGES.

Dock Dues.

	£	s.	d.
For every vessel trading from Africa, Honduras, Surinam, and other ports in South America, the U. States of America, the East and West Indies, all the ports within the Straits of Gibraltar, the Southern Whale Fishery, the British Colonies, Portugal, Prussia, Russia, Spain, without the Straits, and Sweden, per ton	0	1	2
For every vessel trading from Flanders, France, without the Straits, Germany, Guernsey, Holland, Jersey, Norway, Poland, and Zealand, per ton	0	0	7
For every vessel trading from Ireland, the Isle of Man, Scotland, or as a coaster, not including vessels from Cardiff, Newport, and other ports to the eastward of the Holms, per ton	0	0	5
For every vessel from Cardiff, Newport, or any other port to the eastward of the Holms (not being vessels one third part of the lading of which shall consist of coal, scroff, iron, tin, tin plates, grain, copper, bricks, stone, coal-tar, slate, bark, timber, or wood), as follows:—			
If such vessel shall be under 40 tons burthen, for each voyage	0	7	6
If such vessel shall be 40 tons burthen, and under 75 tons, for each voyage	0	12	6
If such vessel be 75 tons burthen, and under 100 tons, for each voyage	0	16	0
If such vessel shall be 100 tons burthen or upwards, for each voyage	1	1	0
For every vessel from Cardiff, Newport, or any other port to the eastward of the Holms, one third part of the lading of which shall consist of coal, scroff, iron, tin, tin plates, grain, copper, bricks, stone, coal-tar, slate, bark, timber, or wood, as follows:—			
If such vessel shall not exceed 75 tons burthen, for each voyage	0	5	0
If such vessel shall exceed 75 tons burthen, for each voyage	0	7	6

N. B. — There are no dock rates or other port charges payable on vessels leaving the port of Bristol. And a vessel having once paid the dock dues on entering the port may remain for an indefinite period in the floating harbour without any further charge.

Anchorage and Moorage chargeable only on Vessels coming from Ports to the westward of the Holms.

	Anchorage and Moorage. s.	d.
All *coasting vessels*, from ports to the westward of the Holms, not exceeding 40 tons burthen, each voyage	0	9
Ditto, at and above 40 tons, ditto	1	6

	Anchorage each. s.	d.	Moorage per ton. s.	d.
All *other vessels*, not being coasters,				
— under 30 tons	2	6	0	0½
— above 30 and under 100 tons	5	0	0	0½
— above 100 tons	5	0	0	1

Mayor's Dues payable only by Vessels coming from Places westward of the Holms to the Port of Bristol and payable by such Vessels not more than Three Times within the Space of Twelve Calendar Months.

	@ voyage. s.	d.
60 tons and under 100 tons, each vessel	5	0
100 — 150 —	10	0
150 — 200 —	15	0
200 — 250 —	30	0
250 and upwards	40	0

Quay Warden's Fees.

	s.	d.
Vessels above 60 tons	5	0
— under —	2	6
Boat, traw, or barge	0	4

Whether from eastward or westward of Holms.

The docks and quays in Bristol are not enclosed. The warehouses, whether bonded or otherwise, are all private property; they are for the most part close to the quays, and are all easy of access.

The following is an Account of the various Port and other Charges which would be incurred by a Ship of 500 Tons bringing a Cargo to Bristol; the *Dock Dues* being taken at the *highest Rate*, viz.: —

	£	s.	d.	£	s.	d.
Pilotage from Lundy to Kingroad	7	7	0			
— from Kingroad to Basin	1	10	0			
Assistant pilot	0	10	0			
5 men at 5*s.* 9*d.* each, 18*s.* 9*d.*; and boat, 3*s.*	1	1	9			
Haven master	0	4	0			
				10	12	9
Steam-tug from Kingroad to Basin, 5*d.* per ton				10	8	4
Lights				5	13	10
Anchorage 5*s.*, moorage 1*d.* per ton, 41*s.* 8*d.*				2	6	8
Mayor's dues 10*s.*, quay warden's fees 5*s.*				2	5	0
Dock dues, 1*s.* 2*d.* per ton				29	3	4
(From the nearer ports only 7*d.* per ton.)						
Electric telegraph from Pill, 1*s.* to 5*s.* per message.				0	0	0
				60	9	11

The charge for labour discharging is from 3*s.* to 3*s.* 6*d.* per day, that for cooperage depends on the condition of the cargo.

The charge for landing and weighing is 7½*d.* for sugar and most other kinds of goods when the public cranes are used.

Outwards. — No port charges except lights and pilotage, which are the same as *inwards*.

Produce of the Dock Dues on Tonnage and Goods at Bristol, during each of the following Years, ending the 30th of April.

PILOTAGE.

To every licensed pilot who navigates a ship or vessel from Lundy Island to Kingroad.

	£	s.	d.
For his pilotage of such vessel, if under 100 tons reg. burthen	3	3	0
If 100 tons and under 200	4	4	0
If 200 — 300	5	5	0
If 300 tons and upwards	6	6	0
From Combe to Kingroad.			
If such vessel be under 100 tons reg.	2	2	0
If 100 tons and under 200	2	16	0
If 200 — 300	3	10	0
If 300 tons and upwards	4	4	0
From Minehead to Kingroad.			
If such vessel be under 100 tons reg.	1	1	0
If 100 tons and under 200	1	8	0
If 200 — 300	1	15	0
If 300 and upwards	2	2	0
From the Holms to Kingroad.			
If such vessel be under 100 tons reg.	0	10	0
If 100 tons and under 200	0	14	6
If 200 — 300	0	17	6
If 300 and upwards	1	1	0

Every pilot who unmoors or carries a ship or vessel under 100 tons reg., from any part of the river Avon, and moors her in Cumberland or Bathurst Basin, or who unmoors or carries such a ship or vessel from either of those basins, and moors her in, or proceeds with her down the said river, shall be entitled to the following pilotage: —

	£	s.	d.
If such vessel be under 40 tons reg.	0	4	0
If 40 tons and under 60	0	5	0
If 60 — 80	0	7	6
If 80 — 100	0	10	0

Every pilot who unmoors or carries a ship from Portshead, Kingroad, Hungroad, or Broad Pill, and moors her in Cumberland or Bathurst Basin, and who unmoors or carries a vessel from either of those basins and moors her in Portshead, Hungroad, Broad Pill, or Kingroad, or any other of such places, or proceeds with her on her voyage, shall be entitled to the following pilotage: —

	£	s.	d.
If such vessel be under 100 tons reg.	0	10	0
If 100 tons and under 200	0	15	0
If 200 — 300	1	0	0
If 300 and upwards	1	5	0

(We are indebted for this valuable information, with respect to Bristol, to the kindness of Edward Hinton, Esq., the intelligent Secretary to the Docks.)

V. Hull Docks, Shipping, &c.

There are five docks in Hull, occupying, with their basins, a water area of 49¼ acres; viz.:—

		A.	R.	P.	£
Old Dock. Opened for business	1778	Area, 10	1	11	Cost, 84,310
Humber Dock - -	1809	9	3	24	235,086
Junction Dock - -	1829	6	0	5	165,033
Railway Dock - -	1846	2	3	9	120,782
Victoria Dock - -	1850	20	1	3	455,357

A timber pond of 9 acres was constructed in 1853. A considerable quantity of shipping is also accommodated within that part of the river Hull that constitutes the old harbour, which may be computed at 10 acres of tidal water. The quays round the docks are spacious, and are entirely surrounded with warehouses and deal yards. Hull is the principal *entrepôt* of the Baltic timber trade on the east coast of G. Britain, and ranks as the third port in the kingdom, the value of her exports being inferior only to those from Liverpool and London; although from the circumstance of her staple articles of import being subject to low duties or altogether free, her customs revenue is smaller than that of less important ports. In 1857 her exports amounted to 15,785,813*l.*, and the customs revenue to 312,628*l.*

The following Tables exhibit the principal features and progress of the Trade of Hull, during the 15 Years ending with 1858.

Year.	Tonnage of Shipping (ex. River Craft.)	Amount of Dock Duties paid.	Value of British Produce exported.	Amount of Customs' Revenue.	Year.	Tonnage of Shipping (ex River Craft).	Amount of Dock Duties paid.	Value of British Produce exported.	Amount of Customs' Revenue.

1848	98,659	123,970	222,629				

Shipping.—There belonged to the port on the 1st January 1858, 458 sailing vessels, whereof 287, of the aggregate burden of 10,371 tons, did not, and 171 of the aggregate burden of 40,622 tons, did exceed 50 tons each. At the same date there also belonged to the port 62 steamers, whereof 11 of the aggregate burden of 277 tons, did not, and 51 of the aggregate burden of 15,636 tons, did exceed 50 tons each.

Dock and Harbour Dues payable to the Hull Dock Company, viz.:—

For every Ship or Vessel trading between the Port of Kingston-upon-Hull and the undermentioned Ports and Places.	Per Registered Ton.	For every Ship or Vessel trading between the Port of Kingston-upon-Hull and the undermentioned Ports and Places.	Per Registered Ton.
	s. *d.*		*s.* *d.*
Any port to the northward of Yarmouth, in Norfolk, or any port to the southward of the Holy Island:		Any port or place in the Baltic seas, and all other ports or places above the Sound -	1 0
So much of the above rates as applies to Tetney Haven, Louth, and Hedon - - -	Abolished	Any island, or port or place in Europe, to the eastward of Ushant, without the Straits of Gibraltar - - - - -	1 0
Great Grimsby - - - - -	0 1	Every port or place in the West Indies, North or South America, Africa, Greenland, or any place to the eastward of the North Cape of Norway. All places within the straits of Gibraltar, and all islands and places in the ocean to the southward of Cape St. Vincent, not hereinbefore named - - - -	1 4½
All other ports comprised within the above limits - - - - -	0 2		
Any port or place between the North Foreland and Shetland, on the east side of England, except as above - - - - -	0 3		
Any other port or place in Great Britain, not before described - - - -	0 5	Every port or place in the East Indies, Australia, all islands and places in the Pacific Ocean, the North and South Pacific Oceans, the Great Southern Ocean, the Indian Ocean, and all other places in Africa, Asia, or America to the eastward of the Cape of Good Hope, and to the westward of Cape Horn - - - -	1 4½
Any port or place in Denmark, Sweden, or Norway, below Elsinore, or any port or place in Germany, Holland, Flanders, France, to the eastward of Ushant, Ireland, the islands of Guernsey and Jersey - - -	0 6		

For every foreign ship or vessel (belonging to a State *not* in reciprocity with Great Britain), coming to or going with merchandise from any of the above-named ports or places, double the rates, tonnage, or duties before-mentioned, unless the said ships belong to British owners.

N.B. One-half of the foregoing rates will be remitted under the following circumstances, upon application in writing being made to the directors, and they are satisfied that each case is *bonâ fide*, and such as calls for a mitigation thereof, viz.:—

1. Vessels taking refuge during winter, or in case of war, in the port, and entering any of the docks and basins of the Company, and not loading or discharging any part of their cargo other than stores.

2. Vessels not bound to Hull, but which may put into the port in distress, leaky or requiring repairs, and enter into any of the docks or basins, but have not taken on board any additional cargo (other than stores), or discharged any portion of their cargo within the said docks or basins.

Ships driven into port by stress of weather, or an enemy, are not liable to rates or duties unless they make use of the docks or basins.

Dock rent on vessels, payable only after 10 months occupancy of the dock,—one half penny per registered ton per week.

Wharfage rates fixed at a scale, being at an average about 40 per cent. below the rates levied at the docks in London, are charged only on such goods as actually pass over the dock quays either inwards or

outwards; and such rates are payable *once* only in respect of the same goods, if in their original state. No charge accrues on goods put overside into craft, unless for labour actually performed; and all work on board ship or upon the quays may be performed either by the company or the merchants, as the latter may elect. No charge is made for river craft or lighters using the docks.

Depth of water. — The access to the docks is either from the river Hull, or from the river Humber. The lock from the Humber into the Victoria dock is capable of admitting at spring tide, vessels drawing 28 feet, and at neap tides 22 feet. The width of entrance is 60 feet.

The Water Bailiff dues hitherto payable to the corporation of Hull, on certain goods imported and exported, were all permanently abolished on the 21st March, 1853.

DUES PAYABLE TO THE CORPORATION OF HULL.

On Vessels entering inwards and outwards.

Anchorage. — Alien vessels under 100 tons burden, 1*s.* 6*d.*; 100 and under 200 tons, 2*s.*; 200 and upwards, 3*s.*

Jettage.—Under 100 tons, 13*s.* 6*d.*; if loads out more, 3*s.* 6*d.*; 100 and under 200 tons, 17*s.*; if loads out more, 5*s.*; 200 tons and upwards, 1*l.*; if loads out more, 7*s.*

Hostage. — For each pound sterling of the freight inwards, 2*d.*; and among the officers, per ship, 3*s.*

Ballast. — For each ton taken outwards, 2*d.*

Freemen are exempt from anchorage, but freemen, as well as non-freemen, pay jettage. The charge for jettage is not made unless with goods landed or taken in at Hull, or within the harbour.

British ships pay no hostage, and nothing for ballast.

For detention on board Vessels performing Quarantine.

Vessels having British registers, or the owners subjects of the Queen of Great Britain - *s.* *d.* 5 0 per diem.

Vessels belonging to aliens - - - 7 0 per diem.

Exclusive of the day on which the vessel shall enter into quarantine, and of the day of her release therefrom.

For attendance on board Vessels at anchor in any of the Roadsteads of the Humber.

For every day of 24 hours' attendance - 5*s.* per diem.

Part of a day's attendance, same as for a whole day.

Masters of vessels from foreign ports who have passed an examination by the Hull Marine Board are not required to employ pilots; and vessels coastwise are under no restriction whatever to engage pilots.

The steam tugs are the property of private parties, who charge rates according to agreement.

N. B. The port charges of Hull have been reduced in the aggregate about 18,000*l.* per annum. We have much pleasure in making this fact known, inasmuch as they have been thought high, which is not the case now, whatever it may have been formerly.

The commerce of Hull depends principally on her advantageous situation, and the judicious arrangements of her extensive docks. She is the principal emporium of the large and fertile counties on the æstuary of the Humber, and of those traversed by the numerous and important rivers, including the Trent, Don, Ouse, &c., that have their embouchure in it. The natural facilities for internal communication thus enjoyed by Hull have been greatly extended by artificial means. She is now united partly by rivers and canals, and also by a chain of railways with Manchester, Liverpool, Sheffield, Leeds, Bradford, and the manufacturing districts on the west; London, and the southern parts of England; the Midland Districts; and Bridlington, Scarbro', &c. on the east. A railway has also been constructed between Hull and the agricultural district of Holderness. She has become not merely the principal port for the East and West Ridings of

Yorkshire, but also for a considerable portion of the trade carried on between Lancashire and the northern parts of Europe. Indeed, much of the Baltic trade that once proceeded by the circuitous route of the English Channel or north about to Liverpool, now stops short at Hull, and finds its way by the more certain and expeditious accommodation of the railways across the country. A regular and very frequent intercourse (with Hamburg almost daily) is kept up by steam packets with Hamburg, Rotterdam, Antwerp, Amsterdam, Gottenburg, St. Petersburg, and other continental ports; and with London, Leith, Aberdeen, Newcastle, and other coasting ports. The great articles of export are cotton stuffs, and twist; woollen goods and woollen yarn; iron, and hardware; linens, and linen yarn; earthenware; machinery, and millwork; coals, salt, and more recently raw cotton brought from Liverpool and Manchester, principally for shipment to Petersburg and the N. of Europe.

The staple imports are timber, deals, grain, and seeds, sheep's wool, tallow, hemp, flax, hides, iron in bars, green fruit, bones, madder, bark, turpentine, cattle, sugar, &c. The rise of Goole and Grimsby has not affected the commerce of Hull at all to the extent anticipated, and her superior facilities for trade and navigation will always ensure her a decided superiority over the other ports of the Humber. Hull used to be very largely engaged in the northern whale fishery, having had, in 1818 and 1819, as many as 64 ships engaged in the trade. Subsequently, however, it rapidly declined, and from 1836 to 1845 only one ship was sent out! It has since partially revived; and for some years past, from 10 to 12 or 14 ships proceed annually from Hull to Greenland and Davis Straits. But the business is one of extreme hazard; and it is generally believed that, on the whole, the losses on the trade have fully countervailed the gains. The steam navigation of the port is greatly on the increase as seen in the previous table; and many iron steamers and sailing vessels continue to be added to the shipping of the port. These, with the reductions in the dock rates and port charges, the increased facilities afforded for the shipment and warehousing of goods, and the intimate communications with the interior of the kingdom, and even with foreign countries, have given an extraordinary impulse to the trade of the port, and this, no doubt, will be maintained and increased if the peace of Europe should happily be preserved.

It is believed by many that the trade of the town and the well-being of its inhabitants would be much promoted by purchasing up the docks from their present proprietors, and placing them under trust for the benefit of the town, as at Liverpool and Bristol; and this, we are assured, might be accomplished with but little difficulty. (We are indebted for most part of the foregoing information to the obliging kindness of Mr. Huffam, the able secretary to the docks.)

VI. Glasgow Docks, Shipping, &c.

Glasgow, the commercial capital of Scotland, on both sides the Clyde, lat. (Observatory) 55° 51′ 32″ N., long. 4° 17′ W., is indebted for her present greatness to her advantageous situation on a fine river, in one of the richest coal and mineral districts of the empire. Originally, however, the Clyde was much encumbered by fords and shallows, and for a lengthened period it served rather to excite and disappoint expectation, than to confer any real commercial advantage on the city. In 1662, after several other schemes had failed, the magistrates of Glasgow purchased the ground on which Port Glasgow (16 miles lower down the river) now stands, where they formed a harbour and a graving dock, the first work of its kind in Scotland. For a considerable period the intercourse between Glasgow and its newly acquired port was principally carried on by land carriage; but from 1665 attempts were every now and then made to deepen the river. In 1688 a quay was formed at the Broomielaw; but even so late as 1775 no vessel drawing 6 ft. water could reach Glasgow, except at spring tides. At length, however, a plan, proposed in 1769 by Mr. Golburn, engineer of Chester, for deepening the river to 7 ft. at neap tides, was adopted, since which time by the continued use of numerous dredging machines a depth of from 16 to 19 ft. water at high water neaps has been obtained. In the year ending the 30th June, 1858, 23 ships drawing 18 ft. water, and 13 drawing 19 ft. came safely to the Broomielaw, while one of the largest steam vessels afloat, the Persia, of 3,600 tons burthen, was launched in 1855 into the river about 1 mile below Glasgow, and came up to the harbour to receive its machinery. The work of deepening and straightening the river is still vigorously prosecuted. Six dredging machines and two diving bells are in constant employment. The river for 7 m. below the city, is very much widened and forms nearly a straight line; the sloping banks, formed of whinstone, being constructed in imitation of ashlar. The accommodation for shipping at the Broomielaw, or harbour, is now, also, very greatly extended. It comprises about 60 acres water. The quays extend about 2½ m. in length, are amply furnished with sheds for goods, cranes, and other appliances for working a first-rate harbour. Among its 19 cranes, 4 of which are wrought by steam power, there is one lately erected which may be well termed gigantic, being capable of easily lifting 60 tons. The quay has the important advantage of being directly connected, by means of the General Terminus Line, with the various railways that centre in the city. The parliamentary trustees for managing the river have, also, acquired ground N. of the harbour, on which they have power to construct docks. They may, likewise, construct a basin on the S. side.

The total expenditure on the river and harbour, inc. works, purchases of ground, &c. down to 1858, was 2,817,188*l.*, of which about 1,764,800*l.* has been raised as revenue.

The influence of these improvements on the shipping and trade of Glasgow has been most striking. At present, a greater number of sailing vessels and of steamers belong to Glasgow than to any other Scotch port, and the harbour is constantly crowded with ships from foreign parts, coasting vessels, and steamers. The steam-packets belonging to the Clyde that sail to New York, London, Liverpool, Dublin and Belfast, are amongst the finest vessels of their class in the empire. In all, there belonged to Glasgow, on the 31st December, 1858, 640 vessels, of the aggregate burden of 228,873 tons.

Abstract of goods imported and exported for year ending June 30th, 1858.

Imported.—Coastwise, 345,132. Foreign, 135,403. Total, 480,535 tons.

Exported.—Coastwise, 442,044. Foreign, 232,219. Total, 674,263.

Harbour Dues.—Rates on vessels, on each time of entering, or using or departing from the river or harbour:—

1. On all vessels, except as after-mentioned, arriving at or departing from the harbour, from or to any place in the United Kingdom of Great Britain and Ireland, per register ton, 1½*d.* inwards, 1½*d.* outwards.

2. On all steam-vessels arriving at or departing from the harbour, from or to any place within a line drawn from east to west across the Channel at Pladda, per register ton, ¾*d.* inwards, ¾*d.* outwards.

3. On all vessels arriving at or departing from the harbour, from or to any place out of the United Kingdom of Great Britain and Ireland, per register ton, 4*d.* inwards, 4*d.* outwards.

4. On all vessels that shall remain in the harbour over and above the first 24 lawful days, per register ton, per week, 1*d.*

5. On all vessels entering or departing from any of the wet docks or tidal basins, when constructed, in addition to the harbour rates, per register ton, 6*d.* inwards, 6*d.* outwards.

6. On all vessels that shall remain in any of the wet docks or basins over and above the first 24 lawful days, per register ton per week, 2*d.*

7. On all vessels entering or using the river, not liable for the above rates, and not trading with cargo liable for rates under schedule (H), per register ton, 6*d.*—Provided that the last mentioned charge shall not extend to any vessels the goods in which are exempted from rates by this Act.

8. On all vessels entering or using the trustees' basin at Bowling, having previously been regularly trading on the river, per register ton, per week, ½*d.*

9. On all other vessels entering or using the said basin, per register ton per week, 2*d.*

Vessels proceeding *empty* for a cargo, or returning empty having discharged a cargo to or from any place beyond the limits of the harbour, shall not be liable to pay any rates for the empty trip, under article 7.

Vessels passing to or from any place on the River Clyde above Hutchesontown Bridge, through that portion of the river which is embraced within the limits of the harbour, shall not be liable for any of the rates specified in this schedule, unless they shall use any of the said docks or tidal basins, or any of the quays or other works constructed by the trustees on the banks of the river, within the limits of the harbour, or unless they shall take in or discharge their cargo or any part thereof within the said limits, or shall remain therein longer than may be necessary for passing through the same.

Rates for use of Ordinary Cranes.

	s.	d.
Each hogshead of sugar and hoists, not exceeding 12 cwt.	0	3
Ditto ditto from 12 to 15 ,,	0	4
Ditto ditto from 15 to 20 ,,	0	6
Each ton of hemp	0	6
Ditto mahogany and other timber rated in the first column of schedule (H) at 2*s.* per ton . .	0	6
Ditto other timber	0	4
Ditto marble.	1	0

Rates for Weighing.

	s.	d.
Each cart, waggon, or other carriage load or weigh not exceeding 12 cwt.	0	1
Ditto ditto ditto exceeding 12 cwt.	0	2

Weighing duties to be paid by the owners, shippers, or importers of goods, if required by the collector or other officer appointed by the trustees for ascertaining the rates, provided the weight specified by the owner, shipper, or importer of the goods, be found less than the real weight, but if equal to, or greater than, the real weight, the weighing duties are not to be exitible.

Weighing duties for coals to be paid only when weighed on the application of the owner or shipper.

Rates for the use of Planks, Stages, and Rhones.

	s.	d.
1. For planks or stages for loading or discharging vessels: for each plank or stage, per week .	1	0
2. For rhones: for each waggon of coal loaded therewith	0	1

One shilling extra on each cargo for removing the rhone to and from the vessel.

Rates for use of Water.

	s.	d.
For the supply of water to vessels entering and using the harbour or docks . . . . . per puncheon	0	8

But rates shall not be leviable unless water shall be actually supplied to vessels.

Rates for the use of Cranes, capable of lifting Ten Tons and upwards, putting in or taking out of Vessels old or new Machinery:—

				£	s.	d.
For each hoist, not exceeding 1 ton . . .				0	0	6
Ditto	exceeding 1 ton and not exceed.	2 tons		0	1	0
Ditto	ditto 2	ditto	3 tons	0	2	0
Ditto	ditto 3	ditto	4 tons	0	5	0
Ditto	ditto 4	ditto	5 tons	0	10	0
Ditto	ditto 5	ditto	6 tons	0	15	0
Ditto	ditto 6	ditto	8 tons	1	0	0
Ditto	ditto 8	ditto	10 tons	1	10	0
Ditto	ditto 10	ditto	12 tons	2	0	0
Ditto	ditto 12	ditto	15 tons	3	0	0
Ditto	ditto 15	ditto	20 tons	5	0	0
Ditto	ditto 20	ditto	25 tons	7	10	0
Ditto	ditto 25	ditto	30 tons	10	0	0
Ditto	ditto 30	ditto	35 tons	12	10	0
Ditto	ditto 35	ditto	40 tons	15	0	0
Ditto	ditto 40	ditto	45 tons	17	10	0
Ditto	ditto 45	ditto	50 tons	20	0	0
Ditto	ditto 50	ditto	60 tons	25	0	0

All necessary use of the crane, from the lifting of a piece of machinery off its carriage until stowed or adjusted in the vessel, or from the lifting of a piece of machinery from the vessel until placed on its carriage, shall be included in one hoist.

Putting on board machinery, engines and boilers, including fitting up, when the vessel is new and fitted out for the first time, per horse power of engine as per contract, 2*s.* 6*d.*; or per ton, 3*s.*

Taking out boilers and machinery for repairs, per horse power of engine, as per contract, 2*s.*; or per ton, 3*s.* 6*d.*

Putting on board boilers and machinery after being repaired, including fitting up, per horse power of engine as per contract, 1*s.* 6*d.*; or per ton, 2*s.*

Putting in or taking out boilers, per horse power of engine, as per contract, 1*s.*; or per ton, 3*s.*

The above rates to be charged per horse power of engine, or per ton, in the option of the trustees.

General repairs or jobbing, not included in the above, to be charged at the rate per day of 5*l.* 5*s.*

In addition to the rates for cranes, specified in this schedule, 6*d.* per hour to be paid for wages to cranemen attending while the crane is being worked.

Ballast.—The Clyde trustees remove ballast from vessels on either side the harbour, at a rate not exceeding 1*s.* per ton, and supply clean stone ballast at 1*s.* per ton.

The River Clyde is divided into three stages, and the following are the Tonnage Dues exigible upon each, viz.:—

The first stage extends from Hutcheson's Bridge to the Old Ferry at Renfrew, being about 600 yards to the east of the present ferry, and the dues on goods carried or conveyed thereon are two-thirds of the tonnage dues exigible by the trustees.

The second stage extends from the Old Ferry at Renfrew to the Mouth of Dalmuir Burn; and the dues exigible thereon are one-sixth of the tonnage dues; and

The third stage extends from Dalmuir Burn to Newark Castle; and the dues exigible thereon are one-sixth part of the tonnage dues.

Charges on a Ship of 500 Tons Register arriving at Glasgow with Cotton, and clearing out laden with Iron.

	Rates.	Foreign. £	Coasting. £
In with cotton.			
Harbour dues on ship	4d. F. and 1½d. C.	8 6 8	3 2 6
Tonnage dues on 300 tons cotton	1s. F. and 1s. 6d. C.	30 0 0	22 10 0
Lumpers' charges for unloading cargo	6d. per ton	7 10 0	same
Northern lights	4 4/16 and 6d. per 50 tons	9 2 1	0 0 0
Clyde lights	1d. per ton	2 1 8	1 0 10
Towing ship	9d. per ton	18 15 0	same
Piloting do.	2s. per ft. (water)	1 10 0	same
Planks and stages		0 15 0	same
Discharging and removing ballast, say 100 tons	1s. per ton	5 0 0	same
		83 0 5	
Norr.—Vessels of more than 15 feet water are charged, in towing and piloting, as drawing 15 feet.			
Out with pig iron.			
Harbour dues on ship	4d. F. and 1½d. C.	8 6 8	3 2 6
Tonnage dues on 700 tons pig iron	9d. F. and 9d. C.	26 5 0	same
Lumpers' charges for loading do.	8d. per ton	23 6 8	same
Northern lights	4 4/16 & 6d. p. 50 tons	9 2 1	0 0 0

Supplying ship with water		0 12 0	same
		90 14 1	
Norr.—If bar or rod iron the charges would be as follows:— Tonnage dues on 700 tons at 1s. 6d. F. and C., 52l. 10s. Lumpers' charges loading ditto at 10d. F. and C., 29l. 5s. 4d.			

Charges for Lights from the Clyde.

America and West Indies by North.	By South.
9l. 2s. 1d. . . . 4 4/16 and 6d. per 50 tons if from a port south of Cape Cod.	21l. 6s. 10d. . . . 10 2/16 and 6d. per 50 tons.
9l. 7s. 3d. . . . 4 6/16 and ditto if from a port north of Cape Cod.	

The charges for unloading and taking in a cargo is per agreement with licensed lumpers or porters who ply on the quay for hire. There are no fixed rates, but the following charges may be considered pretty near the mark: unloading cotton about 6d. per ton, and for taking in iron, 9d. per ton. The other items of charge of a public kind affecting the ship are, towing up and down the river, planks and stages for discharging and loading the cargoes, supplying the ship with water and the removal of ballast if any on board, and ships loaded with cotton usually have ballast.

Entrance to the River.—As a guide to mariners it may be mentioned that vessels of 19 feet draught of water can arrive at the harbour of Glasgow, and that vessels drawing 17 feet are considered regular traders. Vessels drawing 15 to 16 feet may always arrive and depart without touching the bottom. At the entrance to the river vessels are placed under the charge of pilots acquainted with the channel, which is well marked with beacons and buoys. A ship on reaching the mouth of the river at Newark had best commence ascending as soon after half-flood as possible. There are no particular usages connected with the harbour of Glasgow beyond those adopted in most other rivers and harbours. Lights are permitted in the harbour from 6 A.M. to 10 P.M.

Glasgow may be said to be *cosmopolitan* in her commerce and manufactures, uniting within herself the businesses and trades of almost every other town and city in the U.K. Hence it follows that while one branch of manufacture or trade may be dull, another may be prosperous, and accordingly Glasgow seldom feels any of those general depressions which so frequently occur in places which have only one or two branches of manufacture or commerce. The great industrial occupations of Glasgow are its cotton spinning and weaving; its collieries and iron manufactures; its iron ship building and machine making, and its chemical, porcelain, and glass manufactures. According to Dr. Strang the consumption of raw cotton in Glasgow in 1854 was above 1,900 bales per week, of from 430 to 440 lbs. each, and the number of power looms dependent on Glasgow was from 26,000 to 27,000, producing daily about 700,000 yards cloth. In the west of Scotland, of which Glasgow is the central mart, there were, in 1854, 6,448,000 tons of coals drawn from the pits, of which 2,152,800 tons were consumed in the manufacture of pig iron, 367,200 in the conversion of pig iron into malleable iron, making in all, 2,250,000 tons used in connection with the manufacture of iron, while 926,221 tons were shipped, and 148,312 tons sent beyond the boundaries by railways, leaving for the manufacturing consumption and domestic use of the Glasgow district 2,853,427 tons. The produce of pig iron in the counties of Lanark and Ayr, in 1854, amounted to 717,600 tons, 122,684 tons of which were shipped direct to foreign countries, 294,194 tons were sent coastwise from the Clyde, Port Dundas and the western ports of the Clyde æstuary, while 22,865 tons were sent away by railways, and 171,360 tons were converted into malleable iron, leaving the remaining 106,497 tons for foundry and other purposes of the district. Malleable iron during the same year was manufactured to the extent of 122,400 tons. The value of the whole coal and iron businesses to the district in 1854 may be reckoned at about 4,872,000*l.*, of which 1,973,000*l.* was paid in wages to 33,900 persons. In 1859, the quantity of pig iron produced is greater while the malleable remains stationary. As to iron ship building and marine engine making it may be stated that in 1853-54, 266 vessels were

made or contracted for, including both steam and sailing, having an aggregate tonnage of 168,000, for which also marine engines were being made or had been made of 29,000 horse power. The average of these vessels being 630 tons involved the large outlay of nearly four millions sterling. In 1858 there were launched 60 iron vessels of 40,522 tons, and there are now (1859) building 34 of 18,463 tons. The chemical products of Glasgow are multifarious, consisting of sulphuric, muriatic, nitric, and acetic acids and their various salts; bleaching powder, soda, soap, cudbear, bichromate of potash, sugar of lead, iodine, salts of ammonia, alum, prussiate of potash, naphtha, pitch, oil, animal charcoal, bone tar, cream of tartar, &c., &c. The works of St. Rollox, situated in the north-east quarter of Glasgow, constitute perhaps the largest chemical establishment in the world. They cover about 12 acres of ground, employ above 1000 men, consuming annually about 20,000 tons of common salt, and 80,000 tons of coal, and producing of soda, bleaching powder, sulphuric acid, soap, &c., about 25,000 tons. The lofty chimneys of St. Rollox are among the curiosities of the city, one of them being 450 feet high, 50 feet diameter at the base, and 14 feet at top. There are eight large potteries engaged in the manufacture of all kinds of china, porcelain, Parian, and other ware, four flint glass manufactories, and twelve bottlehouses. The total produce of the business, which employs 2000 people, may be fairly estimated at 120,000*l.*, while the quantity exported in 1854 from the Clyde amounted to 4,931,166 pieces. In the flint glass manufactories of Glasgow there were produced in 1854 about 1,640,000 lbs. of finished goods, the quantity exported being 2,262 cwt. The twelve bottlehouses produced 15 millions of bottles, nearly half of which were exported from the Clyde. In the manufacture of tobacco pipes 600 persons are employed, who work up 2,740 tons of clay, and who daily manufacture, finish, and pack about 2,700 gross pipes. The rapid progress which these industrial pursuits have made in Glasgow may be chiefly attributed to the demand which the foreign trade of the Clyde has created for bulky freight.

Accounts of the Custom Duties collected at Glasgow, and of the Number and Tonnage of the Ships belonging to the Port in the undermentioned Years.

Years ended Jan. 5.	Duties.			No. of Ships.	Tonnage.
	£	s.	d.		
1798	125	13	0½		
1806	1,523	7	11½

The value of the exports from Greenock during the same year amounted to 502,899*l.* Those from Port Glasgow are comparatively inconsiderable.

Population.—If the foregoing figures give some idea of the rapid advance of Glasgow as a commercial and manufacturing city, the following table of its progressive population during the present century will render this more apparent.

Years.	Males.	Females.	Total.	Total Increase each Census.	Increase per Cent.
1801	- -	- -	83,769		
1811	- -	- -	110,460	26,691	31·865
1821	68,119	78,934	147,013	36,563	33·11
1831	93,724	108,702	202,426	55,383	37·66
1841	133,313	147,369	280,682	78,256	38·22
1851	163,731	183,270	347,001	66,319	23·62

In 1859 the estimated population of Glasgow and its sub urbs is about 440,000, having been nearly quintupled in 50 years!

We are indebted for most part of the previous details to our learned friend Dr. Strang, Chamberlain of the city of Glasgow.

VII. Dundee Docks, Shipping, &c.

Dundee, on the N. side of the Frith of Tay, lat. 56° 28′ N., long. 2° 57′ 30″ W., 9 miles W. from Buttonness Point (on which there are two first-class light-houses, with *fixed* lights), has increased with extraordinary rapidity since the peace of 1815, and is now become the principal seat of the British linen manufacture, and has a very extensive trade. Down to 1815, the harbour was on a humble scale, and adapted only to a very limited commerce. Only one small pier existed. But in the year referred to, an act was obtained for separating the harbour from the other branches of the burgh revenue, for constructing an entirely new harbour, on a scale commensurate with the growing importance of the place, and for investing the management in a board of commissioners. Additional acts were obtained in 1830 and 1836; and the result of the measures thus set on foot has been, that Dundee can already boast of the completion of two wet docks, King William's, of 6¼, Earl Grey's, of 5¼, and of a tide harbour, of 4¾ acres, connected with them. The breadth of the lock of the former, to which is attached a splendid graving dock, is 40 feet; and that of the latter, which is fitted to admit steamers, 55 feet. A crane, reaching 28 feet from the face of the quay wall on which it is placed, and capable of raising 30 tons, is erected at this dock, so that every facility is afforded for taking out and putting in the boilers &c. of the largest steam vessels. There is also a Morton slip attached to the tide harbour, on which three vessels may be placed at once. The vessels are hauled up by a steam-engine of 16 horse power: a ship of 800 tons may be placed on the slip; one of the Dundee steamers, the Perth, weighing, without her boilers, 596 tons, was lately repaired on it.

A wet dock of 14½ acres is now being constructed, the lock of which will be 60 feet. The harbour plan also embraces another wet dock of 9½ acres, and the tide harbour between these docks will be of the extent of 11 acres. The quays are wide and spacious, affording berthage for above 65 vessels; and there are extensive and convenient carpenters' and other yards for ship building. The accommodation for the building and repairing of vessels is not surpassed in any port of the kingdom.

The expenditure on these great works up to May, 1858, was as follows: —

Total expenditure to May, 1858 - - - - - -			£834,809 17 9
Total shore dues, &c. collected to May, 1858 - -	£662,902 1 11		
Amount of debt at May, 1858 - - - -	171,907 15 10		
Total income to May, 1858 - - - - - -			£834,809 17 9

The shore dues in 1765 yielded 126*l.*; 1775, 140*l.* 5*s.*; 1785, 490*l.*; 1795, 965*l.*; 1805, 1,272*l.* 10*s.*; 1814, 1,701*l.* 10*s.* 3*d.* Their amount in the following years is seen in the Table next page.

It is essential also to bear in mind, that while the income has rapidly increased, the rates of charge have been very considerably reduced. The customs revenue in the undermentioned years has been: —

Years.	Revenue.	Years.	Revenue.
1792 - -	£6,341 17 4	1850 - -	£65,183 10 3
1833 - -	48,647 12 1	1855 - -	57,894 11 1
1837 - -	76,150 1 3	1856 - -	56,678 5 2
1840 - -	63,346 8 9	1857 - -	59,084 1 6
1845 - -	46,325 0 0	1858 - -	53,392 18 6

The amount of customs duties does not, however, afford anything like a true criterion of the extent of the trade of the port, as flax and hemp, the chief articles of import from foreign countries, are not subject to any duty. The greater part of the sugar used in Dundee being either refined or of the sort called crushed lump, which is partially refined, there is scarcely any revenue derived from sugar, there being no refineries here, and no direct importation of raw sugar. When there was a duty on foreign corn, a considerable sum was received at this port, but now that the duty is only 1*s* per quarter, the sum received from that source is very small.

There belonged to the port, on the 1st January, 1858, 18 sailing vessels of less, and 251 of more than 50 tons, the agg. burden of the former being 633, and of the latter 49,844 tons; there then, also, belonged to the port 9 steamers, agg. burden, 1,852 tons. Latterly there has been a considerable extension of the carrying trade by steam from this port. Besides steamers to London and Hull weekly, there are regular sailing ships during the season to Hamburg and St. Petersburg, and two large screw steamers have this year (1859) been fitted out for Davis' Straits and the Greenland seas.

Table showing the Size and Berthage of the Docks finished and projected at Dundee.

Name of Dock.	Acres.	Berthage in Feet.	Depth of Water.		Remarks.
			Springs.	Neaps.	
			ft. in.	ft. in.	
Earl Grey's dock - -	5½	2,645	18 8	13 6	These tides are an average of 8 years.
King William's dock - -	6½	2,555	16 2	11 0	
Victoria dock - -	14½	3,550	18 8	13 6	The south wall of this dock is finished, the rest partly so.
Projected dock (east) - -	9½	2,645	18 8	13 6	
West tide harbour - -	4½	1,580	18 8	13 6	
East tide harbour - -	11	2,010	18 8	13 6	Considerably advanced, and when it is finished it will contain 2490 ft. berthage.
Graving dock* - -	270 feet in length, 70 feet wide at top of walls, 35 feet at bottom.				
Patent slip* - -	600 feet in length, capable of taking up a ship of 800 tons, worked by an engine of 16 horse power.				
Width of entrance—K.W.D. -	40 feet length of lock, 160 feet betwixt the gates.				
Ditto E. G. D. -	55 do. 215 do				
Ditto Vic. D. -	60 feet,—not finished.				

* The Graving dock and Patent slip are capable of taking 3 vessels on each at one time, each vessel being 350 tons.

The docks are accommodated with three sheds, having 15,400 sq. ft. of floor, and seven cranes.

The Pilotage of the River Tay and Harbour of Dundee is under the jurisdiction of a board composed jointly of the trustees of the harbour of Dundee and the corporation of the fraternity of masters and seamen of Dundee. Certain rates of pilotage are exigible under the Dundee harbour acts, but the pilotage is not compulsory. The establishment has two pilot cutters, with necessary tenders, and one of the cutters is always at sea, cruising outside the buoy of Tay, unless driven in by stress of weather. There is a pilot master at the port with an ordinary staff of 15 licensed pilots.

14. All steam vessels carrying goods and passengers, to pay the same rates as sailing vessels.				

(From information communicated by our esteemed friend George Duncan, Esq., late M.P. for Dundee.)

VIII. Leith Docks, Shipping, etc.

Leith, which may be called the port of Edinburgh, has 3 wet docks, containing about 15 acres of water room. Two of these were constructed several years ago for the accommodation of the vessels ordinarily frequenting the port. The other, which has been recently finished, is intended for the use of steamers. It has also, or shortly will have, 3 dry docks; 2 on a small scale being already constructed, and 1 of larger dimensions being in the course of formation.

These docks have cost large sums; and owing to the harbour drying at low water, large sums have, also, been expended in the extension of the old, and the formation of a new pier. The former consisting partly of stone, and partly of stone and wood intermixed, is of very great length; and the new, or western pier, which is nearly parallel to the other, is also of great length, and has a landing stage near its extremity, and a railway. The object in carrying out the piers was to form a harbour which, at their extremity, should have water sufficient to enable vessels to come to the landing stage at all times of the tide. But this object has not been fully attained; and though it had, we should have been inclined to regard the outlay upon it as little better than thrown away. The truth is, that the docks and new harbour at Leith are entirely misplaced. Instead of being where they are, the docks should have been constructed at Trinity or Granton, about ¾ or 1 m. W. from Leith, being, however, nearer to it than the extremity of the new pier. And a deep water harbour, accessible at all times, having been already constructed at Granton, the outlay on the extension of the piers at Leith seems not a little preposterous.

The harbour at Granton has been formed by the Duke of Buccleugh. A pier, constructed in the most approved manner, projects into the sea about 1700 feet. It is shaped like a T with its head to the N., and has harbours and landing places on both sides. It has been open for some years; but hitherto it has been principally resorted to by steamers. The duke has, also, constructed a breakwater, which adds much to the security of the shipping.

The commerce of Leith, from its being the port of Edinburgh, is very considerable, and has been slowly but steadily improving. It carries on a limited trade with Australia, the E. and W. Indies, the Mediterranean, Canada, and the United States; but its chief foreign trade is with Holland and the N. of Europe. The principal articles of export consist of linen manufactures and linen yarn, brought from Fifeshire and Dundee; cottons and cotton yarn from Lanarkshire; iron from the latter; with woollens and worsteds, coal, salt-fish, ale, spirits, &c. And as the port is now about to be connected by branches with the leading railway lines that centre in Edinburgh, a considerable extension of its trade may be anticipated. The leading articles of import consist of corn and timber; flax and hemp; hides, guano, and provisions; sugar and other colonial products; wool, wine, spirits, dye stuffs, &c. With regard to its domestic trade, there are companies, which have vessels trading with London; and other companies have vessels trading with Hull, Newcastle, Liverpool, Greenock, Glasgow, Aberdeen, Montrose, Wick, Orkney, Shetland, Dundee, Stirling, &c. The communication with London is kept up by first class steamers that sail twice a week during the entire year, but

more vessels sail in summer than in winter. There is also a communication by steam with Newcastle and Hull twice a week; with Stirling twice a day; the opposite coast of Fife several times a day; and a regular communication with every important place on the E. of Scotland, from Lerwick in Shetland, and Kirkwall in Orkney, to Berwick-upon-Tweed. The steamers sail some from Leith and some from Granton. Leith formerly sent 8 or 10 vessels to the Greenland whale fishery, but such has been the decline of the business that she no longer sends a single ship. We subjoin an

Account of the Quantities and Values of the Principal Articles, the Produce and Manufacture of the U. Kingdom exported from Leith, in 1857.

Articles.		Quantity.	Value.

Dock Rates on Vessels, per Register Ton.

	s.	d.
All vessels from Asia or Africa, to the east of the Cape of Good Hope, including the Cape, or from S. America	1	5
From West Indies, West Coast of Africa, Cape de Verde Islands, or Greenland and Davis' Straits fisheries	1	5
From within Straits of Gibraltar, or from N. America	1	2
From the Baltic all above the Sound, Onega, Archangel, Jersey, or Guernsey, Portugal, France, and Spain, without the Straits of Gibraltar, Newfoundland, Madeira, and Western Islands	1	0
From Norway, Sweden, Denmark, Holstein, Hamburg, Bremen, Holland, and Flanders, that is, without the Baltic, and no farther south than Dunkirk	0	10
From ports in Great Britain and Ireland other than those mentioned below	0	8
From ports between Buchanness and Eyemouth, including the Firth of Forth, the Great Canal and the River Clyde, as far down as Greenock	0	5
All vessels entirely loaded with coals, either for wholesale or retail, and which are excluded from the docks —from ports in England	0	6
Ditto ditto from ports in Scotland	0	4
All steam vessels from ports in the Firth of Forth, as far as Anstruther on the north, and North Berwick on the south, carrying passengers and their luggage exclusively	0	0½
Note.—On all vessels arriving light, or in ballast to load coals, stones, cotton, pig iron, or street manure, the charge reduced during the pleasure of the commission, to	0	4

Rates of Pilotage for Leith Harbour, as fixed by the Commissioners, and approved by the Trinity House and Board of Trade.

	s.	d.
For a vessel drawing not more than 7 feet of water .	5	10
Above 7 and not above 8 feet	8	0
8 9	9	9
9 10	11	8
10 11	13	9
11 12	16	0
12 13	19	6

And for every foot or part of a foot above 13, an additional charge of 1*s.* 6*d.*

Extra Attendance.—For each 24 hours extra attendance on board, when requested by the master, to the master-pilot 2*s.* and to each of the boatmen 1*s.*

Pilot Boats and Crews.

	s.	d.
For vessels from foreign ports, under 70 tons .	4	0
Ditto from ditto, of 70 and not exceeding 120 tons	5	0
Ditto from ditto, exceed. 120 and not exceed. 250 .	6	0
Ditto from ditto, exceeding 250 tons . . .	9	0

Coasting vessels of any size which require to take a pilot boat, or employ such, to be charged only 2*s.* 6*d.* for boat's and men's attendance, besides the pilotage.

The rates of pilotage, &c., outwards are one-half of those inwards.

Where a vessel takes a steam tug, either in or out, the pilotage and charges for pilot boats and crews shall be one-third less than the rates above specified.

DOG (Fr. *Chien*; Ger. *Hund*; It. *Cane*; Lat. *Canis familiaris*). Of this quadruped, emphatically styled "the friend and companion of man," there is a vast number of varieties. But to attempt to give any description of an animal so well known would be quite out of place in a work of this kind; and we mention it for the purpose principally of laying the following account before our readers, with a remark or two with respect to Asiatic dogs.

An Account of the Number of Dogs entered, and for which Duty was paid in Great Britain, in the Year 1851; distinguishing the Number of Packs of Hounds, and the Number of each Description of Dog, the Rate of Duty on each, and the aggregate Amount paid.

Description of Dogs.	Rates of Duty. £	s.	d.	Total Number.	Amount of Duty. £	s.	d.
Greyhounds, &c. - - - - -	1	0	0	11,964	11,964	0	0
Pointers, hounds, setter dogs, spaniels, terriers, or lurchers, or where the person keeps two or more - - - -	0	14	0	105,134	73,593	16	0
Dogs, not being greyhounds, hounds, &c., and the person keeping one only - - - - - -	0	8	0	172,211	68,884	8	0
Total number of dogs, exclusive of packs of hounds - -	-		-	289,309	154,442	4	0
Packs of hounds compounded for - - - -	-		-	85	5,060	0	0

In 1855 the duty on dogs was equalised and fixed at 12*s.* each, without regard to denomination or breed. It was at the same time provided (16 & 17 Vict. c. 90), that no person shall be charged more than 3*l.* 12*s.* in one year for hounds, and 9*l.* for greyhounds, how many soever of these animals he may keep (a limitation for which it is not easy to discover any sufficient reason); and that shepherds' dogs kept *bonâ fide* for herding sheep and cattle shall be exempted from duty.

In 1857, the total number of 332,056 dogs were charged with the duty of 12*s.*, which, consequently, produced 198,921*l.*

Cuvier, the great French naturalist, says, "The dog is the most complete, the most remarkable, and the most useful conquest ever made by man: every species has become our property; each individual is altogether devoted to his master, assumes his manners, knows and defends his goods, and remains attached to him until death; and all this proceeds neither from want nor constraint, but solely from true gratitude and real friendship. The swiftness, the strength, and the scent of the dog have created for man a powerful ally against other animals, and were, perhaps, necessary to the establishment of society. He is the only animal which has followed man through every region of the earth."

It is singular, however, that neither Cuvier, nor any one of those by whom his statements have been copied, should have mentioned that this account is applicable only to Europe. All Mohammedan nations regard the dog as impure, and will not touch it without an ablution. The same is also the case with the Hindoos. From the Hellespont to the confines of Cochin-China, dogs are unappropriated, and have no master. They prowl about the towns and villages; and though they are naturally more familiar, they are in no respect more domesticated, than the carrion crows, kites, vultures, &c., which assist them in performing the functions of scavengers. In China and Cochin-China, the dog is eaten as food; its flesh being, with the exception of that of the hog, the most common in their markets.

The unnecessary multiplication of dogs, particularly in large cities, is a very great nuisance: coming, as they often do, into the possession of those who are without the means of providing for them, they are frequently left to wander about in the streets; and from ill usage, want of food and of proper attention, are apt, during hot weather, to become rabid. In several places the nuisance has attained to a formidable height; and it is singular, considering the numerous fatal occurrences that have taken place, that no efforts should have been made to have it abated. It has grown to its present excess, partly from too many exemptions having been granted from the duty, and partly from a want of care in its collection. The number of the former has now been lessened; and besides more rigidly enforcing the latter, it would be proper to enact that all dogs found wandering in the streets without masters should be impounded.

DOWN (Ger. *Dunen, Flaumfedern*; Du. *Dons*; Fr. *Duvet*; It. *Penna matta, Piumini*; Sp. *Flojel, Plumazo*; Rus. *Puch*; Lat. *Plumæ*), the fine feathers from the breasts of several birds, particularly those of the duck kind. That of the eider duck is the most valuable. These birds pluck it from their breasts and line their nests with it.

Mr. Pennant says that it is so very elastic, that a quantity of it weighing only $\frac{3}{4}$ of an ounce, more than fills the crown of the largest hat. That found in the nest is most valued, and termed *live down*; it is much more elastic than that plucked from the dead bird, which is comparatively little esteemed. The eider duck is found on the western islands of Scotland, but the down is principally imported from Norway and Ireland.

DRAGON'S BLOOD. See BALSAM.

DRAWBACK, a term used in commerce to signify the remitting or paying back of the duties previously paid on a commodity on its being exported.

A drawback is a device resorted to for enabling a commodity affected by taxes to be exported and sold in the foreign market on the same terms as if it had not been taxed at all. It differs in this from a bounty, — that the latter enables a commodity to be sold abroad for *less* than its natural cost, whereas a drawback enables it to be sold exactly at its natural cost. Drawbacks, as Dr. Smith has observed, "do not occasion the exportation of a greater quantity of goods than would have been exported had no duty been imposed. They do not tend to turn towards any particular employment a greater share of the capital of the country than would go to that employment of its own accord, but only to hinder the duty from driving away any part of that share to other employments. They tend not to overturn that balance which naturally establishes itself among all the various employments of the society; but to hinder it from being overturned by the duty. They tend not to destroy, but to preserve, what it is in most cases advantageous to preserve — the natural division and distribution of labour in the society."—(p. 221.)

Were it not for the system of drawbacks, it would be impossible, unless when a country enjoyed some very peculiar facilities of production, to export any commodity that was more heavily taxed at home than abroad. But the drawback obviates this difficulty, and enables merchants to export commodities loaded at home with heavy duties, and to sell them in the foreign market on the same terms as those fetched from countries where they are not taxed.

Most foreign articles imported into this country may be warehoused for subsequent exportation. In this case they pay no duties on being imported: and, of course, get no drawback on their subsequent exportation.

Sometimes a drawback exceeds the duty or duties laid on the article; and in such cases the *excess* forms a real bounty of that amount, and should be so considered.

The Act 16 & 17 Vict. c. 107. has the following clauses in relation to drawbacks: —

No drawback of excise shall be allowed upon any goods cleared for exportation, unless the person intending to claim such drawback have given due notice to the officer of excise, and have produced to the searcher, at the time of clearing such goods, a proper document under the hand of the officer of excise, containing the description of such goods; and if such goods be found to correspond with the particulars of the goods contained in such document, and be duly shipped and exported, the searcher shall, if required, certify such shipment upon such document, and shall transmit the same to the officer of excise. — § 122.

No drawback to be allowed upon the exportation of any goods entered for drawback or as stores which shall be of less value than the amount of the drawback claimed; and all such goods so entered shall be forfeited, and the person who caused such goods to be entered shall forfeit the sum of 200*l*., or treble the amount of drawback claimed in such case, at the election of the Commissioners of Customs. — § 123.

No drawback to be allowed on any tobacco not wholly manufactured from tobacco on which the duty on importation shall have been paid, nor on any tobacco mixed with dirt, rubbish, or other substance; and every person who shall enter or ship, or cause to be entered or shipped, any tobacco contrary hereto, shall, over and above all other penalties which he may thereby incur, forfeit treble the amount of the drawback sought to be obtained, or 200*l*., at the election of the Commissioners of Customs, and all such tobacco shall be forfeited.—§ 124.

If any goods which have been cleared to be exported for any drawback be not duly exported to parts beyond seas, or be unshipped or relanded in any part of the U. K. (such goods not having been duly relanded or discharged as short-shipped under the care of the proper officers), or be carried to any of the Channel Islands (not having been duly entered, cleared, and shipped to be exported or carried direct to such islands), the same shall be forfeited, together with any ship, boat, or craft which may have been used in so unshipping, relanding, landing, or carrying such goods from the ship in which the same were shipped for exportation; and the master of such ship, and any person by whom or by whose orders or means such goods shall have been so unshipped, relanded, landed, or carried, or who shall aid, assist, or be concerned therein, shall forfeit a sum equal to treble the value of such goods, or a penalty of 100*l*., at the election of the Commissioners of Customs. — § 135.

(See DEBENTURE and IMPORTATION AND EXPORTATION.)

DUBBER, a leathern vessel, bottle, or jar, used in India to hold oil, ghee, &c. Barrels, as already observed — (see BARRELS) — are entirely a European invention. Liquids, in Eastern countries, are for the most part packed for exportation in leathern vessels. Dubbers are made of thin untanned goat skins; and are of all sizes, from a quart up to nearly a barrel.

DUNDEE, DOCKS, SHIPPING, &c. See p. 533.

DUNNAGE, in commercial navigation, loose wood, consisting of pieces of timber, boughs of trees, faggots, &c, laid in the bottom and against the sides of the ship's hold, either, 1st, by raising the cargo when she is loaded with heavy goods, to prevent her from becoming too stiff — (see BALLAST); or, 2d, to prevent the cargo, should it be

susceptible of damage by water, from being injured in the event of her becoming leaky. A ship is not reckoned seaworthy unless she be provided with proper and sufficient dunnage.—(*Falconer's Marine Dictionary; Abbott (Lord Tenterden) on the Law of Shipping*, part iii. c. 3.)

DYES AND DYE STUFFS: materials that afford different colours, which the dyer extracts and imparts to other articles.

Mankind in their rudest as well as their most advanced state admire certain colours in preference to others; and when their clothes, or other things, do not naturally possess the colours which they prefer, they endeavour to have them supplied artificially. And hence the art of dyeing has been in use from the remotest ages. We may safely suppose that at first it would be practised in a very rude manner, by immersing the linens, woollens, cottons, or other articles to be dyed, in a solution of the colouring matter, or by some such simple process. But, though sometimes very brilliant, the colours imparted in this inartificial manner, are, for the most part, of the most fugitive description. And yet it is sufficiently certain that a lengthened period must have elapsed, and many trials have taken place, before the happy, and, most probably, accidental discovery was made of fixing colours, or rendering them permanent, by the use of mordants. (Goguet, *de l' Origine des Loix*, &c. i. 130. Eng. trans; and *Bancroft on Colours*, i. Introd.) In modern times the arts of dyeing and calico printing have been greatly improved, and their products are now as remarkable for their cheapness as for their splendour.

We have given notices of the following articles under their respective heads; but it may be interesting to have their imports brought together in one point of view.

Account of the Quantities of the Principal Dyes and Dyeing Stuffs imported into the U. Kingdom during each of the 3 Years ending with 1858.

E.

EARNEST, in commercial law, is the sum advanced by the buyer of goods in order to bind the seller to the terms of the agreement. It is enacted by the 17th section of the famous Statute of Frauds, 29 Cha. II. c. 3., that "no contract for the sale of any goods, wares, and merchandises, for the prices of 10*l.* sterling or upwards, shall be allowed to be good, except the buyer shall accept part of the goods so sold, and actually receive the same, or give something in *earnest* to bind the bargain, or in part payment, or that some note or memorandum in writing of the said bargain be made and signed by the parties to be charged by such contract, or their agents thereunto lawfully authorised."

As to what amounts to sufficient earnest, Blackstone lays it down, that "if any part of the price is paid down, if it is but a penny, or any portion of the goods is delivered by way of earnest, it is binding." To constitute earnest, the thing must be given as a token of ratification of the contract, and it should be expressly stated so by the giver.—(*Chitty's Commercial Law*, vol. iii. p. 289.)

EARTHENWARE (Ger. *Irdene Waaren*; Du. *Aardegoed*; Fr. *Vaisselle de terre, Poterie*; It. *Stoviglie, Terraglie*; Sp. *Loza de barro*; Rus. *Gorschetschnüe passodü*; Pol. *Glinianæ naczynia*), or crockery, as it is sometimes termed, comprises every sort of household utensil made of clay hardened in the fire. Its manufacture is, in England, of very considerable importance; and the improvements that have been made in it since the middle of last century have contributed powerfully to its extension, and have added greatly to the comfort and convenience of all classes.

"There is scarcely," it has been well observed, "any manufacture which is so interesting to contemplate in its gradual improvement and extension as that of earthenware, presenting, as it does, so beautiful a union of science and art, in furnishing us with the comforts and ornaments of civilised life. Chemistry administers her part, by investigating the several species of earths, and ascertaining as well their most appropriate combinations as the respective degrees of heat which the several compositions require. Art has studied the designs of antiquity, and produced from them vessels even more exquisite in form than the models by which they have been suggested. The ware has been provided in such gradations of quality as to suit every station from the highest to the lowest. It is to be seen in every country, and almost in every house, through the whole extent of America, in many parts of Asia, and in most of the countries of Europe. At home

it has superseded the less cleanly vessels of pewter and of wood, and, by its cheapness, has been brought within the means of our poorest housekeepers. Formed from substances originally of no value, the fabrication has induced labour of such various classes, and created skill of such various degrees, that nearly the whole value of the annual produce may be considered as an addition made to the mass of national wealth. The abundance of the ware exhibited in every dwelling-house is sufficient evidence of the vast augmentation of the manufacture, which is also demonstrated by the rapid increase of the population in the districts where the potteries have been established.—(*Quarterly Review.*)

For the great and rapid extension of the manufacture we are chiefly indebted to the late Mr. Josiah Wedgwood, whose original and inventive genius enabled him to make many most important discoveries in the art; and who was equally successful in bringing his inventions into use. The principal seat of the manufacture is in Staffordshire, where there is a district denominated the Potteries, comprising a number of villages, and a population which is supposed to amount, at this moment, to above 85,000, by far the greater portion of which is engaged in the manufacture. There are no authentic accounts of the population of this district in 1760, when Mr. Wedgwood began his discoveries; but the general opinion is, that it did not at that time exceed 20,000. The village of Etruria, in the Potteries, was built by Mr. Wedgwood. The manufacture has been carried on at Burslem, in the same district, for several centuries.

The canals by which Staffordshire is intersected have done much to accelerate the progress of the manufacture. Pipe-clay from Dorsetshire and Devonshire, and flints from Kent, are conveyed by water carriage to the places where the clay and coal abound; and the finished goods are conveyed by the same means to the great shipping ports, whence they are distributed over most parts of the globe.

It is estimated that the value of the various sorts of earthenware produced at the Potteries may amount to about 2,000,000*l.* a-year; and that the earthenware produced at Worcester, Derby, and other parts of the country, may amount to about 1,000,000*l.* more; making the whole value of the manufacture 3,000,000*l.* a-year. The consumption of gold at the Potteries is about 1200*l.* a-week, and of coal about 13,000 tons a-week.

The earthenware manufacture has increased considerably since 1814, but it is not possible to state the exact ratio. The prices of the different sorts of earthenware are said to have fallen 25 per cent. during the last 20 years. Wages have not fallen in the same proportion; but we are assured that a workman can, at the present day, produce about *four* times the quantity he did in 1790. We subjoin an

Account of the Value of the Earthenware exported from the U. Kingdom in 1857, specifying the Countries to which it was principally sent, and the Values sent to each.

Countries to which exported.	Value.	Countries to which exported.	Value.
	£		£
Russia	31,357	British East Indies	57,142
Hanse Towns	53,376	Australia	142,121
Holland	32,600	British North America	85,156
Java	29,989		
Cuba	51,795	Total value of the above and of the exports to all other countries	1,492,436
United States	507,376		
Brazil	102,672		

The above account sets the preponderance of the U. States as a market for earthenware in a very striking point of view. We have been assured that it is necessary to add ¼ to the declared value of the exports, to get their true value.

EAST INDIA COMPANY, a famous association, originally established for prosecuting the trade between England and India, which they acquired a right to carry on exclusively. Since the middle of last century, however, the Company's political have become of more importance than their commercial concerns.

East Indies, a popular geographical term not very well defined, but generally understood to signify the continents and islands to the east and south of the river Indus, as far as the borders of China, including Timor and the Moluccas, but excluding the Philippine Islands, New Guinea, and New Holland: China and the Philippine Islands were, however, included within the limits of the East India Company's peculiar privileges.

I. East India Company (Historical Sketch of).
II. East Indies (State of Society in, growing Demand for English Goods, Trade, Colonisation, etc.).
III. East Indies (Extent, Population, Military Force, Revenue, etc. of British).

I. East India Company (Historical Sketch of).

The persevering efforts of the Portuguese to discover a route to India, by sailing round Africa, were crowned with success in 1497. And it may appear singular, that, notwithstanding the exaggerated accounts that had been prevalent in Europe, from the remotest antiquity, with respect to the wealth of India, and the importance to which the commerce with it had raised the Phœnicians and Egyptians in antiquity, the Venetians in the middle ages, and which it was then seen to confer on the Portuguese, the latter should have been allowed to monopolise it for nearly a century after it had been turned into a channel accessible to every nation. But the prejudices by which the people of most European states were actuated in the sixteenth century, and the peculiar circumstances under which they were placed, hindered them from embarking with that alacrity and ardour that might have been expected in this new commercial career.

Soon after the Portuguese began to prosecute their discoveries along the coast of Africa, they applied to the pope for a bull, securing to them the exclusive right to and possession of all countries occupied by infidels, they either had discovered, or might discover, to the south of Cape Non, on the west coast of Africa, in 27° 54′ north latitude: and the pontiff, desirous to display, and at the same time to extend, his power, immediately issued a bull to this effect. Nor, preposterous as a proceeding of this sort would now appear, did any one then doubt that the pope had a right to issue such a bull, and that all states and empires were bound to obey it. In consequence, the Portuguese were, for a lengthened period, allowed to prosecute their conquests in India without the interference of any other European power. And it was not till a considerable period after the beginning of the war, which the blind and brutal bigotry of Philip II. kindled in the Low Countries, that the Dutch navigators began to display their flag on the Eastern Ocean, and laid the foundations of their Indian empire.

The desire to comply with the injunctions in the pope's bull, and to avoid coming into collision, first with the Portuguese, and subsequently with the Spaniards, who had conquered Portugal in 1580, seems to have been the principal cause that led the English to make repeated attempts, in the reigns of Henry VIII. and Edward VI., and the early part of the reign of Elizabeth, to discover a route to India by a north-west or north-east passage; channels from which the Portuguese would have had no pretence for excluding them. But these attempts having proved unsuccessful, and the pope's bull having ceased to be of any effect in this country, the English merchants and navigators resolved to be no longer deterred by the imaginary rights of the Portuguese from directly entering upon what was then reckoned by far the most lucrative and advantageous branch of commerce. Captain Stephens, who performed the voyage in 1582, was the first Englishman who sailed to India by the Cape of Good Hope. The voyage of the famous Sir Francis Drake contributed greatly to diffuse a spirit of naval enterprise, and to render the English better acquainted with the newly opened route to India. But the voyage of the celebrated Mr. Thomas Cavendish was, in the latter respect, the most important. Cavendish sailed from England in a little squadron, fitted out at his own expense, in July, 1586; and having explored the greater part of the Indian Ocean, as far as the Philippine Islands, and carefully observed the most important and characteristic features of the people and countries which he visited, returned to England, after a prosperous navigation, in September, 1588. Perhaps, however, nothing contributed so much to inspire the English with a desire to embark in the Indian trade, as the captures that were made, about this period, from the Spaniards. A Portuguese East India ship, or carrack, captured by Sir Francis Drake, during his expedition to the coast of Spain, inflamed the cupidity of the merchants by the richness of her cargo, at the same time that the papers found on board gave specific information respecting the traffic in which she had been engaged. A still more important capture, of the same sort, was made in 1593. An armament, fitted out for the East Indies by Sir Walter Raleigh, and commanded by Sir John Borroughs, fell in, near the Azores, with the largest of all the Portuguese carracks, a ship of 1,600 tons burden, carrying 700 men and 36 brass cannon; and, after an obstinate conflict, carried her into Dartmouth. She was the largest vessel that had been seen in England; and her cargo, consisting of gold, spices, calicoes, silks, pearls, drugs, porcelain, ivory, &c., excited the ardour of the English to engage in so opulent a commerce.

In consequence of these and other concurring causes, an association was formed in London, in 1599, for prosecuting the trade to India. The adventurers applied to the queen for a charter of incorporation, and also for power to exclude all other English subjects, who had not obtained a licence from them, from carrying on any species of traffic beyond the Cape of Good Hope or the Straits of Magellan. As exclusive companies were then very generally looked upon as the best instruments for prosecuting most branches of commerce and industry, the adventurers seem to have had little difficulty in obtaining their charter, which was dated the 31st of December, 1660. The corporation was entitled "The Governor and Company of Merchants of London trading into the East Indies:" the first governor (Thomas Smythe, Esq.) and 24 directors were nominated in the charter; but power was given to the Company to elect a deputy governor, and, in future, to elect their governor and directors, and such other office-bearers as they might think fit to appoint. They were empowered to make by-laws; to inflict punishments, either corporal or pecuniary, provided such punishments were in accordance with the laws of England; to export all sorts of goods free of duty for 4 years; and to export foreign coin, or bullion, to the amount of 30,000*l.* a year, 6,000*l.* of the same being previously coined at the mint; but they were obliged to import, within 6 months after the completion of every voyage, except the first, the same quantity of silver, gold, and foreign coin that they had exported. The duration of the charter was limited to a period of 15 years; but with and under the condition that, if it were not found for the public advantage, it might be cancelled at any time upon 2

years' notice being given. Such was the origin of the British East India Company,—the most celebrated commercial association of ancient or modern times, and which has now extended its sway over the whole of the Mogul empire.

It might have been expected that, after the charter was obtained, considerable eagerness would have been manifested to engage in the trade. But such was not the case. Notwithstanding the earnest calls and threats of the directors, many of the adventurers could not be induced to come forward to pay their proportion of the charges incident to the fitting out of the first expedition. And as the directors seem either to have wanted power to enforce their resolutions, or thought it better not to exercise it, they formed a subordinate association, consisting of such members of the Company as were really willing to defray the cost of the voyage, and to bear all the risks and losses attending it, on condition of their having the exclusive right to whatever profits might arise from it. And it was by such subordinate associations that the trade was conducted during the first 13 years of the Company's existence.

The first expedition to India, the cost of which amounted, ships and cargoes included, to 69,091*l.*, consisted of 5 ships, the largest being 600 and the smaller 130 tons burden. The goods put on board were principally bullion, iron, tin, broad cloths, cutlery, glass, &c. The chief command was intrusted to Captain James Lancaster, who had already been in India. They set sail from Torbay on the 13th of February, 1601. Being very imperfectly acquainted with the seas and countries they were to visit, they did not arrive at their destination, Acheen in Sumatra, till the 5th of June, 1602. But though tedious, the voyage was, on the whole, uncommonly prosperous. Lancaster entered into commercial treaties with the kings of Acheen and Bantam; and having taken on board a valuable cargo of pepper and other produce, he was fortunate enough, in his way home, to fall in with and capture, in concert with a Dutch vessel, a Portuguese carrack of 900 tons burden, richly laden. Lancaster returned to the Downs on the 11th of September, 1603.—(*Modern Universal History*, vol. x. p. 16.; *Macpherson's Commerce of the European Powers with India*, p. 81.)

But notwithstanding the favourable result of this voyage, the expeditions fitted out in the years immediately following, though sometimes consisting of larger ships, were not, at an average, materially increased. In 1612, Captain Best obtained from the court at Delhi several considerable privileges; and, amongst others, that of establishing a factory at Surat; which city was, henceforth, looked upon as the principal British station in the west of India, till the acquisition of Bombay.

In establishing factories in India, the English only followed the example of the Portuguese and Dutch. It was contended, that they were necessary to serve as *depôts* for the goods collected in the country for exportation to Europe, as well as for those imported into India, in the event of their not meeting with a ready market on the arrival of the ships. Such establishments, it was admitted, are not required in civilised countries; but the peculiar and unsettled state of India was said to render them indispensable there. Whatever weight may be attached to this statement, it is obvious that factories formed for such purposes could hardly fail of speedily degenerating into a species of forts. The security of the valuable property deposited in them furnished a specious pretext for putting them in a condition to withstand an attack; while the agents, clerks, warehousemen, &c. formed a sort of garrison. Possessing such strong holds, the Europeans were early emboldened to act in a manner quite inconsistent with their character as merchants, and but a very short time elapsed before they began to form schemes for monopolising the commerce of particular districts, and acquiring territorial dominion.

Though the Company met with several heavy losses during the earlier part of their traffic with India, from shipwrecks and other unforeseen accidents, and still more from the hostility of the Dutch, yet, on the whole, the trade was decidedly profitable. There can, however, be little doubt, that their gains, at this early period, have been very much exaggerated. During the first 13 years, they are said to have amounted to 132 per cent. But then it should be borne in mind, as Mr. Grant has justly stated, that the voyages were seldom accomplished in less than 30 months, and sometimes extended to 3 or 4 years: and it should further be remarked, that, on the arrival of the ships at home, the cargoes were disposed of at long credits of 18 months or 2 years; and that it was frequently even 6 or 7 years before the concerns of a single voyage were finally adjusted.—(*Sketch of the History of the Company*, p. 13.) When these circumstances are taken into view, it will immediately be seen that the Company's profits were not, really, by any means so great as has been represented. It may not, however, be uninstructive to remark, that the principal complaint that was then made against the Company did not proceed so much on the circumstance of its charter excluding the public from any share in an advantageous traffic, as in its authorising the Company to export gold and silver of the value of 30,000*l.* a year. It is true that the charter stipulated that the Company should import an equal quantity of gold and silver within 6 months of the termination of every voyage: but the enemies of the Company contended that this condition was not complied

with; and that it was, besides, highly injurious to the public interest, and *contrary to all principle*, to allow gold and silver to be sent out of the kingdom. The merchants and others interested in the support of the Company could not controvert the reasoning of their opponents, without openly impugning the ancient policy of absolutely preventing the exportation of the precious metals. They did not, however, venture to contend, if the idea really occurred to them, that the exportation of bullion to the East was advantageous, on the broad ground of the commodities purchased by it being of greater value in England. But they contended that the exportation of bullion to India was advantageous, because the commodities thence imported were chiefly re-exported to other countries from which a much greater quantity of bullion was obtained than had been required to pay for them in India. Mr. Thomas Mun, a director of the East India Company, and the ablest of its early advocates, ingeniously compares the operations of the merchant in conducting a trade carried on by the exportation of gold and silver to the seed time and harvest of agriculture. "If we only behold," says he, "the actions of the husbandman in the seed time, when he casteth away much good corn into the ground, we shall account him rather a madman than a husbandman. But when we consider his labours in the narvest, which is the end of his endeavours, we find the worth and plentiful increase of his actions." — (*Treasure by Foreign Trade*, p. 50. ed. 1664.)

We may here remark, that what has been called the *mercantile system* of political economy, or that system which measures the progress of a country in the career of wealth by the supposed balance of payments in its favour, or by the estimated excess of the value of its exports over that of its imports, appears to have originated in the excuses now set up for the exportation of bullion. Previously to this epoch, the policy of prohibiting the exportation of bullion had been universally admitted; but it now began to be pretty generally allowed, that its exportation might be productive of advantage, provided it occasioned the subsequent exportation of a greater amount of raw or manufactured products to countries whence bullion was obtained for them. This, when compared with the previously existing prejudice — for it hardly deserves the name of system — which wholly interdicted the exportation of gold and silver, must be allowed to be a considerable step in the progress to sounder opinions. The maxim, *ce n'est que le premier pas qui coute*, was strikingly verified on this occasion. The advocates of the East India Company began gradually to assume a higher tone, and, at length, boldly contended that bullion was nothing but a commodity, and that its exportation should be rendered as free as that of any thing else. Nor were these opinions confined to the partners of the East India Company. They were gradually communicated to others; and many eminent merchants were taught to look with suspicion on several of the previously received dogmas with respect to commerce, and were, in consequence, led to acquire more correct and comprehensive views. The new ideas ultimately made their way into the House of Commons; and, in 1663, the statutes prohibiting the exportation of foreign coin and bullion were repealed, and full liberty given to the East India Company and to private traders to export them in unlimited quantities.

But the objection to the East India Company, or rather the East India trade, on the ground of its causing the exportation of gold and silver, admitted of a more direct and conclusive, if not a more ingenious reply. How compendious soever the ancient intercourse with India by the Red Sea and the Mediterranean, it was unavoidably attended with a good deal of expense. The productions of the remote parts of Asia, brought to Ceylon, or the ports on the Malabar coast, by the natives, were there put on board the ships which arrived from the Arabic gulph. At Berenice they were landed, and carried by camels 250 miles to the banks of the Nile. They were there again embarked, and conveyed down the river to Alexandria, whence they were despatched to different markets. The addition to the price of goods by such a multiplicity of operations must have been considerable; more especially as the price charged on each operation was fixed by monopolists, subject to no competition or control. Pliny says, that the cost of the Arabian and Indian products brought to Rome when he flourished (A. D. 70), was increased a hundred fold by the expenses of transit — (*Hist. Nat.* lib. vi. c. 23.); but there can be little or no doubt that this is to be regarded as a rhetorical exaggeration. — (See *antè*, p. 19.) There are good grounds for thinking that the less bulky sorts of Eastern products, such as silk, spices, balsams, precious stones, &c., which were those principally made use of at Rome, might, supposing there were no political obstacles in the way, be conveyed from most parts of India to the ports on the Mediterranean by way of Egypt, at a decidedly cheaper rate than they could be conveyed to them by the Cape of Good Hope.

But at the period when the latter route to India began to be frequented, Syria, Egypt, &c. were occupied by Turks and Mamelukes; barbarians who despised commerce and navigation, and were, at the same time, extremely jealous of strangers, especially of Christians or infidels. The price of the commodities obtained through the intervention of such persons was necessarily very much enhanced; and the discovery of

the route by the Cape of Good Hope was, consequently, of the utmost importance; for, by putting an end to the monopoly enjoyed by the Turks and Mamelukes, it introduced, for the first time, something like competition into the Indian trade, and enabled the western parts of Europe to obtain supplies of Indian products for about a third part of what they had previously cost. Mr. Mun, in a tract published in 1621, estimates the quantity of Indian commodities imported into Europe, and their cost when bought in Aleppo and in India, as follows: —

Cost of Indian commodities consumed in Europe when bought in Aleppo (or Alexandria).

	£	s.	d.
6,000,000 lbs. pepper cost, with charges, &c. at Aleppo 2s. per lb.	600,000	0	0
450,000 lbs. cloves, at 4s. 9d.	106,875	10	0
150,000 lbs. mace, at 4s. 9d.	35,626	0	0
400,000 lbs. nutmegs, at 2s. 4d.	46,666	2	4
350,000 lbs. indigo, at 4s. 4d.	75,833	6	8
1,000,000 lbs. Persian raw silk, at 12s.	600,000	0	0
	£1,465,000	19	0

But the same quantities of the same commodities cost, when bought in the East Indies, according to Mr. Mun, as follows: —

	£	s.	d.
6,000,000 lbs. pepper, at 2½d. per lb.	62,500	0	0
450,000 lbs. cloves, at 9d.	16,875	0	0
150,000 lbs. mace, at 8d.	5,000	0	0
400,000 lbs. nutmegs, at 4d.	6,666	13	4
350,000 lbs. indigo, at 1s. 2d.	20,416	12	4
1,000,000 lbs. raw silk, at 8s.	400,000	0	0
	£511,458	5	8

Which being deducted from the former, leaves a balance of 953,542*l.* 13*s.* 4*d.* And supposing that the statements made by Mr. Mun are correct, and that allowance is made for the difference between the freight from Aleppo and India, the result would indicate the saving which the discovery of the route by the Cape of Good Hope occasioned in the purchase of the above-mentioned articles. — (*A Discourse of Trade from England to the East Indies*, by T. M., original ed. p. 10. This tract, which is very scarce, is reprinted in Purchas's Pilgrims.)

In the same publication (p. 37.), Mr. Mun informs us that, from the beginning of the Company's trade to July, 1620, they had sent 79 ships to India; of which 34 had come home safely and richly laden, 4 had been worn out by long service in India, 2 had been lost in careening, 6 had been lost by the perils of the sea, and 12 had been captured by the Dutch. Mr. Mun further states, that the exports to India, since the formation of the Company, had amounted to 840,376*l.*; that the produce brought from India had cost 356,288*l.*, and had produced here the enormous sum of 1,914,600*l.*; that the quarrels with the Dutch had occasioned a loss of 84,088*l.*; and that the stock of the Company, in ships, goods in India, &c., amounted to 400,000*l.*

The hostility of the Dutch, to which Mr. Mun has here alluded, was long a very formidable obstacle to the Company's success. The Dutch early endeavoured to obtain the exclusive possession of the spice trade, and were not at all scrupulous about the means by which they attempted to bring about this their favourite object. The English, on their part, naturally exerted themselves to obtain a share of so valuable a commerce; and as neither party was disposed to abandon its views and pretensions, the most violent animosities grew up between them. In this state of things, it would be ridiculous to suppose that unjustifiable acts were not committed by the one party as well as the other; though the worst act of the English appears venial, when compared with the conduct of the Dutch in the massacre at Amboyna, in 1622. While, however, the Dutch Company was vigorously supported by the government at home, the English Company met with no efficient assistance from the feeble and vacillating policy of James and Charles. The Dutch either despised their remonstrances, or defeated them by an apparent compliance; so that no real reparation was obtained for the outrages they had committed. During the civil war, Indian affairs were necessarily lost sight of: and the Dutch continued, until the ascendancy of the republican party had been established, to reign triumphant in the East, where the English commerce was nearly annihilated.

But notwithstanding their depressed condition, the Company's servants in India laid the foundation, during the period in question, of the settlements at Madras and in Bengal. Permission to build Fort St. George was obtained from the native authorities in 1640. In 1658, Madras was raised to the station of a presidency. In 1645, the Company began to establish factories in Bengal; the principal of which was at Hooghly. These were, for a lengthened period, subordinate to the presidency at Madras.

No sooner, however, had the civil wars terminated, than the arms and councils of Cromwell retrieved the situation of our affairs in India. The war which broke out between the long parliament and the Dutch, in 1652, was eminently injurious to the latter. In the treaty of peace, concluded in 1654, it was stipulated that indemnification

should be made by the Dutch for the losses and injuries sustained by the English merchants and factors in India. The 27th article bears, "that the Lords, the states-general of the United Provinces, shall take care that justice be done upon those who were partakers or accomplices in the massacre of the English at Amboyna, as the republic of England is pleased to term that fact, provided any of them be living." A commission was at the same time appointed, conformably to another article of the treaty, to inquire into the reciprocal claims which the subjects of the contracting parties had upon each other for losses sustained in India, Brazil, &c.; and, upon their decision, the Dutch paid the sum of 85,000*l.* to the East India Company, and 3,615*l.* to the heirs or executors of the sufferers at Amboyna. — (*Bruce's Annals*, vol. i. p. 489.)

The charter under which the East India Company prosecuted their exclusive trade to India, being merely a grant from the Crown, and not ratified by any act of parliament, was understood by the merchants to be at an end when Charles I. was deposed. They were confirmed in this view of the matter, from the circumstance of Charles having himself granted, in 1635, a charter to Sir William Courten and others, authorising them to trade with those parts of India with which the Company had not established any regular intercourse. The reasons alleged in justification of this measure, by the Crown, were, that "the East India Company had neglected to establish fortified factories, or seats of trade, to which the king's subjects could resort with safety; that they had consulted their own interests only, without any regard to the king's revenue; and in general, that they had broken the condition on which their charter and exclusive privileges had been granted to them."—(*Rym. Fœdera*, vol. xx. p. 146.)

Courten's association, for the foundation of which such satisfactory reasons had been assigned, continued to trade with India during the remainder of Charles's reign; and no sooner had the arms of the Commonwealth forced the Dutch to desist from their depredations, and to make reparation for the injuries they had inflicted on the English in India, than private adventurers engaged in great numbers in the Indian trade, and carried it on with a zeal, economy, and success, that monopoly can never expect to rival. It is stated in a little work, entitled *Britannia Languens*, published in 1680, the author of which has evidently been a well-informed and intelligent person, that during the years 1653, 1654, 1655, and 1656, when the trade to India was open, the private traders imported East India commodities in such large quantities, and sold them at such reduced prices, that they not only fully supplied the British markets, but had even come into successful competition with the Dutch in the market of Amsterdam, "and very much sunk the actions (shares) of the Dutch East India Company."—(p. 132.) This circumstance naturally excited the greatest apprehensions on the part of the Dutch Company; for, besides the danger that they now ran of being deprived, by the active competition of the English merchants, of a considerable part of the trade which they had previously enjoyed, they could hardly expect that, if the trade were thrown open in England, the monopoly would be allowed to continue in Holland. A striking proof of what is now stated is to be found in a letter in the third volume of *Thurlow's State Papers*, dated at the Hague, the 15th of January, 1654, where it is said, that "the merchants of Amsterdam have advice that the Lord Protector intends to dissolve the East India Company at London, and to declare the navigation and commerce of the East Indies free and open: which doth cause great jealousy at Amsterdam, *as a thing that will very much prejudice the East India Company in Holland.*"

Feeling that it was impossible to contend with the private adventurers under a system of fair competition, the moment the treaty with the Dutch had been concluded, the Company began to solicit a renewal of their charter; but in this they were not only opposed by the free traders, but by a part of themselves. To understand how this happened, it may be proper to mention that Courten's association, the origin of which has been already noticed, had begun, in 1648, to found a colony in Assuda, an island near Madagascar. The Company, alarmed at this project, applied to the council of state to prevent its being carried into effect; and the council, without entering on the question of either party's rights, recommended them to form a union; which was accordingly effected in 1649. But the union was, for a considerable time, rather nominal than real; and when the Dutch war had been put an end to, most of those holders of the Company's stock who had belonged to Courten's association joined in petitioning the council of state that the trade might in future be carried on, not by a joint stock, but by a *regulated* company; so that each individual engaging in it might be allowed to employ his own stock, servants, and shipping, in whatever way he might conceive most for his own advantage. — (*Petition of Adventurers*, 17th of Nov. 1656; *Bruce's Annals*, vol. i. p. 518.)

This proposal was obviously most reasonable. The Company had always founded their claim to a monopoly of the trade on the alleged ground of its being necessary to maintain forts, factories, and ships of war in India; and that as this was not done by government, it could only be done by a Company. But, by forming the traders with India into a regulated company, they might have been subjected to whatever rules were

considered most advisable; and such special duties might have been laid on the commodities they exported and imported, as would have sufficed to defray the public expenses required for carrying on the trade, at the same time that the inestimable advantages of free competition would have been secured; each individual trader being left at liberty to conduct his enterprises, subject only to a few general regulations, in his own way and for his own advantage. — (See COMPANIES.)

But notwithstanding the efforts of the petitioners, and the success that was clearly proved to have attended the operations of the private traders, the Company succeeded in obtaining a renewal of their charter from Cromwell in 1657. Charles II. confirmed this charter in 1661; and at the same time conferred on them the power of making peace or war with any power or people *not of the Christian religion*; of establishing fortifications, garrisons, and colonies; of exporting ammunition and stores to their settlements duty free; of seizing and sending to England such British subjects as should be found trading to India without their leave; and of exercising civil and criminal jurisdiction in their settlements, according to the laws of England. Still, however, as this charter was not fully confirmed by any act of parliament, it did not prevent traders, or interlopers as they were termed, from appearing within the limits of the Company's territories. The energy of private commerce, which, to use the words of Mr. Orme, "sees its drift with eagles' eyes," formed associations at the risk of trying the consequence at law, being safe at the outset, and during the voyage, since the Company were not authorised to stop or seize the ships of those who thus attempted to come into competition with them. Hence their monopoly was by no means complete; and it was not till after the Revolution, and when a free system of government had been established at home, that, by a singular contradiction, the authority of parliament was interposed to enable the Company wholly to engross the trade with the East.

In addition to the losses arising from this source, the Company's trade suffered severely, during the reign of Charles II., from the hostilities that were then waged with the Dutch, and from the confusion and disorders caused by contests among the native princes; but in 1668 the Company obtained a very valuable acquisition in the island of Bombay. Charles II. acquired this island as a part of the marriage portion of his wife, Catharine of Portugal; and it was now made over to the Company, on condition of their not selling or alienating it to any persons whatever, except such as were subjects of the British crown. They were allowed to legislate for their new possession; but it was enjoined that their laws should be consonant to reason, and "as near as might be" agreeable to the practice of England. They were authorised to maintain their dominion by force of arms; and the natives of Bombay were declared to have the same liberties as natural-born subjects. The Company's western presidency was soon after transferred from Surat to Bombay.

In 1664, the French East India Company was formed; and 10 years afterwards they laid the foundation of their settlement at Pondicherry.

But the reign of Charles II. is chiefly memorable in the Company's annals, from its being the æra of the commencement of the tea trade. The first notice of tea in the Company's records is found in a despatch, addressed to their agent at Bantam, dated 24th of January, 1667-8, in which he is desired to send home 100 lbs. of tea, "the best he can get."— (*Bruce's Annals*, vol. ii. p. 210.) Such was the late and feeble beginning of the tea trade; a branch of commerce that has long been of vast importance to the British nation; and without which, it is more than probable that the East India Company would long since have ceased to exist, at least as a mercantile body.

In 1677, the Company obtained a fresh renewal of their charter; receiving at the same time an indemnity for all past misuse of their privileges, and authority to establish a mint at Bombay.

During the greater part of the reigns of Charles II. and James II. the Company's affairs at home were principally managed by the celebrated Sir Josiah Child, the ablest commercial writer of the time; and in India, by his brother, Sir John Child. In 1681, Sir Josiah published an apology for the Company, under the signature of Φιλοπατρις — "A Treatise wherein is demonstrated that the East India Trade is the most National of all Foreign Trades:" in which, besides endeavouring to vindicate the Company from the objections that had been made against it, he gives an account of its state at the time. From this account it appears that the Company consisted of 556 partners; that they had from 35 to 36 ships, of from 775 to 100 tons, employed in the trade between England and India, and from port to port in India — (p. 23.); that the customs duties upon the trade amounted to about 60,000*l.* a year; and that the value of the exports, "in lead, tin, cloth, and stuffs, and other commodities of the production and manufacture of England," amounted to about 60,000*l.* or 70,000*l.* a year. Sir Josiah seems to have been struck, as he well might, by the inconsiderable amount of the trade; and he therefore dwells on the advantages of which it was indirectly productive, in enabling us to obtain supplies of raw silk, pepper, &c. at a much lower price than they would otherwise have fetched.

But this, though true, proved nothing in favour of the Company; it being an admitted fact, that those articles were furnished at a still lower price by the interlopers or private traders.

Sir Josiah Child was one of the first who projected the formation of a territorial empire in India. But the expedition fitted out in 1686, in the view of accomplishing this purpose, proved unsuccessful; and the Company were glad to accept peace on the terms offered by the Mogul. Sir John Child, having died during the course of these transactions, was succeeded in the principal management of the Company's affairs in India by Mr. Vaux. On the appointment of the latter, Sir Josiah Child, to whom he owed his advancement, exhorted him to act with vigour, and to carry whatever instructions he might receive from home into immediate effect. Mr. Vaux returned for answer, that he should endeavour to acquit himself with integrity and justice, and that he would make the laws of his country the rule of his conduct. Sir Josiah Child's answer to this letter is curious: — "He told Mr. Vaux roundly that he expected his orders were to be his rules, and not the laws of England, which were a heap of nonsense, compiled by a few ignorant country gentlemen, who hardly knew how to make laws for the good government of their own private families, much less for the regulating of companies and foreign commerce." — (*Hamilton's New Account of the East Indies*, vol. i. p. 232.)

During the latter part of the reign of Charles II. and that of his successor, the number of private adventurers, or interlopers, in the Indian trade, increased in an unusual degree. The Company vigorously exerted themselves in defence of what they conceived to be their rights; and the question with respect to the validity of the powers conferred on them by their charter was at length brought to issue, by a prosecution carried on at their instance against Mr. Thomas Sandys, for trading to the East Indies without their licence. Judgment was given in favour of the Company in 1685. But this decision was ascribed to corrupt influence; and instead of allaying, only served to increase the clamour against them. The meeting of the Convention Parliament gave the Company's opponents hopes of a successful issue to their efforts; and had they been united, they might probably have succeeded. Their opinions were, however, divided — part being for throwing the trade open, and part for the formation of a new company on a more liberal footing. The latter being formed into a body, and acting in unison, the struggle against the Company was chiefly carried on by them. The proceedings that took place on this occasion are amongst the most disgraceful in the history of the country. The most open and unblushing corruption was practised by all parties. — "*It was, in fact, a trial which side should bribe the highest; public authority inclining to one or other as the irresistible force of gold directed.*" — (*Modern Universal History*, vol. x. p. 127.) Government appears, on the whole, to have been favourable to the Company; and they obtained a fresh charter from the Crown in 1693. But in the following year the trade was virtually laid open by a vote of the House of Commons, "that all the subjects of England had an equal right to trade to the East Indies, unless prohibited by act of parliament." Matters continued on this footing till 1698. The pecuniary difficulties in which government was then involved, induced them to apply to the Company for a loan of 2,000,000*l.*, for which they offered 8 per cent. interest. The Company offered to advance 700,000*l.* at 4 per cent.; but the credit of government was at the time so low, that they preferred accepting an offer from the associated merchants, who had previously opposed the Company, of the 2,000,000*l.* at 8 per cent., on condition of their being formed into a new and exclusive company. While this project was in agitation, the advocates of free trade were not idle, but exerted themselves to show that, instead of establishing a new Company, the old one ought to be abolished. But, however conclusive, their arguments, having no adventitious recommendations in their favour, failed of making any impression. The new Company was established by authority of the legislature; and as the charter of the old Company was not yet expired, the novel spectacle was exhibited of two legally constituted bodies, each claiming an exclusive right to the trade of the same possessions!

Notwithstanding all the pretensions set up by those who had obtained the new charter during their struggle with the old Company, it was immediately seen that they were as anxious as the latter to suppress every thing like free trade. They had not, it was obvious, been actuated by any enlarged views, but merely by a wish to grasp at the monopoly, which they believed would redound to their own individual interest. The public, in consequence, became equally disgusted with both parties; or, if there were any difference, it is probable that the new Company was looked upon with the greatest aversion, inasmuch as we are naturally more exasperated by what we conceive to be duplicity and bad faith, than by fair undisguised hostility.

At first the mutual hatred of the rival associations knew no bounds. But they were not long in perceiving that such conduct would infallibly end in their ruin; and that while one was labouring to destroy the other, the friends of free trade might step in and

procure the dissolution of both. In consequence, they became gradually reconciled; and in 1702, having adjusted their differences, they resolved to form themselves into one company, entitled *The United Company of Merchants of England trading to the East Indies.*

The authority of parliament was soon after interposed to give effect to this agreement.

The United Company engaged to advance 1,200,000*l.* to government without interest, which, as a previous advance had been made of 2,000,000*l.* at 8 per cent., made the total sum due to them by the public 3,200,000*l.*, bearing interest at 5 per cent.; and government agreed to ratify the terms of their agreement, and to extend the charter to the 25th of March, 1726, with 3 years' notice.

While those important matters were transacting at home, the Company had acquired some additional possessions in India. In 1692, the Bengal agency was transferred from Hooghly to Calcutta. In 1698, the Company acquired a grant from one of the grandsons of Aurengzebe, of Calcutta and 2 adjoining villages; with leave to exercise judiciary powers over the inhabitants, and to erect fortifications. These were soon after constructed, and received, in compliment to William III., then king of England, the name of Fort William. The agency at Bengal, which had hitherto been subsidiary only, was now raised to the rank of a presidency.

The vigorous competition that had been carried on for some years before the coalition of the old and new Companies, between them and the private traders, had occasioned a great additional importation of Indian silks, piece goods, and other products, and a great reduction of their price. These circumstances occasioned the most vehement complaints amongst the home manufacturers, who resorted to the arguments invariably made use of on such occasions by those who wish to exclude foreign competition; affirming that manufactured India goods had been largely substituted for those of England; that the English manufacturers had been reduced to the cruel necessity either of selling nothing, or of selling their commodities at such a price as left them no profit; that great numbers of their workmen had been thrown out of employment; and, last of all, that Indian goods were not bought by British goods, but by gold and silver, the exportation of which had caused the general impoverishment of the kingdom! The merchants and others interested in the India trade could not, as had previously happened to them in the controversy with respect to the exportation of bullion, meet these statements without attacking the principles on which they rested, and maintaining, in opposition to them, that it was for the advantage of every people to buy the products they wanted in the cheapest market. This just and sound principle was, in consequence, enforced in several petitions presented to parliament by the importers of Indian goods; and it was also enforced in several able publications that appeared at the time. But these arguments, how unanswerable soever they may now appear, had then but little influence; and in 1701, an act was passed, prohibiting the importation of Indian manufactured goods for home consumption.

For some years after the re-establishment of the Company, it continued to prosecute its efforts to consolidate and extend its commerce. But the unsettled state of the Mogul empire, coupled with the determination of the Company to establish factories in every convenient situation, exposed their affairs to perpetual vicissitudes. In 1715, it was resolved to send an embassy to Delhi, to solicit from Furucksur, an unworthy descendant of Aurengzebe, an extension and confirmation of the Company's territory and privileges. Address, accident, and the proper application of *presents*, conspired to ensure the success of the embassy. The grants or patents solicited by the Company were issued in 1717. They were in all 34. The substance of the privileges they conferred was, that English vessels wrecked on the coasts of the empire should be exempt from plunder; that the annual payment of a stipulated sum to the government of Surat should free the English trade at that port from all duties and exactions; that those villages contiguous to Madras formerly granted and afterwards refused by the government of Arcot, should be restored to the Company; that the island of Diu, near the port of Masulipatam, should belong to the Company, paying for it a fixed rent; that in Bengal, all persons, whether European or native, indebted or accountable to the Company, should be delivered up to the presidency on demand; that goods of export or import, belonging to the English, might, under a *dustuck* or passport from the president of Calcutta, be conveyed duty free through the Bengal provinces; and that the English should be at liberty to purchase the lordship of 37 towns contiguous to Calcutta, and in fact commanding both banks of the river for 10 miles south of that city. — (*Grant's Sketch of the History of the East India Company*, p. 128.)

The important privileges thus granted were long regarded as constituting the great charter of the English in India. Some of them, however, were not fully conceded; but were withheld or modified by the influence of the emperor's lieutenants, or soubahdars.

In 1717, the Company found themselves in danger from a new competitor. In the course of that year some ships appeared in India, fitted out by private adventurers from

Ostend. Their success encouraged others to engage in the same line; and in 1722, the adventurers were formed into a company under a charter from his Imperial Majesty. The Dutch and English Companies, who had so long been hostile to each other, at once laid aside their animosities, and joined heartily in an attempt to crush their new competitors. Remonstrances being found ineffectual, force was resorted to; and the vessels of the Ostend Company were captured, under the most frivolous pretences, in the open seas and on the coasts of Brazil. The British and Dutch governments abetted the selfish spirit of hostility displayed by their respective Companies. And the emperor was, in the end, glad to purchase the support of Great Britain and Holland to the pragmatic sanction, by the sacrifice of the Company at Ostend.

Though the Company's trade had increased, it was still inconsiderable, and it is very difficult, indeed, when one examines the accounts that have from time to time been published of the Company's mercantile affairs, to imagine how the idea ever came to be entertained that their commerce was of any considerable, much less paramount, importance. At an average of the 10 years ending with 1724, the total value of the British manufactures and other products annually exported to India amounted to only 92,410*l.* 12*s.* 6*d.* The average-value of the bullion annually exported, during the same period, amounted to 518,102*l.* 11*s.* 0*d.*; making the total annual average exports 617,513*l.* 3*s.* 10*d.*; — a truly pitiful sum, when we consider the wealth, population, and industry of the countries between which the Company's commerce was carried on; and affording, by its smallness, a strong presumptive proof of the effect of the monopoly in preventing the growth of the trade.

In 1730, though there were 3 years still unexpired of the Company's charter, a vigorous effort was made by the merchants of London, Bristol, and Liverpool, to prevent its renewal. It has been said that the gains of the Company, had they been exactly known, would not have excited any very envious feelings on the part of the merchants; but, being concealed, they were exaggerated; and the boasts of the Company as to the importance of their trade contributed to spread the belief that their profits were enormous, and consequently stimulated the exertions of their opponents. Supposing, however, that the real state of the case had been known, there was still enough to justify the utmost exertions on the part of the merchants; for the limited profits made by the Company, notwithstanding their monopoly, were entirely owing to the misconduct of their agents, which they had vainly endeavoured to restrain; and to the waste inseparable from such unwieldy establishments.

The merchants, on this occasion, followed the example that had been set by the petitioners for free trade in 1656. They offered, in the first place, to advance the 3,200,000*l.* lent by the Company to the public, on more favourable terms; and, in the second place, they proposed that the subscribers to this loan should be formed into a *regulated* company, for opening the trade, under the most favourable circumstances, to all classes of their countrymen.

It was not intended that the Company should trade upon a joint stock, and in their corporate capacity, but that every individual who pleased should trade in the way of private adventure. The Company were to have the charge of erecting and maintaining the forts and establishments abroad; and for this, and for other expenses attending what was called the enlargement and preservation of the trade, it was proposed that they should receive a duty of 1 per cent. upon all exports to India, and of 5 per cent. upon all imports from it. For ensuring obedience to this and other regulations, it was to be enacted, that no one should trade to India without licence from the Company; and it was proposed that 31 years, with 3 years' notice, should be granted as the duration of their peculiar privilege.

"It appears from this," says Mr. Mill, "that the end which was proposed to be answered, by incorporating such a company, was the preservation and erection of the forts, buildings, and other fixed establishments, required for the trade of India. This company promised to supply that demand which has always been held forth as peculiar to the India trade, as the grand exigency which, distinguishing the traffic with India from all other branches of trade, rendered monopoly advantageous in that peculiar case, how much soever it might be injurious in others. While it provided for this real or pretended want, it left the trade open to all the advantages of private enterprise, private vigilance, private skill, and private economy, — the virtues by which individuals thrive and nations prosper. And it gave the proposed company an interest in the careful discharge of its duty by making its profits increase in exact proportion with the increase of the trade, and, of course, with the facilities and accommodation by which the trade was promoted.

"Three petitions were presented to the House of Commons in behalf of the proposed company, by the merchants of London, Bristol, and Liverpool. It was urged that the proposed company would, through the competition of which it would be productive, cause a great extension of the trade; that it would produce a larger exportation

of our own produce and manufactures in India, and reduce the price of all Indian commodities to the people at home; that new channels of traffic would be opened in Asia and America, as well as in Europe; that the duties of customs and excise would be increased; and that the waste and extravagance caused by the monopoly would be entirely avoided."—(*Mill's India*, vol. iii. p. 37.)

But these arguments did not prevail. The Company magnified the importance of their trade; and contended that it would be unwise to risk advantages already realised, for the sake of those that were prospective and contingent. They alleged that, if the trade to India were thrown open, the price of goods in India would be so much enhanced by the competition of different traders, and their price in England so much diminished, that the freedom of the trade would certainly end in the ruin of all who had been foolish enough to adventure in it. To enlarge on the fallacy of these statements would be worse than superfluous. It is obvious that nothing whatever could have been risked, and that a great deal would have been gained, by opening the trade in the way that was proposed. And if it were really true that the trade to India ought to be subjected to a monopoly, lest the traders, by their competition should ruin each other, it would follow that the trade to America—and not that only, but every branch both of the foreign and home trade of the empire—should be surrendered to exclusive companies. But such as the Company's arguments were, they seemed satisfactory to parliament. They, however, consented to reduce the interest on the debt due to them by the public from 5 to 4 per cent., and contributed a sum of 200,000*l.* for the public service. On these conditions it was agreed to extend their exclusive privileges to Lady-day, 1766, with the customary addition of 3 years' notice.

For about 15 years from this period, the Company's affairs went on without any very prominent changes. But notwithstanding the increased importation of tea, the consumption of which now began rapidly to extend, their trade continued to be comparatively insignificant. At an average of the 8 years ending with 1741, the value of the British goods and products of all sorts, exported by the Company to India and China, amounted to only 157,944*l.* 4*s.* 7*d.* a year! And during the 7 years ending with 1748, they amounted to only 188,176*l.* 16*s.* 4*d.* And when it is borne in mind that these exports included the military stores of all sorts forwarded to the Company's settlements in India and at St. Helena, the amount of which was, at all times, very considerable, it does appear exceedingly doubtful whether the Company really exported, during the entire period from 1730 to 1748, 150,000*l.* worth of British produce as a legitimate mercantile adventure! Their trade, such as it was, was entirely carried on by shipments of bullion; and even its annual average export, during the 7 years ending with 1748, only amounted to 548,711*l.* 19*s.* 2*d.* It would seem, indeed, that the Company had derived no perceptible advantage from the important concessions obtained from the Mogul emperor in 1717. But the true conclusion is, not that these concessions were of little value, but that the deadening influence of monopoly had so paralysed the Company, that they were unable to turn them to account; and that, though without competitors, and with opulent kingdoms for their customers, their commerce was hardly greater than that carried on by some single merchants.

In 1732, the Company were obliged to reduce their dividend from 8 to 7 per cent., at which rate it continued till 1744.

The opposition the Company had experienced from the merchants, when the question as to the renewal of their charter was agitated, in 1730, made them very desirous to obtain the next renewal in as quiet a manner as possible. They therefore proposed, in 1743, when 23 years of their charter were yet unexpired, to lend 1,000,000*l.* to government, at 3 per cent., provided their exclusive privileges were extended to 1780, with the usual notice. And, as none were expecting such an application, or prepared to oppose it, the consent of government was obtained without difficulty.

But the period was now come, when the mercantile character of the East India Company—if, indeed, it could with propriety be, at any time, said to belong to them—was to be eclipsed by their achievements as a military power, and the magnitude of their conquests. For about two centuries after the European powers began their intercourse with India, the Mogul princes were regarded as amongst the most opulent and powerful of monarchs. Though of a foreign lineage—being descended from the famous Tamerlane, or Timur Bec, who overran India in 1400—and of a different religion from the great body of their subjects, their dominion was firmly established in every part of their extensive empire. The administration of the different provinces was committed to officers, denominated soubahdars, or nabobs, intrusted with powers, in their respective governments, similar to those enjoyed by the Roman prætors. So long as the emperors retained any considerable portion of the vigour and bravery of their hardy ancestors, the different parts of the government were held in due subordination, and the soubahdars yielded a ready obedience to the orders from Delhi. But the emperors were gradually debauched by the apparently prosperous condition of their affairs.

Instead of being educated in the council or the camp, the heirs of almost unbounded power were brought up in the slothful luxury of the seraglio; ignorant of public affairs; benumbed by indolence; depraved by the flattery of women, of eunuchs, and of slaves; their minds contracted with their enjoyments; their inclinations were vilified by their habits; and their government grew as vicious, as corrupt, and as worthless as themselves. When the famous Kouli Khan, the usurper of the Persian throne, invaded India, the effeminate successor of Tamerlane and Aurengzebe was too unprepared to oppose, and too dastardly to think of avenging the attack. This was the signal for the dismemberment of the monarchy. No sooner had the invader withdrawn, than the soubahdars either openly threw off their allegiance to the emperor, or paid only a species of nominal or mock deference to his orders. The independence of the soubahdars was very soon followed by wars amongst themselves; and, being well aware of the superiority of European troops and tactics, they anxiously courted the alliance and support of the French and English East India Companies. These bodies, having espoused different sides, according as their interests or prejudices dictated, began very soon to turn the quarrels of the soubahdars to their own account. Instead of being contented, as hitherto, with the possession of factories and trading towns, they aspired to the dominion of provinces; and the struggle soon came to be, not which of the native princes should prevail, but whether the English or the French should become the umpires of India.

But these transactions are altogether foreign to the subject of this work; nor could any intelligible account of them be given without entering into lengthened statements. We shall only, therefore, observe that the affairs of the French were ably conducted by La Bourdonnais, Dupleix, and Lally, officers of distinguished merit, and not less celebrated for their great actions than for the base ingratitude of which they were the victims. But though victory seemed at first to incline to the French and their allies, the English affairs were effectually retrieved by the extraordinary talents and address of a single individual. Colonel (afterwards Lord) Clive was equally brave, cautious, and enterprising; not scrupulous in the use of means; fertile in expedients; endowed with wonderful sagacity and resolution; and capable of turning even the most apparently adverse circumstances to advantage. Having succeeded in humbling the French power in the vicinity of Madras, Clive landed at Calcutta in 1757, in order to chastise the soubahdar, Surajah ul Dowlah, who had a short while before attacked the English factory at that place, and inhumanly shut up 146 Englishmen in a prison, where, owing to the excessive heat and want of water, 123 perished in a single night. Clive had only 700 European troops and 1,400 Sepoys with him when he landed; but with these, and 570 sailors furnished by the fleet, he did not hesitate to attack the immense army commanded by the soubahdar, and totally defeated him in the famous battle of Plassey. This victory threw the whole provinces of Bengal, Bahar, and Orissa into our hands; and they were finally confirmed to us by the treaty negotiated in 1765.

Opinion has been long divided as to the policy of our military operations in India; and it has been strenuously contended, that we should never have extended our conquests beyond the limits of Bengal. The legislature seems to have taken this view of the matter; the House of Commons having resolved, in 1782, "that to pursue schemes of conquest and extent of dominion in India are measures repugnant to the wish, the honour, and the policy of this nation." But others have argued, and apparently on pretty good grounds, that, having gone thus far, we were compelled to advance. The native powers, trembling at the increase of British dominion, endeavoured, when too late, to make head against the growing evil. In this view they entered into combinations and wars against the English; and the latter having been uniformly victorious, their empire necessarily went on increasing, till all the native powers have been swallowed up in its vast extent.

The magnitude of the acquisitions made by Lord Clive powerfully excited the attention of the British public. Their value was prodigiously exaggerated; and it was generally admitted that the Company had no legal claim to enjoy, during the whole period of their charter, all the advantages resulting from conquests, to which the fleets and armies of the state had largely contributed. In 1767, the subject was taken up by the House of Commons; and a committee was appointed to investigate the whole circumstances of the case, and to calculate the entire expenditure incurred by the public on the Company's account. During the agitation of this matter, the right of the Company to the new conquests was totally denied by several members. In the end, however, the question was compromised by the Company agreeing to pay 400,000*l.* a year for 2 years; and in 1769, this agreement, including the yearly payment, was further extended for 5 years more. The Company, at the same time, increased their dividend, which had been fixed by the former agreement at 10, to 12½ per cent.

But the Company's anticipations of increased revenue proved entirely visionary. The rapidity of their conquests in India, the distance of the controlling authority at home,

and the abuses in the government of the native princes, to whom the Company had succeeded, conspired to foster a strong spirit of peculation among their servants. Abuses of every sort were multiplied to a frightful extent. The English, having obtained, or rather enforced, an exemption from those heavy transit duties to which the native traders were subject, engrossed the whole internal trade of the country. They even went so far as to decide what quantity of goods each manufacturer should deliver, and what he should receive for them. It is due to the directors to say, that they exerted themselves to repress these abuses. But their resolutions were neither carried into effect by their servants in India, nor sanctioned by the proprietors at home; so that the abuses, instead of being repressed, went on acquiring fresh strength and virulence. The resources of the country were rapidly impaired; and while many of the Company's servants returned to Europe with immense fortunes, the Company itself was involved in debt and difficulties; and, so far from being able to pay the stipulated sum of 400,000*l.* a year to government, was compelled to apply, in 1772, to the Treasury for a loan!

In this crisis of their affairs, government interposed, and a considerable change was made in the constitution of the Company. The dividend was restricted to 6 per cent., till the sum of 1,400,000*l.*, advanced to them by the public, should be paid. It was further enacted, that the court of directors should be elected for 4 years, 6 members annually, but none to hold their seats for more than 4 years at a time; that no person was to vote at the courts of proprietors who had not possessed his stock for 12 months; and that the amount of stock required to qualify for a vote should be increased from 500*l.* to 1,000*l.* The jurisdiction of the Mayor's Court at Calcutta was in future confined to small mercantile cases; and, in lieu of it, a new court was appointed, consisting of a chief justice and 3 principal judges appointed by the Crown. A superiority was also given to Bengal over the other presidencies, Mr. Warren Hastings being named in the act as governor-general of India. The governor-general, councillors, and judges were prohibited from having any concern whatever in trade; and no person residing in the Company's settlements was allowed to take more than 12 per cent. per annum for money. Though strenuously opposed, these measures were carried by a large majority.

At this period (1773) the total number of proprietors of East India stock, with their qualifications as they stood in the Company's book, were as follows: —

	Proprietors.	Stock. £	s.	d.
Englishmen, possessing 1,000*l.* stock and upwards	487	1,018,398	19	11
Foreigners, possessing 1,000*l.* stock and upwards	325	890,940	17	0
Englishmen, possessing 500*l.* stock and upwards	1,246	634,464	1	8
Foreigners, possessing 500*l.* stock and upwards	95	50,226	0	0
Total	2,153	£2,594,029	18	7

Notwithstanding the vast extension of the Company's territories, their trade continued to be apparently insignificant. During the 3 years ending with 1773, the value of the entire exports of British produce and manufactures, including military stores, exported by the Company to India and China, amounted to 1,469,411*l.*, being at the rate of 489,803*l.* a year; the annual exports of bullion during the same period being only 84,933*l.*! During the same 3 years, 23 ships sailed annually for India. The truth, indeed, seems to be, that, but for the increased consumption of tea in Great Britain, the Company would have entirely ceased to carry on any branch of trade with the East; and that the monopoly would have excluded us as effectually from the markets of India and China as if the trade had reverted to its ancient channels, and the route by the Cape of Good Hope been relinquished.

In 1781, the exclusive privileges of the Company were extended to 1791, with 3 years' notice; the dividend on the Company's stock was fixed at 8 per cent.; three fourths of their surplus revenues, after paying the dividend, and the sum of 400,000*l.* payable to government, was to be applied to the public service, and the remaining fourth to the Company's own use.

In 1780, the value of British produce and manufactures exported by the Company to India and China amounted to only 386,152*l.*; the bullion exported during the same year was 15,014*l.* The total value of the exports during the same year was 12,648,616*l.*; showing that the East India trade formed only *one thirty-second* part of the entire foreign trade of the empire!

The administration of Mr. Hastings was one continued scene of war, negotiation, and intrigue. The state of the country, instead of being improved, became worse; so much so, that in a council minute by Marquis Cornwallis, dated the 18th of September, 1789, it is distinctly stated, "*that one third part of the Company's territory is now a jungle for wild beasts.*" Some abuses in the conduct of their servants were, indeed, rectified; but, notwithstanding, the nett revenue of Bengal, Bahar, and Orissa, which, in 1772, had amounted to 2,126,766*l.*, declined, in 1785, to 2,072,963*l.* This exhaustion of the country, and the expenses incurred in the war with Hyder Ally and France, involved

the Company in fresh difficulties; and being unable to meet them, they were obliged, in 1783, to present a petition to parliament, setting forth their inability to pay the stipulated sum of 400,000*l.* a year to the public, and praying to be excused from that payment and to be supported by a loan of 900,000*l.*

All parties seemed now to be convinced that some further changes in the constitution of the Company had become indispensable. In this crisis, Mr. Fox brought forward his famous India Bill; the grand object of which was to abolish the courts of directors and proprietors, and to vest the government of India in the hands of 7 commissioners appointed by parliament. The coalition between Lord North and Mr. Fox having rendered the ministry exceedingly unpopular, advantage was taken of the circumstance to raise an extraordinary clamour against the bill. The East India Company stigmatised it as an invasion of their chartered rights; though it is obvious that, from their inability to carry into effect the stipulations under which those rights were conceded to them, they necessarily reverted to the public; and it was as open to parliament to legislate upon them as upon any other question. The political opponents of the government represented the proposal for vesting the nomination of commissioners in the legislature, as a daring invasion of the prerogative of the Crown, and an insidious attempt of the minister to render himself all-powerful, by adding the patronage of India to that already in his possession. The bill was, however, carried through the House of Commons; but, in consequence of the ferment it had excited, and the avowed opposition of his Majesty, it was thrown out in the House of Lords. This event proved fatal to the coalition ministry. A new one was formed, with Mr. Pitt at its head; and parliament being soon after dissolved, the new minister acquired a decisive majority in both Houses. When thus secure of parliamentary support, Mr. Pitt brought forward his India Bill, which was successfully carried through all its stages. By this bill a Board of Control was erected, consisting of 6 members of the privy council, who were "to check, superintend, and control all acts, operations, and concerns, which in anywise relate to the civil or military government, or revenues, of the territories and possessions of the East India Company." All communications to or from India, touching any of the above matters, were to be submitted to this Board; the directors being ordered to yield obedience to its commands, and to alter or amend all instructions sent to India as directed by it. A secret committee of 3 directors was formed, with which the Board of Control might transact any business it did not choose to submit to the court of directors. Persons returning from India were to be obliged, under very severe penalties, to declare the amount of their fortunes; and a tribunal was appointed for the trial of all individuals accused of misconduct in India, consisting of a judge from each of the Courts of King's Bench, Common Pleas, and Exchequer; 5 members of the House of Lords, and 7 members of the House of Commons; the last being chosen by lot at the commencement of each session. The superintendence of all commercial matters continued, as formerly, in the hands of the directors.

During the administration of Marquis Cornwallis, who succeeded Mr. Hastings, Tippoo Saib, the son of Hyder Ally, was stripped of nearly half his dominions; the Company's territorial revenue was, in consequence, greatly increased; at the same time that the permanent settlement was carried into effect in Bengal, and other important changes accomplished. Opinion has been long divided as to the influence of these changes. On the whole, however, we are inclined to think that they have been decidedly advantageous. Lord Cornwallis was, beyond all question, a sincere friend to the people of India; and laboured earnestly, if not always successfully, to promote their interests, which he well knew were identified with those of the British nation.

During the 3 years ending with 1793, the value of the Company's exports of British produce and manufactures fluctuated from 928,783*l.* to 1,031,262*l.* But this increase is wholly to be ascribed to the reduction of the duty on tea in 1784, and the vast increase that, consequently, took place in its consumption. —(See article Tea.) Had the consumption of tea continued stationary, there appear no grounds for thinking that the Company's exports in 1793 would have been greater than in 1780, unless an increase had taken place in the quantity of military stores exported.

In 1793, the Company's charter was prolonged till the 1st of March, 1814. In the act for this purpose, a species of provision was made for opening the trade to India to private individuals. All his Majesty's subjects, residing in any part of his European dominions, were allowed to export to India any article of the produce or manufacture of the British dominions, except military stores, ammunition, masts, spars, cordage, pitch, tar, and copper; and the Company's civil servants in India, and the free merchants resident there, were allowed to ship, on their own account and risk, all kinds of Indian good, except calicoes, dimities, muslins, and other piece goods. But neither the merchants in England, nor the Company's servants or merchants in India, were allowed to export or import except in Company's ships. And in order to insure such conveyance, it was enacted, that the Company should annually appropriate 3,000 tons of shipping for

the use of private traders; it being stipulated that they were to pay, in time of peace, 5*l.* outwards, and 15*l.* homewards, for every ton occupied by them in the Company's ships; and that this freight might be raised in time of war, with the approbation of the Board of Control.

It might have been, and, indeed, most probably was foreseen that very few British merchants or manufacturers would be inclined to avail themselves of the privilege of sending out goods in Company's ships; or of engaging in a trade fettered on all sides by the jealousy of powerful monopolists, and where, consequently, their superior judgment and economy would have availed almost nothing. As far, therefore, as they were concerned, the relaxation was more apparent than real, and did not produce any useful results.* It was, however, made use of to a considerable extent by private merchants in India; and also by the Company's servants returning from India, many of whom invested a part, and some the whole, of their fortune, in produce fit for the European markets.

The financial difficulties of the East India Company led to the revolution which took place in its government in 1784. But, notwithstanding the superintendence of the Board of Control, its finances have continued nearly in the same unprosperous state as before. We have been favoured, from time to time, with the most dazzling accounts of revenue that was to be immediately derived from India; and numberless acts of parliament have been passed for the appropriation of surpluses that never had any existence except in the imagination of their framers. The proceedings that took place at the renewal of the charter, in 1793, afford a striking example of this. Lord Cornwallis had then concluded the war with Tippoo Saib, which had stripped him of half his dominions: the perpetual settlement, from which so many benefits were expected to be derived, had been adopted in Bengal; and the Company's receipts had been increased, in consequence of accessions to their territory, and subsidies from native princes, &c., to upwards of *eight* millions sterling a year, which, it was calculated, would afford a future annual surplus, after every description of charge had been deducted, of 1,240,000*l.* Mr. Dundas (afterwards Lord Melville), then president of the Board of Control, availed himself of these favourable appearances, to give the most flattering representation of the Company's affairs. There could, he said, be no question as to the permanent and regular increase of the Company's surplus revenue; he assured the House that the estimates had been framed with the greatest care; that the Company's possessions were in a state of prosperity till then unknown in India; that the abuses, which had formerly insinuated themselves into some departments of the government, had been rooted out; and that the period was at length arrived, when India was to pour her golden treasures into the lap of England! Parliament participated in these brilliant anticipations, and in the act prolonging the charter it was enacted, 1st, That 500,000*l.* a year of the surplus revenue should be set aside for reducing the Company's debt in India to 2,000,000*l.*; 2dly, That 500,000*l.* a year should be paid into the exchequer, to be appropriated for the public service as parliament should think fit to order; 3dly, When the India debt was reduced to 2,000,000*l.*, and the bond debt to 1,500,000*l.*, *one sixth* part of the surplus was to be applied to augment the dividends, and the other *five sixths* were to be paid into the Bank, in the name of the commissioners of the national debt, to be accumulated as a *guarantee fund*, until it amounted to 12,000,000*l.*; and when it reached that sum, the dividends upon it were to be applied to make up the dividends on the capital stock of the Company to 10 per cent., if at any time the funds appropriated to that purpose should prove deficient, &c.

Not one of these anticipations was realised! Instead of being diminished, the Company's debts began immediately to increase. In 1795, they were authorised to add to the amount of their floating debt. In 1796, a new device to obtain money was fallen upon. Mr. Dundas represented that as all competition had been destroyed in consequence of the war, the Company's commerce had been greatly increased, and that their mercantile capital had become insufficient for the extent of their transactions. In consequence of this representation, leave was given to the Company to add *two millions* to their capital stock by creating 20,000 new shares; but as these shares sold at the rate of 173*l.* each, they produced 3,460,000*l.* In 1797, the Company issued additional bonds to the extent of 1,417,000*l.*; and notwithstanding all this, Mr. Dundas stated in the House of Commons, on the 13th of March, 1799, that there had been a deficit in the previous year of 1,319,000*l.*

During the administration of the Marquis Wellesley, which began in 1797–8 and terminated in 1805–6, the British empire in India was augmented by the conquest of Seringapatam and the whole territories of Tippoo Saib, the cession of large tracts by

* In his letter to the East India Company, dated the 21st of March, 1812, Lord Melville says: "It will not be denied that the facilities granted by that act (the act of 1793) have not been satisfactory, at least to the merchants either of this country or of India. They have been the source of constant dispute, and they have even entailed a heavy expense upon the Company, without affording to the public any adequate benefit from such a sacrifice."— (*Papers published by E. I. Comp.* 1813, p. 84.)

the Mahratta chiefs, the capture of Delhi, the ancient seat of the Mogul empire, and various other important acquisitions; so that the revenue, which had amounted to 8,059,000*l.* in 1797, was increased to 15,403,000*l.* in 1805. But the expenses of government, and the interest of the debt, increased in a still greater proportion than the revenue, having amounted, in 1805, to 17,672,000*l.*, leaving a deficit of 2,269,000*l.* In the following year the revenue fell off nearly 1,000,000*l.*, while the expenses continued nearly the same. And there was, at an average, a continued excess of expenditure, including commercial charges, and a contraction of fresh debt, down to 1811–12.

Notwithstanding the vast additions made to their territories, the Company's commerce with them continued to be very inconsiderable. During the 5 years ending with 1811, the exports to India by the Company, exclusive of those made on account of individuals in their ships, were as under: —

1807	£952,416	1810	£1,010,815
1808	919,544	1811	1,033,816
1809	866,153		

The exports by the private trade, and the *privilege* trade, that is, the commanders and officers of the Company's ships, during the above-mentioned years, were about as large. During the 5 years ending with 1807-8, the annual average imports into India by British private traders, only, amounted to 305,496*l.* — (*Papers published by the East India Company in* 1813, 4to. p. 56.)

The Company's exports include the value of the military stores sent from Great Britain to India. The ships employed in the trade to *India and China*, during the same 5 years, varied from 44 to 53, and their burden from 36,671 to 45,342 tons.

For some years previously to the termination of the Company's charter in 1813, the conviction had been gaining ground among all classes, that the trade to the East was capable of being very greatly extended; and that it was solely owing to the want of enterprise and competition, occasioned by its being subjected to a monopoly, that it was confined within such narrow limits. Very great efforts were, consequently, made by the manufacturing and commercial interests to have the monopoly set aside, and the trade to the East thrown open. The Company vigorously resisted these pretensions; and had interest enough to procure a prolongation of the privilege of carrying on an exclusive trade to China to the 10th of April, 1831, with 3 years' notice; the government of India being continued in their hands for the same period. Fortunately, however, the trade to India was opened, under certain conditions, to the public. The principal of these conditions were, that private individuals should trade, directly only, with the presidencies of Calcutta, Madras, and Bombay, and the port of Penang; that the vessels fitted out by them should not be under 350 tons burden; and that they should abstain, unless permitted by the Company, or the Board of Control, from engaging in the carrying trade of India, or in the trade between India and China. And yet, despite these disadvantages, such is the energy of individual enterprise as compared with monopoly, that the private traders gained an almost immediate ascendancy over the East India Company, and in a very short time more than *trebled* our trade with India.

In the Report of the committee of the House of Lords on the foreign trade of the country, printed in May, 1821, it is stated, that "the greatly increased consumption of British goods in the East, since the commencement of the free trade, cannot be accounted for by the demand of European residents, the number of whom does not materially vary; and it appears to have been much the greatest in articles calculated for the general use of the natives. That of the cotton manufactures of this country alone is stated, since the first opening of the trade, to have been augmented from *four* to *five* fold (it is now (1843) augmented many hundreds of times). The value of the merchandise exported from Great Britain to India, which amounted, in 1814, to 870,177*l.*, amounted *, in 1819, to 3,052,741*l.*; and although the market appears then to have been so far overstocked as to occasion a diminution of nearly one half in the exports of the following year, that diminution appears to have taken place more in the articles intended for the consumption of Europeans than of natives; and the trade is now stated to the committee, by the best informed persons, to be reviving. When the amount of population, and the extent of the country over which the consumption of these articles is spread, are considered, it is obvious that any facility which can, consistently with the political interests and security of the Company's dominions, be given to the private trader, for the distribution of his exports, by increasing the number of ports at which he may have the option of touching in pursuit of a market, cannot fail to promote a more ready and extensive demand."

Besides the restraints imposed by the act of 1813 on the proceedings of the free traders†,

* This is the amount of the Company's exports only, and the sum is not quite accurate: *see post.*

† These restraints were a good deal modified by the 3 Geo. 4. c. 80., passed in pursuance of the recommendation of the committee quoted above.

they frequently experienced very great loss and inconvenience from the commercial speculations of the East India Company. The latter had commercial residents, with large establishments of servants, some of them intended for coercive purposes, stationed in all the considerable towns; and the Marquis Wellesley has stated, "that the intimation of a wish from the Company's resident is always received as a command by the native manufacturers and producers." The truth is, that it was not in the nature of things that the Company's purchases could be fairly made; the natives could not deal with their servants as they would have dealt with private individuals; and it would be absurd to suppose that agents authorised to buy on account of government, and to draw on the public treasury for the means of payment, should generally evince the prudence and discretion of individuals directly responsible in their own private fortunes for their transactions. The interference of such persons would, under any circumstances, have rendered the East India trade peculiarly hazardous. But their influence in this respect was materially aggravated by the irregularity of their appearances. No individual, not belonging to the court of directors, could foresee whether the Company's agents would be in the market at all; or, if there, to what extent they would either purchase or sell. So capricious were their proceedings, that in some years they laid out 700,000*l.* on indigo, while in others they did not lay out a single shilling: and so with other things. A fluctuating demand of this sort necessarily occasioned great and sudden variations of price, and was injurious alike to the producers and the private merchants.

And besides being injurious to the private trader, and to the public generally, both in India and England, this trade was of no advantage to the East India Company. How, indeed, could it be otherwise? A company that mantained armies and retailed tea, that carried a sword in the one hand and a ledger in the other, was a contradiction; and, had she traded with success, would have been a prodigy. It was impossible for her to pay that attention to details that is indispensable to the carrying on of commerce with advantage. She may have gained something by the monopoly of the tea trade, though even that is questionable; but it is admitted on all hands, that she lost heavily by her trade to India. When, therefore, the question as to the renewal of the charter came to be discussed in 1832 and 1833, the Company had no reasonable objection to urge against their being deprived of the privilege of trading. And the act 3 & 4 Will. 4. c. 85., for continuing the charter till 1854, *terminated the Company's commercial character*; by enacting, that the Company's trade to China was to cease on the 22d of April, 1834, and that the Company was, as soon as possible after that date, to dispose of their stocks on hand, and close their commercial business. And the wonderful increase that has since taken place in the trade with the East is the best proof of the sagacity and soundness of the opinions of those by whose efforts the incubus of monopoly was removed.

From this period down to last year (1858), when the Company was finally abolished, its functions were wholly political, and the directors were, in truth, little more than a council to assist and advise the President of the Board of Control. During the period now alluded to (from 1834 to 1858), some most important events have taken place in India. The British Empire has been increased by the acquisition, in 1845, of the territory of Scinde, at the mouths of the Indus; in 1849, of the extensive and fertile country of the Punjab (Five Rivers), in N. W. India, between the Sutlej and the Indus; and, in 1852, of Pegu and Martaban, in Burmah. Being occupied by comparatively brave and hardy races, the subjugation of Scinde and the Punjab was not effected without much difficulty, and after the occurrence of several well-fought battles.

The period referred to is also distinguished by the ill advised invasion of Affghanistan in 1839. This unprovoked aggression led to the greatest reverse that has ever happened to the English in India. But the disastrous retreat from Caubul having been avenged, and the *prestige* of our arms restored, we finally withdrew from the country in 1842. And it is to be hoped that we may never again, unless from the most urgent necessity, attempt to extend our empire in that quarter beyond its present limits.

A conviction had been for a lengthened period gaining ground, that the Company's intervention in the government of India had become inexpedient, and that it should be directly administered by the Crown. In 1853 a step was taken in this direction by the act 16 & 17 Vic. c. 95., which reduced the number of directors from 24 to 18, part of which were to be nominated by the Crown, and made other changes. It is not easy to say how long this modified system might have gone on, had it not been for the outbreak of the gigantic mutiny of 1857. It would be foreign to our object to introduce details with respect to the origin of this insurrection, its progress and suppression. These are known to all our readers. Here it is sufficient to mention, that the incipient prejudice against the Company having been strengthened, though without much reason, by the disasters in India, advantage was taken of their occurrence to introduce a bill into

Parliament for transferring its government from the Company to the Crown, which soon after (2nd August 1858) became the act 21 & 22 Vic. c. 106. Thus has terminated, after a prolonged existence of about 258 years, the East India Company *,—the most celebrated joint-stock association of which history has preserved any account. For a lengthened period its commercial had been sunk in its military and political character. It had subjugated one of the most extensive empires in the world. And though its policy has been in many respects of a very questionable description, it is entitled to the high praise of having vigorously exerted itself to restrain abuses on the part of its servants, to protect the vast population within its dominion, and provide for their well-being.

The government of India is now vested under the 21 & 22 Vic. c. 106. in a Secretary of State, assisted by a council of 15 members: 8 of the latter were nominated by Her Majesty, and 7 by the East India Company. On vacancies taking place among the former, their successors are to be nominated by the Crown; and vacancies among the Company's nominees are to be filled up by election by the council. Members hold their situations during good behaviour, receive a salary of 1200*l.* a-year, and a retiring pension of 500*l.* a-year. The majority of the council are to consist of persons who have either served or resided in India for 10 years. They are not allowed to sit in Parliament.

II. EAST INDIES (STATE OF SOCIETY IN, GROWING DEMAND FOR ENGLISH GOODS, TRADE, COLONISATION, ETC.).

1. *Distinction of Castes in India. Inaccuracy of the Representations as to the Inhabitants being unalterably attached to ancient Customs and Practices.* — We have taken occasion in the preceding sketch of the history of the East India Company, repeatedly to notice the small extent of the trade carried on by its agency. It was contended, however, that this was to be ascribed, not to the deadening influence of monopoly, but to the peculiar state of the people of India. A notion has long been prevalent in this quarter of the world, that the Hindoos are a race unsusceptible of change or improvement of any sort; that every man is brought up to the profession of his father, and can engage in none else; and that, owing to the simplicity and unalterableness of their habits, they never can be consumers, at least to any considerable extent, of foreign commodities. "What is now in India, has always been there, and is likely still to continue." —(*Robertson's Disquisition*, p. 202.) The Hindoos of this day are said to be the same as the Hindoos of the age of Alexander the Great. The description of them given by Arrian has been quoted as applying to their actual situation. It is affirmed that they have neither improved nor retrograded; and we are referred to India as to a country in which the institutions and manners that prevailed 3000 years ago may still be found in their pristine purity! The President de Goguet lays it down distinctly, in his learned and invaluable work on the origin of laws, arts, and sciences, that in India "every trade is confined to a particular caste, and can be exercised only by those whose parents professed it."—(*Origin of Laws, &c.*, Eng. trans. vol. iii. p. 24.) Dr. Robertson says, that *the station of every Hindoo is unalterably fixed; his destiny is irrevocable; and the walk of life is marked out, from which he must never deviate.*"—(*Disquisition on India*, p. 199.) The same opinions are maintained by later authorities. Dr. Tennant says, that "the whole Indian community is divided into 4 great classes; and each class is stationed between certain walls of separation, which are impassable by the purest virtue, and most conspicuous merit."—(Quoted by *Mr. Rickards*, p. 6.) This unalterable destiny of individuals has been repeatedly assumed in the despatches and official papers put forth by the East India Company; and has been referred to on all occasions by them and their servants, as a proof that the depressed and miserable condition of the natives is not owing to misgovernment, or to the weight of the burdens laid upon them; and that it is in vain to think of materially improving their condition, or of making them acquainted with new arts, or giving them new habits, so long as the institution of castes, and the prejudices to which it has given rise, preserve their ascendancy unimpaired.

But notwithstanding the universal currency which the opinions now referred to have obtained, and the high authority by which they are supported, they are, in all the most essential respects, entirely without foundation! The books and codes of the Hindoos themselves, and the minute and careful observations that have recently been made on Indian society, have shown that the influence ascribed to the institution of castes by the ancients, and by the more early modern travellers, has been prodigiously exaggerated. In the first part of his work on India, Mr. Rickards established, partly by re-

* It still exists in name for the receipt and distribution of dividends and other routine matters; but it is probable that this phantom, *magni nominis umbra*, will speedily disappear.

ferences to the authoritative books of the Hindoos, and partly by his own observations, and those of Mr. Colebrook, Dr. Heber, and other high authorities, that the vast majority of the Hindoo population may, and, in fact, do engage in all sorts of employments. It has been further shown, that there is nothing in the structure of Indian society to oppose any serious obstacle to the introduction of new arts, or the spread of improvement; and that the causes of the poverty and misery of the people must be sought for in other circumstances than the institution of castes, and the nature of Hindoo superstition.

The early division of the population into the 4 great classes of priests (Brahmins), soldiers (Cshatryas), husbandmen and artificers (Vaisyas), and slaves (Sudras), was maintained only for a very short period. The Hindoo traditions record that a partial intermixture of these classes took place at a very remote epoch; and the mixed brood thence arising were divided into a vast variety of new tribes, or castes, to whom, speaking generally, no employments are forbidden.

"The employments," says Mr. Rickards, "allowed to these mixed and impure castes, may be said to be every description of handicraft and occupation for which the wants of human society have created a demand. Though many seem to take their names from their ordinary trade or profession, and some have duties assigned them too low and disgusting for any others to perform, but from the direct necessity; yet no employment, generally speaking, is forbidden to the mixed and impure tribes, excepting three of the prescribed duties of the sacerdotal class; viz. teaching the *Vedas*, officiating at a sacrifice, and receiving presents from a pure-handed giver; which three are exclusively *Brahminical*."

Mr. Colebrook, who is acknowledged on all hands to be one of the very highest authorities as to all that respects Indian affairs, has a paper in the fifth volume of the *Asiatic Researches*, on the subject of castes. In this paper, Mr. Colebrook states that the *Jatimala*, a Hindoo work, enumerates *forty-two* mixed classes springing from the intercourse of a man of inferior class with a woman of a superior class, or in the *inverse* order of the classes. Now, if we add to these the number that must have sprung from intermixture in the *direct* order of the classes, and the hosts further arising from the continued intermixture of the mixed tribes amongst themselves, we shall not certainly be disposed to dissent from Mr. Colebrook's conclusion, "that the subdivisions of these classes have further multiplied distinctions to an *endless variety*."

Mr. Colebrook has given the following distinct and accurate account of the professions and employments of the several classes at the present day. It forms a curious commentary on the "irrevocable destiny" of Dr. Robertson, and the "impassable walls" of Dr. Tennant.

"A *Brahman*, unable to subsist by his duties, may live by the duty of a soldier; if he cannot get a subsistence by either of these employments, he may apply to tillage and attendance on cattle, or gain a competence by traffic, avoiding certain commodities. A *Cshatrya* in distress may subsist by all these means; but he must not have recourse to the highest functions. In seasons of distress a further latitude is given. The practice of medicine, and other learned professions, painting, and other arts, work for wages, menial service, alms, and usury, are among the modes of subsistence allowed both to the *Brahman* and *Cshatrya*. A *Vaisya*, unable to subsist by his own duties, may descend to the servile acts of a *Sudra;* and a *Sudra*, not finding employment by waiting on men of the higher classes, may subsist by handicrafts; principally following those mechanical operations, as joinery and masonry, and practical arts, as painting and writing, by which he may serve men of superior classes; and although a man of a lower class is in general restricted from the acts of a higher class, the *Sudra* is expressly permitted to become a trader, or a husbandman.

"Besides the particular occupation assigned to each of the mixed classes, they have the alternative of following that profession, which regularly belongs to the class from which they derive their origin on the mother's side; those at least have such an option who are born in the direct order of the classes. *The mixed classes are also permitted to subsist by any of the duties of a Sudra, that is, by mental service, by handicrafts, by commerce, and agriculture.* Hence it appears THAT ALMOST EVERY OCCUPATION, THOUGH REGULARLY IT BE THE PROFESSION OF A PARTICULAR CLASS, IS OPEN TO MOST OTHER CLASSES; and that the limitations, far from being rigorous, do in fact reserve only the peculiar profession of the *Brahman*, which consists in teaching the *Veda*, and officiating at religious ceremonies."

"We have thus," says Mr. Rickards, by whom this passage has been quoted, "the highest existing authority for rejecting the doctrine of the whole Hindoo community 'being divided into four castes,' and of their peculiar prerogatives being guarded inviolate by 'impassable walls of separation.' It is also clear that the intermixture of castes had taken place, to an indefinite extent, at the time when the *Dherma Sastra* was composed, which Sir William Jones computes to be about 880 years B.C.; for the mixed classes are specified in this work, and it also refers, in many places, to past times, and to events which a course of time only could have brought about. The origin of the intermixture is therefore lost in the remotest and obscurest antiquity; and having been carried on through a long course of ages, a heterogeneous mass is everywhere presented to us, in these latter times, without a single example, in any particular state, or kingdom, or separate portion of the Hindoo community, of that quadruple division of castes which has been so confidently insisted upon.

"I have *myself* seen carpenters of five or six different castes, and as many different bricklayers, employed on the same building. The same diversity of castes may be observed among the craftsmen in dockyards, and all other great works; and those who have resided for any time in the principal commercial cities of India must be sensible that every increasing demand for labour, in all its different branches and varieties of old and new arts, has been speedily and effectually supplied, in spite of the tremendous institution of castes, which we are taught to believe forms so impassable an obstruction to the advancement of Indian industry."

2. *Growing Demand for English Goods.*—It is difficult to suppose that the directors of the East India Company should not have been early aware of the fallacy of the opinions as to the fixedness of Indian habits. So far, however, as we know, they did not, in this instance, evince any acquaintance with the discoveries of their servants. On the

contrary, in all the discussions that took place with respect to the opening of the trade in 1814, the Company invariably contended that no increase of trade to India could be expected. In a letter of the chairman and deputy chairman to the Right Honourable Robert Dundas, dated 13th of January, 1809, it is stated, that the small demand for foreign commodities in India "results from the nature of the Indian people, their climate and their usages. The articles of first necessity their own country furnishes more abundantly and more cheaply than it is possible for Europe to supply them. The labour of the great body of the common people only enables them to subsist on rice, and to wear a slight covering of cotton cloth; they, therefore, *can purchase none of the superfluities we offer them.* The comparatively few in better circumstances, restricted, like the rest, by numerous religious and civil customs, of which all are remarkably tenacious, find few of our commodities to their taste; and their climate, so dissimilar to ours, renders many of them unsuitable to their use; so that a commerce between them and us cannot proceed far upon the principle of supplying mutual wants. Hence, except woollens, in a very limited degree, for mantles in the cold season, and metals, on a scale also very limited, to be worked up by their own artisans for the few utensils they need, hardly any of our staple commodities find a vent among the Indians; the other exports which Europe sends to India being chiefly consumed by the European population there, and some of the descendants of the early Portuguese settlers; all of whom, taken collectively, form but a small body, in view to any question of national commerce."—(*Papers published by authority of the East India Company*, 1813, p. 21.)

The volume from which we have made this extract contains a variety of passages to the same effect. So confident, indeed, were the Company that they had carried the trade to India to the utmost extent of which it was capable, that it was expressly stated, in resolutions passed in a general court held at the India House on the 26th of January 1813, "that no large or sudden addition can be made to the amount of British exports to India or China;" that the Company had suffered a loss in attempting to extend this branch of their trade; that the warehouses at home were glutted with Indian commodities for which there was no demand; and that to open the outports to the trade would be no other than "a ruinous transfer of it into new channels, to the destruction of immense and costly establishments, and the beggary of many thousands of industrious individuals."

Luckily, however, these representations were unable to prevent the opening of the trade, and the result has sufficiently demonstrated their fallacy. The enterprise and exertion of individuals has vastly increased our exports to India—to that very country which the Company had so confidently pronounced was, and would necessarily continue to be, incapable of affording any additional outlet for our peculiar products!

The commercial accounts for 1812 and 1813 were unfortunately destroyed by the fire at the Custom-house. The trade to India was opened on the 10th of April, 1814; and in that year the declared or real value of the products exported from Great Britain to the countries eastward of the Cape of Good Hope, excepting China, by the East India Company, was 826,558*l.*, and by the private traders, 1,048,132*l.* In 1817, the Company's exports had declined to 638,382*l.*, while those of the private traders had increased to 2,750,333*l.*; and in 1828, the former had sunk to only 488,601*l.*, while the latter had increased to 3,979,072*l.*, being more than double the total exports to India, as well by the Company as by private traders in 1814! Since then the market has continued progressively to increase. At an average of the 6 years ending with 1849 the declared value of the exports of British goods amounted to no less than 6,313,668*l.* a year; the declared value of those exported in 1849 being 6,803,274*l.* In 1854, previously to the late outbreak, the exports to India had reached the sum of 10,025,969*l.*

The Company stated, and no doubt truly, that they lost a very large sum in attempting to extend the demand for British woollens in India and China, which, notwithstanding, continues very limited. But in their efforts to force the sale of woollens, they seem to have entirely forgotten that we had attained to great excellency in the manufacture of cotton stuffs, the article principally made use of as clothing in Hindostan; and that, notwithstanding the cheapness of labour in India, the advantage we derived from our superior machinery might enable us to offer cotton stuffs to the natives at a lower price than they could afford to manufacture them for. No sooner, however, had the trade been open to private adventurers, that this channel of enterprise was explored; and the result has been, that, instead of bringing cottons from India to England, the former has become *one of the best and most extensive markets for the cottons of the latter.* We question, indeed, whether, in the whole history of commerce, another equally striking example can be produced of the powerful influence of competition in opening new and almost boundless fields for the successful prosecution of commercial enterprise.

In 1814, the first year of the free trade to India, the exports of cotton amounted to 817,000 yards, of which only about 170,000 yards, valued at 17,778*l.*, were exported by the Company! The progress of the trade has since been such that, in 1837, we exported to India 419,226,233 yards cotton stuffs, and 17,846,904 lbs. twist and yarn, ex hosiery, lace, and small wares, the agg. declared value of the whole being 6,083,266*l.*

The demand for several other articles of British manufactures has recently increased, though not in the same unprecedented manner as cotton, with considerable rapidity. Notwithstanding all that has been said as to the immutability of Hindoo habits, the fact is not to be denied, that a taste for European products and customs is rapidly spreading itself over India. And the fair presumption is, that it will continue to gain ground according as education is more diffused, and as the natives become better acquainted with our language, arts, and habits. The authenticity of Dr. Heber's statements cannot be called in question; and there are many passages in different parts of his Journal that might be quoted in corroboration of what has now been stated. Our limits, however, will only permit of our making a very few extracts.

"Nor have the religious prejudices, and the unchangeableness of the Hindoo habits, been less exaggerated. Some of the best informed of their nation, with whom I have conversed, assure me that half their most remarkable customs of civil and domestic life are borrowed from their Mohammedan conquerors; and *at present there is an obvious and increasing disposition to imitate the English in everything*, which has already led to very remarkable changes, and will, probably, to still more important. The wealthy natives now all affect to have their houses decorated with Corinthian pillars, and filled with English furniture; they drive the best horses and the most dashing carriages in Calcutta; many of them speak English fluently, and are tolerably read in English literature; and the children of one of our friends I saw one day dressed in jackets and trowsers, with round hats, shoes, and stockings. In the Bengalee newspapers, of which there are two or three, politics are canvassed with a bias, as I am told, inclined to Whiggism; and one of their leading men gave a great dinner, not long since, in honour of the Spanish revolution: among the lower orders the same feeling shows itself more beneficially in a growing neglect of caste."—(Vol. ii. p. 306.)

"To say that the Hindoos or Mussulmans are deficient in any essential feature of a civilised people, is an assertion which I can scarcely suppose to be made by any who have lived with them: their manners are at least as pleasing and courteous as those in the corresponding stations of life among ourselves; their houses are larger, and, according to their wants and climate, to the full as convenient as ours; their architecture is at least as elegant; nor is it true that in the mechanic arts they are inferior to the general run of European nations. Where they fall short of us, (which is chiefly in agricu tural implements, and the mechanics of common life,) they are not, so far as I have understood of Italy and the south of France, surpassed in any degree by the people of those countries. Their goldsmiths and weavers produce as beautiful fabrics as our own; and it is so far from true that they are obstinately wedded to their old patterns, that they show an anxiety to imitate our models, and do imitate them very successfully. The ships built by native artists at Bombay are notoriously as good as any which sail from London or Liverpool. The carriages and gigs which they supply at Calcutta are as handsome, though not as durable, as those of Long-Acre. In the little town of Monghyr, 300 miles from Calcutta, I had pistols, double-barrelled guns, and different pieces of cabinet work, brought down to my boat for sale, which in outward form (for I know no further) nobody but perhaps Mr. ——— could detect to be of Hindoo origin; and at Delhi, in the shop of a wealthy native jeweller, I found brooches, ear-rings, snuff-boxes, &c. of the latest models (so far as I am a judge), and ornamented with French devices and mottoes."—(Vol. ii. p. 382.)

As Bishop Heber penetrated into the interior of India, he found the same taste as in Calcutta, for European articles and for luxuries, to prevail everywhere among the natives. Of Benares, he writes as follows:—

"But what surprised me still more, as I penetrated further into it, were the large, lofty, and handsome dwelling-houses, the beauty and apparent richness of the goods exposed in the bazaars, and the evident hum of business. Benares is in fact a very industrious and wealthy, as well as a very holy city. It is the great mart where the shawls of the north, the diamonds of the south, and the muslins of Dacca and the eastern provinces centre; and it has very considerable silk, cotton, and fine woollen manufactories of its own; while English hardware, swords, shields, and spears, from Lucknow and Monghyr, and *those European luxuries and elegancies which are daily becoming more popular in India*, circulate from hence through Bundlecund, Gorruckpoor, Nepaul, and other tracts which are removed from the main artery of the Ganges."—(Vol. i. p. 289.)

Proceeding still further into the interior of the country, and when at Nusseerabad, distant above 1,000 miles from Calcutta, the bishop continues his Journal in the same strain; viz.: —

"European articles are, at Nusseerabad *, as might be expected, very dear; the shops are kept by a Greek and two Parsees from Bombay: they had in their list all the usual items of a Calcutta warehouse. English cotton cloths, both white and printed, are to be met with commonly in wear among the people of the country, and may, I learned to my surprise, be bought best and cheapest, as well as all kinds of hardware, crockery, writing-desks, &c., at Pallee, a large town and celebrated mart in Marwar, on the edge of the desert, several days' journey west of Joudpoor, where, till very lately, no European was known to have penetrated."—(Vol. ii. p. 36.)

As to the character of the Hindoos, their capacity, and even anxious desire, for improvement, the bishop's testimony is equally clear and decided; and as this is a point of pre-eminent importance, the reader's attention is requested to the following statements.

"In the schools which have been lately established in this part of the empire, of which there are at present 9 established by the Church Missionary, and 11 by the Christian Knowledge Societies, some very unexpected facts have occurred. As all direct attempts to convert the children are disclaimed, the parents send them without scruple. But it is no less strange than true, that there is no objection made to the use of the Old and New Testament, as a class-book; that so long as the teachers do not urge them to eat what will make them lose their caste, or to be baptized, or to curse their country's gods, they readily consent to everything else; and not only Mussulmans, but Brahmins, stand by with perfect coolness, and listen sometimes with apparent interest and pleasure, while the scholars, by the road side, are reading the stories of the creation and of Jesus Christ."—(Vol. ii. p. 290.)

"Hearing all I had heard of the prejudices of the Hindoos and Mussulmans, I certainly did not at all expect to find that the common people would, not only without objection, but with the greatest thankfulness, send their children to schools on Bell's system; and they seem to be fully sensible of the advantages conferred by writing, arithmetic, and, above all, by a knowledge of English. There are now in Calcutta, and the surrounding villages, 20 boys' schools, containing 60 to 120 each; and 23 girls', each of 25 or 30."—(Vol. ii. p. 300.)

"In the same holy city (Benares) I visited another college, founded lately by a wealthy Hindoo banker, and intrusted by him to the management of the Church Missionary Society, in which, besides a grammatical knowledge of the Hindoostanee language, as well as Persian and Arabic, the senior boys could pass a good examination in English Grammar, in Hume's History of England, Joyce's Scientific Dialogues, the use of the globes, and the principal facts and moral precepts of the Gospel; most of them writing beautifully in the Persian, and very tolerably in the English character, and excelling most boys I have met with in the accuracy and readiness of their arithmetic."—(Vol. ii. p. 388.)

"The different nations which I have seen in India (for it is a great mistake to suppose that all India is peopled by a single race, or that there is not as great a disparity between the inhabitants of Guzerat, Bengal, the Dooab, and the Deccan, both in language, manners, and physiognomy, as between any four nations in Europe,) have, of course, in a greater or less degree, the vices which must be expected to attend on arbitrary government, a demoralising and absurd religion, and (in all the independent states, and in some of the districts which are partially subject to the British) a laxity of law, and an almost universal prevalence of intestine feuds and habits of plunder. The general character, however, has much which is extremely pleasing to me: they are brave, courteous, intelligent, and most eager after knowledge and improvement, with a remarkable talent for the sciences of geometry, astronomy, &c., as well as for the arts of painting and sculpture. In all these points they have had great difficulties to struggle with, both from the want of models, instruments, and elementary instruction; the indisposition, or rather the horror entertained, till lately, by many among their European masters, for giving them instruction of any kind; and now from the real difficulty which exists of translating works of science into languages which have no corresponding terms."—(Vol. ii. p. 409.)

Even if our space permitted, it would be unnecessary to add to these extracts. The facts and circumstances now mentioned, must, we think, satisfy every one that there is nothing in the nature of Indian society, in the institution of castes as at present existing, or in the habits and customs of the natives, to hinder them from advancing in the career of civilisation, commerce, and wealth. "It may safely be asserted," says Mr. Hamilton, "that with so vast an extent of fertile soil, peopled by so many millions of tractable and industrious inhabitants, Hindostan is capable of supplying the whole world with any species of tropical merchandise; the production, in fact, being only limited by the demand."

3. *Trade with India.*—We had occasion to animadvert, in former editions of this work, on the difficulties under which the trade with India then laboured, in consequence of the duties on sugar, rum, and other Indian products, being very much higher than those laid on the same articles when imported from the colonies in the West Indies. It is needless, however, to enlarge on the manifest inexpediency of such policy, or to enter into any lengthened arguments to prove that governments are bound to treat all who are subject to their authority with the same equal and impartial justice. The discriminating duties now referred to have been all, or nearly all, abolished, and the products of India and of our other dependencies come into the home market on the same equal terms. The beneficial influence of this wise and liberal policy has been strikingly evinced in the increased imports of sugar, cotton, indigo, rice, wool, &c., from India. These, indeed, have been so very great, that despite the vast increase in the shipments of cotton stuffs and yarn, iron, machinery, woollens, and other articles of British produce for India, the value of the imports from, has greatly exceeded the value of the exports to that continent; and hence the heavy drain of bullion to the East. This drain, indeed, has always, or almost always, existed; but the late extraordinary excess of the imports over the exports has proportionally increased its magnitude.

Indigo grows luxuriantly from the equator to the 30th degree of lat.; but in India the best is produced in Bengal and Bahar, between lat. 23° and 27° N., and long. 84°

* Nusseerabad, near Ajmere, in the heart of the Rajepoot country.

and 90° E.; everywhere else the product is inferior. The annual produce of all the Bengal provs. may be estimated at about 60,000,000 lbs. produced on about 1,250,000 acres of cultivated land; the planters, at an average, farming about 2500 acres each. The prime cost of the article to the planters has been estimated at 1,700,000*l.*; the gross profit on which, including risk and charges to the port of exportation, amounts to 40 per cent. The production of silk in India is confined to Bengal, and the produce, though large, is of inferior quality.

Opium has been, for many years past, and still is, an article of great and rapidly increasing export to China, the Malay Islands, and elsewhere. The exports to China may at present (1858) be estimated at the prodigious amount of from 70,000 to 75,000 chests, worth from 32,000,000 to 34,000,000 dolls. This vast importation into China not being balanced by any corresponding exportation of ordinary merchandise, is the cause of the large exports of bullion from it to India. The poppy may be said to take the place in Indian agriculture that the vine and olive occupy in that of S. Europe. Its growth within the British territories has been confined to Bahar and the Benares districts; but in the province Malwah, most part of which is included in the dominions of Scindia, it is extensively cultivated, and pays an export duty on being shipped from ports in our territories. It is produced under a monopoly, and yields a large revenue to government.

The principal export of cotton is to China; but the export to Great Britain is also very considerable, having amounted to 84,101,961 lbs. in 1848, and to no fewer than 250,338,144 lbs. in 1857. But large as this importation may appear, it does not really amount to 1-5th part of our whole annual consumption of cotton wool!

Notwithstanding the vast, and all but unlimited, capacities of British India for the production of sugar, its total export, in 1838, amounted to little more than two thirds of the exports of sugar from the Mauritius! This miserable result was wholly, or almost wholly, ascribable to the inferior quality of East Indian sugars, owing to the very rude and imperfect methods in which they were prepared; but it was partly, also, ascribable to the circumstance of E. Indian sugars having been burdened, previously to 1836, with a duty of 8*s.* a cwt. over and above the duty charged on W. Indian sugars. But in the course of that year Bengal sugars were put on the same footing, in respect of duties, as those of the W. Indian colonies; and of late years a great improvement has been effected in the manufacture of E. Indian sugars, the best of which are now about equal to the best of those from Jamaica and Demerara. In consequence of the circumstances now referred to, and of the comparatively high price of sugar in this country, the imports from India have increased with such rapidity, that they amounted, in 1857, to 1,181,369 cwt.

The abolition of the discriminating duty, in favour of Bengal sugars, being founded on reason and equity, it has since been extended to all parts of British India, and to Ceylon. Nothing, indeed, as already observed, could be more unjust and inconsistent with sound principle, than to impose higher duties on the products of one portion or dependency of the empire than on those of another.

The corn of India, both rice and wheat, is inferior to that of most other countries, for the same reason that its cotton and sugar are inferior, both being the produce of a rude husbandry, and rude preparation. Rice is scalded instead of being kiln-dried; and wheat is never dried at all, except in the sun. It was supposed that the latter might be largely imported under a free corn trade into England; but it does not appear that there are any real grounds for such an opinion. Indian wheat is, speaking generally, very inferior to British wheat; and it could not be imported, in ordinary years, at less than from 40*s.* to 44*s.* a quarter. Its price, free on board at Calcutta, may be taken at 16*s.* or 17*s.* a quarter; to which, if we add 16*s.* or 18*s.* for freight to England, and 7*s.* or 9*s.* for profits and landing charges here, it is abundantly plain that, except in high priced years, it would not answer to import Indian corn.

The exports of wool principally obtained from Bombay and the north-west provinces have increased with extraordinary rapidity. The imports of Indian wool into England in 1833, when the trade began, were so inconsiderable as to amount to only 3721 lbs., whereas, in 1851, they had increased to 4,529,520 lbs., and, in 1857, to no fewer than 19,341,021 lbs.

Previously to the discovery of nitrate of soda in S. America, Bengal and Bahar had a monopoly of the trade in saltpetre. And, contrary to what might have been anticipated, the exports from the latter do not appear to have been much affected by that discovery. Dyes, shell-lac, linseed, safflower, sal-ammoniac, castor oil, coffee from Malabar, tea from Assam, &c., tin, antimony, catechu, and pearl sago, are other exports worthy of mention; and which owe their importance as such principally to the commercial enterprise and talent of Europeans.

Account of the Quantities and computed Values of the Principal Articles imported from India into the United Kingdom in each of the 3 Years ending with 1857.

Exportation of the Precious Metals to India.—There is a vast portion of the earth's surface, including Turkey in Asia, Arabia, Persia, India, China, and other eastern territories, into which bullion has been largely imported from the remotest æra. During the intercourse of the Phœnicians, Greeks, and Romans, with the East, gold and silver, obtained from the mines of Spain and other European countries, always formed important articles of export to Arabia and India. The same notions of the mischievous influence of the exportation of these metals that have prevailed in modern times were also prevalent in antiquity; and various efforts were in consequence made to hinder its taking place. That such had been the practice in the earlier periods of Roman history, is evident from the statement of Cicero *, and the prohibition was repeatedly renewed, though with very little effect, by the emperors. Tiberius complained to the Senate that the wealth (meaning gold and silver) of the state was irrecoverably consigned to foreign and hostile nations in exchange for luxuries and female ornaments.† Pliny computed the annual drain of cash to India only for these objects at 50 million sesterces, or 400,000*l.*‡; and to India, China, and Arabia, at double that sum, or 800,000*l.*§ And the drain thus early commenced, though varying in intensity, has continued, with but little interruption, down to the present times. Since the establishment of the East India Company in 1600, gold and silver have usually been among the best and safest articles of export to the East. And despite the vast quantities of these metals, but more especially of silver, that have thus been poured into India, they appear of late years to be in greater request than ever in that and the adjacent countries. The supplies thrown upon their markets, like the water poured into the sieves of the Danaids, completely disappear, or are so absorbed that the demand for fresh supplies continues without any abatement.

Humboldt estimated that, of the entire produce of the American mines at the commencement of this century, amounting, as already seen, to 43,500,000 dollars, no less than 25,500,000 were sent to Asia,—17,500,000 by the Cape of Good Hope, 4,000,000 by the Levant, and 4,000,000 through the Russian frontier. And though it be generally believed by later authorities that this estimate was beyond the mark, still there is no manner of doubt that the drain of bullion to the East was then, and for several years before and after, of the most formidable dimensions. Gradually, however, it began to diminish, partly in consequence of the decrease in the supplies of bullion from America, subsequently to 1808, and partly, and we believe principally, from the great and sudden increase in the exports of cottons and other manufactured goods to India which followed the opening of the trade in 1813. Such, indeed, was the influence of these and other concurring causes, that in 1832 and 1833 the export of bullion from England to India had not merely ceased, but the tide had actually begun to set in the opposite direction. This abnormal state of things did not, however, continue for any very lengthened period. For a few years there was no very decided movement of bullion either from Europe to the East, or from the East to Europe. But this approach to an equilibrium has wholly passed away. Within the last dozen years the drain of bullion from Europe to the East has again set in with renewed force, and is become deeper and broader than at any former period. And yet, despite their continued influx, there is no general rise of prices nor anything to show that India is becoming saturated with the precious metals, or even with silver. On the contrary, the supply appears to be as deficient as ever; and it is doubtful whether this apparently bottomless abyss be not of itself sufficient to swallow up the largest portion, if not the whole, of the late extraordinary additions to the supply of bullion.

Causes of the Drain of Bullion to India.—It is difficult to account for the long-continued and heavy drain of bullion to India. It would seem, however, to be principally owing to the following circumstances, viz.:—1. To the country having no mines of its own *; 2. To the great amount of the population, their early civilisation and poverty, and their habit of wearing ornaments of silver and gold; and, 3. To that burying and hoarding of the precious metals which is perhaps more prevalent in India than anywhere else.

1. The influence of the first of these causes of the importation of the precious metals into India is too obvious to require any illustration.

2. The influence of the second cause of the importation referred to is of the most powerful kind. From the remotest period the people of India have been in a considerably advanced state of civilisation, which, owing to the early institution of castes and other circumstances, has continued in a comparatively stationary state. Owing also to the economical habits of the people, and the facility with which they have obtained subsistence, their wages have always been, and continue to be, extremely low. And from the combination of these and other causes, the businesses carried on in India have, with few exceptions, been generally on a petty scale; and while comparatively few large payments have to be made, the every-day transactions of an immense population, though individually small, amount in the aggregate to a very great sum. And hence the extraordinary demand for silver to serve as coin in retail transactions, and for *cowries*, inferior in value even to the smallest coins.

And in addition to the very great sums required for currency, another, and also a very large sum, is absorbed in jewellery or trinkets. The habit of wearing rings, bracelets, brooches, hair-pins, and such like personal ornaments of gold and silver, but generally the latter, is universal in India, and cannot fail to occasion a very large expenditure. There are no data on which to build up an approximate estimate of the gross amount of the sums invested in the coin in circulation and in trinkets in India. It has, however, been said that it is quite conceivable it should come up to 400,000,000 sterling †; and to those who bear in mind that the population is not less perhaps than from 175,000,000 to 180,000,000, and that metallic ornaments are worn by all but the most degraded persons, this conjectural estimate may not appear to be in any degree extravagant.

But if it be not very far from the mark, the wear and tear or abrasion and loss upon so great a sum, being taken at only 1 per cent., would require an influx of bullion to the extent of 4,000,000*l.* a year. And as this source of loss may be regarded, so to speak, as a constant quantity, it is plain that if, owing to circumstances affecting the commerce of the Peninsula, or any other cause, this supply should be diminished for a few years, the demand for bullion would be proportionally increased as soon as the disturbing force had ceased to operate.

3. The practice of burying or hoarding of treasure has been carried to a greater extent in India, Persia, Turkey in Asia, and other eastern countries, than anywhere else. Despotism and a want of security have always prevailed in these countries. The inhabitants have in consequence been accustomed to regard the money they have committed to the earth as their only real wealth, and have availed themselves of every opportunity to place portions of their means beyond the grasp of their avaricious and tyrannical masters. And as many of the hoards so deposited will never be brought to light, the practice has undoubtedly been a principal cause of the constant flow of bullion to the East. ‡

* This statement may not, perhaps, be strictly correct. It is affirmed that gold and silver have been produced in India; but if so, it is admitted on all hands that the production has been so inconsiderable as to be unworthy of notice.

† Newmarch in *Tooke on Prices*, vi., p. 723.

‡ For accounts of the discovery of concealed treasures see D'Herbelot, *Bibliothèque Orientale*, i. 206, and ii. 347, ed. 1777.

Bernier, "that most curious traveller," as he is called by Gibbon *, remarks on this subject as follows, viz.: — "Avant que de finir, je dirai d'où peut venir que cet empire du Mogol étant ainsi une abyme d'or et d'argent, comme j'ai dit dans le commencement, on ne voit neanmoins pas qu'entre le peuple il y en ait davantage qu'ailleurs, au contraire le peuple y paroit moins pecunieux et l'argent s'y trouve plus rare qu'en beaucoup d'autres endroits.

"La premiere raison est qu'il s'en consomme beaucoup a fondre et refondre tous ces anneaux de nez et d'oreilles, chaines, bagues, et brasselets des pieds et des mains que portent les femmes; et principalement dans cette incroyable quantitè de manufactures où il en entre tant, que se perd, et qu'on ne sçait ce qu'il devient, comme dans toutes ces broderies, alachas ou étoffes de soye rayes, &c. &c." And then, having adverted to the injustice and exactions to which the mass of the people are exposed, he goes on to state, — "D'ou vient qu'un chacun est dans une crainte perpetuelle de ces sortes de gens, et surtout des Gouverneurs, plus qu'une esclave de son maitre. Que pour l'ordinaire ils affectent de paroitre gueux et sans argent, très-simples dans le vestement, logement, ameublement, et encore plus dans le boire et le manger. Qu'ils apprehendent même souvent de se mesler trop avant dans le negoce, dans la crainte qu'ils ont qu'on ne les croye riches et qu'on ne leur trâme quelque piece pour les ruiner; si bien qu'enfin ils ne trouvent point de meilleur remede que de cacher et enfouir leur argent bien secretement et bien profondement en terre, sortant ainsi hors du commerce ordinaire des hommes, et perissant enfin là dedans, sans que le Roy, ni l'etat, ni que ce soit en profite. Ce qui arrive non seulement entre les paisans et artisans, mais ce qui est plus considerable entre toutes sortes de marchands, soit Mahometans soit Gentils; mais principalment entre les Gentils, qui sont presque seuls les maitres du negoce et de l'argent, infatuez qu'ils sont de cette croyance, que l'or et l'argent qu'ils cachent durant leur vie leur servira après la mort; et c'est à mon avis la veritable raison pourquoi il paroit, si peu d'argent en commerce parmi le peuple." (Bernier, *Voyage dans les Etats du Grand Mogul*, i. pp. 306—311, Amst. 1710.)

At a later date, Mr. Luke Scrafton has referred to the same practice in still stronger terms: — "In India," says he, "the Hindoos bury their money underground often with such secrecy as not to trust their own children with the knowledge of it; and it is amazing what they will suffer rather than betray it. When their tyrants have tried all manner of corporal punishments upon them, they threaten to defile them; but even that fails; for, resentment prevailing over the love of life, they frequently rip up their bowels or poison themselves, and carry the secret to their graves. And the sums lost in this manner in some measure account why the silver of India does not appear to increase, though there are such quantities continually coming into it, and none going out." (*On the Government of Hindostan*, p. 16.)

The comparative security that was lately enjoyed by the natives in most parts of India may have done something to lessen this habit. But one so widely diffused and so deeply rooted, cannot be easily or speedily modified. And though the illegal exactions of their rulers were curbed and partially put down in the countries directly under the Company's government, there was in Oude and many other parts of India, previously to the late insurrection, a great deal of disorder, oppression, and robbery. And since that unfortunate outbreak insecurity and disorders of all sorts have immeasurably increased, and have proportionally stimulated the practice of hoarding. The rebellion raging in China has had similar effects; and we have been assured by those who, from experience and observation, are well qualified to form an opinion on such a subject, that it may be moderately estimated that in India and China, during the half-dozen years ending with 1857, a sum of not less than 100,000,000*l.* sterling has been consigned to the earth.

The circumstances thus briefly noticed may be considered as the leading causes of the all but perennial drain of bullion to the East. Other circumstances, already adverted to, depending on the peculiar state of the trade between England and Europe generally and the East during the last ten years, have largely increased the export of the precious metals to India. But the further details connected with this part of the subject will find a more appropriate place in the article PRECIOUS METALS, to which we beg to refer the reader.

4. *Colonisation of India.*— Considerable obstacles were long thrown in the way of Europeans establishing themselves in India, and particularly of their acquiring or holding land. This policy was dictated by various considerations; partly by a wish to prevent the extrusion of the natives from the soil, which it was supposed would be eagerly bought up by Europeans, and partly by the fear lest the latter, when scattered over the country, and released from any effectual control, should offend the prejudices of the natives, and get embroiled with them. Now, however, it seems to be the general

* *Decline and Fall*, i., p. 267, ed. 1838.

opinion of those best acquainted with India, that but little danger is to be apprehended from these circumstances; that the few Europeans established in it as Indigo planters, &c. have contributed very materially to its improvement; and that the increase and diffusion of the English population, and their permanent settlement in the country, are at once the most likely means of spreading a knowledge of our arts and sciences, and of widening and strengthening the foundations of our ascendancy. It is obvious, indeed, that the duration of our power in India must depend on a very uncertain tenure, unless we take root, as it were, in the soil, and a considerable portion of the population be attached to us by the ties of kindred, and of common interests and sympathies. In this respect we should imitate the Roman in preference to the Lacedæmonian or Athenian policy. *Quid aliud exitio Lacedæmoniis Atheniensibus fuit, quanquam armis pollerent nisi quod victis pro alienigenis arcebant?* When, however, a former edition of this work was published, we observed that, looking at the density of population in India, the low rate of wages, the nature of the climate, and other similar circumstances, it seemed very doubtful whether it would ever become the resort of any considerable number of English settlers, at least of such a number as would be sufficient, within any reasonable period, to form anything like a powerful native English interest. And we have now to state, that these anticipations have been more than realised; and that though the restraints on the settlement of Englishmen in India have been practically at an end since 1834, very few have availed themselves of the privilege. There may, no doubt, though we see little reason to anticipate such a result, be a greater emigration to India in time to come; and to whatever extent it may be carried, it promises to be highly advantageous. "We need not, I imagine," said Lord William Bentinck, "use any laboured argument to prove that it would be infinitely advantageous for India to borrow largely in arts and knowledge from England. The legislature has expressly declared the truth: its acknowledgment has been implied in the daily acts and professions of government, and in all the efforts of humane individuals and societies for the education of the people. Nor will it, I conceive, be doubted, that the diffusion of useful knowledge, and its application to the arts and business of life, must be comparatively tardy, unless we add to precept the example of Europeans, mingling familiarly with the natives in the course of their profession, and practically demonstrating, by daily recurring evidence, the nature and the value of the principles we desire to inculcate, and of the plans we seek to have adopted. It seems to be almost equally plain, that, independently of their influencing the native community in this way, various and important national advantages will result from there being a considerable body of our countrymen, and their descendants, settled in the country. To question it, is to deny the superiority which has gained us the dominion of India; it is to doubt whether national character has any effect on national wealth, strength, and good government: it is to shut our eyes to all the perils and difficulties of our situation; it is to hold as nothing community of language, sentiment and interest, between the government and the governed: it is to disregard the evidence afforded by every corner of the globe in which the British flag is hoisted: it is to tell our merchants and manufacturers, that the habits of a people go for nothing in creating a market; and that enterprise, skill, and capital, and the credit which creates capital, are of no avail in the production of commodities."

III. EAST INDIES, EXTENT, POPULATION, MILITARY FORCE, REVENUE, ETC.

1. *Extent, Population, &c. of British Dominions in Hindostan.* — The following Table has been framed from the best authorities. It can, however, be regarded as an approximation only, inasmuch as no means exist of coming at correct conclusions; but we incline to think that it is nearly as accurate as it can be made with the present imperfect means of information.

Table of the Area and Population of British and Native Indian States.

States.	Government.	Area in Sq. Miles.	Total Area in Sq. Miles.	Population.	Total Population.
British States	Under Gov.-Gen. of India in Council	246,050		23,255,972	
	Lieut. Gov. of Bengal	222,609		41,212,562	
	Lieut.-Gov. of N.W.P.	105,726		33,216,565	
	Madras Government	132,090		22,437,297	
	Bombay Government	131,544		11,790,042	
			838,019		131,912,238
	Presidency.				
Native States	Bengal	515,533		38,749,589	
	Madras	51,802		5,213,671	
	Bombay	60,575		4,460,370	
			627,910		48,423,630
	Country.				
Foreign States	French	188		203,887	
	Portuguese	1,066		313,262	
			1,254		517,149
	Grand Totals		1,467,183		180,853,017

The native states comprise those of Bundelcund, Bhawlpore, Golab Singh's and Scindia's possessions, Hyderabad, or the Nizam's dominions, Nepaul, the Rajpoot states, Mysore, Travancore, &c. These dependent states are, for the most part, surrounded by British territories; and their governments are substantially under the control of the British agents appointed to reside at their respective courts. One would be inclined to think that their entire absorption into the British dominions would be desirable; but though this would most likely be beneficial in the end, it would, at first, occasion much discontent. The annexation of Oude, by Lord Dalhousie, notwithstanding its government was of the worst possible description, is believed to have been a prominent cause of the late rebellion.

In 1805, according to the official returns, the total number of British-born subjects in Hindostan was 31,000. Of these, 22,000 were in the army as officers and privates: the civil officers of government of all descriptions were about 2,000; the free merchants and mariners who resided in India under covenant, about 5,000; the officers and practitioners in the courts of justice, 300; the remaining 1,700 consisting of adventurers who had smuggled themselves out in various capacities. Since the date above mentioned, no detailed reports have been published; but there is no reason to believe that down to the recent outbreak the total number of British subjects in Hindostan exceeded 45,000 or 50,000, if so many; the removal of the restrictions on their settlement having, as already seen, added very few to the previous number.

The army required for the protection of these extensive provinces, and for the retaining them under due subordination, has been, with the exception of that of Russia, probably the largest standing army in the world. In 1796, it amounted to 55,000. In 1852, it consisted of the following effective force, in British, native, and contingent native troops: —

The Army of the British Government in India, including Her Majesty's Troops and the Company's European and Native Troops of all Arms, consisted, in 1852, of 289,529 men, viz.—

	Queen's Troops: Europeans.	Company's Troops.			Total.
		Europeans.*	Natives.	Total.	
Engineers	-	321	2,248	2,569	2,569
Artillery	-	7,436	9,004	16,440	16,440
Cavalry	3,664	469	30,851	31,320	34,984
Infantry	25,816	9,648	193,942	203,590	229,406
Medical	included in above.	1,111	652	1,763	1,763
Warrant officers	-	243	-	243	243
Veterans	-	700	3,424	4,124	4,124
	29,480	19,928	240,121	260,049	289,529

The contingent Troops of the Native States commanded by British Officers, and available, under Treaties, to the British Government, amount to about 32,000 men, viz.—

Hyderabad (Nizam's) auxiliary force	8,094	Brought forward	27,845
Gwalior (Scindia's) contingent	8,401	Malwa Bheel corps	648
Kotah contingent	1,148	Joudpore legion	1,246
Mysore horse	4,000	Meywar Bheel corps	1,054
Guzerat (Guicowar's) contingent	3,756	Colapore local horse	907
Bhopal contingent	829	Sawunt Warree local corps	611
Malwa united contingent	1,617	Total	32,311
Carried forward	27,845		

The military expenses amounted, in 1855-56, to 10,974,212*l.*, which differed but little from their amount for some years previously.

Each presidency has its separate army, commander-in-chief, staff, &c.; but the commander-in-chief of the supreme government has a general authority over the armies of all the presidencies. Among the native troops, called *Sepoys* (esquires), the infantry consists chiefly of Hindoos, and the cavalry of Mohammedans. The Hindoo soldiers of the Bengal army have been mostly of high caste; more than 20,000 being Brahmins. The soldiers of the Madras army are principally Rajpoots, and are reckoned the most persevering and hardy; but they observe their religious customs so strictly, that the least deviation from them might have a dangerous effect on their discipline. The Bombay soldiers are the most easily disciplined, being generally of the lower castes. The troops are not raised by any forced levy or conscription; military service in India is quite voluntary; and has been so popular that each regiment has had a number of supernumeraries ready to take the place of such soldiers as die or leave. The men have been well paid, clothed, and fed. The corporal punishment of Hindoos is not allowed, imprisonment being, in the Indian as in the French army, the principal engine by which discipline is kept up. Each company has an English captain, lieutenant, and ensign, as well as a native captain, lieutenant, and ensign. The latter, however, are under the command of British officers; so that, with the title and uniform of officers, they are, properly speaking, only subalterns or non-commissioned officers.

A good deal of conflicting evidence was given before the parliamentary committees,

* Including officers attached to native regiments.

in 1832 and 1833, as to the real state of the Indian army, and the degree of dependence to be placed on it. But none could have anticipated the entire, or all but the entire, defection of the Bengal native army, and the bloodshed and calamities by which it has been followed. A radical change will now, no doubt, be effected in the constitution and government of the native troops kept on foot in India. But, however modified, if we wish to retain possession of the country, we must in future depend less on them, and more on the European force distributed over its surface.

Two systems are open to us, on either of which we may attempt permanently to establish our power in India, viz.: 1st. By maintaining the laws and customs, and outwardly respecting the religious and other prejudices of the natives; and 2nd. By vigorously labouring to subvert all these, and to effect a moral and religious revolution by, in as far as possible, anglicising the country. We have hitherto acted on the first of these plans, and though its results have not certainly been of the most satisfactory description, it is the safest and most economical, the most in accordance with the tolerant spirit of the age, and it might, in the course of centuries, if our ascendancy were so far prolonged, lead to nearly the same results as the second. The latter, however, provided it were skilfully conducted, and that we were prepared to maintain a force in India adequate to suppress any disturbance that might take place, particularly at the outset of the plan, would accomplish its object in a much shorter period, and would probably be, in the end, the best for all parties, and more especially for the natives.

Advantage of India to England. — The popular opinions in regard to the vast advantages derived by England from the government of India are as fallacious as can well be imagined. It is doubtful, indeed, whether its advantages compensate for its disadvantages. India never has been, and never can be, a field for the resort of ordinary emigrants. It has, it is true, furnished an outlet for considerable numbers of well-educated young men of the middle classes, but the fortunes of those who return to spend the evening of their days in England, are far short of compensating for the outlay on themselves and on those who die in the service. And there is but little ground to think that the legitimate* trade we carry on with India is greater than it would have been had it continued subject to its native rulers: neither is it by any means improbable that the large public debt of India will, in the end, have to be partially or wholly provided for by this country.

We may flatter our vanity by dwelling on the high destiny and glory of providing for the regeneration and well-being of 180 millions of human beings. But we have yet to learn whether this be not an undertaking that is greatly beyond our means; and whether in attempting to elevate a debased and enervated race (supposing that we really make such an attempt), 12,000 miles from our shores, we may not be sapping the foundations of our own power and greatness.

Nothing during the recent outbreak has been more extraordinary than the fact of its having failed to bring forward a single native chief of talent. In every contest the inferiority even of the best drilled sepoys, when brought face to face with Europeans, has been most striking. No superiority of numbers gave them a chance of success. They continue to be precisely what they were at Plassey and Assaye.

2. *Revenue and Expenditure of the East India Company.*—The far greater part of the revenue of India is at present, and has always been, derived from the soil. The land has been held by its immediate cultivators generally in small portions, with a perpetual and transferable title; but they have been under the obligation of making an annual payment to government of certain portion of the produce of their farms, which might be increased or diminished at the pleasure of the sovereign; and which has, in almost all cases, been so large, as seldom to leave the cultivators more than a bare subsistence. Under the Mohammedan government, the *gross* produce of the soil was divided into equal or nearly equal shares, between the ryots, or cultivators, and the government. We regret we are not able to say that the British government has made any material deductions from this enormous assessment. Its oppressiveness, and the impossibility of assessing it on anything like a fair and sound principle, has done far more than anything else to prevent our ascendancy in India, and the comparative tranquillity and good order we have introduced, from having the beneficial effects that might have been anticipated. The cultivators throughout Hindostan are proverbially poor; and till the amount of the assessment they are subject to be effectually reduced, and they are secured from the interference of the revenue officers, they cannot be otherwise than wretched. They are commonly obliged to borrow money, to buy their seed and carry on their operations, at a high interest, on a species of mortgage over the ensuing crop. Their only object is to get subsistence — to be able to exist in the same obscure poverty as their forefathers. If they succeed in this, they are satisfied. Mr. Colebrooke, whose authority on all that relates to India is so deservedly high, mentions that the quantity

* We say *legitimate*, for a considerable portion of our trade with India is carried on upon account of the British troops serving in the Peninsula.

Abstract View of the Gross Revenues of India for the Years 1854-55, 1855-56, 1856-57, with an Estimate for 1857-58.

Heads of Revenue.	1854-55.	1855-56.	1856-57.	Estimate 1857-58.
Ordinary:	£	£	£	£
Land revenue	15,066,475	15,935,016	16,604,282	14,648,172
Tributes and subsidies from Native States	507,437	498,904	504,030	507,804
Excise duties in Calcutta	35,464	42,326	42,829	41,915
Sayer revenue	309,460	343,784	382,921	368,408
Abkarry ditto	737,333	797,225	859,131	704,102
Moturpha, Madras	105,196	101,889	101,642	102,192
Small farms and licenses, Madras	26,889	22,350	12,330	
Miscellaneous receipts in the revenue department	68,447	98,922	151,725	83,225
Customs	1,436,867	1,974,999	1,961,759	1,831,525
Salt (exclusive of customs duty on salt imported)	2,707,175	2,485,736	2,517,726	1,940,135
Opium	4,415,955	4,871,227	4,689,750	5,865,718
Post-office collections	188,871	219,795	166,181	177,706
Stamp duties	508,495	518,203	583,280	386,470
Mint receipts	75,792	184,903	246,009	267,616
Marine and Pilotage receipts	127,027	164,013	161,488	149,753
Judicial receipts	158,907	178,508	191,834	195,377
Revenues of Prince of Wales' Island, Singapore and Malacca	82,529	97,904	104,812	119,766
Revenues and receipts from the district of Coorg	15,893	20,477	19,013	18,750
Ditto ditto Nagpore Territory	*501,384			
Sale of presents	8,202	8,858	18,452	1,500
Interest on debts due by Native States, and on other accounts	93,397	85,705	60,506	59,587
Electric telegraph receipts	3,695	15,719	22,108	14,062
Toll and ferry collections		69,109	64,225	53,258
Miscellaneous receipts in the Civil and Political Departments	63,624	85,620	72,862	52,512
Total Ordinary Revenues	27,240,314	28,821,192	29,536,893	27,589,953
Other Receipts:				
Unclaimed estates transferred to the credit of government	8,432	12,971	4,475	4,406
Produce of assets of the late government in the Punjaub	2,693			
Gain by exchange with reference to the fixed rate of 1s. 10½d. the Company's Rupee on remittance transactions between India and London	60,796	57,136	161,486	49,855
Total Revenue receipts of all the Presidencies of India	27,312,235	28,891,299	29,702,854	27,644,214
Excess of Expenditure over Income	1,707,364	972,791	143,597	9,304,905
	29,019,599	29,864,090	29,846,451	36,949,119

Abstract Account of the Charges on the Revenue of India, including those disbursed in England, for the Years 1854-55, 1855-56, 1856-57, and by Estimate for 1857-58.

Expenditure.		1854-55.	1855-56.	1856-57.	Estimate, 1857-58.
		£	£	£	£
Repayments: allowances, refunds and drawbacks		101,606	79,202	89,281	51,214
Charges of collection and other payments in realisation of the revenues, including cost of salt and opium, viz.:					
Land, Sayer and Abkarry		2,260,241	2,170,715	2,150,870	1,934,088
Customs		169,498	116,609	107,115	128,085
Salt	Cost	243,274	261,113	275,624	291,168
	Charges	227,636	313,169	281,876	242,249

	Charges	162,594	161,869	151,100	130,924
Post-Office		250,359	241,115	278,473	322,913
Stamps		27,793	30,958	26,596	35,771
Prince of Wales' Island, Singapore and Malacca, charges of collection, &c.		4,332	4,032	3,718	4,440
Coorg ditto		9,657	8,572	7,317	7,350
Allowances and assignments payable out of the revenues, in accordance with treaties, or other engagements		1,277,955	1,244,498	1,044,843	1,009,138
Sinking fund for redemption of the bonds issued to the creditors of the late Rajah of Tanjore, &c.		46,956	47,789	25,360	0
Allowances to district and village officers and Enamdars, &c.		1,055,798	1,064,366	1,068,873	1,074,195
Payments to claimants upon the Registrar of the Supreme Court		6,866	4,940	1,881	656
Total of the direct claims and demands upon the revenues, including charges of collection and cost of salt and opium		6,945,655	6,743,952	6,452,762	6,101,970
Charges of the civil and political establishments, including contingent charges		2,302,429	2,276,262	2,446,856	3,949,859
Judicial and police charges		2,373,051	2,510,799	2,585,626	2,512,045
Buildings, roads, and other public works, exc. repairs and of military buildings		1,328,118	1,881,606	1,866,515	828,393
Military charges		9,701,408	10,019,436	9,958,759	13,428,426
Ditto buildings		490,860	397,935	162,291	684,137
Indian navy and other marine charges		536,507	598,070	622,313	703,150
Charges of Prince of Wales' Island, Singapore, and Malacca (exc. charges of collection, &c. out of the revenues)		63,667	64,512	62,351	65,228
Charges of the Nagpore Territory (exc. charges of collection, &c. out of the revenues)		*308,791			
Mint charges		48,708	62,573	78,751	80,673
Interest on debt		1,908,670	2,044,318	2,100,554	2,297,138
Total charges in India		26,007,864	26,599,461	26,316,778	30,651,019
Charges disbursed in England, including invoice value of stores consigned to India		3,011,735	3,264,629	3,529,673	6,298,100
		29,019,599	29,864,090	29,846,451	36,949,119

It is seen from these statements that the territorial revenues at the disposal of the East India Company equal those of the most powerful monarchies. At present they are greater than those of either Russia or Austria, being inferior only to those of Great Britain and France. Still, however, the Company's financial situation is not very prosperous. Vast as their revenue has been, their expenditure appears, in most instances, to have been still larger. In 1857 their debts in India, exclusive of their bond debts at home, amounted to above 52,000,000*l.* And the heavy expenditure occasioned by the late rebellion will increase the debt to 80 or 90 millions, or even to a larger sum.

* The receipts and disbursements of the Nagpore territory are included in 1855-56 and subsequent years under their separate heads of account.

of land occupied by each ryot, or cultivator, in Bengal, is commonly about 6 acres, and rarely amounts to 24; and it is obvious that the abstraction of a half or even a third the produce raised on such patches can leave their occupiers nothing more than the barest subsistence for themselves and their families. Indeed, Mr. Colebrooke tells us that the condition of ryots subject to his tax is generally inferior to that of a hired labourer, who receives the miserable pittance of 2 annas, or about 3 pence, a day of wages. The metayer system is the curse of every European country into which it has been introduced. And yet we seem to think that it may be advantageously acted upon in most parts of India!

Besides the land revenue *, a considerable revenue is derived in India from the monopolies of salt and opium, the sale of spirituous liquors, land and sea customs, post office, &c. Of these monopolies, the first is, in all respects, decidedly the most objectionable. Few things, indeed, would do more to promote the improvement of India, than the total abolition of this monopoly. An open trade in salt, with moderate duties, would, there can be no doubt, be productive of the greatest advantage to the public, and perhaps of an increase of revenue to government. The opium monopoly, though far less objectionable than the last, is, notwithstanding, very oppressive. It interferes with the industry of the inhabitants; those who are engaged in the cultivation of opium being obliged to sell their produce at prices arbitrarily fixed by the Company's agents. It would be useless to waste the reader's time by pointing out in detail the mischievous effects of such a system; they are too obvious not to arrest the attention of every one.

Account exhibiting the Total Gross and Net Revenue and Charges of the British Possessions in India for 15 Years from 1835-36 to 1849-50. (*Campbell's Modern India*, p. 419.)

Years.	Gross Revenue.	Nett Revenue.	Charges.	Surplus.	Deficit.
	£	£	£	£	£
1835-36	20,680,246	16,391,000	14,924,152	1,466,848	
1836-37	20,976,580	16,215,000	14,966,776	1,248,224	
1837-38	20,832,710	16,070,000	15,289,682	780,318	
1838-39	- -	16,320,000	16,701,000	- -	381,000
1839-40	- -	15,512,000	17,650,000	- -	2,138,000
1840-41	- -	16,141,000	17,895,000	- -	1,754,000
1841-42	- -	16,334,000	18,605,000	- -	1,771,000
1842-43	- -	17,485,000	18,831,000	- -	1,346,000

N.B.—The charges defrayed in England on account of India, including cost of home establishments, dividends on Company's stock, about 630,000*l.* a year; interest on home bond debt; invoice value of stores consigned to India; half pay, and other retired allowances, &c.

* For an account of the land revenue system of British India, see art. INDIA (BRITISH), in *Geog. Dict.*

However much this account of the financial concerns of our Eastern empire may be at variance with the exaggerated ideas entertained respecting it, as well by a large proportion of the people of England as by foreigners, it will excite no surprise in the mind of any one who has ever reflected on the subject. It is due, indeed, to the directors, to state, that though they have occasionally acted on erroneous principles, they have always exerted themselves to enforce economy in every branch of their expenditure, and to impose and collect their revenues in the best and cheapest manner. But though they have succeeded in repressing many abuses, it would be idle to suppose that they should ever have succeeded in entirely rooting them out. How can it be imagined, that strangers sent to India, conscious that they are armed with all the strength of government, placed under no real responsibility, exempted from the salutary influence of public opinion, fearing no effectual exposure through the medium of the press, and anxious only to accumulate a fortune, should not occasionally abuse their authority? or that they should manage the complicated and difficult affairs of a vast empire, inhabited by a race of people of whose language, manners, and habits they are almost wholly ignorant, with that prudence, economy, and vigilance, without which it were idle to expect that any great surplus revenue should ever be realised?

EBONY (Ger. *Ebenholz*; Du. *Ebbenout*; Fr. *Ebéne*; It. *Ebano*; Rus. *Ebenowoederewo*; Lat. *Ebenus*), a species of wood brought principally from the West and East Indies. It is exceedingly hard and heavy, of great durability, susceptible of a very fine polish, and on that account used in mosaic and other inlaid work. There are many species of ebony. The best is that which is jet black, free from veins and rind, very compact, astringent, and of an acrid pungent taste. This species (denominated by botanists *Diospyrus Ebenus*) is found principally in Madagascar, the Mauritius, and Ceylon. The centre only of the tree is said to be valuable. In 1857, we imported 718 tons of ebony, principally from the W. Indies, Cuba, the W. coast of Africa, &c. Besides the black, there are red, green, and yellow ebonies; but the latter are not so much esteemed as the former. Cabinet-makers are in the habit of substituting pear-tree and other woods dyed black, for genuine ebony; these, however, want its polish and lustre, though they hold glue better. The price of ebony varies, in the London market, from 5*l.* to 20*l.* a ton.

EEL (*Anguilla muræna* of Linnæus), a fish, the appearance of which is too well known to require any description. It is a native of almost all the waters of Europe, frequenting not only rivers but stagnant pools. Eels are, in many places, extremely abundant, particularly in Holland and Jutland. Several ponds are appropriated in England to the raising of eels; and considerable numbers are taken in the Thames and other rivers. But a large portion of the eels used in England are furnished by Holland. Indeed, very few except Dutch eels are ever seen in London; and even Hampton and Richmond are principally supplied by them. The trade is carried on by Dutch traders, who employ it in several small vessels, by means of which the market is regularly and amply provided for. A cargo of eels is supposed to average from 15,000 to 20,000 lbs. weight, and was charged down to 1853, when it was repealed, with a duty of 13*l.* 13*s.* In 1857, 74 cargoes were imported, of the estimated value of 22,092*l.*—(*Report on Channel Fisheries*, p. 93, &c.)

EGGS (Fr. *Œufs*; Lat. *Ova*) are too well known to require to be described. They differ in size, colour, taste, &c. according to the different species of birds that lay them. The eggs of poultry are those most commonly used as food; and form an article of very considerable importance in a commercial point of view. The eggs of plovers, which are esteemed a great delicacy, are, also, extensively used in London during a part of the season; and make, indeed, a perpetually recurring dish at fashionable dinners. Vast quantities of the eggs of poultry are brought from the country to London and other large towns; besides being very largely imported from the Continent. At this moment the trade in eggs forms no inconsiderable branch of our trade with France, and affords constant employment to a number of small vessels.

In 1854, the duty on eggs was fixed at 8*d.* per cubic foot (about 200), on those brought from a foreign country, and at 4*d.* per ditto on those brought from a British possession. The imports from the latter are quite inconsiderable, and it were much to be wished that the discriminating duty were abolished. It is a miserable as well as an offensive remnant of the protective system.

In 1858, we imported no fewer than 134,684,800 eggs, almost entirely from France, Belgium, and Spain, but especially France, which furnished by far the largest portion of the entire supply. In 1857, the duty produced 21,169*l.* Supposing the eggs brought from the foreigner to cost at an average 4*d.* per dozen, it follows, taking the imports at 134,600,000, that the people of the metropolis and Brighton (for it is into them that they are almost all imported) pay the French, Belgians, &c. about 186,000*l.* a year for eggs: and supposing that the freight, importers' and retailers' profit, duty, &c. raise their price to the consumer to 10*d.* a dozen, their total cost will be 466,000*l.*

Plovers' eggs are found in most parts of England, but especially in the Fens. Considerable supplies are, also, derived from Holland.

EJOO. See GOMUTI.

ELEMI, a resin obtained from the *Amyris elemifera*, a tree growing in different parts of America, Turkey, &c. It is obtained by wounding the bark in dry weather, the juice being left to thicken in the sun. It is of a pale yellow colour, semi-transparent; at first softish, but it hardens by keeping. Its taste is slightly bitter and warm. Its smell, which is, at first, strong and fragrant, gradually diminishes. It used to be imported in long roundish cakes, wrapped in flag leaves, but it is now usually imported in mats and chests. — (*Thomson's Chemistry.*)

ELEPHANTS' TEETH. See IVORY.

ELM (*Ulmus*), a forest tree common in Great Britain, of which there are several varieties. It attains to a great size, and lives to a great age: its trunk is often rugged and crooked, and it is of slow growth. The colour of the heart-wood of elm is generally darker than that of oak, and of a redder brown. The sap-wood is of a yellowish or brownish white, with pores inclined to red. It is in general porous, and cross-grained, sometimes coarse-grained, and has no larger septa. It has a peculiar odour. It twists and warps much in drying, and shrinks very much both in length and breadth. It is difficult to work, but is not liable to split, and bears the driving of bolts and nails better than any other timber. In Scotland, chairs and other articles of household furniture are frequently made of elm wood; but in England, where the wood is inferior, it is chiefly used in the manufacture of coffins, casks, pumps, pipes, &c. It is appropriated to these purposes because of its great durability in water, which also occasions its extensive use as piles and planking for wet foundations. The naves of wheels are frequently made of elm; those of the heavy waggons and drays of London are made of oak, which supports a heavier weight, but does not hold the spokes so firmly. Elm is said to bear transplanting better than any other large tree.—(*Tredgold's Principles of Carpentry*, pp. 201—203, &c.)

ELSINEUR, OR HELSINGOR, a town of Zealand, on the Sound, about 22 miles north of Copenhagen, lat. 56° 2′ 17″ N., lon. 12° 38′ 2″ E. Population about 8,000. Adjacent to Elsineur is the castle of Cronborg, which commands the entrance to the Baltic by the Sound. All merchant ships passing to and from the Baltic were obliged, previously to 1857, to salute Cronborg Castle by hoisting their colours when abreast of the same; and no merchant ship was allowed to pass the Sound without clearing out at Elsineur, and paying toll, according to the provisions in the treaties to that effect negotiated with Denmark by the different European powers. The first treaty with England having reference to this subject is dated in 1450. The Sound duties had their origin in an agreement between the King of Denmark on the one part, and the Hanse Towns on the other, by which the former undertook to construct lighthouses, landmarks, &c. along the Cattegat, and the latter to pay duty for the same. The duties have since been varied at different periods. But being a serious obstruction to navigation, and much objected to, they were finally repealed, in 1857, on compensation being made to Denmark according to the subjoined treaty.—(See *post*, p. 571.) The following plan of the Sound is taken from the Admiralty Chart, compiled by Danish authorities.—(See next page.)

Navigation of the Baltic.—This is exhibited in the following Account of the Number of Ships that have passed (going and returning) the Sound at different Periods, from the Year 1777 to 1856, specifying the Countries to which they belonged.

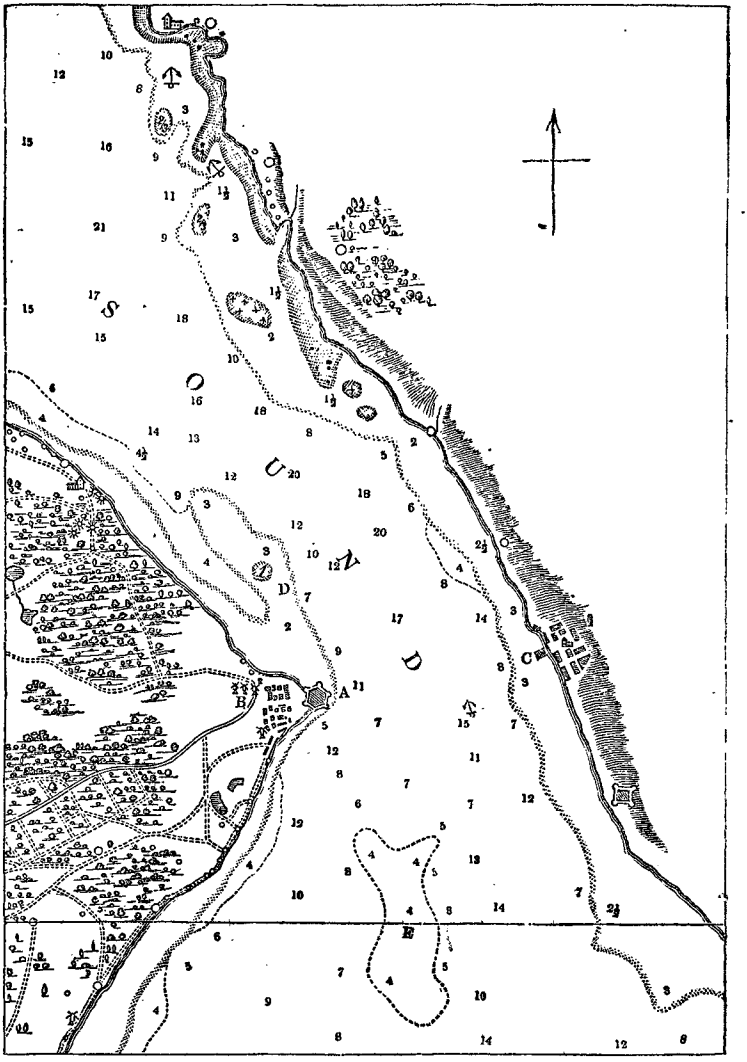
The statements in this Table for the years 1777 and 1780 are taken from the valuable work entitled



References to Plan.— A, Castle and light of Cronborg; B, Elsineur; C, Helsingborg in Sweden; D, the bank called the Lappen; E, the bank called the Disken. The soundings are in fathoms.

Voyage de Deux François au Nord de l'Europe (i. 360.); the other years are taken from the returns sent by the British consul at Elsineur, and other sources. We have seen no two returns of the shipping that pass the Sound that quite agree, though the differences are not very material. The British consul first began to send returns of the tonnage in 1831.

The Oder, Vistula, and other great rivers which flow into the Baltic, and the many large cities that are built on or near its shores, have made it the theatre of a very extensive commerce. In this respect its importance was much increased by the foundation of Petersburg, the trade of which is now of great extent and value. Raw products, including corn, timber, hemp and flax, tallow, hides, linseed, bristles, wool, &c., constitute the principal articles of export from the Baltic ports; colonial products, manufactured goods, dry stuffs, wine, salt, coal, &c., being among the principal articles of import. The leading ports, setting out from the Sound, are Copenhagen, Lubeck, Wismar, Rostock, Swinemunde, Dantzic, (which, next to Odessa, is the principal European port for the shipment of wheat,) Konigsberg, Memel, Riga, Petersburg, and Stockholm. The U. Kingdom has by far the largest portion of the foreign trade of the Baltic. This is evident from the fact of the British ships passing

the Sound greatly exceeding those of any other country. In 1857 we imported from the Baltic about 1,580,000 qrs. wheat, 980,000 do. barley, and 1,260,000 do. oats, exclusive of very large quantities of tallow, hemp and flax, timber, linseed, bristles, &c.

Pilotage, &c.—When ships come into Elsineur roads, or lie wind-bound near the Lappen, watermen come on board to inquire if the master will be carried ashore to clear; and in rough weather it is always best to make use of their services, their boats being generally very safe. The Danish authorities have published a table of rates, being the highest charge that can be made by the boatmen upon such occasions; but captains may bargain with them for as much less as they please. Most ships passing the Sound take on board pilots, the signal for one being a flag at the fore-topmast-head. Those bound for the Baltic take a pilot at Elsineur, who either carries the ship to Copenhagen, or Dragoe, a small town on the south-east extremity of the island of Amack, where she is clear of the grounds. Those leaving the Baltic take a pilot from Dragoe, who carries the ship to Elsineur. Sometimes, when the wind is fresh from the E. and S.E., it is impossible for a ship bound for Copenhagen or the Baltic to double the point of Cronborg; and in that case an Elsineur pilot is sometimes employed to moor the ship in the channel towards Kull Point on the Swedish shore, in lat. 56° 18′ 3″ N., lon. 12° 26′ E. But this does not often happen, as the Danish government employ steam tugs for the special purpose of bringing ships, in adverse weather, round Cronborg Point. The pilots are regularly licensed, so that, by employing them, the captain's responsibility is at an end. Their charges are fixed by authority, and depend on the ship's draught of water. We subjoin a copy of the tariff applicable to pilots taken on board at Elsineur to carry ships to Dragoe, Copenhagen, or Kull Point, with the sums both in silver and in Rigsbank paper dollars.

Pilotage from the 1st of April to the 30th of September.

N.B.—When a pilot is taken on board at Dragoe to carry a ship to Elsineur, the charge is the same as that given under the first head of the above column.—(*Archives du Commerce*, tome iii. p. 145.)

The *Monies*, *Weights*, and *Measures* of Elsineur are the same as those of Copenhagen (which see), except that the rixdollar is divided into 4 *orts* instead of 6 marcs: thus, 24 skillings make 1 ort; and 4 orts 1 rixdollar.

Treaty for Abolition of Sound Dues

Agreed to at Copenhagen, on the 14th March, 1857, by the following Powers:—

The Queen of the U. K. of Great Britain and Ireland, the Emperor of Austria, the King of the Belgians, the Emperor of the French, the King of Hanover, the Grand Duke Mecklenburg-schwerin, the Grand Duke of Oldenburg, the King of the Netherlands, the King of Prussia, the Emperor of Russia, the King of Sweden and Norway, and the Senates of the Free Hanseatic Cities of Lübeck, Bremen, and Hamburg, on the one part; and the King of Denmark, on the other part.

I. The King of Denmark engages to the Queen of the U. K. of Great Britain and Ireland, &c.

1. Not to levy any duty of customs, tonnage, lights, lighthouses, beacons, or any other charge whatever, either in regard to vessels or cargo, upon ships sailing from the North Sea to the Baltic, or *vice versâ*, on passing through the Belts or the Sound, whether they simply traverse the Danish waters, or whether they may be obliged by casualties or by commercial operations to anchor or lie to therein. No vessel whatever shall henceforward be subjected, under any pretext, to any detention or impediment whatever, in the passage of the Sound or of the Belts; but the King of Denmark expressly reserves to himself the right of regulating, by special arrangements, not involving visit or detention, the treatment in regard to duties and customs, of vessels belonging to Powers which are not parties to the present Treaty;

2. Not to levy upon such of the said vessels as may enter or depart from Danish ports, whether with cargo or in ballast, and whether they have or have not performed any operation of commerce therein,

nor upon their cargoes, any tax whatever to which such vessels or their cargoes would have been liable on account of the passage through the Sound and the Belts, and which is abolished by the stipulations of the preceding paragraph; and it is well understood that the taxes which shall be so abolished, and which consequently shall not be levied either in the Sound and the Belts or in Danish ports, shall never be reimposed indirectly by any augmentation, for that purpose, of the port and customs dues now existing, nor by the introduction, for that purpose, of fresh dues of navigation or customs; nor in any other manner whatever.

II. The King of Denmark engages, moreover, to the above-mentioned High Contracting Parties—

1. To preserve and maintain in the best state all the lights and lighthouses actually existing either at the entrance or in the approaches to his ports, harbours, roads, and rivers or canals, or along his coasts, as well as the buoys, beacons, and sea-marks actually existing, and serving to facilitate navigation in the Kattegat, the Sound, and the Belts;

2. To take into most serious consideration, as heretofore, in the general interest of navigation, the utility or expediency either of changing the position or the form of such lights, lighthouses, buoys, beacons, and sea-marks, or of increasing the number thereof; the whole without charge of any kind upon foreign vessels;

3. To superintend, as heretofore, the service of pilotage, the employment of which in the Kattegat, the Sound, and the Belts, shall at all times be at the option of captains and masters of vessels. It is understood that the charges for pilotage shall be moderate; that the rate thereof shall be the same for Danish vessels and for foreign vessels; and that the charge for pilotage shall be exacted from those vessels only which shall have voluntarily employed pilots.

4. To permit, without any restriction, any private individuals, Danes or foreigners, to establish and to station in the Sound and in the Belts, freely and on the same conditions, whatever nation they may belong to, tugs serving exclusively for the towing of vessels which may desire to employ them.

5. To extend to all the roads or canals which do now or may hereafter connect the North Sea and the Elbe with the Baltic, the exemption from dues *which is at present* accorded on some of those lines of communication, to the national or foreign goods enumerated in the following list:—

Agaric; amadou, not prepared; yellow amber; living animals of all kinds; antimony; live trees and shrubs; slates and slate-pencils; slate for roofing; silver in bars and for remelting; arsenic; asphaltum (bitumen Judaicum or glutinous bitumen); assafœtida; valonia; berries or seeds of juniper; brooms and rubbers (unless comprised under the article "brushes"); bamboo, Indian reeds or canes, and other rough reeds not manufactured; butter; spermaceti, and oil of spermaceti: grain; buckwheat, barley, oats, maize, rye, wheat, vetches: wood for the use of apothecaries; dye-woods; wood of all kinds; float-wood, wood to be used instead of cork as floats for fishing-nets; bole, white and red, and terra sigillata: borax, crude or refined; gut; bricks; pounded brick, or brick-powder; bronze or bell-metal; brushwood (*buisson*); bulbs or roots of flowers; cadmium; calamine; camphor; cantharides; floor-stones (*carreaux*); maps and charts; castoreum: ashes; potash, soda, and other kinds of ashes: wooden hoops; hemp, dressed or undressed; charcoal; teasles; wheelwright's work (*charronnage*); lime; rags; cement of all kinds; wax; isinglass; shells; corals; cordage; ox and cow horns (or horns of black cattle) as well as horn-tips; cotton: copper; rose-copper (Garkupher) (not forged or prepared by rollers) and copper in sheets for coining; waste of grain; grits as forage for cattle; bran, straw, chaff, and other waste of grain: elephant's teeth or ivory; teeth of the walrus (the sea-horse or sea-cow); law or business documents; staves, or stave wood; tortoise-shell; patterns of no value; scaleboards for binders shoemakers, furbishers, as well as split twigs; meerschaum: packages, old or used; casks, cases, trunks, chests, bags or sacks, and old wicker flasks, empty: emery; tin, raw, unwrought, and rasped tin (*étain râpé*); whalebone, whalefins, whalebone not split; flour or meal made of grain which is free from transit duty; feldspar, not pulverised; pig-iron, raw; bar-iron of all kinds; (hoop-iron, however, is liable to duty); beans; figures and statues in plaster; flowers and flower-plants; flores cassiæ (cassia buds); hay; dung and artificial manure; also, for example, patent manures, *noir animal*, &c.; (Chile saltpetre, sulphated ammoniac, and *similar* goods, are not exempt, notwithstanding they may be intended for manure. Plaster in powder is, however, exempt from transit duty, when certified as intended to be used only for manure); rough ice (natural); acorns; globes; tar and tarwater; seeds, hemp, flax, colza, and other seeds of all kinds, as well as seeds for the use of apothecaries, as, for example, fennel-seed (caraway and aniseed are liable to duty); clothes and baggage of travellers, household furniture, and implements which have been used, if they are transported in consequence of a change of residence; clothes or garments, which have been worn, transported, according to the judgment of the officers of customs, as travellers' baggage, without its being necessary for the owner to accompany them: fresh pot-herbs, as well as whortleberries or bilberries, strawberries, raspberries, gooseberries, red or spotted whortleberries (*airelles rouges ou ponctuées*), green gooseberries, hips, fresh grapes, horseradish, and onions: coal of all kinds, as well as coke and cinders; oil of hemp; oysters; reed for thatching; wool of all kinds; milk; brass, unwrought (not forged and not prepared by rollers); blubber, liver, and graves, for making train-oil; bacon; lentils; lees of wine in a dry state (sediment of wine); cork; flax, dressed or undressed; printed books with the prints which belong to them, bound or unbound; malt; manganese; manna; medals; metals, unwrought (bronze and other alloys of metals similar to brass), not forged, and not prepared by rollers; black lead; ore, not melted, of all kinds; minerals, and objects of natural history, such as earths, stones, and ores, plants and fruits, shells, insects, birds, and other animals, stuffed or preserved in spirit of wine for cabinets of natural history or scientific collections; models of all kinds; coin of all kinds; moss for packing and stuffing, and *coton silvestre*; music, manuscript or printed; musk; mother-of-pearl, rough or in shells; mats, used; galls; objects of art, such as statues, busts, bas-reliefs,; opium; gold in bars, and for remelting; peeled, shelled, or hulled barley, and groats made of grain which is free from transit duty; bones; osiers, peeled or unpeeled; rope-maker's work, including hemp-webs and fishing-nets; straw, and straw cut or chopped; skins, curried or not curried, without exception, such as fur-skins, calf or sheep-skins, cordovan, morocco, &c.; walrus skins (of the sea-horse or sea-cow); juniper-poles; pearls (real); pumice-stone; blood-stone or hæmatites; lime-stone; chalk-stone, and chalk in powder; plaster-stone; precious stones; stones of all kinds; veneers; platina unwrought; lead in pigs, blocks, and moulds, old lead for remelting, and old sheet-lead; feathers for beds, and down; hair of all kinds (including bristles, hair, and wool of pigs); hair curled or crisped is liable to duty: peas; fresh fish; pitch; potatoes; pozzolana; paper-cuttings and shavings, and waste of paper of all kinds; brown-red, or Spanish brown (*rouge brun*); blood; leeches; salt (except medicinal salts); steatite; tallow; sumach; pictures, as well as engravings, lithographies, and stanographies; tanner's bark or tan; Cologne earth, white; clay, such as pipe-clay, marl, English clay, china clay, fuller's earth, clay for refining sugar (or sugar clay), and other kinds of clay, argil, and marl, unless they fall under the class of colours: turtles; turf; tripoli; tiles; quills; sea-weed for packing and stuffing; Muscovy glass (*verre de Moscovie ou pierre spéculaire*); meat, fresh and salted; quicksilver; vehicles of all kinds, as well as railway carriages and tenders, (locomotives are liable to duty); detached parts of such vehicles and railway carriages (and dismounted vehicles and railway carriages) are liable to duty, unless they can be considered as wheelwright's work (*ouvrage de charron*); crab's eyes; zinc, raw, not wrought, or in cakes.

It is understood that if hereafter other articles should, on any line of communication whatever, be allowed a similar exemption, such exemption from transit duty shall be extended as a matter of right to all the lines of communication above specified.

6. To reduce on all the said roads or canals to a uniform rate, in proportion to weight, not exceeding sixteen (16) skillings Danish per 500 lbs. Danish, the transit duty on all goods which are now chargeable with duty, such charge not to be augmented by any other charge, under any denomination whatever.

In case the transit duties should be reduced below the rate above specified, the King of Denmark engages to place all the roads or canals which do or may connect the North Sea and the Elbe with the Baltic or its tributaries, on a footing of perfect equality with the most favoured roads which now exist, or may hereafter be established, upon his territory.

7. The King of Sweden and Norway having, by a special Convention concluded with the King of Denmark, contracted with the said King the engagement to maintain the lighthouses upon the coasts of Sweden and Norway, which serve to light and facilitate the passage of the Sound and the entrance of the Kattegat; the King of Denmark engages to make a definite arrangement with the King of Sweden and Norway, for ensuring for the future the maintenance and support of those lighthouses as hitherto, without any charge on that account upon vessels passing by the Sound and the Kattegat.

III. The engagements contained in the two preceding Articles shall come into operation from and after the 1st of April, 1857.

IV. As compensation for the sacrifices which the stipulations above-mentioned will impose upon the King of Denmark, the Queen of the U. K. of Great Britain and Ireland, and the other contracting parties engage, on their part, to pay to the King of Denmark, who accepts the same, a total sum of 30,476,325 rix-dollars, to be thus assessed:

	Rd. R. M.		*Rd. R. M.*
Upon Great Britain	10,126,855	Upon Mecklenburg	373,663
„ Austria	29,434	„ Norway	667,225
„ Belgium	301,455	„ Oldenburg	28,127
„ Bremen	218,585	„ Netherlands	1,408,060
„ France	1,219,003	„ Prussia	4,440,027
„ Hamburgh	107,012	„ Russia	9,739,993
„ Hanover	123,387	„ Sweden	1,590,503
„ Lübeck	102,996		

It is fully understood that each of the High Contracting Parties shall be eventually responsible only for the share placed to its own charge.

V. The sums specified in the preceding Article may, subject to the reservations hereinafter set forth in § 3 Art. VI, be paid in 20 years, by 40 equal half-yearly payments, which shall cover both capital and the interest accruing on instalments not due.

VI. Each of the High Contracting Powers engages to regulate and determine with the King of Denmark, by a separate and special Convention: —

1. The mode and the place of payment of the forty above-mentioned half-yearly instalments for the amount placed to its charge by Art. IV.

2. The mode and the rate of conversion into foreign money of the amounts of Danish currency specified in the same Art.

3. The conditions and the mode of entire or partial redemption which each Power expressly reserves to itself the right to effect at any time, in order to anticipate the total discharge of its share of the indemnity hereinbefore stipulated.

VII. The execution of the reciprocal engagements contained in the present Treaty, is expressly declared to be subject to the fulfilment of the formalities and rules prescribed by the constitutional laws of those of the High Contracting Parties for whom such a sanction is needful, and who engage to take measures for obtaining the same with the least possible delay.

VIII. The present Treaty shall be ratified, and the ratifications shall be exchanged at Copenhagen, before the 1st of April, 1857, or as soon as possible after that date.

In witness whereof the respective Plenipotentiaries have signed the same, and have affixed thereto the seals of their arms.

Done at Copenhagen the 14th March, 1857.

Then follow the signatures.

At the rate of 9 rix-dollars to 1 pound sterling, the total compensation awarded to Denmark by the above Treaty amounts to 3,386,258*l.*, of which the portion to be paid by Great Britain amounts to 1,125,206*l.*

The United States were not a party to the above Treaty. But they soon after (11th April, 1857) agreed to pay Denmark a compensation of 717,829 rix-dollars for the abolition of the dues levied on their ships. The determination of the United States not to submit to the payment of the dues was, in fact, the immediate cause of their abolition.

EMBARGO, an order issued by the government of a country to prevent the sailing of ships.

When hostilities are apprehended with a country, it is not unusual to take the questionable step of laying an embargo on its ships and goods: sometimes an embargo is imposed on vessels laden with articles of which it is thought expedient to prevent the exportation; sometimes it is resorted to, in cases of emergency, in the view of obtaining ships for the conveyance of troops or other purposes; and sometimes, as in the case of the embargoes of the U. States in 1807 and 1812, it is intended as a hostile demonstration. But an embargo for the prevention of intercourse with others rarely answers: that stoppage of trade, which it is intended to effect, is in general as injurious to those by whom the embargo is enacted, as to those against whom it is levelled.

EMERALD (Fr. *Éméraude*; Ger. *Smaragd*; It. *Smeraldo*; Lat. *Smaragdus*; Sp. *Esmeralda*), a precious stone in high estimation. It is distinguished from all other gems by its peculiar *emerald green* lustre, varying in intensity from the palest possible tinge to a full and deep colour, than which, as Pliny has truly stated, nothing can be more beautiful and pleasing; *nullius coloris aspectus jucundior est.* It emulates, he continues, if it do not surpass, the verdure of the spring; and the eye, satiated by the dazzling glare

of the more brilliant gems, or wearied by intense application, is refreshed and strengthened by the quiet enlivening green of the emerald. In Pliny's time, the best came from Scythia. Those met with in modern times do not often exceed the size of a walnut. Some of a much larger size, and perfect, have been found, but they are extremely rare. Nero used one as an eye-glass in surveying the combats of the gladiators. Hitherto it has always been found crystallised. Specific gravity from 2·6 to 2·77. — (*Plin. Hist. Nat.* lib. xxxvii. cap. 5. ; *Thomson's Chemistry.*)

"For the last two centuries and more, the only country known to yield emeralds is Peru, where they occur in Santa Fé, and in the valley of Tunca. Several large stones have appeared in Europe: about 2 years ago I cut one, exceeding 2 ounces in weight, for the Emperor of Morocco, but it was full of imperfections. The largest specimen known is an hexagonal crystal, nearly 6 inches long, and above 2 in diameter. This gem, however small, is so rarely seen perfect, that 'an emerald without a flaw' has passed into a proverb. A fine stone of 4 carats may be valued at 40*l.* or 50*l.*, or even more if very pure. Inferior stones of 1 or 2 carats are sold at from 40*s.* to 70*s.* per carat; and if smaller and defective, at 10*s.* or 15*s.* per carat. Fine emeralds are rare, and in such demand, that a particular suit has been known to have passed into the possession of a series of purchasers, and to have made the tour of Europe in the course of half a century." — (*Mawe on Diamonds*, 2d ed. p. 104.)

EMERY (Fr. *Emeril, Emeri;* Ger. *Smirgel;* It. *Smerglio, Smeregio;* Sp. *Esmeril;* Rus. *Nashdak;* Lat. *Smiris*), a mineral brought to Britain from Naxos, Smyrna, &c. It occurs also in Germany, Italy, and Spain. It is always in shapeless masses, and mixed with other minerals. Colour intermediate between greyish black and bluish grey. Specific gravity about 4. Lustre glistening and adamantine. Emery is extensively used in the polishing of hard bodies. Its fine powder is obtained by trituration. — (*Thomson's Chemistry.*)

Most part of the emery that is at present used in the arts comes from Asia Minor. In 1847, an American geologist, of the name of Smith, discovered a deposit of emery in the vicinity of Smyrna; and the supplies from thence are now very extensive. In 1854, for example, 44,950 cwts. (2,247 tons) of emery were exported from Smyrna, of which no fewer than 38,360 cwts. were destined for England. The value of the article was estimated at 2,257,250 piastres.—(See *Rolleston's* valuable *Report on Smyrna*, p. 89.)

ENGROSSING, "the buying up of corn and other dead victuals, with intent to sell them again." — (*Blackstone*, book iv. cap. 42.) We have shown, in another article, how absurd it is to suppose that this practice should have any injurious influence — (*antè*, p. 412). But, for a long time, most scarcities that occurred were either entirely ascribed to the influence of engrossers and forestallers — (see FORESTALLING) — or, at least, were supposed to be materially aggravated by their proceedings. In consequence, however, of the prevalence of more just and enlarged views upon such subjects, the statutes that had been made for the suppression and punishment of engrossing, forestalling, &c. were repealed in 1772. But notwithstanding this repeal, engrossing continues to be an indictable offence, punishable at common law by fine and imprisonment; though it is not at all likely, were an attempt made, that any jury would now be found ignorant or prejudiced enough to convict any one on such a charge.

ENTRY, BILL OF. See IMPORTATION.

ERMINE (Ger. *Hermelin;* Fr. *Hermine, Ermine;* Rus. *Gornostai*), a species of weasel (*Mustela candida* Lin.), abundant in all cold countries, particularly Russia, Norway, Lapland, &c., and producing a most valuable species of fur. In summer, the ermine is of a brown colour, and is called the *stoat.* It is in winter only that the fur has that beautiful snowy whiteness and consistence so much admired. — (See FURS.)

ESPARTO, a species of rush, the *Stipa tenacissima* of botanists. It is found in the southern provinces of Spain; and is particularly abundant on all the sterile, uncultivated, and mountainous districts of Valencia and Murcia. Beckmann (*Hist. of Invent.* vol. ii. p. 288. Eng. ed.) supposes, apparently with good reason, that the *Stipa tenacissima* is the plant described by Pliny under the name of *Sparta*, who ascribes its application to useful purposes to the Carthaginians.—(*Hist. Nat.* lib. xix. c. 2.) It is still used for the same purposes as in antiquity, being manufactured into cordage, shoes, matting, baskets, nets, mattresses, sacks, &c. Cables made of esparto are said to be excellent; being light, they float on the surface of the water, and are not, therefore, so liable as hempen cables to be cut or injured by a foul bottom. They are exclusively made use of in the Spanish navy. Esparto is largely consumed in the manufacture of *alpergates.* These are light shoes worn by the Valencian peasantry, having platted soles made either of esparto or hemp, but principally of the former. They are extremely cheap and commodious in hot climates; and besides being in extensive demand at home, used to be exported in immense quantities to both Indies: but since the emancipation of Spanish America, this trade has greatly fallen off. The Spanish peasantry have attained to wonderful dexterity

in the manufacture of esparto. "After having soaked the rush in water, the women and children, without either wheel or spindle, contrive to twist two threads at the same time. This they do by rubbing them between the palms of their hands, in the same manner as a shoemaker forms a thread upon his knees, with this difference, that one motion gives the twist to each thread, and, at the same time, unites them. To keep the threads asunder, the thumb of the right hand is interposed between them; and when that is wanted for other purposes, the left thumb supplies its place. Two threads being thus twisted into one of the bigness of a large crow-quill, 46 yards are sold for little more than $\frac{1}{4}d.$, the materials being worth about $\frac{1}{5}$th part of the price."—(*Townsend's Travels in Spain*, vol. iii. p. 177., see also p. 129.; *Fischer's Picture of Valencia*, Eng. ed. p. 92. and p. 57, &c.)

But despite the falling off in the exports of esparto shoes to America, this branch of industry has materially advanced of late years. At present (1858) about 50,000 women and young persons are said to be constantly employed in the country between Alicant and Almeria in the production of nets, mats, and other light articles, exclusive of great numbers of men engaged in the manufacture of cables, and cordage of all sorts. Latterly esparto matting has come into very extensive demand, and the various articles made from the rush, *esparto labrado*, form a considerable item in the exports of Spain. About 20,000 tons are annually shipped from Aguilas, near Carthagena, besides considerable quantities from the latter, Alicant, and Valencia. They are mostly sent to Marseilles; but partly, also, to other ports of Spain, and to England and other countries. Within the last few years machinery has been successfully introduced into various branches of the manufacture, and the demand for its produce is said to be rapidly extending.—(*Annales du Commerce Exterieur* for 1858.)

ESTRICH OR ESTRIDGE (Fr. *Duvet d'autruche*; It. *Penna matta di strozzo*; Sp. *Plumazo de avestrux*; Lat. *Struthionum plumæ molliores*), is the fine soft down which lies immediately under the feathers of the ostrich. The finest is used as a substitute for beaver in the manufacture of hats, and the coarser or stronger sort is employed in the fabrication of a stuff which resembles fine woollen cloth. Estridge is brought from the Levant, Italy, and other parts of the Mediterranean.

EUPHORBIUM (Ger. *Euphorbiengummi*; Lat. *Euphorbium*; Fr. *Euphorbe*; Arab. *Akal-nafzah*), the produce of a perennial plant, a native of Africa, and of many parts of India, &c. It is a concrete gum resin; is inodorous; when first chewed has little taste, but it soon gives a very acrid burning impression to the tongue, palate, and throat, which is very permanent, and almost insupportable. It is imported in serons, containing from 100 to 150 lbs. It is in small, hollow, forked pieces, often mixed with seeds and other impurities. —(*Thomson's Dispensatory.*)

EXCHANGE. In commerce, this term is generally used to designate that species of mercantile transactions, by which the debts of individuals residing at a distance from their creditors are cancelled without the transmission of money.

Among cities or countries having any considerable intercourse together, the debts mutually due by each other approach, for the most part, near to an equality. There are at all times, for example, a considerable number of persons in London indebted to Hamburg; but, speaking generally, there are about an equal number of persons in London to whom Hamburg is indebted. And hence, when A. of London has a payment to make to B. of Hamburg, he does not remit an equivalent sum of money to the latter; but he goes into the market and buys a *bill* upon Hamburg, that is, he buys an order from C. of London addressed to his debtor D. of Hamburg, requesting him to pay the amount to A. or his order. A., having indorsed this bill or order, sends it to B., who receives payment from his neighbour D. The convenience of all parties is consulted by a transaction of this sort. The debts due by A. to B., and by D. to C., are extinguished without the intervention of any money. A. of London pays C. of ditto, and D of Hamburg pays B. of ditto. The debtor in one place is substituted for the debtor in another; and a postage or two, and the stamp for the bill, form the whole expenses. All risk of loss is obviated.

A bill of exchange may, therefore, be defined to be an order addressed to some person residing at a distance, directing him to pay a certain specified sum to the person in whose favour the bill is drawn, or his order. In mercantile phraseology, the person who draws a bill is termed the *drawer*; the person in whose favour it is drawn, the *remitter*; the person on whom it is drawn, the *drawee*; and after he has accepted, the *acceptor*. Those persons into whose hands the bill may have passed previously to its being paid, are, from their writing their names on the back, termed *indorsers*; and the person in whose possession the bill is at any given period, is termed the *holder* or *possessor*.

The negotiation of *inland* bills of exchange, or of those drawn in one part of Great Britain and Ireland on another, is entirely in the hands of bankers, and is conducted in the manner already explained. —(See *antè*, p. 66.) Bills drawn by the merchants

of one country upon another are termed *foreign* bills of exchange, and it is to their negotiation that the following remarks principally apply.

I. *Par of Exchange.* — The *par* of the currency of any two countries means, among merchants, the equivalency of a certain amount of the currency of the one in the currency of the other, *supposing the currencies of both to be of the precise weight and purity fixed by their respective mints.* Thus, according to the mint regulations of Great Britain and France, 1*l.* sterling is equal to 25 fr. 20 cent., which is said to be the par between London and Paris. And the exchange between the two countries is said to be at par when bills are negotiated on this footing; that is, for example, when a bill for 100*l.* drawn in London is worth 2,520 fr. in Paris, and conversely. When 1*l.* in London buys a bill on Paris for more than 25 fr. 20 cent., the exchange is said to be in favour of London and against Paris; and when, on the other hand, 1*l.* in London will not buy a bill on Paris for 25 fr. 20 cent., the exchange is against London and in favour of Paris.*

II. *Circumstances which determine the Course of Exchange.* — The exchange is affected, or made to diverge from par, by two classes of circumstances: *first*, by any discrepancy between the actual weight or fineness of the coins, or of the bullion for which the substitutes used in their place will exchange, and their weight or fineness as fixed by the mint regulations; and, *secondly*, by any sudden increase or diminution of the bills drawn in one country upon another.

1. It is but seldom that the coins of any country correspond exactly with their mint standard; and when they diverge from it, an allowance corresponding to the difference between the actual value of the coins and their mint value must be made in determining the *real* par. Thus, if, while the coins of Great Britain corresponded with the mint standard in weight and purity, those of France were either 10 per cent. worse or debased below the standard of her mint, the exchange, it is obvious, would be at *real* par when it was *nominally* 10 per cent. against Paris, or when a bill payable in London for 100*l.* was worth in Paris 2,772 fr. instead of 2,520 fr. In estimating the real course of exchange between any 2 or more places, it is always necessary to attend carefully to this circumstance; that is, to examine whether their currencies be all of the standard weight and purity, and if not, how much they differ from it. When the coins circulating in a country are either so worn or rubbed as to have sunk considerably below their mint standard, or when paper money is depreciated from excess or want of credit, the exchange is at real par only when it is against such country to the extent to which its coins are worn or its paper depreciated. When this circumstance is taken into account, it will be found that the exchange during the latter years of the war, though apparently very much against this country, was really in our favour. The depression was nominal only; being occasioned by the great depreciation of the paper currency in which bills were paid.

2. Variations in the actual course of exchange, or in the price of bills, arising from circumstances affecting the currency of either of two countries trading together, are *nominal* only: such as are *real* grow out of circumstances affecting their trade.

When two countries trade together, and each buys of the other commodities of precisely the same value, their debts and credits will be equal, and, of course, the *real* exchange will be at par. The *bills* drawn by the one will be exactly equivalent to those drawn by the other, and their respective claims will be adjusted without requiring the transfer of bullion or any other valuable produce. But it very rarely happens that the debts reciprocally due by any two countries are equal. There is almost always a balance owing on the one side or the other; and this balance must affect the exchange. If the debts due by London to Paris exceeded those due by Paris to London, the competition in the London market for bills on Paris would, because of the comparatively great amount of payments our merchants had to make in Paris, be greater than the compe-

* The statements in the text explain what is usually meant by the *par* of exchange; but its exact determination, or the ascertaining of the precise equivalency of a certain amount of the currency of one country in the currency of another, is exceedingly difficult. If the standard of one be gold and that of another silver, the par must necessarily vary with every variation in the relative values of these metals. This, however, is not all: even where two countries use the same metal for a standard, its value may be greater in one than in the other, and in estimating the par of exchange between them this difference must be taken into account. In illustration of this we may take the case of France and Mexico: they both use silver for a standard; but silver being largely produced in Mexico, is always cheaper there than in France, and is extensively imported into the latter; and taking the cost of this importation at 2 or 3 per cent., it is plain that the exchange would be really at par when it appeared to be 2 or 3 per cent. against Mexico. But the value of the precious metals, even in contiguous countries, is always exposed to fluctuations from the over issue or withdrawal of paper, from circumstances affecting the balance of payments, &c., as shown in the text. It is obvious, therefore, that it is all but impossible to say, by merely looking at the mint regulations of any two or more countries, and the prices of bullion in each, what is the par of exchange between them. And, luckily, this is not necessary. The importation and exportation of bullion is the real test of the exchange. If bullion be stationary, neither flowing into nor out of a country, its exchanges may be truly said to be at par; and, on the other hand, if there be an efflux of bullion from a country, it is a proof that the exchange is against it, and conversely if there be an influx of bullion into a country.

tition in Paris for bills on London; and, consequently, the real exchange would be in favour of Paris and against London.

The cost of conveying bullion from one country to another forms the limit within which the rise and fall of the *real* exchange between them must be confined. If 1 per cent. sufficed to cover the expense and risk attending the transmission of money from London to Paris, it would be indifferent to a London merchant whether he paid 1 per cent. premium for a bill of exchange on Paris, or remitted money direct to that city. If the premium were less than 1 per cent., it would clearly be his interest to make his payments by bills in preference to remittances: and that it could not exceed 1 per cent. is obvious; for every one would prefer remitting money, to buying a bill at a greater premium than sufficed to cover the expense of a money remittance. If, owing to the breaking out of hostilities between the two countries, or to any other cause, the cost of remitting money from London to Paris were increased, the fluctuations of the *real* exchange between them *might* also be increased. For the limits within which such fluctuations *may* range, correspond in all cases with the cost of making remittances in cash.

Fluctuations in the *nominal* exchange, that is, in the value of the currencies of countries trading together, have no effect on foreign trade. When the currency is depreciated, the premium which the exporter of commodities derives from the sale of the bill drawn on his correspondent abroad, is only equivalent to the increase in the price of the goods exported, occasioned by this depreciation. But when the premium on a foreign bill is a consequence, not of a fall in the value of money, but of a deficiency in the supply of bills, there is no rise of prices; and in these circumstances the unfavourable exchange operates as a stimulus to exportation. As soon as the *real* exchange diverges from *par*, the mere inspection of a price current is no longer sufficient to regulate the operations of the merchant. If it be unfavourable, the premium which the exporter will receive on the sale of his bill must be included in the estimate of the profit he is likely to derive from the transaction. The greater that premium, the less will be the difference of prices necessary to induce him to export. And hence an unfavourable *real* exchange has an effect exactly the same with what would be produced by granting a bounty on exportation equal to the premium on foreign bills.

But for the same reason that an unfavourable *real* exchange increases exportation, it proportionally diminishes importation. When the exchange is really unfavourable, the price of commodities imported from abroad must be so much lower than their price at home, as not merely to afford, exclusive of expenses, the ordinary profit of stock on their sale, but also to compensate for the premium which the importer must pay for a foreign bill, if he remit one to his correspondent, or for the discount, added to the invoice price, if his correspondent draw upon him. A less quantity of foreign goods will, therefore, suit our market when the *real* exchange is unfavourable; and fewer payments having to be made abroad, the competition for foreign bills will be diminished, and the *real* exchange rendered proportionally favourable. In the same way, it is easy to see that a favourable *real* exchange must operate as a *duty* on exportation, and as a *bounty* on importation.

It is thus that fluctuations in the *real* exchange have a necessary tendency to correct themselves. They can never, for any considerable period, *exceed* the expense of transmitting bullion from the debtor to the creditor country. But the exchange cannot continue either permanently favourable or unfavourable to this extent. When favourable, it corrects itself by restricting exportation and facilitating importation; and when unfavourable, it produces the same effect by giving an unusual stimulus to exportation, and by throwing obstacles in the way of importation. The true PAR forms the centre of these oscillations; and although the thousand circumstances which are daily and hourly affecting the state of debt and credit, prevent the ordinary course of exchange from being almost ever precisely at *par*, its fluctuations, whether on the one side or the other, are confined within certain limits, and have a constant tendency to disappear.

This natural tendency which the exchange has to correct itself, is powerfully assisted by the operations of the bill-merchants.

England, for example, might owe a large excess of debt to Amsterdam; yet, as the aggregate amount of the debts *due* by a commercial country is generally balanced by the amount of those which it has to receive, the deficiency of bills on Amsterdam in London would most probably be compensated by a proportional redundancy of those on some other place. Now, it is the business of the merchants who deal in bills, in the same way as of those who deal in bullion or any other commodity, to buy them where they are cheapest, and to sell them where they are dearest. They would, therefore, buy up the bills drawn by other countries on Amsterdam, and dispose of them in London; and by so doing, would prevent any great fall in the price of bills on Amsterdam in those countries in which the supply exceeded the demand, and any great rise in Great Britain and those countries in which the supply happened to be deficient. In the trade between Italy and this country, the bills drawn on Great Britain amount almost inva-

riably to a greater sum than those drawn on Italy. The bill-merchants, however, by buying up the excess of the Italian bills on London, and selling them in Holland, and other countries indebted to England, prevent the *real* exchange from ever becoming very much depressed.

III. *Negotiation of Bills of Exchange.*—Bills of exchange may be made payable on *demand* (the invariable term of payment in the case of checks), at *sight*, at a certain specified time *after sight* or *after date*, or at *usance*, which is the usual term allowed by the custom or law of the place where the bill is payable. In most countries, though not in all, a few days are allowed for payment beyond the term when the bill becomes due. These are denominated *days of grace*, and vary in different parts. In Great Britain and Ireland, 3 days' grace are allowed on all bills except those payable on demand, which must be paid as soon as presented. The following is a statement of the usance and days of grace, if any, for bills drawn upon some of the principal commercial cities:—

[*m* | *d*, *m* | *s*, *d* | *d*, *d* | *s*, *d* | *a* respectively denote *months after date, months after sight, days after date, days after sight, days after acceptance.*]

London on	Usance.	Days of Grace.	London on	Usance.	Days of Grace.	London on	Usance.	Days of Grace.

In the dating of bills, the new style is used in every country in Europe, with the exception of Russia.

In London, bills of exchange are bought and sold by brokers, who go round to the principal merchants and discover whether they are buyers or sellers of bills. A few of the brokers of most influence, after ascertaining the state of the relative supply and demand for bills, suggest a price at which the greater part of the transactions of the day are settled, with such deviations as particular bills, from their being in very high or low credit, may be subject to. The price fixed by the brokers is that which is published in Wittenhall's List; but the first houses generally negotiate their bills on $\frac{1}{8}$, 1, $1\frac{1}{2}$, and 2 *per cent.* better terms than those quoted. In London and other great commercial cities, a class of middlemen speculate largely on the rise and fall of the exchange; buying bills when they expect a rise, and selling them when a fall is anticipated.

It is usual in drawing foreign bills of exchange, to draw them in sets, or duplicates, lest the first should be lost or miscarry. When bills are drawn in sets, each must contain a condition that it shall be payable only while the others remain unpaid; thus, the first is payable only, "second and third unpaid;" the second, "first and third being unpaid;" and the third, "first and second unpaid."

The Stamps on Bills of Exchange have been fixed by the 17 & 18 Vict. c. 83., as follows, viz.:—

Inland bill of exchange, draft, or order for the payment to the bearer, or to order, at any time otherwise than on demand, of any sum of money

£			£	Duty. £ s. d.
Not exceeding	-	-	5	0 0 1
Exceeding	5	and not exceeding	10	0 0 2
—	10	—	25	0 0 3
—	25	—	50	0 0 6
—	50	—	75	0 0 9
—	75	—	100	0 1 0
—	100	—	200	0 2 0
—	200	—	300	0 3 0
—	300	—	400	0 4 0
—	400	—	500	0 5 0
—	500	—	750	0 7 6
—	750	—	1,000	0 10 0
—	1,000	—	1,500	0 15 0
—	1,500	—	2,000	1 0 0
—	2,000	—	3,000	1 10 0
—	3,000	—	4,000	2 0 0
—	4,000 and upwards	-	-	2 5 0

Foreign bill of exchange drawn in, but payable out of, the U. K.,

If drawn singly or otherwise than in a set of three or more, the same duty as on an inland bill of the same amount and tenor.

If drawn in sets of three or more, for every bill of each set, where the sum payable thereby shall not exceed - - - - £25 0 0 1

Exceeding	£25	and not exceeding	50	0 0 2
—	50	—	75	0 0 3
—	75	—	100	0 0 4
—	100	—	200	0 0 8
—	200	—	300	0 1 0
—	300	—	400	0 1 4
—	400	—	500	0 1 8
—	500	—	750	0 2 6

—	3,000	—	4,000	2 0 0
—	4,000 and upwards	-	-	2 5 0

The stat. 17 & 18 Vict. c. 83. directs that the duties in respect of bills of exchange drawn out of the U. K. shall be denoted by proper adhesive stamps, to be obtained from the Commissioners of Inland Revenue, and applied to the same.—§ 3.

The holder of a bill drawn out of the U. K. shall affix the proper adhesive stamp to the same before negociating it, under a penalty of 50*l.*—§ 5.

Persons drawing a bill purporting to be one of a set, and not drawing the whole number of the set, shall forfeit 100*l.*; and persons receiving such bills shall not be entitled to recover on the same.—§ 6.

* In France, days of grace were suppressed by the *Code de Commerce*, art. 135.

† In Austria, bills payable at sight, or on demand, or at less than 7 days after sight or date, are not allowed any days of grace. In Petersburg bills after date are allowed ten days' grace, but after sight only 3 days do.

No one acquainted with the fundamental rules of arithmetic can have any difficulty whatever in estimating how much a sum of money in one country is worth in another, according to the state of the exchange at the time. The common arithmetical books abound in examples of such computations. But in conducting the business of exchange, a direct remittance is not always preferred. When a merchant in London, for example, means to discharge a debt due by him in Paris, it is his business to ascertain not only the state of the direct exchange between London and Paris, and, consequently, the sum which he must pay in London for a bill on Paris equivalent to his debt, but also the state of the exchange between London and Hamburg, Hamburg and Paris, &c.; for it frequently happens that it may be more advantageous for him to buy a bill on Hamburg, Amsterdam, or Lisbon, and to direct his agent to invest the proceeds in a bill on Paris, rather than remit directly to the latter. This is termed the ARBITRATION of exchange. An example or two will suffice to show the principle on which it is conducted.

Thus, if the exchange between London and Amsterdam be 35*s.* Flemish (old coinage) per pound sterling, and between Paris and Amsterdam 1*s.* 6*d.* Flemish per franc, then, in order to ascertain whether a direct or indirect remittance to Paris would be most advantageous, we must calculate what would be the value of the franc in English money if the remittance were made through Holland; for if it be less than that resulting from the direct exchange, it will obviously be the preferable mode of remitting. This is determined by stating, as 35*s.* Flem. (the Amsterdam currency in a pound sterling): 1*s.* 6*d.* Flem. (Amsterdam currency in a franc):: 1*l.* : 10*d.* the proportional or *arbitrated* value of the franc. — Hence, if the English money, or bill of exchange, to pay a debt in Paris, were remitted by Amsterdam, it would require 10*d.* to discharge a debt of a franc, or 1*l.* to discharge a debt of 24 francs: and therefore, if the exchange between London and Paris were at 24, it would be indifferent to the English merchant whether he remitted directly to Paris, or indirectly *viâ* Amsterdam; but if the exchange between London and Paris were *above* 24, then a direct remittance would be preferable; while, if, on the other hand, the direct exchange were less than 24, the indirect remittance ought as plainly to be preferred.

"Suppose," to borrow an example from Kelly (*Universal Cambist*, vol. ii. p. 137.) "the exchange of London and Lisbon to be at 68*d.* per milree, and that of Lisbon on Madrid 500 rees per dollar, the arbitrated price between London and Madrid is 34*d.* sterling per dollar; for, as 1,000 rees : 68*d.* :: 500 rees : 34*d.* But if the direct exchange of London on Madrid be 35*d.* sterling per dollar, then London, by remitting directly to Madrid, must pay 35*d.* for every dollar; whereas, by remitting through Lisbon, he will pay only 34*d.*: it is therefore the interest of London to remit indirectly to Madrid through Lisbon. On the other hand, if London draws directly on Madrid, he will receive 35*d.* sterling per dollar; whereas, by drawing indirectly through Lisbon, he would receive only 34*d.*; it is therefore the interest of London to draw directly on Madrid. Hence the following rules: —

"1. Where the certain price is given, draw through the place which produces the lowest arbitrated price, and remit through that which produces the highest.

"2. Where the uncertain price is given, draw through that place which produces the highest arbitrated price, and remit through that which produces the lowest."

In compound arbitration, or when more than 3 places are concerned, then, in order to find how much a remittance passing through them all will amount to in the last place, or, which is the same thing, to find the arbitrated price between the first and the last, we have only to repeat the different statements in the same manner as in the foregoing examples.

Thus, if the exchange between London and Amsterdam be 35*s.* Flem. for 1*l.* sterling; between Amsterdam and Lisbon 42*d.* Flem. for 1 old crusade; and between Lisbon and Paris 480 rees for 3 francs: what is the arbitrated price between London and Paris?

In the first place, as 35*s.* Flem. : 1*l.* :: 42*d.* Flem. : 2*s.* sterling = 1 old crusade.

Second, as 1 old crusade, or 400 rees : 2*s.* sterling :: 480 rees : 2*s.* 4·8*d.* sterling = 3 francs.

Third, as 2*s.* 4·8*d.* sterling : 3 francs :: 1*l.* sterling : 25 francs, the arbitrated price of the pound sterling between London and Paris.

This operation may be abridged as follows: —

1*l.* sterling	=	1*l.* sterling.
3½ shillings Flem.	=	35*s.* Flemish.
1 old crusade	=	1 old crusade.
480 rees	=	400 rees.
	=	3 francs.

Hence $\frac{35 \times 400 \times 3}{480 \times 3\frac{1}{2}} = \frac{4{,}200}{168} = 25$ francs.

This abridged operation evidently consists in arranging the terms so that those which would form the divisors in continued statements in the Rule of Three are multiplied together for a common divisor, and the other terms for a common dividend. The ordinary arithmetical books abound with examples of such operations.

The following account of the manner in which a very large transaction was actually conducted by indirect remittances, will sufficiently illustrate the principles we have been endeavouring to explain.

In 1804, Spain was bound to pay to France a large subsidy; and, in order to do this, three distinct methods presented themselves: —

1. To send dollars to Paris by land.
2. To remit bills of exchange directly to Paris.
3. To authorise Paris to draw directly on Spain.

The first of these methods was tried, but it was found too slow and expensive; and the second and third plans were considered likely to turn the exchange against Spain. The following method by the indirect, or circular exchange, was, therefore, adopted.

A merchant, or *banquier*, at Paris, was appointed to manage the operation, which he thus conducted: — He chose London, Amsterdam, Hamburg, Cadiz, Madrid, and Paris, as the principal hinges on which the operation was to turn; and he engaged correspondents in each of these cities to support the circulation. Madrid and Cadiz were the places in Spain from whence remittances were to be made; and dollars were, of course, to be sent to where they bore the highest price, for which bills were to be procured on Paris, or on any other places that might be deemed more advantageous.

The principle being thus established, it only remained to regulate the extent of the operation, so as not to issue too much paper on Spain, and to give the circulation as much support as possible from real business. With this view, London was chosen as a place to which the operation might be chiefly directed, as the price of dollars was then high in England; a circumstance which rendered the proportional exchange advantageous to Spain.

The business was commenced at Paris, where the negotiation of drafts issued on Hamburg and Amsterdam served to answer the immediate demands of the state; and orders were transmitted to these places to draw for the reimbursements on London, Madrid, or Cadiz, according as the course of exchange was most favourable. The proceedings were all conducted with judgment, and attended with complete

success. At the commencement of the operation, the course of exchange of Cadiz on London was 36*d.*; but by the plan adopted, Spain got 39½*d.*, or above 8 *per cent.* by the remittance of dollars to London, and considerable advantages were also gained by the circulation of bills through the several places on the Continent. — (*Kelly's Cambist*, vol. ii. p. 168.; *Dubost's Elements of Commerce*, 2d ed. p. 228.)

Table specifying the Value of the Monies of Account of the principal Places with which this Country has Exchange Transactions, taking Silver at 5*s.* an oz., and specifying also the *Par* of Exchange with such Places on this Hypothesis. — (Abstracted from *Tate's Modern Cambist*, to which the reader is referred for farther explanations).

					Par of Exchange.
Petersburg	100 copecks	= 1 rouble	= 3*s.* 1½*d.* giving	6 roub. 40 cop.	= 1*l.*
Berlin	30 sil. groschen	= 1 Pruss. doll.	= 2*s.* 10⅝*d.* —	6 doll. 27 s. g.	= 1*l.*
Copenhagen	96 skillings	= 1 Rig. doll.	= 2*s.* 2½*d.* —	9 doll. 10 sk.	= 1*l.*
Hamburg	16 schillings	= 1 mark	= 1*s.* 5½*d.* —	13 mks. 10½ sch.	= 1*l.*
Amsterdam	100 centimes	= 1 florin	= 1*s.* 8*d.* —	11 fl. 97 cents	= 1*l.*
Antwerp	100 centimes	= 1 florin	= 1*s.* 8*d.* —	11 fl. 97 cents	= 1*l.*
Paris	100 centimes	= 1 franc	= 9½*d.* —	25 fr. 57 cents	= 1*l.*
Frankfort	24½ guld. or flor.	= 1 mark	= 1*s.* 7⅞*d.* —	12⅝ guldens	= 1*l.*
Vienna	60 kreusers	= 1 florin	= 2*s.* 0⅘*d.* —	9 fl. 50 kr.	= 1*l.*
Venice	100 centisimi	= 1 lira Austriaca	= 8·13*d.* —	29 li. 52 cent.	= 1*l.*
Genoa	100 centisimi	= 1 lira Nuova	= 9¾*d.* —	25 li. 57 cent.	= 1*l.*
Leghorn	100 centisimi	= 1 lira Toscana	= 7·82*d.* —	30 li. 69 cent.	= 1*l.*
Madrid	8 reals	= 1 dollar of Plate	= 3*s.* 1½*d.* —	6 doll. 2⅜ reals	= 1*l.*
Lisbon	1000 reis	= 1 milreis	= 4*s.* 8*d.* —	4 mil. 285 reis	= 1*l.*
New York	100 cents	= 1 dollar	= 4*s.* 2*d.* —	4 doll. 80 cents	= 1*l.*
Rio Janeiro	1000 reis	= 1 milreis	= 2*s.* 7*d.* —	7 mil. 777 reis	= 1*l.*
Havannah	100 cents	= 1 dollar	= 4*s.* 6$\frac{13}{222}$*d.* —	4 doll. 44 cents	= 1*l.*

It is easy from this table to calculate the value of any of the above coins, taking silver at 5*s.* 2*d.*, 5*s.* 6*d.* an oz., or any other price, and thence to deduce the par of exchange at such rates. The values of the coins in the Table of Coins (*antè*, p. 328.) are estimated on the hypothesis that silver is worth 5*s.* 2*d.* an oz.

Law of Bills of Exchange.

The chief legal privileges appertaining to bills are, first, that though only a simple contract, yet they are always presumed to have been originally given for a good and valuable consideration; and, secondly, they are assignable to a third person not named in the bill or party to the contract, so as to vest in the assignee a right of action, in his own name; which right of action, no release by the drawer to the acceptor, nor set-off or cross demand due from the former to the latter, can affect.

All persons, whether merchants or not, being legally qualified to contract, may be parties to a bill. But no action can be supported against a person incapable of binding himself, on a bill drawn, indorsed, or accepted by such incapacitated person; at the same time the bill is good against all other competent parties thereto.

Bills may be drawn, accepted, or indorsed by the party's agent or attorney verbally authorised for the purpose. When a person has such authority, he must either write the name of his principal, or state in writing that he draws, &c. as agent, thus: "per procuration, for A. B."

Where one of several partners accepts a bill drawn on the firm, for himself and partners, or in his own name only, such acceptance binds the partnership if it concern the trade. But the acceptance of one of several partners on behalf of himself and partners, will not bind the others, if it concern the acceptor only in a separate and distinct interest; and the holder of the bill, at the time he becomes so, was aware of that circumstance. If, however, he be a *bonâ fide* holder for a sufficient consideration, and had no such knowledge at the time he first became possessed of the bill, no subsequently acquired knowledge of the misconduct of the partner in giving such security will prevent him from recovering on such bills against all the partners.

Although no precise form of words is required to constitute a bill of exchange or promissory note, yet it is necessary that it should be *payable at all events*, and not depend on any contingency; and that it be made for the payment of money only, and not for payment of money and performance of some other act, as the delivery of a horse, or the like.

If, however, the event on which the payment is to depend must inevitably happen, it is of no importance how long the payment may be in suspense; so a bill is negotiable and valid if drawn payable 6 weeks after the death of the drawer's father, or payable to an infant when he shall become of age.

Any material alteration of a bill after it has been drawn, accepted, or indorsed, such as the date, sum, or time of payment, will invalidate it: but the mere correction of a mistake, as by inserting the words "or order," will have no such effect.

The negotiability of a bill depends on the insertion of sufficient operative words of transfer; such as by making it payable to A. or order, or to A. or bearer, or to bearer generally.

Although a bill is presumed to have been originally drawn upon a good and valuable consideration, yet in certain cases a want of sufficient consideration may be insisted on in defence to an action on a bill. Certain considerations have been made illegal by

statute; as for signing a bankrupt's certificate, for money won at gaming, or for money lent on a usurious contract. But with respect to gaming, it is held, that a bill founded on a gambling transaction is good in the hands of a *bonâ fide* holder; and by 58 Geo. 3. c. 93. a bill or note in the hands of an innocent holder, although originally founded on a usurious contract, is not invalid.

In general, if a bill is fair and legal in its origin, a subsequent illegal contract or consideration on the indorsement thereof will not invalidate it in the hands of a *bonâ fide* holder.

A bill cannot be given in evidence in a court of justice, unless it be duly stamped, not only with a stamp of the proper value, but also of the proper denomination.

Acceptance of a Bill.—An acceptance is an engagement to pay a bill according to the tenor of the acceptance, which may be either *absolute* or *qualified*. An *absolute* acceptance is an engagement to pay a bill according to its request, which is done by the drawee writing "Accepted" on the bill, and subscribing his name, or writing "Accepted" only; or merely subscribing his name at the bottom or across the bill. A *qualified* acceptance is when a bill is accepted conditionally; as when goods conveyed to the drawee are sold, or when a navy bill is paid, or other future event which does not bind the acceptor till the contingency has happened.

An acceptance may be also partial; as to pay 100*l.* instead of 150*l.*, or to pay at a different time or place from that required by the bill. But in all cases of a conditional or partial acceptance, the owner should, if he mean to resort to the other parties to the bill in default of payment, give notice to them of such partial or conditional acceptance.

In all cases of presenting a bill for acceptance, it is necessary to present the bill at the house where the drawee lives, or where it is made payable. By 1 & 2 Geo. 4. c. 78., all bills accepted payable at a banker's or other place are to be deemed a general acceptance; but if they are accepted payable at a banker's "only and not otherwise or elsewhere," it is a qualified acceptance, and the acceptor is not liable to pay the bill, except in default of payment when such payment shall have been first demanded at the banker's. The drawee is entitled to keep the bill 24 hours when presented for acceptance. The acceptance of an inland bill must be *in writing on the face of the bill*, or if there be more parts than one, on one of such parts; nothing short of this constitutes a valid acceptance.

When a bill is made payable *at sight*, or at a certain time *after sight*, it must, in either case, in order to fix the time when it is to be paid, be presented for acceptance; and the date of the acceptance should appear thus: "Accepted, 10th December, 1845."

Due diligence is the only thing to be considered in presenting any description of bill for acceptance; and such diligence is a question depending on the situation of the parties, the distance at which they live, and the facility of communication between them.

When the drawee refuses to accept, any third party, after protesting, may accept for the honour of the bill generally, or for the drawee, or for the indorser; in which case the acceptance is called an acceptance *supra protest*.

The drawers and indorsers are discharged from liability, unless due notice of non-acceptance when presented for acceptance, or non-payment at the time the bill becomes due, is given. These notices must be given with all due diligence to all the parties to whom the holder means to resort for payment. Generally, in both foreign and inland bills, notice is given next day to the immediate indorser, and such indorser is allowed a day, when he should give fresh notice to the parties who are liable to him.

Notice may be sent by the post, however near the residence of the parties may be to each other; and though the letter containing such notice should miscarry, yet it will be sufficient; but the letter, containing the notice, should be delivered at the General Post-Office, or at a receiving-house appointed by that office, not to the bellman in the street. In all cases of notice, notice to one of several parties is held to be notice to all; and if one of several drawers be also the acceptor, it is not necessary to give notice to the other drawers.

Upon the non-acceptance or non-payment of a bill, the holder, or a public notary for him, should protest it; that is, draw up a notice of the refusal to accept or pay the bill, and the declaration of the holder against sustaining loss thereby. Inland bills need not be protested; in practice they are usually only noted for non-acceptance; but this, without the protest, is wholly futile, and adds nothing whatever to the evidence of the holder, while it entails a useless expense on those liable to pay.

Indorsement of Bills.—An indorsement is the act by which the holder of a negotiable instrument transfers his right to another person, termed the indorsee. It is usually made on the back of a bill, and must be in writing; but the law has not prescribed any set form of words as necessary to the ceremony, and in general the mere signature of the indorser is sufficient.

All bills payable to order or to bearer for *l.* and upwards are negotiable by indorsement; and the transfer of them for a good consideration, before they are payable, gives a right of action against all the precedent parties on the bill, if the bills in themselves are valid; but a transfer after they are due will only place the holder in the situation of the person from whom he takes them.

Bills may be transferred either by delivery only, or by indorsement and delivery: bills payable to order are transferred by the latter mode only; but bills payable to bearer may be transferred by either mode. On a transfer by delivery, the person making it ceases to be a party to the bill; but on a transfer by indorsement, he is to all intents and purposes chargeable as a new drawer.

A bill originally transferable may be restrained by restrictive words; for the payee or indorsee, having the absolute property in the bill, may, by express words, restrict its currency, by indorsing it "Payable to A. B. only," or "to A. B. for his use," or any other words clearly demonstrating his intention to make a restrictive and limited indorsement. Such special indorsement precludes the person in whose favour it is made from making a transfer, so as to give a right of action against the special indorser, or any of the preceding parties to the bill.

In taking bills to account or discount, it is important well to examine all special indorsements. Lord Tenterden decided that a person who discounts a bill indorsed "Pay to A. B. or order *for my use*," discounts it subject to the risk of having to pay the money to the special indorser, who so limited the application *for my use*; thus a party may be liable to pay the amount of the bill twice over, unless he previously ascertains that the payment has been made conformably to the import of the indorsement.

After the payment of part, a bill may be indorsed over for the residue.

Presentment for Payment.—The holder of a bill must be careful to present it for payment at the time when due, or the drawer and indorsers will be exonerated from their liability; even the bankruptcy, insolvency, or death of the acceptor, will not excuse a neglect to make presentment to the assignees or executor; nor will the insufficiency of a bill in any respect constitute an excuse for non-presentment;

the presentment should be made at a reasonable time of the day when the bill is due; and if by the known custom of any trade or place bills are payable only within particular hours, a presentment must be within those hours. If a bill has a qualified acceptance, the presentment should be at the place mentioned in such qualified acceptance, or all the parties will be discharged from their obligations.

If a bill fall due on Sunday, Good Friday, Christmas Day, or any public fast or thanksgiving day, the presentment must be on the day preceding these holidays. By 7 & 8 Geo. 4. c. 15., if a bill or note be payable on the day preceding these holidays, notice of the dishonour may be given the day following the holiday; and if Christmas Day fall on Monday, notice may be given on Tuesday.

Bills, however, payable at usance, or at a certain time after date or sight, or after demand, ought not to be presented for payment precisely at the expiration of the time mentioned in the bills, but at the expiration of the *days of grace*. These are not allowed in some countries: they also vary where they are allowed, and should always be computed according to the usage of the place where the bill is due.—(See *antè*, p. 580.) At Hamburg, the day on which the bill falls due makes one of the days of grace; but nowhere else.

On bills payable on demand, or when no time of payment is expressed, no days of grace are allowed; but they are payable instantly on presentment. On bank post bills no days of grace are claimed; but on bills payable at sight the usual days of grace are allowed from the sight or demand, as notified by the date of the acceptance.

Payment of a bill should be made only to the holder; and it may be refused unless the bill be produced and delivered up. On payment, a receipt should be written on the back; and when a part is paid, the same should be acknowledged upon the bill, or the party paying may be liable to pay the amount a second time to a *bonâ fide* indorser.

Promissory Notes and Checks.—The chief distinction between promissory notes and bills of exchange is, that the former are a direct engagement by the drawer to pay them according to their tenor, without the intervention of a third party as a drawee or acceptor. Promissory notes may be drawn payable on demand to a person named therein, or to order, or to bearer generally. They are assignable and indorsable; and in all respects so nearly assimilated to bills by 3 & 4 Ann. c. 9., that the laws which have been stated as bearing upon the latter, may be generally understood as applicable to the former. In *Edis* v. *Bury*, it has been decided, in case an instrument is drawn so equivocally as to render it uncertain whether it be a bill of exchange or promissory note, the holder may treat it as either against the drawer.

Promissory notes, bills, drafts, or undertakings in writing, being made negotiable or transferable, for a less sum than 20*s*., are void, and persons uttering such are subject to a penalty not exceeding 20*l*., recoverable before a justice of peace.

The issue of any promissory note payable to bearer on demand for a less sum than 5*l*. by the Bank of England, or any licensed English banker, is prohibited; and by 9 Geo. 4. c. 65. it is provided, that no corporation or person shall utter or negotiate, in England, any such note which has been made or issued in Scotland, Ireland, or elsewhere, under a penalty not exceeding 20*l*. nor less than 5*l*. But this does not extend to any draft or order on bankers for the use of the drawer.

A check or draft is as negotiable as a bill of exchange, and vests in the assignee the same right of action against the assignor.

Checks are of two sorts, that is, they may be either on plain or on stamped paper. The distinction was introduced by the 16 & 17 Vict. c. 59. The peculiar conditions and limitations under which plain checks must be drawn, and the privileges enjoyed by those on stamped paper, are briefly stated in the Art. CHECKS, to which the reader is referred.

Any person drawing, accepting, or paying any bill or promissory note, not duly stamped, is liable to a penalty of 50*l*.; and a penalty of 50*l*. is imposed on parties sending or receiving unstamped checks or drafts at a greater distance than 15 miles in a direct line from the place where they are issued.

It used to be of especial importance to bankers and others taking bills and notes, that they should not only be aware of the responsibility of the acceptors and other parties to such bills and notes, but that they should have some knowledge of those from whom they received them; for, if the instrument turned out to have been lost or fraudulently obtained, they might be deprived of their security, on an action by the owner to recover possession. Lord Tenterden decided, "if a person take bill, note, or any other kind of security, under circumstances which ought to excite suspicion in the mind of any reasonable man acquainted with the ordinary affairs of life, and which ought to put him on his guard to make the necessary inquiries, and he do not, then he loses the right of maintaining possession of the instrument against the rightful owner."—(*Guildhall*, Oct. 25, 1826.) But it has since been decided, in contravention of this doctrine, that the claim of the *bonâ fide* holder of a bill or note that has been lost or stolen is not invalidated by the want of the suspicions or inquiries referred to by Lord Tenterden, or even by gross negligence: and that to defeat the holder's claim it must be shown that he took the instrument *malâ fide*.—(*Chitty on Bills*, 9th ed. p. 257.) This is an important, and, as we think, a sound decision: it facilitates the negotiation of bills, and clears up and gives precision to the law.

Before concluding this article on mercantile paper, it may not be improper to introduce one or two cautions with regard to acceptances, and accommodation paper, and proceedings in case of the loss of bills.

First, A man should not put his name as acceptor to a bill of exchange without well considering whether he has the means of paying the same when due, as otherwise he may be liable not only to the costs of the action against himself, but also to the costs of the action against the other parties to the bill: the shrewd tradesman is generally anxious to get the acceptance of his debtor at a short date, well knowing that it not only fixes the amount of the debt, but it is more speedily recoverable by legal procedure than a book debt.

Secondly, Traders who wish to support their respectability, and desire to succeed in business, should be cautious in resorting to what is called the system of cross-accommodation acceptances: it seldom ends well, and usually excites suspicion as to the integrity of the parties; it being an expedient often adopted by swindlers to defraud the public. Independent of the expense in stamps and discounts, and frequently in noting, interest, and law expenses, the danger attending such accommodation is sufficient to deter from the practice. Suppose, for instance, A. B. mutually accommodate each other to the amount of 1,000*l*., the acceptances being in the hands of third persons: both A. and B. are liable to such third persons to the extent of 2,000*l*. each; and should A. by any unforeseen occurrence be suddenly rendered unable to meet his acceptances, the holders of the whole, as well the acceptances of A. as the acceptances of B., will resort to B. for payment; and it may so happen, that although B. could have provided for his own share of the accommodation paper, he may be unable to provide for the whole, and may thus become insolvent.

Lastly, In case of the loss of a bill, the 9 & 10 Will. 3. c. 17. provides, that if any inland bill be lost or missing within the time limited for its payment, the drawer shall, on sufficient security given to indemnify him if such bill be found again, give another bill of the same tenor with the first.

EXCHEQUER BILLS. See FUNDS.

EXPECTATION, of life. See INSURANCE.

EXPORTATION, in commerce, the act of sending or carrying commodities from one country to another.—(See IMPORTATION and EXPORTATION.)

EXCISE, the name given to the duties or taxes laid on certain articles produced and consumed at home; but, exclusive of these, the duties on licenses and post-horses

are also placed under the management of the excise, and are consequently included in the excise duties.

An excise of one sort or other has existed in all modern, and, perhaps, also, in all ancient states. It was introduced into Rome by Augustus, who imposed a duty of 1 per cent. (centesima rerum venalium) on all articles, whether great or small, sold in public markets or by auction. Though extremely moderate, a duty of this sort could not fail, from the difficulties in the way of its assessment, its interference with the dealings of individuals, and the abuses to which it must have led, to occasion clamour and discontent. And these in no long time became so very prevalent, that Tiberius was obliged to declare, that the maintenance of the army, for the support of which this tax had been appropriated, depended on its being continued.* In the sequel it underwent various changes. It appears to be sufficiently well established that it applied only to Rome, and, perhaps, to some few of the other great towns. In the smaller towns its produce would not indeed have sufficed to defray the cost of its collection. It, therefore, had at bottom a good deal in common with the octrois or town duties charged on commodities coming into Paris, and other great continental cities. But the defective mode of its assessment must have made it infinitely more troublesome and onerous.†

Excise duties had been from an early period established in Holland, and the large revenue which they afforded pointed them out to the leaders of the popular party in the great civil war, as the most likely means by which they could raise funds to carry on the great contest in which they had embarked. They were consequently introduced by a parliamentary ordinance in 1643; being then laid on the makers and vendors of ale, beer, cider, and perry. The royalists soon after followed the example of the republicans; both sides declaring that the excise should be continued no longer than the termination of the war. But it was found too productive a source of revenue to be again relinquished; and when the nation had been accustomed to it for a few years, the parliament declared in 1649, that the "impost of excise was the most easy and indifferent levy that could be laid upon the people." And it is worthy of remark, that the regulations embodied in Cromwell's Excise Act of 1657, authorising officers to make searches, and directing the giving of notices, &c., are very similar to those now in force.

The same reasons that made the excise be continued down to the Restoration secured its existence subsequently to that epoch. A portion of its produce was, at the same time, assigned in perpetuity to the Crown, in compensation for its relinquishing the hereditary revenues arising from wardships and other feudal prerogatives which were then abolished. And, notwithstanding Mr. Justice Blackstone says that "from its first original to the present time, its very name has been odious to the people of England" — (*Com.* book i. c. 3.), — it has continued progressively to gain ground; and is at this moment imposed on various important articles, and furnishes a large share of the public revenue of the kingdom.

It is probable that the prejudice to which Blackstone alludes, did not originate so much in any dislike to the duties themselves, as in the peculiar circumstances connected with their imposition. Originally they were let in farm, which is a most unpopular proceeding. And down to a recent period there was hardly a single duty, the assessment of which was not made the subject of numerous lengthened, obscure, and contradictory statutes, so that it was hardly possible for any trader, however desirous to comply with the law, to avoid getting into serious scrapes. The duties being frequently also carried to an oppressive extent, smuggling was practised; and when a party was prosecuted, whether for an intentional or unintentional infraction of the law, or for attempting to defraud the revenue, the case might be laid before judges (without the intervention of a jury) in whose decision the public had little confidence. No wonder, therefore, that the excise should have been unpopular. But the obnoxious practice of letting the duties to farmers has been long abandoned; and of late years the laws and regulations connected with their assessment have been much simplified. In this respect, indeed, nothing should be omitted to render the rules for assessing the duties brief, level to the comprehension of every one, and calculated to interfere as little as possible with the details and processes of manufacture. And, supposing their assessment to be sufficiently simplified, and that they are of a reasonable amount, but little objection can be made to the duties because of the summary jurisdiction exercised by the commissioners and justices. On the contrary, this practice has some material advantages. When parties are prosecuted in the Court of Exchequer for offences against the revenue, their case is, of course, submitted to a jury. But in this court, as in others, delays frequently take place, and the expenses are always very considerable; whereas in cases of summary jurisdiction, or those adjudged by the commissioners and justices, there is little or no delay, and little or no expense. And considering that all parties who fancy themselves

* Taciti, *Annal.*, lib. i. § 78.

† Gibbon, *Decline and Fall*, i. 211., ed. 1838; Dureau de la Malle, *Economie Politique des Romains*, ii. 45.

aggrieved by the decision of the commissioners are entitled (4 Vict. c. 20. § 26.) to appeal at a very trifling cost to a baron of exchequer, who rejudges the case; while those who suppose themselves aggrieved by a sentence of the justices may appeal to the quarter-sessions (7 & 8 Geo. 4. c. 53. § 82.), there really appears to be more to approve than to object to in the summary jurisdiction.

The excise duties formerly imposed on salt, leather, candles, beer, glass, and other less important articles, have been repealed within these few years. And we doubt whether there be one of the existing duties which can be fairly objected to on principle, or for its injuriously interfering with the manufacture, or being too high. Whatever may have been the case formerly, the excise is now fully entitled to the eulogium passed upon it by Arthur Young. "Excises are by much the fairest, most equal, and least burdensome of all taxes. They are paid voluntarily. Not a shilling is contributed but in proportion to the free consumption. The Dutch, who have been deservedly esteemed the wisest nation in Europe, in all matters of taxation, have been enabled to preserve their industry under burdens of which we have no experience, and scarcely any conception, principally by their having adopted this mode of taxation."*

Account of the Quantities of each Article charged with Excise Duty in England, Scotland, and Ireland respectively, in the Years ended the 31st of March, 1857–58 and 1858–59.

The excise duty on sugar was imposed, by the act 3 & 4 Vict. c. 57., on all sugar raised in the U. Kingdom, whether from beet-root, potatoes, or other materials. It is the same as the duty on British colonial sugar. Probably, however, the better policy would be to prohibit the home production of such articles; inasmuch as it is sure to facilitate smuggling and adulteration.

The laws with respect to the general management of the excise were consolidated by the 7 & 8 Geo. 4. c. 5., from which the following particulars are selected:—

Commissioners.—Four commissioners constitute a board. They are to be subject, in all things relating to their peculiar duty, to the orders of the Treasury. They may appoint collectors and other subordinate officers, and give them such salaries and allowances as the Treasury shall direct; but they are not allowed to increase the number of inferior officers without the permission and approval of the Treasury. No member of the House of Commons can be a commissioner of excise.

Officers of Excise.—No officer of excise is to vote or interfere at any election of a member of parliament, under pain of forfeiting 500*l.*, and being rendered incapable of ever holding any office or place of trust under her Majesty.

No person holding any office of excise is to deal in any sort of goods subject to the excise laws.

Any person bribing or offering to bribe any officer of excise shall forfeit 500*l.*; and every officer accepting such bribe, or doing, conniving at, or permitting any act or thing whereby any of the provisions of the excise laws may be evaded or broken, shall forfeit 500*l.*, and be declared incapable of ever after serving her Majesty in any capacity whatever. But if any of the parties to such illegal transactions shall inform against the other, before any proceedings thereupon shall have been instituted, he shall be indemnified against the penalties and disabilities imposed for such offences.

Duties and Powers of Officers.—It is lawful for any officer to enter any building or other place, used for carrying on any trade subject to the excise, either by night or by day (but if by night, in the presence of a constable or peace officer), to in-

* *Political Arithmetic*, part ii. p. 46.

spect the same, &c. And upon an officer making oath that he has cause to suspect that goods forfeited under the excise acts are deposited in any private house or place, 2 commissioners of excise, or 1 justice of the peace, may grant a warrant to the officer to enter such house or place (if in the night, in the presence of a constable) to search for and seize such forfeited goods.

Specimen Books may be left by the officers on the premises of persons subject to the excise laws; and any one who shall remove or deface such books shall be liable to a penalty of 200*l*.

Removing Goods to avoid Duty.—Goods fraudulently removed or secreted, in order to avoid the duty, to be forfeited; and every person assisting in such removal shall forfeit and lose treble the value of such goods, or 100*l*., at the discretion of the commissioners.

Obstructing Officers.—All persons who shall oppose, molest, &c. any officer of excise in the execution of his duty, shall respectively, for every such offence, forfeit 200*l*.

Officers violently resisted in making any seizure may oppose force to force; and in the event of their wounding, maiming, or killing any person, when so opposed, they shall be admitted to bail, and may plead the general issue.

Justices, mayors, bailiffs, constables, &c. are required to assist excise officers; and any constable or peace officer who, on notice and request, declines going with an excise officer, is to forfeit 20*l*. for every such offence.

Claimants of Goods seized.—No claim shall be entered for goods seized, except in the real names of the proprietors of such goods. Claimants are bound with 2 sureties in a penalty of 100*l*. to pay the expenses of claim; and in default thereof, the goods are to be condemned.

Proceedings in Courts of Law.—All penalties under the excise laws may be sued for and recovered in the Courts of Exchequer at Westminster, Edinburgh, or Dublin respectively, according as the offence may have taken place in England, Scotland, or Ireland; provided that the proceedings in the courts commence within 3 years after the commission of the offence.

Informations for the recovery of penalties against the excise laws in London may be heard and adjudged by any 3 or more of the commissioners of excise; and in other places such informations may be exhibited before 1 or more justices of the peace, and may be heard and adjudged by any 2 or more such justices.

Mitigation of Penalties.—Justices are authorised, if they shall see cause, except when there is a special provision to the contrary, to mitigate any penalty incurred for any offence committed against the excise laws to *one fourth* part thereof; but it is lawful for the commissioners of excise, when they see cause, further to mitigate, or entirely remit, such penalty.

Distribution of Penalties.—All penalties and forfeitures incurred under the excise acts are to be distributed, half to his majesty, and half to the officer or person who shall discover, inform, or sue for the penalty. On proof being made of any officer acting collusively in making a seizure, the commissioners may direct his share to be forfeited.

Oaths and Affirmations.—Persons wilfully taking or making any false oath or affirmation as to any matter connected with the excise laws, shall, upon being convicted of such offence, suffer the pains and penalties incident to wilful and corrupt perjury; and those procuring or suborning such persons to swear or affirm falsely shall, upon conviction, be liable to the pains and penalties incident to subornation of perjury.

Actions against Excise Officers.—No writ, summons, or process shall be sued out or served upon, nor shall any action be brought, raised, or prosecuted against, any officer of excise, for any thing done under any of the excise laws, until after the expiration of 1 calendar month next after notice in writing has been delivered to such officer, specifying the cause of such action, and the name and place of abode of the person in whose name it is to be brought. No action shall lie against any excise officer for any thing done under the excise laws, unless it be brought within 3 months after the cause of action shall have arisen. If judgment be given against the plaintiff, and in favour of the defendant, the latter shall, in every such action, have treble costs awarded to him.

Forging Certificates, &c.—By the 41 Geo. 3. c. 91. it is enacted, that if any one shall forge, counterfeit, or knowingly give any forged certificate required to be granted by any officer of excise, he shall be guilty of felony, and being convicted, shall be transported for 7 years.

All individuals carrying on any business subjected to the control of the excise, must take out licences renewable annually on the 5th of July.—(See *Licences.*)

All such individuals are also obliged to make entries of every building, place, vessel, or utensil, as the case may be, in the name of the real owner, with the officer of excise in whose survey such building, place, &c. shall be situated. Individuals found employed in unentered excise manufactories are severally liable in a penalty of 30*l*. for the first offence; and in the event of any such offender refusing or neglecting to pay such penalty, he is to be committed to the house of correction or other prison for 3 calendar months, to be kept to hard labour, and not to be liberated until the fine of 30*l*. has been paid, or the term of 3 months has expired; and if found guilty of a second offence, the fine is to be 60*l*.; and in the event of its not being paid, the imprisonment is to be for 6 months.—(7 & 8 Geo. 4. c. 53. s. 33.)

Permits are usually necessary for the removal of exciseable commodities.—(See *Permits.*)

EXPORTS, the articles exported, or sent beyond seas.—(See IMPORTS AND EXPORTS.)

F.

FACTOR, an agent employed by some one individual or individuals, to transact business on his or their account. He is not generally resident in the same place as his principal, but, usually, in a foreign country. He is authorised, either by letter of attorney or otherwise, to receive, buy, and sell goods and merchandise; and, generally, to transact all sorts of business on account of his employers, under such limitations and conditions as the latter may choose to impose. A very large proportion of the foreign trade of this and most other countries is now carried on by means of factors or agents.

Factors and brokers are, in some respects, nearly identical, but in others they are radically different. "A factor," said Mr. Justice Holroyd, "differs materially from a broker. The former is a person to whom goods are sent or consigned; and he has not only the possession, but, in consequence of its being usual to advance money upon them, has also a special property in them, and a general lien upon them. When, therefore, he sells in his own name, it is within the scope of his authority; and it may be right, therefore, that the principal should be bound by the consequences of such sale. But the case of a broker is different: he has not the possession of the goods, and so the vendor cannot be deceived by the circumstance; and, besides, the employing a person to sell goods as a broker does not authorise him to sell in his own name. If, therefore, he sells in his own name, he acts beyond the scope of his authority; and his principal is not bound."

A factor is usually paid by a per-centage or commission on the goods he sells or buys. If he act under what is called a *del credere* commission, that is, *if he guarantee the price of the goods sold on account of his principal*, he receives an additional per-centage to indemnify him for this additional responsibility. In cases of this sort the factor stands in the vendee's place, and must answer to the principal for the value of the goods sold. But where the factor undertakes no responsibility, and intimates that he acts only on account of another, it is clearly established that he is not liable in the event of the vendee's failing.

The sound maxim, that the principal is responsible for the acts of his agent, prevails universally in courts of law and equity. In order to bind the principal, it is necessary only that third parties should deal *boná fide* with the agent, and that the conduct of the latter should *be conformable to the common usage and mode of dealing.* Thus, a factor may sell goods upon credit, that being in the ordinary course of conducting mercantile

affairs: but a stock broker, though acting *boná fide*, and with a view to the benefit of his principal, cannot sell stock upon credit, *unless he have special instructions to that effect;* that being contrary to the usual course of business.

A sale by a factor creates a contract between the owner and buyer; and this rule holds even in cases where the factor acts upon a *del credere* commission. Hence, if a factor sell goods, and the owner *give notice to the buyer to pay the price to him*, and not to the factor, the buyer will not be justified in afterwards paying the factor, and the owner may bring his action against the buyer for the price, unless the factor has a lien thereon. But if no such notice be given, a payment to the individual selling is quite sufficient.

If a factor buy goods on account of his principal, where he is accustomed so to do, the contract of the factor binds the principal to a performance of the bargain; and the principal is the person to be sued for non-performance. But it is ruled, that if a factor enter into a charterparty of affreightment with the master of a ship, the contract obliges *him* only, unless he lade the vessel with his principal's goods, in which case the principal and lading become liable, and not the factor. Where a factor, who is authorised to sell goods in his own name, makes the buyer debtor to himself; then, though he be not answerable to the principal for the debt, if the money be not paid, yet he has a right to receive it, if it be paid, and his receipt is a sufficient discharge; the factor may, in such a case, enforce the payment by action, and the buyer cannot defend himself by alleging that the principal was indebted to him in more than the amount.

"Where a factor," said Lord Mansfield, "dealing for a principal, but concealing that principal, delivers goods in his own name, the person contracting with him has a right to consider him, to all intents and purposes, as the principal; and though the real principal may appear, and bring an action on that contract against the purchaser of the goods, yet that purchaser may set off any claim he may have against the factor, in answer to the demand of the principal."

Merchants employing the same factor run the joint risk of his actions, although they are strangers to each other: thus, if different merchants remit to a factor different bales of goods, and the factor sell them as a single lot to an individual who is to pay one moiety of the price down and the other at 6 months' end; if the buyer fail before the second payment, each merchant must bear a proportional share of the loss, and be content to accept his dividend of the money advanced. — (*Beawes, Lex Merc.*)

A factor employed, without his knowledge, in negotiating an illegal or fraudulent transaction, has an action against his principal. On this ground it was decided, that a merchant who had consigned counterfeit jewels to his factor, representing them to be genuine, should make full compensation to the factor for the injury done to him by being concerned in such a transaction, as well as to the persons to whom the jewels had been sold.

The office of a factor or agent being one of very great trust and responsibility, those who undertake it are bound, both legally and morally, to conduct themselves with the utmost fidelity and circumspection. A factor should take the greatest care of his principal's goods in his hands: he should be punctual in advising him as to his transactions on his behalf, in sales, purchases, freights, and, more particularly, bills of exchange: he should deviate as seldom as possible from the terms, and never from the *spirit and tenor*, of the orders he receives as to the sale of commodities: in the execution of a commission for purchasing goods, he should endeavour to conform as closely as practicable to his instructions as to the quality or kind of goods: if he give more for them than he is authorised, they may be thrown on his hands; but he is bound to buy them for as much less as he possibly can. After the goods are bought, he must dispose of them according to order. If he send them to a different place from that to which he was directed, they will be at his risk, unless the principal, on getting advice of the transaction, consent to acknowledge it.*

* "Whoever," says Dr. Paley, "undertakes another man's business, makes it his own; that is, promises to employ upon it the same care, attention, and diligence, that he would do if it were actually his own; for he knows that the business was committed to him with that expectation. And he promises nothing more than this. Therefore, an agent is not obliged to wait, inquire, solicit, ride about the country, toil, or study, whilst there remains a possibility of benefiting his employer. If he exert as much activity, and use such caution, as the value of the business in his judgment deserves; that is, as he would have thought sufficient if the same interest of his own had been at stake; he has discharged his duty, although it should afterwards turn out, that by more activity and longer perseverance, he might have concluded the business with greater advantage."— (*Moral and Pol. Phil.* c. 12.)

There seems to be a good deal of laxity in this statement. It is necessary to distinguish between those who, in executing a commission, render their services for the particular occasion only, without hire, and those who undertake it *in the course of business*, making a regular charge for their trouble. If the former bestow on it that ordinary degree of care and attention which the *generality of mankind* bestow on similar affairs of their own, it is all, perhaps, that can be expected: but the latter will be justly censurable, if they do not execute their engagements on account of others with that care and diligence which a "*provident and attentive father of a family*" uses in his own private concerns. It is their duty to exert themselves proportionally to the exigency of the affair in hand; and neither to *do* any thing, how minute soever, by which their employers may sustain damage, nor omit any thing, however inconsiderable, which the nature of the act requires. Perhaps the best general rule on the subject is, to suppose a factor

A factor who sells a commodity under the price he is ordered, may be obliged to make good the difference, unless the *commodity be of a perishable nature and not in a condition longer to be kept.* And if he purchase goods for another at a fixed rate, and, their price having afterwards risen, he fraudulently takes them to himself, and sends them somewhere else, in order to secure an advantage, he will be found, by the custom of merchants, liable in damages to his principal.

If a factor, in conformity with a merchant's orders, buy with his money, or on his credit, a commodity he is directed to purchase, and, without giving advice of the transaction, sells it again at a profit, appropriating that profit to himself, the merchant may recover it from him, and have him amerced for fraud.

If a factor buy, conformably to his instructions, goods of which he is *robbed,* or which suffer some unavoidable injury, he is discharged, and the loss falls on the principal. But if the goods be *stolen* from the factor, he will not be so easily discharged; for the fact of their having been abstracted by *stealth,* and not by *violence,* raises a strong presumption that he had not taken that reasonable care of them which was incumbent upon him. If, however, he can prove that the goods were lodged in a place of security, and that he had not been guilty of positive negligence, nor exercised less care towards them than towards his own property, he will not be held responsible even for a theft committed by his servants. — (*Jones on Bailments,* 2d ed. p. 76.; *Chitty on Commercial Law,* vol. iii. p. 368.)

If a factor, having money in his hands belonging to his principal, neglect to insure a ship and goods, according to order, he must, in the event of the ship miscarrying, make good the damage; and if he make any composition with the insurers after insurance, without orders to that effect, he is answerable for the whole insurance. A principal at the end of a very long letter, directed his agent thus: "Observe, the premium on this value is also to be insured." But the agent, not noticing this sentence, neglected to insure the premium; and being sued, was held liable for the omission.

If goods are remitted to a factor, and he make a false entry of them at the Custom-house, or land them without entry, and they are, in consequence, seized or forfeited, he is bound to make good the damage to his principal; but if the factor make his entry according to invoice or letters of advice, and these proving erroneous, the goods are seized, he is discharged.

It is now a settled point, that a factor has a lien on goods consigned to him, not only for incidental charges, but as an item of mutual account for the balance due to him so long as he remains in possession. If he be surety in a bond for his principal, he has a lien on the goods sold by him on account of such principal, to the amount of the sum he is bound for.

It being the general rule of law "that property does not change while *in transitu,*" or in the hands of a carrier, a consignment made *before* the bankruptcy of a consignor, but not arriving till *after,* remains the property of the consignor, except, indeed, where the *delivery* is made *by the order* and upon the account of the consignee, and is a complete *alienation from* the consignor. In the case, therefore, of a consignment to a factor, the property remains the consignor's, and passes into the hands of *his* assignees. When a factor has a lien on goods, he has a right to the price, though received after the bankruptcy.

Where general or unlimited orders are given to a factor, he is left to buy and sell on the best conditions he can. And if detriment arise to a principal from the proceedings of a factor acting under such authority, he has no redress, unless he can show that he acted fraudulently or with *gross negligence.*

A factor or broker acting against the interest of his principal cannot even receive his commission. If he pay money on account of his principal, without being authorised, he cannot recover it back.

An agent cannot delegate his rights to another so as to bind the principal, unless expressly authorised to nominate a sub-agent.

(For further information as to the general powers and liabilities of factors and agents, see *Beawes, Lex Mercatoria,* art. *Factors, Supercargoes, &c.; Chitty's Commercial Law,* vol. iii. c. 3.; *Woolrych on Commercial Law,* pp. 317—329, &c. See also the article BROKERS.)

Under the law with respect to the transactions of factors or agents on third parties that prevailed down to the act 6 Geo. 4. c. 94., it was held, that a factor, as such, had no authority to *pledge,* but only to *sell* the goods of his principal; and it was repeatedly decided that a principal might recover back goods on which a *bonâ fide* advance of

or agent bound to exert that degree of care and vigilance that may *be reasonably expected of him by others.* At all events, it is clear he is not to be regulated by his own notions of the "value of the business." A man may neglect business of his own, or not think it worth attending to; but he is not, therefore, to be excused for neglecting any similar business he has undertaken to transact for others.—(There are some very good observations on this subject in *Sir William Jones's Essay on Bailments,* 2d ed, p. 53. and *passim.*)

money had been made by a third party, without his being bound to repay such advance; and notwithstanding this third party was wholly ignorant that the individual pledging the goods held them as a mere factor or agent. It used also to be held, that *bonâ fide* purchasers of goods from factors or agents not vested with the power of sale, might be made liable to pay the price of the goods a second time to the real owner.

The extreme hardship and injurious influence of such regulations is obvious. It is the business of a principal to satisfy himself as to the conduct and character of the factor or agent he employs; and if he make a false estimate of them, it is more equitable, surely, that he should be the sufferer, than those who have no means of knowing any thing of the matter. The injustice of the law in question, and the injury it did to the commerce of the country, had frequently excited attention; and was very ably set forth by the late Lord Liverpool, in his speech in the House of Lords, on moving the second reading of the bill referred to.

"Those of their Lordships who were acquainted with commercial transactions, would know that money was frequently advanced on goods, without its being possible for the person advancing the money to have any further acquaintance with the transactions, than that the factor was in actual possession of the goods. It then became a question, putting fraud out of view, if the factor became a bankrupt, or in any other way failed to execute his engagements, whether the loss should fall on the principal who had consigned these goods, or on the *pledgee* who had advanced money on them. It had been of late ruled, that if the factor were intrusted only to dispose of the property, the loss must fall on the pledgee. He meant to contend, that this was contrary to equity, and contrary to analogy; that it was disapproved of by high authority, and was contrary to the law in every country of the world, except this, and the United States of America, which had drawn their law from this country. It was contrary to equity, he thought, that the pledgee, who had advanced his money without any fraud, but on the *bonâ fide* possession of the goods, should suffer. He had placed no confidence, but the principal who had appointed the factor had placed confidence. He could limit him in his operations as he pleased — he could give him any kind of instructions — he might qualify his power — he was bound to take precautions before placing confidence; and he was in all respects more liable to suffer from his faults than the pledgee. The latter knew nothing of the power of the factor, he saw only the goods, and advanced his money on what was a sufficient security for repayment. On every principle of natural equity, therefore, the loss ought to fall, not on the *pledgee*, but on the principal. He knew that this view was connected with one very important question — that of possession and title; but it was not possible for transactions to go on, unless the possession was admitted as the title to the goods. If this were an indifferent question, or a question involving only a few cases, he would not have called on their Lordships to legislate on this subject; but all the commercial interests of the country were connected with it. And he might say he believed that two thirds of the whole commerce of the country was carried on by consigning goods to a factor, and leaving it to his discretion to dispose of them to the greatest advantage, sending them to market when he pleased, and raising money on them when he could not send them to market. Bills of exchange, Exchequer bills, and money bills of every description, were subject to this rule. If a person consigned Exchequer bills to a second person, and he parted with them, the third party who obtained them was held to have a right to them. Commercial proceedings were of as much importance as money proceedings, and he could not see why they should not receive the same security. It might be asked, perhaps, when this was felt to be so great an evil, why it was not altered before; but it seemed to be one of those things which had grown up gradually, and which did much mischief before they became extensively known. The first decision, he believed, which established the law as it now stood, was delivered in 1742; and he knew that Lord Chief Justice Gibbs had said, he could not explain the origin of that decision. He supposed it might have been dictated by some fraud. That decision, the Lord Chief Justice maintained, was at variance with the best interests of commerce, and had grown out of circumstances he could not explain. From the time of the first decision, the decisions had not been numerous, till of late years. He did not doubt but the judges had decided according to the law as it was established by these precedents; but in doing that, they had expressed their regret that these precedents had been established. [Here his Lordship read an extract from opinions delivered by the late Lord Chief Justice Ellenborough, and a late judge, Mr. Le Blanc, expressing their regret, in deciding cases according to these precedents, that they had been established.] He inferred from these opinions, that these judges, though they had felt themselves obliged to decide in this way, supposed that the law was contrary to the general analogy of our laws, and to the principles of justice. He then came to the last consideration, the law of this country being in this respect different from the law of all other countries, except the law of the United States of America. In all other countries, the law was recognised to be what he wished to establish it by the bill before their Lordships. When there was no evidence of fraud, it was held, that the man advancing money on goods held by a factor should not suffer for his faults, but that the person who confided in the factor must be the sufferer. This was also the law in Scotland. He had understood, too, that the evils of the law were felt in America, and that means had been taken for bringing it before the congress, with a view to assimilate the law of America to the law of other countries. If the question were examined by the principles of equity, by analogy with other cases, by the authority of those who decided in our courts, or by the practice of other countries, it would be found that the reasons were strong in favour of the bill. It was of great importance in commercial transactions, that our law should be like the laws of other countries. It was not the same with the laws relative to real property — to our local law, if he might so call it; but when the bill was founded on equity and analogy, he thought it was an additional reason in its favour, that it assimilated our commercial law to the commercial law of other countries. He did not know if he had made himself understood, or if he had sufficiently explained the object of the bill; but the measure was founded in justice, and he hoped to have their Lordships' consent to it." The noble Earl concluded by moving the second reading of the bill.

Nothing can be clearer or more satisfactory than the principle laid down by Lord Liverpool, in the above extract from his speech. But the act 6 Geo. 4. c. 94., which his Lordship introduced, did not fully carry out his views; for while it confirms *bonâ fide* sales, made in the ordinary course of business, in cases in which the purchaser had notice that the seller was merely an agent, it does not confirm *bonâ fide* advances made on goods, or on documents of title to goods, under the same circumstances. To obviate this discrepancy, to get rid of the litigation to which certain ambiguities in the 6 Geo. 4. c. 94. had given rise, and to facilitate commerce, the following statute, 5 & 6 Victoria, c. 39., was passed in 1842.

Bonâ fide Advances to Persons intrusted with the Possession of Goods or Documents of Title, though known to be Agents, protected. — From and after the passing of this act, any agent intrusted with the

possession of goods, or of the documents of title to goods, shall be deemed and taken to be owner of such goods and documents, so far as to give validity to any contract or agreement by way of pledge, lien, or security *bonâ fide* made by any person with such agent, as well for any original loan, advance, or payment made upon the security of such goods or documents, as also for any further or continuing advance in respect thereof; and such contract or agreement shall be binding upon and good against the owner of such goods, and all other persons interested therein, notwithstanding the person claiming such pledge or lien may have had notice that the person with whom such contract or agreement is made is only an agent.—§ 1.

Bonâ fide Deposits in exchange protected.—Where any such contract or agreement for pledge, lien, or security shall be made in consideration of the delivery or transfer to such agent of any other goods or merchandise, or document of title, or negotiable security, upon which the person so delivering up the same had at the time a valid and available lien and security for or in respect of a previous advance by virtue of some contract or agreement made with such agent, such contract and agreement, if *bonâ fide* on the part of the person with whom the same may be made, shall be deemed to be a contract made in consideration of an advance within the true intent and meaning of this act, and shall be as valid and effectual, to all intents and purposes, and to the same extent, as if the consideration for the same had been a *bonâ fide* present advance of money: provided always, that the lien acquired under such last-mentioned contract or agreement upon the goods or documents deposited in exchange shall not exceed the value at the time of the goods and merchandise which, or the documents of title to which, or the negotiable security which shall be delivered up and exchanged.—§ 2.

But the Statute to be construed to protect only Transactions bonâ fide.—This act, and every matter and thing herein contained, shall be deemed and construed to give validity to such contracts and agreements only, and to protect only such loans, advances, and exchanges, as shall be made *bonâ fide*, and without notice that the agent making such contracts or agreements as aforesaid has not authority to make the same, or is acting *malâ fide* in respect thereof against the owner of such goods and merchandise; and nothing herein contained shall be construed to extend to or protect any lien or pledge for or in respect of any antecedent debt, owing from any agent to any person with or to whom such lien or pledge shall be given, nor to authorise any agent intrusted as aforesaid in deviating from any express orders or authority received from the owner; but that, for the purpose and to the intent of protecting all such *bonâ fide* loans, advances, and exchanges as aforesaid (though made with notice of such agent not being the owner, but without any notice of the agent's acting without authority), and to no further or other intent or purpose, such contract or agreement as aforesaid shall be binding on the owner and all other persons interested in such goods.—§ 3.

Meaning of the Term "Document of Title," &c.—Any bill of lading, India warrant, dock warrant, warehouse keeper's certificate, warrant, or order for the delivery of goods, or any other document used in the ordinary course of business as proof of the possession or control of goods, or authorising or purporting to authorise, either by indorsement or by delivery, the possessor of such document to transfer or receive goods thereby represented, shall be deemed and taken to be a document of title within the meaning of this act; and any agent intrusted as aforesaid, and possessed of any such document of title, whether derived immediately from the owner of such goods, or obtained by reason of such agent's having been intrusted with the possession of the goods, or of any other document of title thereto, shall be deemed and taken to have been intrusted with the possession of the goods represented by such document of title as aforesaid, and all contracts pledging or giving a lien upon such document of title as aforesaid shall be deemed and taken to be respectively pledges of and liens upon the goods to which the same relates; and such agent shall be deemed to be possessed of such goods or documents, whether the same shall be in his actual custody, or shall be held by any other person subject to his control or on his behalf; and where any loan or advance shall be *bonâ fide* made to any agent intrusted with and in possession of any such goods or documents of title as aforesaid, on the faith of any contract or agreement in writing to consign, deposit, transfer, or deliver such goods or documents of title as aforesaid, and such goods or documents of title shall actually be received by the person making such loan or advance, without notice that such agent was not authorised to make such pledge or security, every such loan or advance shall be deemed and taken to be a loan or advance on the security of such goods or documents of title within the meaning of this act, though such goods or documents of title shall not actually be received by the person making such loan or advance till the period subsequent thereto; and any contract or agreement, whether made direct with such agent as aforesaid, or with any clerk or other person on his behalf, shall be deemed a contract or agreement with such agent; and any payment made, whether by money or bills of exchange, or other negotiable security, shall be deemed and taken to be an advance within the meaning of this act; and an agent in possession as aforesaid of such goods or documents shall be taken, for the purposes of this act, to have been intrusted therewith by the owner thereof, unless the contrary can be shown in evidence.—§ 4.

Agent's civil Responsibility not to be diminished.—Nothing herein contained shall lessen, vary, alter, or affect the civil responsibility of an agent for any breach of duty or contract, or non-fulfilment of his orders or authority in respect of any such contract, agreement, lien, or pledge as aforesaid.—§ 5.

Agent making Consignments contrary to Instruction of Principal, guilty of Misdemeanor.—If any agent intrusted as aforesaid shall, contrary to or without the authority of his principal in that behalf, for his own benefit and in violation of good faith, make any consignment, deposit, transfer, or delivery of any goods or documents of title so intrusted to him as aforesaid, as and by way of a pledge, lien, or security; or shall, contrary to or without such authority, for his own benefit and in violation of good faith, accept any advance on the faith of any contract or agreement to consign, deposit, transfer, or deliver such goods or documents of title as aforesaid; every such agent shall be deemed guilty of a misdemeanor, and being convicted thereof, shall be sentenced to transportation for any term not exceeding 14 years nor less than 7 years, or to suffer such other punishment by fine or imprisonment, or by both, as the court shall award; and every clerk or other person who shall knowingly and wilfully act and assist in making any such consignment, deposit, transfer, or delivery, or in accepting or procuring such advance as aforesaid, shall be deemed guilty of a misdemeanor, and being convicted thereof, shall be liable, at the discretion of the court, to any of the punishments which the court shall award, as hereinbefore last mentioned: provided nevertheless, that no such agent shall be liable to any prosecution for consigning, depositing, transferring, or delivering any such goods or documents of title, in case the same shall not be made a security for or subject to the payment of any greater sum of money than the amount which at the time of such consignment, deposit, transfer, or delivery was justly due and owing to such agent from his principal, together with the amount of any bills of exchange drawn by or on account of such principal, and accepted by such agent: provided also, that the conviction of any such agent shall not be received in evidence in any action at law or suit in equity against him, and no agent intrusted as aforesaid shall be liable to be convicted by any evidence in respect of any act done by him, if he shall, at any time previously to his being indicted for such offence, have disclosed such act, on oath, in consequence of any compulsory process of any court of law or equity in any action, suit, or proceeding which shall have been *bonâ fide* instituted by any party aggrieved, or if he shall have disclosed the same in any examination or deposition before any commissioner of bankrupt.—§ 6.

Right of Owner to redeem, &c.—Nothing herein contained shall prevent such owner as aforesaid from having the right to redeem such goods or documents of title pledged as aforesaid, at any time before such goods shall have been sold, upon repayment of the amount of the lien thereon, or restoration of the securities in respect of which such lien may exist, and upon payment or satisfaction to such agent, if by him required, of any sum of money for or in respect of which such agent would by law be entitled to

retain the same goods or documents, or any of them, by way of lien as against such owner, or to prevent the said owner from recovering of and from such person with whom any such goods or documents may have been pledged, or who shall have any such lien thereon as aforesaid, any balance or sum of money remaining in his hands as the produce of the sale of such goods, after deducting the amount of the lien of such person under such contract or agreement: provided always, that in case of the bankruptcy of any such agent, the owner of the goods which shall have been so redeemed by such owner shall, in respect of the sum paid by him on account of such agent for such redemption, be held to have paid such sum for the use of such agent before his bankruptcy, or in case the goods shall not be so redeemed, the owner shall be deemed a creditor of such agent for the value of the goods so pledged at the time of the pledge, and shall, if he shall think fit, be entitled in either of such cases to prove for or set off the sum so paid, or the value of such goods, as the case may be.—§ 7.

Clause 8. refers to the interpretation of the act.

FACTORAGE, or COMMISSION, the allowance given to factors by the merchants and manufacturers, &c. who employ them: it is a percentage on the goods they purchase or sell on account of their principals; and varies in different countries, and as it refers to different articles. It is customary for factors, as observed in the previous article, to insure the debts due to those for whom they sell for an additional, or *del credere*, commission, generally averaging from 1½ to 2 per cent. Factorage or commission is also frequently charged at a certain rate per cask, or other package, measure, or weight, especially when the factor is only employed to receive or deliver: this commission is usually fixed by special agreement between the merchant and factor.

FACTORY, in commerce, a place where merchants and factors reside, to negotiate business for themselves and their correspondents on commission. We have factories in China, Turkey, Russia, &c.

FAIRS AND MARKETS. These institutions are very closely allied. A fair, as the term is now generally understood, is only a greater species of market recurring at more distant intervals. Both are appropriated to the sale of one or more species of goods, the hiring of servants, or labourers, &c. : but fairs are, in most cases, attended by a greater concourse of people, for whose amusement various exhibitions are got up.

1. *Origin of Fairs.* — Institutions of this sort are peculiarly serviceable in the earlier stages of society, and in rude and inland countries. The number of shops, and the commodities in them, are then either comparatively limited, or they are but little frequented by dealers; so that it is for the advantage of all, that fairs should be established, and merchants induced to attend them. For this purpose various privileges have been annexed to fairs, and numerous facilities afforded to the disposal of property in them. To give them a greater degree of solemnity, they were originally, both in the ancient and modern world, associated with religious festivals. In most places, indeed, they are still held on the same day with the wake or feast of the saint to whom the church is dedicated; and till the practice was prohibited, it was customary, in England, to hold them in churchyards! — (*Jacob's Law Dict.* art. *Fair.*) But since the growth of towns, and the opportunities afforded for the disposal and purchase of all sorts of produce at the weekly or monthly markets held in them, the utility of fairs, in this country at least, has very much diminished; they have, also, lost much of their ancient splendour; and, though some of them are still well attended, and of real use, a good number might be advantageously suppressed.

But it is far otherwise in inland countries, where the facilities for carrying on commercial transactions are comparatively circumscribed. There it is of the utmost importance, that certain convenient places and specified periods should be appointed for the bringing together of commodities and dealers. This is not only the readiest and best means of promoting commerce, but also of softening national antipathies, and diffusing a knowledge of the products, arts, and customs of other countries.

2. *Establishment of English Fairs.* — No fair can be holden without grant from the Crown, or a prescription which supposes such grant. And before a patent is granted, it is usual to have a writ of *ad quod damnum* executed and returned, that it may not be issued to the prejudice of a similar establishment already existing. The grant usually contains a clause that it shall not be to the hurt of another fair or market; but this clause, if omitted, will be implied in law: for if the franchise occasion damage either to the king or a subject, in this or any other respect, it will be revoked; and a person, whose ancient title is prejudiced, is entitled to have a *scire facias* in the king's name to repeal the letters patent. If his Majesty grant power to hold a fair or market in a particular place, the lieges can resort to no other, even though it be inconvenient. But if no place be appointed, the grantees may keep the fair or market where they please, or rather where they can most conveniently.

3. *Times of holding Fairs and Markets.* — These are either determined by the letters patent appointing the fair or market, or by usage. The statute 2 Edw. 3. c. 15. enacts, that the duration of the fair shall be declared at its commencement, and that it shall not be continued beyond the specified time. By statute 5 Edw. 3. c. 5. any merchant selling goods after the stipulated time is to forfeit double the value of the goods sold.

4. *Effects of Sales in Fairs and Markets.* — A *bonâ fide* sale made in a fair or open market, in general, transfers the complete property of the thing sold to the vendee; so that, however vicious or illegal the title of the vendor may be, the vendee's is good against every one except the king. But the sale, in order to come within this rule, must take place *on the market day, and at the place assigned for the market.* The city of London is said to be a market overt every day of the week except Sunday; every shop being a market overt for such things as the shopkeeper professes to deal in. The property of goods may, however, be changed, and effectually transferred to the buyer, by a *bonâ fide* sale in a shop out of London, whether the shopkeeper be the vendor or vendee, if the goods are of the kind in which he trades. A wharf in London is not within the custom, and is not a market overt for articles brought there. But a sale in a market will not be binding, if it be such as carries with it a presumption of fraud: as, for example, if it take place in a back room, or secret place; if the sale be covinous, and intended to defraud the real owner; or if the buyer know that the vendor is not the real owner of the goods, &c. It is very difficult to transfer the property of horses, even when they are sold in an open market, without the consent of the real owner. — (See HORSES.)

5 *Court of Pié Poudre.* — To every fair or market there is incident, even without any express words in the grant, a court of *pié poudre*, in allusion to the dusty feet of the suitors. The steward or mayor may preside. It has cognizance of all questions as to contracts made in the market, respecting goods *bought and delivered there*, &c. Formerly *pié poudre* courts were held at every considerable fair: but they are now entirely laid aside.

6. *Clerk of the Market.* — Owners and governors of fairs are to take care that every thing be sold according to just weights and measures. And for that and other purposes they may appoint a clerk of the fair or market, who is to mark and allow all such weights, &c.; charging 1*d.* for sealing and marking a bushel, ½*d.* for marking a half bushel or peck, and ¼*d.* for marking a gallon, pottle, quart, pint, &c., under penalty of 5*l.* — (22 *Cha.* 2. c. 8.)

7. *Tolls.* — Being a matter of private benefit to the owners of fairs or markets, and not incident to them, tolls are not exigible unless specially granted in the patent: but the king may by a new grant authorise a reasonable toll to be taken. If the toll granted be excessive, the patent will be void. It is a general rule, unless changed by a contrary custom obtaining time out of mind, that no toll be paid for any thing brought to a fair or market, before the same is sold, and that it shall then be *paid by the buyer.*

The owner of a house next to a fair or market is not allowed to open his shop during such fair or market without paying *stallage* (toll for having a stall); on the ground that if he take the benefit of the market, he ought to pay the duties thereon. This regulation has been a good deal complained of.

The owners of fairs and markets are required by statute (2 & 3 Ph. and M. c. 7.) to appoint a person in a special open place to take the toll. The most important part of this person's duty has reference to his entering the horses sold with three distinguishing marks, and the names, &c. of those who buy and sell them. — (See HORSES.)

An action lies against any one who refuses to pay the customary toll.

(For further information as to British fairs and markets, see *Chitty on Commercial Law*, vol. ii. c. 9.)

The 3 Geo. 4. c. 55. enacts, that at all fairs held within 10 miles of Temple Bar, business and amusements of all kinds shall cease at 11 o'clock in the evening, and not re-commence before 6 o'clock in the morning, under a penalty of 40*s.* to be paid by any master, mistress, or other person, having the care or management of any house, shop, room, booth, standing, tent, caravan or wagon, where any breach of this enactment shall have been committed. Power is also given by the same act to any 2 justices of the peace, within their respective jurisdictions, to put a stop to any fair which is held without charter, prescription, or lawful authority.

8. *Principal British Fairs.* — Among these may be specified Stourbridge, in Worcestershire. Bristol has two considerable fairs, one in March and one in September. Exeter December fair, for cattle, horses, and most sorts of commodities. Weyhill fair, in Hampshire (October 10.), has, probably, the greatest display of sheep of any fair in the kingdom. Bartholomew fair, in London, used to be of considerable importance, but latterly it was appropriated only to shows of wild beasts, and such like exhibitions, and has, within these few years, been very properly suppressed. St. Faith's near Norwich (October 17.), is the principal English fair for Scotch cattle. They are sold to the graziers and feeders of Norfolk, Suffolk, Essex, &c., by whom they are fattened for the London markets, where they are met with in great abundance. But besides those sold at St. Faith's, large numbers of Scotch cattle are disposed of at Market Harborough, Carlisle, Ormskirk, and other places. Ipswich has two considerable fairs: one in August, for lambs; and one in September, for butter and cheese: it is reckoned that above 100,000 lambs are annually sold at the former. Woodborough-hill, in Dorset, for west country manufactures, as kerseys, druggets, &c. Woodstock October fair, for cheese. Northampton and Nottingham have each several large fairs, for horses, cattle, cheese, &c. The August fair of Horncastle, in Lincolnshire, is the largest horse fair in the kingdom, many thousand horses being exhibited for sale during its continuance: it is resorted to by crowds of dealers from all parts of Great Britain, by several from the Continent, and sometimes even from North America. Howden, in Yorkshire, has, also, a very large horse fair, particularly for Yorkshire hunters. Devizes, in Wiltshire, has several large fairs for sheep and cattle. There is usually a large display of cheese at the Gloucester April fair. A guild, or jubilee, commencing the last week of August, is held every twentieth year at Preston, in Lancashire; the last was held in 1842, and was well attended. The October fair of Market Harborough, Leicestershire, lasts 9 days, and a great deal of business is usually done in cattle, cheese, &c. Woodbridge Lady-day fair is celebrated for the show of Suffolk horses. Falkirk fair, or tryst, is one of the most important in Scotland, for the sale of cattle and sheep. The October fair of Ballinasloe, in the county Galway, is famous for the display of cattle and sheep; by far the largest proportion of these animals raised for sale in Connaught being disposed of at it. The sheep are generally from 3 to 4, the heifers from 3 to 4, and the bullocks from 4 to 5 years of age. They are mostly lean; and are kept for a year in Leinster before they are fit for the Dublin or Liverpool markets.

We subjoin an

Account of the Number of Sheep and Cattle exhibited at the October Fairs of Ballinasloe, in the undermentioned Years, from 1790 to 1858, both inclusive.

Years.	Sheep, total sold and unsold.	Horned Cattle, total sold and unsold.	Years.	Sheep, total sold and unsold.	Horned Cattle, total sold and unsold.	Years.	Sheep, total sold and unsold.	Horned Cattle, total sold and unsold.

9. *Principal French Fairs.*—Among these may be specified the fairs of St. Germain's, Lyons, Rheims, Chartres, Rouen, Bordeaux, Troyes, and Bayonne; but they are much fallen off.

The most important of the modern French fairs is that of Beaucaire, on the right bank of the Rhone opposite to Tarrascon, 14 miles E. Nismes. It is very favourably situated for an *entrepôt*, being, exclusive of the command of internal navigation afforded by the Rhone, connected by canals with the sea and the *Canal du Midi*. The fair, which commences on the 22d and finishes on the 28th of July, was formerly the greatest in Europe, and, though a good deal fallen off, it is still attended by a vast concourse of people, not from France only, but also from Switzerland, Germany, Italy, Spain, and the Levant. Almost every sort of article, whether of convenience or luxury, may then be met with in the town. It is said that the number of visitors still amounts to from 70,000 to 80,000, and the amount of business done to 150,000,000 fr.; but we have little doubt that these estimates are very greatly exaggerated; and that the first would be nearer the mark were it reduced to 50,000 or 60,000. All bills due at this fair are presented on the 27th, and protested on the 28th. A tribunal instituted for the purpose takes cognizance of and immediately settles all disputes growing out of transactions that take place at the fair. A military force attends to preserve order, and the prefect of the department, who is always present, entertains the principal merchants and strangers. — (See *Geographical Dictionary*, art. *Beaucaire*, and the authorities there referred to.)

10. *German Fairs.*—The principal German, or rather European, fairs, are those of Frankfort on the Maine, Frankfort on the Oder, and Leipsic. The concourse of merchants, and the business done at these fairs, are generally very great. They are copiously supplied with the cotton stuffs, twist, cloths, and hardware of England; the silks and jewellery of France; the printed cottons of Switzerland and Austria; the raw, manufactured, and literary products of Germany; the furs of the North; Turkey carpets; Cachemere shawls, &c.; and there, also, are to be found merchants of all countries, those of Ispahan negotiating with those of Montreal for the purchase of furs; and Georgians and Servians supplying themselves with the cottons of Manchester and the jewellery of Paris. There, in fact, are met the representatives, as it were, of every people in the world, labouring, though without intending it, to promote each other's interest, and to extend and strengthen those ties that bind together the great family of the human race.

The fairs at Frankfort on the Maine should begin, the first on Easter Tuesday, and the second on the Monday nearest to the 8th of September. Their duration is limited to 3 weeks, but they usually begin from 8 to 15 days before their legal commencement. Accounts are kept in rixdollars: 1 rixdollar of account = $1\frac{1}{2}$ florin, or $4\frac{1}{2}$ copsticks, or $22\frac{1}{2}$ batzen. The rixdollar = 3*s.* 1·8*d.*; so that the par of exchange is 141 batzen per 1*l.* sterling. 100 lbs. common Frankfort weight = 103 lbs. avoirdupois. The foot = 11·27 English inches.

The fairs at Frankfort on the Oder are 3 in number: viz. *Reminiscere*, in February or March; *St. Margaret*, in July; and *St. Martin*, in November. They ought, strictly speaking, to terminate in 8 days, but they usually extend to 15. The Prussian government gives every facility to those who attend these fairs. Accounts are kept in Prussian money, that is, in rixdollars of 2*s.* $11\frac{1}{4}$*d.* 100 lbs. Prussian = 103 lbs. avoirdupois. The foot = 12·356 English inches.

The fairs of Leipsic are still more celebrated than those of either Frankfort. They are held thrice a year, — on the 1st of January, at Easter, and at Michaelmas. The first is the least important. The Easter and Michaelmas fairs are famous, particularly

the former, for the vast number of new publications usually offered for sale. They are attended by all the principal booksellers of Germany, and by many from the adjoining countries, who adjust their accounts, learn the state of the trade in all parts of the world, and endeavour to form new connections. Most German publishers have agents in Leipsic; which is to the literature of Germany what London is to that of Great Britain. As many as 5,000 new publications have been in a single Leipsic catalogue! They are also great markets for Saxon woollens and other goods, British calicoes, French silks, and, in fact, for most descriptions of produce. The fairs ought to close in 8 days, but they usually continue for about 3 weeks.

No days of grace are allowed. The holder of a bill must demand payment on the day it becomes due; and, if not paid, he must have it protested on that very day, and returned by the first opportunity. If he neglect any of these regulations, he loses all right of recourse upon the drawer and indorsers. Money of account at Leipsic same as at Frankfort on the Maine. 100 lbs. Leipsic=103 lbs. avoirdupois. The foot = 11·11 English inches.—(*Kelly's Cambist; Manuel de Nelkenbrecher; Bowring's Report on the Prussian Commercial Union*, pp. 255—269, &c.)

Dr. Bright gives, in his *Travels in Hungary* (pp. 201—223.), an interesting account of the fairs held at Debretzin and Pesth. The latter has become the grand centre of Hungarian commerce; most part of which is conducted at its fairs.

11. *Italian Fairs.*—Of these, the most celebrated is that of Sinigaglia, a small but handsome town of the Papal dominions, on the Misa, near its confluence with the Adriatic. The fair commences on the 20th of July, and should terminate on the last day of that month, but it usually continues 8 or 10 days longer. The duties on goods brought to the fair are extremely moderate, and every thing is done to promote the convenience of those frequenting it. All sorts of cotton, woollen, and silk goods, colonial produce, iron and steel, hardware, jewellery, brandy and liqueurs, timber, drugs, spices, &c. are brought here by the English, French, Austrians, Swiss, &c. These are exchanged for the various raw and manufactured products of Italy and the Levant; consisting, among others, of raw, thrown, and wrought silks; oil, fruits, cheese, alum, soda, sumach, sulphur, &c. Accounts are kept in scudi of 20 soldi; the scudo = 4*s.* 4*d.* very nearly. 100 lbs. Sinigaglia = 73¾ avoirdupois. The ell or braccio measures 25·33 English inches. —(*Manuel de Nelkenbrecher; Macgregor's Tariffs, Italy*, p. 121.)

12. *Russian Fairs.*—These are numerous, and many of them are well attended. The most important is held at Nijnii-Novgorod, at the confluence of the Oka with the Wolga; lat. 56° 19′ 40″ N. lon. 44° 28′ 30″ E. Previously to 1817 this fair was held in a less convenient situation, at Makarieff, lower down the Wolga. But the buildings for the accommodation of the merchants at the latter having been accidentally burnt down in 1816, government took advantage of the circumstance to remove the fair to Nijnii. It is principally carried on within the new bazaars constructed for that purpose on the left bank of the Oka. These, which are divided into parallel rows or streets, are constructed of stone walls roofed with iron, having covered galleries in front supported by iron pillars. They are built on piles, and, to guard against inundations, the ground on which they stand has been raised about 20 feet. Being enclosed on 3 sides by canals, and on the 4th by a navigable inlet of the Oka, there is every facility for the delivery and shipment of goods. The establishment is of great extent, comprising 2,524 booths, and is admitted on all hands to be at once the largest and most perfect of its kind that is anywhere to be met with. But, in addition to the above, there are about as many shops and booths constructed of wood which belong to private parties. The fair begins in July, and continues for a month or 6 weeks.

The total value of all sorts of produce brought to the fair in 1852 amounted to 64,591,000 silv. roubles: of this sum Russian produce made 49,274,000 roub.; colonial and European produce, 3,754,000 do.; drugs and dye stuffs, 2,580,000 do.; Chinese produce, 6,886,000 do.; Persian produce 1,234,000 do.; with the produce of Khiva and Boukhara 886,000 do. The sales amounted to 56,264,000 roub. (*Tegoborski, Forces Productives de la Russie*, iii. 281.) The stationary population of the town, which may amount to about 25,000, is, during the fair, said to amount to from 100,000 to 130,000, including Chinese, Persians, Armenians, Tartars, Bokharians, &c. Theatrical exhibitions, shows of wild beasts, and other Bartholomew fair exhibitions, add to the attractions of the scene.

Another celebrated Russian fair is held, in the month of December, at Kiachta, in Mongolia, on the Chinese frontier, lat. 50° 21′ 5″ N., long. 106° 28′ 15″ E. The town is small, the population not exceeding 4,000 or 5,000; but by far the largest part of the commerce between the Russian and Chinese empires is transacted at its fair, and it is also the centre of the political intercourse between them. The commodities brought hither by the Russians consist principally of Russian and German broad cloths, furs, sheep and lamb skins, leather, coarse linens, worsted stuffs, cattle, &c., with, for the most part, bullion. These they exchange with the Chinese for tea, raw and manufactured silk, nankeens, porcelain, sugar candy, rhubarb, tobacco, musk, &c., the value of the articles, however, other than tea, being comparatively inconsiderable. The quantity of tea purchased at the Kiachta fairs by the Russians, which has latterly increased very considerably, amounted, in 1850, according to the official returns, to 210,179 poods, or 7,566,444 lbs. of very superior tea, worth about 2*s.* 6*d.* per lb., and 85,440 poods (3,076,840 lbs.) inferior or black tea. At an average of the 6 years ending with 1850, the total imports of all sorts of tea into Russia through Kiachta was estimated at 11,748,464 lbs. Eng. a year. According to the same accounts, the total value of the exports to China through Kiachta, in 1850, amounted to 6,916,071 silver

roubles, and that of the imports to about the same. The customs duty received at Kiachta in 1848 amounted to 923,554*l.* The Russian trade is in the hands of a comparatively small number of merchants, some of whom are very rich; that of the Chinese is much more diffused. Commodities may be conveyed from Kiachta to European Russia either by land or by water. In the former case, the journey takes a year; in the latter, it takes 3 years, or rather 3 very short summers; the rivers being for the most part of the year frozen over.)—*Schnitzler, Statistique Générale de l'Empire de la Russie*, p. 143, &c.) We subjoin

13. *Turkish Fairs.* — Several important fairs, of which little or nothing is known in this country, are held at various places in European Turkey. Among others may be specified those of Usundji, or Usundjova, in Roumelia; Joanina, in Albania; Strouga on the lake of Ocrida; Novi-Bazar, in Upper Mœsia; Islivni, in Thrace; Prelip and Nicopoli, in Macedonia; Eski-Djouma, in Bulgaria; and Zeitoun and Pharsalia, in Thessaly.

The largest and most important of these fairs is that of Usundji, held at the village of that name, on the Usundji, a tributary of the Maritza, about 44 miles W. by N. Adrianople. It was visited by M. Blanqui in 1841, and by Mr. Spencer in 1850. The latter says (but statements of this sort are very apt to be exaggerated), that it was attended by from 80,000 to 100,000 people, who had journeyed hither from all parts of European Turkey for the purpose of disposing of their wool, hides, raw cotton, leeches, and other products of the country, and of purchasing in return the manufactures of the West. The show of the latter is very extensive. Sheds are erected in the village by government, which serve as warehouses for the merchants, and every house is converted into a han for the reception of strangers. But by far the greater number of the latter have, notwithstanding, to encamp with their camels, horses, &c., on the surrounding plain. Blanqui speaks in high terms of commendation of the good order that prevailed, in the absence of any thing like police, among the motley population at the fair. —(*Blanqui, Voyage en Bulgarie*, p. 252; *Spencer's Travels in European Turkey*, ii. 346, &c.)

This great fair, which lasts for 15 days (Blanqui) is held, like the other fairs, in autumn, immediately after harvest. But though it be largely frequented by German, Swiss, Italian, and Greek merchants, who transact a great amount of business, it is very little, if at all, known in England. This is the more surprising, seeing that we have consuls at Adrianople and other places not very distant from the seat of the fair. And it might have been supposed that these functionaries would have been anxious to send home the most ample details with respect to this and other fairs in their vicinity; describing the products which might be most advantageously bought and sold at these marts; the routes by which they might be most easily reached, and so forth. But if such reports any where exist, they have not, at all events, been published. And hence, probably, the fact of the business of these fairs being mostly in the hands of foreigners.

14. *Eastern Fairs.* — The most important fair in the Eastern world is that held at Mecca, during the resort of pilgrims in the month of Dhalhajja. It used to be frequented by many thousands of individuals of all ranks and orders, brought together from the remotest corners of the Mohammedan world; and though the numbers attending it have declined of late years, the concourse is still very great. — (See CARAVAN.)

Hurdwar, in Hindostan, in lat. 29° 57′ N., lon. 78° 2′ E., 117 miles N. E. from Delhi, is famous from its being one of the principal places of Hindoo pilgrimage, and the greatest fair in India. The town, which is but inconsiderable, is situated on the Ganges, at the point where that sacred stream issues from the mountains. The pilgrimage and fair are held together at the vernal equinox; and Europeans, nowise addicted to exaggeration, who have been repeatedly present on these occasions, estimate that from 200,000 to 300,000 strangers are then assembled in the town and its vicinity. But every twelfth year is reckoned peculiarly holy; and then it is supposed that from 1,000,000 to 1,500,000, and even 2,000,000 pilgrims and dealers are congregated together from all parts of India and countries to the north. In 1819, which happened to be a twelfth year, when the auspicious moment for bathing in the Ganges was announced to the impatient devotees, the rush was so tremendous that no fewer than 430 persons were either trampled to death under foot, or drowned in the river! The foreigners resorting to Hurdwar fair for commercial purposes only, consist principally of natives of Nepaul, the Punjab, and Peshwaur, with Afghans, Usbeck Tartars, &c. They import vast num-

bers of horses, cattle, and camels; Persian dried fruits, shawls, drugs, &c.: the returns are made in cotton piece goods, indigo, sugar, spices, and other tropical productions. The merchants never mention the price of their goods, but conduct the bargain by touching the different joints of their fingers, to hinder the bystanders gaining any information. During the Mahratta sway, a kind of poll-tax and duties on cattle were levied; but all is now free, without impost or molestation of any sort. Owing, also, to the precautions adopted by the British government, the most perfect order is preserved; much to the surprise and satisfaction of the natives; for, antecedent to our occupation of the country, the fairs usually ended in disorder and bloodshed. — (*Private Information*, and the excellent account of *Hurdwar* in *Hamilton's Gazetteer*.)

The fairs of Portobello, Vera Cruz, and Acapulco, once so famous, are now totally deserted; that of the Havannah is also much fallen off.

FATHOM, a measure of length, 6 feet, chiefly used for measuring the length of cordage, and the depth of water and mines.

FEATHERS, BED-FEATHERS (Fr. *Plumes, Plumes à lit;* Ger. *Federn, Bettfedern;* Du. *Bedveern, Pluimen;* It. *Piume;* Sp. *Plumas*), make a considerable article of commerce; particularly those of the ostrich, goose, heron, swan, peacock, and other poultry. The feathers of the ostrich have been held in the highest estimation from antiquity downwards, and have furnished favourite decorations for the fans and head-dresses of ladies, the helmets of warriors, and the most splendid processions. Many parts of Great Britain supply feathers for beds, and an inferior sort is brought from Ireland. Eider down, the finest variety of its class, is imported from the north of Europe; the ducks that supply it being inhabitants of Greenland, Iceland, and Norway. The eider duck breeds in the islands on the west of Scotland, but not in sufficient numbers to form a profitable branch of trade to the inhabitants. Hudson's Bay furnishes very fine feathers, especially for quills. The down of the swan is brought from Dantzic, as well as large quantities of superior feathers.

The duty on feathers was repealed in 1845. In 1852 the following quantities were imported and re-exported; viz.

	Imported.			Re-exported.				Imported.	Re-exported.
Feathers for beds -	- cwt.	2,541	3 19	535	1 17	Feathers, not otherwise described, undressed - value		£810 10 0	£993 0 0
ostrich, undressed -	- lb.	8,976	0 0	3,242	0 0				
paddy bird, undressed -	-	403	0 0	314	0 0				

FIDDLES, OR VIOLINS (Ger. *Violinen, Geigen;* Du. *Vioolen;* Fr. *Violons;* It. *Violini;* Sp. *Violines;* Rus. *Skripizii*), musical instruments, too well known to need any particular description. The finest-toned violins are those made in Italy; they are usually called Cremonas, from the name of the town where they were formerly manufactured in the highest perfection: 100 guineas and more have not unfrequently been given for a first-rate Cremona violin.

FIGS (Ger. *Feigen;* Du. *Vygen;* Fr. *Figues;* It. *Fichi;* Sp. *Higos;* Lat. *Fici, Caricæ;* Arab. *Teen*), the fruit of the fig tree (*Ficus carica*), a native of Asia, but early introduced into Europe.

It flourishes in Turkey, Greece, France, Spain, Italy, and Northern Africa, and even sometimes ripens its fruit in the open air in this country. Figs, when ripe, are, for the most part, dried in ovens to preserve them; and then packed very closely in the small chests and baskets in which we import them. The best come from Turkey; those of Kalamata, in the Morea, are said to be the most luscious. — (*Thomson's Dispensatory.*)

Dried figs form a very considerable article of commerce in Provence, Italy, and Spain; besides affording, as in the East, a principal article of sustenance for the population. In Spain, figs are chiefly exported from Andalusia and Valencia; but they are more or less abundant in every province. In the northern parts of France there are many fig gardens, particularly at Argenteuil.

In 1857, 35,953 cwt. figs were admitted to consumption. The duty, which was reduced in 1840 to 15*s.* 9*d.* a cwt., amounted to 28,314*l.* Of 48,693 cwt. figs imported in 1857 no fewer than 31,666 came from Turkey, 8,008 cwt. being supplied by Spain, 1,288 by Portugal, and 6,681 by Austria, probably at second hand from Turkey.

No abatement of duty is made on account of any damage received by figs.

FILE, FILES (Da. *File;* Du. *Vylen;* Fr. *Limes;* Ger. *Feilen;* It. *Lime*), an instrument of iron or forged steel, cut in little furrows, used to polish or smooth metals, timber, and other hard bodies.

FIR. See PINE.

FIRE-ARMS. Under this designation is comprised all sorts of guns, fowling-pieces, blunderbusses, pistols, &c. The manufacture of these weapons is of considerable importance; employing at all times, but especially during war, a large number of persons.

In consequence of the frequent occurrence of accidents from the bursting of insufficient barrels, the legislature has most properly interfered, not to regulate their manufacture, but to prevent all persons from using or selling barrels that have not been regularly *proved* in a public proof-house. The first act for this purpose was passed in 1813; but it was soon after superseded by a fuller and more complete one, the 55 G. 3. c. 59. This statute imposes a fine of 20*l.* on any person *using*, in any of the progressive stages

of its manufacture, any barrel not duly proved; on any person *delivering* the same, except through a proof-house; and on any person *receiving*, for the purpose of making guns, &c., any barrels which have not passed through a proof-house. These penalties to be levied on conviction before 2 justices: with like penalties, to be similarly levied, on persons counterfeiting the *proof-marks*.

FIRE-WORKS. By 9 & 10 Will. 3., all sorts of fire-works are declared to be a common nuisance: and the *making*, *causing to be made*, *giving*, *selling*, or *offering* for sale, any squibs, rockets, serpents, or *other fireworks*, or any cases or implements for making the same, is made subject to a penalty of *5l.*, to be recovered on conviction before a justice of the peace. Casting or firing any such fire-works, or permitting the same to be cast or fired, *from* any house or place, and casting or firing the same *into* any house, shop, street, highway, or river, is subjected to a penalty of 20*s.*, to be recovered in like manner; and if not immediately paid, the party to be imprisoned and kept to hard labour for any time not exceeding a month. But the statute provides, that it shall be lawful for the master, lieutenant, or commissioners of his Majesty's ordnance, or those authorised by them, to give orders for making any fire-works, to be used according to such orders.

FIRKIN, a measure of capacity, equal to 9 ale gallons, or 7½ Imperial gallons, or 2,538 cubic inches. —(See WEIGHTS AND MEASURES.)

FIRLOT, a dry measure used in Scotland. The Linlithgow wheat firlot is to the Imperial bushel as ·998 to 1; and the Linlithgow barley firlot is to the Imperial bushel as 1·456 is to 1. —(See WEIGHTS AND MEASURES.)

FISH (Ger. *Fische*; Du. *Visschen*; Da. and Sw. *Fisk*; Fr. *Poissons*; It. *Pesci*; Sp. *Pescados*; Port. *Peixes*; Rus. *Riib*; Pol. *Rybi*; Lat. *Pisces*), a term used in natural history to denote every variety of animal inhabiting seas, rivers, lakes, ponds, &c. that cannot exist for any considerable time out of the water. But in a commercial point of view, those fishes only are referred to, that are caught by man, and used either as food or for some other useful purpose. Of these, herring, salmon, cod, pilchard, mackarel, turbot, lobster, oyster, whale, &c. are among the most important. —(See the different articles under these titles.)

The supply of fish in the seas round Britain is most abundant, or rather quite inexhaustible. "The coasts of Great Britain," says Sir John Boroughs, "doe yield such a continued sea harvest of gain and benefit to all those that with diligence doe labour in the same, that no time or season of the yeare passeth away without some apparent meanes of profitable employment, especially to such as apply themselves to fishing; which, from the beginning of the year unto the latter end, continueth upon some part or other upon our coastes; and these in such infinite shoales and multitudes of fishes are offered to the takers, as may justly move admiration, not only to strangers, but to those that daily are employed amongst them."—"That this harvest," says Mr. Barrow, "ripe for gathering at all seasons of the year — without the labour of tillage, without expense of seed or manure, without the payment of rent or taxes — is inexhaustible, the extraordinary fecundity of the most valuable kinds of fish would alone afford abundant proof. To enumerate the thousands, and even millions of eggs, which are impregnated in the herring, the cod, the ling, and indeed in almost the whole of the esculent fish, would give but an inadequate idea of the prodigious multitudes in which they flock to our shores; the shoals themselves must be seen, in order to convey to the mind any just notion of their aggregate mass."—(For an account of the shoals of herrings, see HERRING.)

But, notwithstanding these statements, there has been, for these some years past, a growing complaint of a scarcity of such fish as breed in the channel; and it is affirmed, in the report of the Commons' committee of 1833, on the Channel fisheries, that the fact of such scarcity existing has been completely established. The committee ascribe it to various causes, but principally to the destruction of the spawn or brood of fish, by fishing with trawl or drag nets with small meshes, near the shore, during the breeding season; a practice prohibited by several statutes, which seem, however, to have fallen into disuse. The committee represent the fishermen as being generally in a very depressed state, and that the business is, for the most part, very unprofitable. We believe that this is the fact; but we do not know any period when the same might not have been said with quite as much truth as at present. Smith has remarked, that from the age of Theocritus downwards, fishermen have been proverbially poor—(*Wealth of Nations*, p. 45.); and a library might be filled with the acts, reports, plans, tracts, &c. that have been printed in this country during the last 2 centuries, containing regulations, schemes, suggestions, &c. for the improvement of fisheries and fishermen. But it is not too much to say, that not one of these well-meant endeavours, notwithstanding the enormous expense incurred in carrying some of them into effect, has been productive of any material advantage! and we see no reason to think that the suggestions of the late committee, supposing they were to be acted upon, would have any better success.

The injury done to the breeding grounds might, perhaps, be obviated; but besides this, the committee laid much stress on the encroachments of the French and other

foreign fishermen, and on the licence given to import foreign-caught turbot, &c. duty free! We confess, it appears to us quite visionary to suppose that these circumstances could have much influence. Our fishermen, living upon the very shores of the bays to which the French are said to resort, have advantages on their side sufficient, surely, to insure them a superiority, without the forcible expulsion, supposing that could be accomplished, of their foreign competitors. A man who does not succeed in a business carried on at his own door so well as one who resides 100 miles off, must look for the cause in his want of skill or industry; and should seek rather to improve himself than to discard his rival. The proposition for excluding turbot, &c. of foreign catch, is one that could not be listened to for a single moment. Such exclusion would not be of the slightest advantage to the British fishermen, unless it occasioned a rise in the price of the fish; and we need not say, that if the legislature interfere at all in the matter, it should have for its object the lowering, not the raising of prices. We are glad, however, to have to state that a convention for fixing the limits of the oyster and other fisheries on the coasts of the U. Kingdom and of France, was signed at Paris on the 2d of August, 1839.

All that it is possible to do for the fishery, by relieving it from tithes and other burdens, and facilitating the disposal of the fish in the markets of this and other countries, should be done; but, except in so far as its interests may be promoted in this way, and, perhaps, by some new regulations for preserving the brood, we do not see what more is to be done by legislative interference. It will be seen, in our articles on the herring and whale fisheries, that the bounty system was attended with vast expense, without leading to any useful result. All sorts of fish, of whatever take, are now admitted free of duty.

The price of fish in the metropolis, though much reduced of late years, is still very high, at least as compared with beef. This has been pretty generally believed to be in no small degree owing to the salesmen of Billingsgate market being able, in great measure, to regulate both the supply of the article and its price. The committee of 1833, however, declared, that though they minutely examined the subject, it did not appear that any improper monopoly or injurious regulations subsisted either in the mode of supplying the market, or in the sale of the fish.

Down to a comparatively late period the consumption of fish, except in the metropolis and a few seaport towns, was but inconsiderable. This was not so much a consequence of the scarcity or high price of fish, as of the difficulty and expense of its conveyance into the country, where, indeed, it could hardly be had quite fresh. But the opening of railroads from the sea-ports to all parts of the interior has obviated this difficulty. And fish brought to London, Yarmouth, Scarborough, &c., in the morning, may be served up at dinner on the same day at Derby, Birmingham, and other towns in the centre of the kingdom. There has been, in consequence, an extraordinary increase in the consumption of fish in the central parts of the country. Birmingham, for example, imported only about 400 tons of fish in 1829; in 1835 the importation had increased to about 1,000 tons; in 1840, to 2,500 tons; and in 1845 to 3,910 tons! And it has since gone on increasing. (*Statistical Account of the British Empire*, 3rd ed. i. 625).— The demand for fish in other central towns has been similarly augmented.

Sir John Barrow, in a valuable article on the fisheries, in the *Encyclopædia Britannica*, estimated the value of the entire annual produce of the foreign and domestic fisheries of Great Britain at 8,300,000*l*. But it is admitted by every one who knows any thing of the subject, that this estimate is very greatly exaggerated. We doubt much, whether the entire value of the fisheries can be reckoned so high as 5,500,000*l*.

FLAX (Ger. *Flachs*; Du. *Vlasch*; Fr. *Lin*; It. and Sp. *Lino*; Rus. *Len*; *Lon*; Pol, *Len*; Lat. *Linum*), an important plant (*Linum usitatissimum*) that has been cultivated from the earliest ages in Great Britain and many other countries; its fibres being manufactured into thread, and its seed crushed for oil. But in general we have been in the habit of importing a large proportion of our supplies. The premiums given by the legislature to force the cultivation of flax had little effect; the fact being, as Mr. Loudon has stated, that its culture is found to be, on the whole, less profitable than that of corn. When allowed to ripen its seed, it is one of the most severe crops.

Probably, however, the case may be different in Ireland, the soil and climate of which appear to be better suited than those of Britain to the growth of flax. There, at all events, its cultivation has been rapidly extended within the last few years. This is evinced by the fact that while the land under flax in Ireland in 1847 amounted to only 58,312 acres, it had increased in 1851 to 140,356 acres. This extension has been, however, owing, in great measure, to the exertions of a society for promoting the growth of flax, and it remains to be seen whether it be really an advantage.

Russia supplies by far the largest portion of the flax imported into this country, the principal sorts being Petersburg, Narva, Riga, Revel, Pernau, Liebau, Memel, and Oberland. Petersburg and Narva flax are nearly of the same quality, the latter being but little inferior to the former. Both sorts come to us in bundles of 12, 9, and 6 heads. The Riga flax seems to deserve the preference of any imported from the Baltic. It is the growth of the provinces of Marienburg, Druania, Thiesenhausen, and Lithuania.

The best Marienburg is called simply Marienburg (M), or Marienburg clean; the second quality, cut (GM); and the third, *risten drayband* (RD); of the three other provinces, the first quality bears the name of *rakitzer*; — as *Druania rakitzer* (DR), *Thiesenhausen rakitzer* (TR), and *Lithuania rakitzer* (LR). The cut flax of these three provinces is the second quality: and to the third quality belong the *badstub* and *badstub cut* (B and BG); the *paternoster* (PN); and *hafs three band* (HD). *Badstub* and *paternoster* are the refuse of the *rakitzer* flax, and the *three band* again the refuse of the former sorts, and consequently very ordinary. The Revel and Pernau consists of Marienburg, *cut*, *risten*, *hafs three band*, and *three band*. The Liebau and Memel growths are distinguished by the denomination of *four* and *three band*. These two sorts, as well as the Oberland flax, come from Königsberg, Elbing, &c., and are little esteemed in the British markets.

Flanders or Dutch flax is well dressed, and of the finest quality.

Flax is extensively cultivated in Egypt. Of late years, some of the Italian ports, which used to be supplied from Russia, have been fully supplied on lower terms from Alexandria.

The *Phormium tenax*, or New Zealand flax, has been said to exceed every other species in strength of fibre and whiteness; qualities (which if it really possess them in the degree stated) must make it peculiarly well fitted for being made into canvas and cordage. In point of fact, however, there is a great diversity of opinion as to its real merits, and it fetches at present but a low price. In 1831 and 1832 the imports of New Zealand flax amounted respectively to 15,725 and 15,867 cwts.; but they fell off in 1835 to 7,812 cwts., and since then only trifling quantities have been imported. It is alleged that this is a consequence of the imperfect preparation of the flax, which has hitherto been entirely intrusted to the native women. But without presuming to say whether the defects with which it is charged be inherent in the flax itself, or depend on its preparation, it is abundantly certain that, unless it be furnished of a superior quality, it will not suit our markets.

When flax is brought to the principal Russian ports whence it is shipped, it is classified according to its qualities, and made up in bundles by sworn inspectors (*brackers*) appointed by government for the assortment of that and all other merchandise. These functionaries are said to perform their task with laudable impartiality and exactness. A ticket is attached to every bundle of assorted flax, containing the names of the inspector and owner, the sort of flax, and the period when it was selected or inspected. —(See HEMP.) Good flax should be of a fine bright colour, well separated from the tow, codilla, or coarser portion of the plant; and of a long, fine, and strong fibre. In purchasing flax, it is usual to employ agents wholly devoted to this peculiar business.

Account of the Quantities and Values of the Flax and Tow, and Codilla of Flax, imported into the United Kingdom in 1857, specifying the Countries from which they were brought, and the Quantities and Values brought from each.

Flax.			Tow and Codilla of Flax.		
Whence imported.	Quantities.	Computed Value of Imports.	Whence imported.	Quantities.	Computed Value of Imports.

Customs	0	1	8
Landing charges	1	11	0
Discount, 5½ per cent. (being sold at 9 months' credit)	1	13	9
Brokerage, ½ per cent.	0	4	6
	£5	15	8
Loss by tare, 2 per cent.	0	18	0
	6	13	8

9 Head Flax.

26 bobbins = 63 poods = 1 ton. *Rou. cop.*

Fixed charges at Petersburg amount to 80 35

The other charges same as on 12 head; the charges of import may be called the same as on 12 head also, the difference being only on the value; which makes the insurance, discount, and brokerage, of less amount. The increase of fixed charges at Petersburg is owing to the larger number of bobbins to the ton.

6 Head Flax.

47 bobbins = 63 poods = 1 ton. *Rou. cop.*

Fixed charges, per ton 91 57

Other charges, *vide suprà*

FLAX-SEED, or LINSEED (Fr. *Lin, Graine de Lin*; Ger. *Leinsaat*; Du. *Lynzaad*; It. *Linseme*; Sp. *Linaza*; Port. *Linhaca*; Pol. *Siemie, Inlane*; Rus. *Semja lenjanoe*; Lat. *Lini semen*), the seed of flax. It contains a great deal of oil, which it yields by expression; and is cultivated either that it may be used in sowing, or sent to the crushing mills to be converted into oil.

As the quality of the crop depends much on the seed employed, a good deal of care is requisite in selecting the best. Generally speaking, it should be chosen of a bright, brownish colour, oily to the feel, heavy, and quite fresh. Dutch seed is in the highest estimation for sowing; it not only ripens sooner than any other that is imported, but produces larger crops, and of the quality that best suits our principal manufactures. American seed produces fine flax, but the produce is not so large as from Dutch seed. British flax-seed is sometimes used instead of Dutch; but the risk of the crop misgiving is so much greater, "that those only who are ignorant of the consequences, or who are compelled from necessity, are chargeable with this act of ill-judged parsimony."—(*Loudon's Enc. of Agriculture.*) Crushing seed is principally imported from Russia, but considerable quantities are also brought from India, Italy, and Egypt.

Account of the Quantities and Values of Flax and Linseed imported into the U. Kingdom in 1857, specifying the Countries from which they were brought, and the Quantities and Values brought from each.

Whence imported.	Quantities.	Computed Value of Imports.	Whence imported.	Quantities.	Computed Value of Imports.
Russia - -	685,569 qrs.	£1,962,462	Egypt - -	35,498 qrs	£103,429

Flax and linseed - - qrs.	799,402	1,035,335	848,513	756,951	1,180,180	1,051,113	1,017,844

The duty of 1*d.* per quarter formerly imposed on flax-seed and linseed was repealed in 1846.

FLOTSAM, JETSAM, AND LAGAN. In order to constitute a legal wreck, the goods must come to land. If they continue at sea, the law distinguishes them by the foregoing uncouth and barbarous appellations: *flotsam* is when the goods continue swimming on the surface of the waves; *jetsam* is when they are sunk under the surface of the water; and *lagan* is when they are sunk, but tied to a cork or buoy to be found again. —(*Blackstone*, book i. c. 8.) Foreign liquors, brought or coming into Great Britain or Ireland, as derelict, flotsam, &c., are to pay the same duties and receive the same drawbacks as similar liquors regularly imported.

FLOUR (Ger. *Feines mehl, Semmelmehl*; Du. *Bloem*; Fr. *Fleur de Farine*; It. *Fiore*; Sp. *Flor*), the meal of wheat corn, finely ground and sifted. There are three qualities of flour, denominated *firsts, seconds,* and *thirds,* of which the first is the purest. — (See CORN LAWS AND CORN TRADE.)

FOOT, a measure of length, consisting of 12 inches. —(See WEIGHTS AND MEASURES.)

FORESTALLING, the buying or contracting for any cattle, provision, or merchandise, on its way to the market, or dissuading persons from buying their goods there, or persuading them to raise the price, or spreading any false rumour with intent to enhance the value of any article. In the remoter periods of our history several statutes were passed, prohibiting forestalling under severe penalties; but as more enlarged views upon such subjects began to prevail, their impolicy became obvious, and they were consequently repealed in 1772. But forestalling is still punishable at common law by fine and imprisonment; though it be doubtful whether any jury would now convict an individual accused of such practices.—(*Wealth of Nations*, p. 237.)

FRANKINCENSE. See ROSIN.

FREIGHT, the sum paid by the merchant or other person hiring a ship, or part of a ship, for the use of such ship or part, during a specified voyage or for a specified time.

The freight is most commonly fixed by the charterparty—(see CHARTERPARTY)—or bill of lading—(see BILL OF LADING); but in the absence of any formal stipulations on the subject, it would be due according to the custom or usage of trade.

In the case of a charterparty, if the stipulated payment be a gross sum for an entire ship, or an entire part of a ship, for the whole voyage, the gross sum will be payable

although the merchant has not fully laden the ship. And if a certain sum be stipulated for every ton, or other portion of the ship's capacity, for the whole voyage, the payment must be according to the number of tons, &c. which the ship is proved capable of containing, without regard to the quantity actually put on board by the merchant. On the other hand, if the merchant have stipulated to pay a certain sum per cask or bale of goods, the payment must be, in the first place, according to the number of casks and bales shipped and delivered; and if he have further covenanted to furnish a complete lading, or a specific number of casks or bales, and failed to do so, he must make good the loss which the owners have sustained by his failure.

If an entire ship be hired, and the burden thereof be expressed in the charterparty, and the merchant bind himself to pay a certain sum for every ton, &c. of goods which he shall lade on board, but does not bind himself to furnish a complete lading, the owners can only demand payment for the quantity of goods actually shipped. But if the merchant agree to load a full and complete cargo, though the ship be described as of less burden than she really is, the merchant must load a full cargo, according to the *real burden* of the ship, and he will be liable for freight according to what ought to be loaded.

The delivery of goods at the place of destination is in general necessary to entitle the owner to freight; but with respect to living animals, whether men or cattle, which may frequently die during the voyage, without any fault or neglect of the persons belonging to the ship, it is ruled, that if there be no express agreement whether the freight is to be paid for the lading, or for the transporting them, freight shall be paid as well for the dead as for the living: if the agreement be to pay freight for the *lading*, then death certainly cannot deprive the owners of the freight; but if the agreement be to pay freight for *transporting* them, then no freight is due for those that die on the voyage, because as to them the contract is not performed. These distinctions have been made in the civil law, and have been adopted into the modern systems of maritime law.

Freight is most frequently contracted to be paid either by the whole voyage, or by the month, or other time. In the former case the owners take upon themselves the chance of the voyage being long or short: but in the latter the risk of the duration falls upon the merchant; and if no time be fixed for the commencement of the computation, it will begin from the day on which the ship breaks ground and commences her voyage, and will continue during the whole course of the voyage, and during all unavoidable delays *not occasioned by the act or neglect of the owners or master*, or by such circumstances as occasion a suspension of the contract for a particular period. Thus, the freight will be payable for the time consumed in necessary repairs during a voyage, provided it do not appear that the ship was insufficient at the outset, or that there was any improper delay in repairing her.

In the absence of an express contract to the contrary, the entire freight is not earned until the whole cargo be ready for delivery, or has been delivered to the consignee according to the contract for its conveyance.

If a consignee receive goods in pursuance of the usual bill of lading, by which it is expressed that he is to pay the freight, he, by such receipt, makes himself debtor for the freight, and may be sued for it. But a person who is only an agent for the consignor, and who is known to the master to be acting in that character, does not make himself personally answerable for the freight by receiving the goods, although he also enters them in his own name at the Custom-house.

In some cases freight is to be paid, or rather an equivalent recompence made to the owners, although the goods have not been delivered at the place of destination, and though the contract for conveyance be not strictly performed. Thus, if part of the cargo be thrown overboard for the necessary preservation of the ship and the remainder of the goods, and the ship afterwards reach the place of destination, the value of this part is to be answered to the merchant by way of general average, and the value of the freight thereof allowed to the owner. So, if the master be compelled by necessity to sell a part of the cargo for victuals or repairs, the owners must pay to the merchant the price which the goods would have fetched *at the place of destination;* and, therefore, are allowed to charge the merchant with the money that would have been due if they had been conveyed thither.

When goods are deteriorated during a voyage, the merchant is entitled to a compensation, provided the deterioration has proceeded from the fault or neglect of the master or mariners; and of course he is not answerable for the freight, unless he accept the goods, except by way of deduction from the amount of the compensation. On the other hand, if the deterioration has proceeded from a principle of decay naturally inherent in the commodity itself, whether active in every situation, or in the confinement and closeness of a ship, or from the perils of the sea, or the act of God, the merchant must bear the loss and pay the freight; for the master and owners are in no fault, nor does their contract contain any insurance or warranty against such an event. In our West India

trade, the freight of sugar and molasses is usually regulated by the weight of the casks at the port of delivery here, which, in fact, is in every instance less than the weight at the time of the shipment; and, therefore, the loss of freight occasioned by the leakage necessarily falls upon the owners of the ship by the nature of the contract.

Different opinions have been entertained by Valin, Pothier, and other great authorities as to maritime law, with respect to the expediency of allowing the merchant to abandon his goods for freight in the event of their being damaged. This question has not been judicially decided in this country. "The only point," says Lord Tenterden, "intended to be proposed by me as doubtful, is the right to abandon for freight alone at the port of destination: and in point of practice, I have been informed that this right is never claimed in this country."—(*Law of Shipping*, part iii. c. 7.)

Freight being the return made for the conveyance of goods or passengers to a particular destination, no claim arises for its payment in the event of a total loss; and it is laid down by Lord Mansfield, that "in case of a total loss with salvage, the merchant may either take the part saved, or abandon."—(*Abbott*, part iii. c. 7.) But after the merchant has made his election, he must abide by it.

It often happens that a ship is hired by a charterparty to sail from one port to another, and thence back to the first—as, for example, from London to Leghorn, and from Leghorn back to London—at a certain sum to be paid for every month or other period of the duration of the employment. Upon such a contract, *if the whole be one entire voyage*, and the ship sail in safety to Leghorn, and there deliver the goods of the merchant and take others on board to be brought to London, but happen to be lost in her return thither, nothing is due for freight, although the merchant has had the benefit of the voyage to Leghorn; but, *if the outward and homeward voyages be distinct*, freight will be due for the proportion of the time employed in the outward voyage. "If," said Lord Mansfield, in a case of this sort, "there be *one entire voyage out and in*, and the ship be cast away on the homeward voyage, no freight is due; no wages are due, because the whole profit is lost; and by express agreement the parties may make the outward and homeward voyage one. Nothing is more common than two voyages: *wherever there are two voyages, and one is performed*, and the ship is lost on the homeward voyage, freight is due for the first."—(*K. B. Trin. Term*, 16 *Geo.* 3.)

It frequently happens that the master or owner fails to complete his contract, either by not delivering the whole goods to the consignee or owner, or by delivering them at a place short of their original destination; in these cases, if the owner or consignee of the goods *derive any benefit from their conveyance*, he is liable to the payment of freight according to the proportion of the voyage performed, or *pro ratâ itineris peracti*: and though contracts of this nature be frequently entire and indivisible, and the master or owner of the ship cannot, from their nature, sue thereon, and recover a rateable freight, or *pro ratâ itineris*; yet he may do so upon a fresh *implied* contract, for as much as he deserves to have, unless there be an express clause in the original charterparty or contract to the contrary. A fresh implied contract is inferred from the owner's or consignee's acceptance of the goods. Many difficulties have, indeed, arisen in deciding as to what shall amount to an acceptance: it is not, however, necessary actually to receive the goods; acceptance may be made by the express or implied directions, and with the consent, of the owner or consignee of the goods, but not otherwise.

It sometimes happens that the owner of the ship, who is originally entitled to the freight, sells or otherwise disposes of his interest in the ship, where a chartered ship is sold *before* the voyage, the vendee, and not the vendor or party to whom he afterwards assigns the charterparty, is entitled to the freight. But where a ship has been sold *during* the voyage, the owner, with whom a covenant to pay freight has been made, is entitled to the freight, and not the vendee. A mortgagee who does not take possession, is not entitled to the freight.

The time and manner of paying freight are frequently regulated by express stipulations in a charterparty, or other written contract; and when that is the case, they must be respected: but if there be no express stipulation contrary to or inconsistent with the right of *lien*, the goods remain as a security till the freight is paid; for the master is not bound to deliver them, or any part of them, without payment of the freight and other charges in respect thereof. But the master cannot detain the cargo on board the vessel till these payments be made, as the merchant would, in that case, have no opportunity of examining the condition of the goods. In England, the practice is, when the master is doubtful of payment, to send such goods as are not required to be landed at any particular wharf, to a public wharf, ordering the wharfinger not to part with them till the freight and other charges are paid. No right of lien for freight can exist, unless the freight be earned; if the freighter or a stranger prevent the freight from becoming due, the ship owner or master's remedy is by action of damages.

(For further information and details with respect to this subject, see the art. CHARTER-

FARTY, in this Dictionary; *Abbot* (Lord Tenterden) *on the Law of Shipping*, part. iii. c. 7.; *Chitty's Commercial Law*, vol. iii. c. 9.; *Molloy de Jure Maritimo*, book ii. c. 4., *&c.*)

FRUIT (Ger. *Obst, Früchte;* Du. *Ooft;* Fr. *Fruit;* It. *Frutta, Frutte;* Sp. *Fruta;* Rus. *Owoschtsch;* Lat. *Fructum*). This appellation is bestowed by commercial men upon those species of fruit, such as oranges, lemons, almonds, raisins, currants, apples, &c., which constitute articles of importation from foreign countries.

FULLERS' EARTH (Ger. *Walkererde;* Du. *Voläarde;* Fr. *Terre à foulon;* It. *Terra da purgatori;* Sp. *Tierra de batan;* Rus. *Schiffernaia;* Lat. *Terra fullonum*), a species of clay, of a greenish white, greenish grey, olive and oil green, and sometimes spotted colour. It is usually opaque, very soft, and feels greasy. It is used by fullers to take grease out of cloth before they apply the soap. The best is found in Buckinghamshire and Surrey. When good, it has a greenish white, or greenish grey colour, falls into powder in water, appears to melt on the tongue like butter, communicates a milky hue to water, and deposits very little sand when mixed with boiling water. The remarkable detersive property on woollen cloth depends on the alumina, which should be at least one fifth of the whole, but not much more than one fourth, lest it become too tenacious. — (*Thomson's Chemistry; Jameson's Mineralogy.*) Malcolm, in his *Survey of Surrey*, published in 1809, says that he took considerable pains in endeavouring to ascertain the consumption of fullers' earth, and that he found it to be about 6,300 tons a year for the entire kingdom, of which about 4,000 tons were furnished by Surrey.

FUNDS (PUBLIC), the name given to the public funded debt due by government.

The practice of borrowing money in order to defray a part of the war expenditure began, in this country, in the reign of William III. In the infancy of the practice, it was customary to borrow upon the security of some tax, or portion of a tax, set apart as a fund for discharging the principal and interest of the sum borrowed. This discharge was, however, very rarely effected. The public exigencies still continuing, the loans were, in most cases, either continued, or the taxes were again mortgaged for fresh ones. At length the practice of borrowing for a fixed period, or, as it is commonly termed, upon *terminable* annuities, was almost entirely abandoned, and most loans were made upon *interminable* annuities, or until such time as it might be convenient for government to pay off the principal.

In the beginning of the funding system, the term fund meant the taxes or funds appropriated to the discharge of the principal and interest of loans; those who held government securities, and sold them to others, selling, of course, a corresponding claim upon some fund. But after the debt began to grow large, and the practice of borrowing upon interminable annuities had been introduced, the meaning attached to the term fund was gradually changed; and instead of signifying the security upon which loans were advanced, it has, for a long time, signified the principal of the loans themselves.

Owing partly, perhaps, to the scarcity of disposable capital at the time, but far more to the supposed insecurity of the Revolutionary establishment, the rate of interest paid by government in the early part of the funding system was, comparatively, high. But as the country became richer, and the confidence of the public in the stability of government was increased, ministers were enabled to take measures for reducing the interest, first in 1716, and again in 1749.

During the reigns of William III. and Anne, the interest stipulated for loans was very various. But in the reign of George II. a different practice was adopted. Instead of varying the interest upon the loan according to the state of the money market at the time, the rate of interest was generally fixed at *three* or *three and a half* per cent.; the necessary variation being made in the principal funded. Thus, suppose government were anxious to borrow, that they preferred borrowing in a 3 per cent. stock, and that they could not negotiate a loan for less than 4½ per cent.; they effected their object by giving the lender, in return for every 100*l.* advanced, 150*l.* 3 per cent. stock; that is, they bound the country to pay him or his assignees 4*l.* 10*s.* a year in all time to come, or, otherwise, to extinguish the debt by a payment of 150*l.* In consequence of the prevalence of this practice, the principal of the debt now existing amounts to nearly *two fifths* more than the sum actually advanced by the lenders.

Some advantages are, however, derivable, or supposed to be derivable, from this system. It renders the management of the debt, and its transfer, more simple and commodious than it would have been, had it consisted of a great number of funds bearing different rates of interest: and it is contended, that the greater field for speculation afforded to the dealers in stocks bearing a low rate of interest, has enabled government to borrow, by funding additional capitals, for a considerably less payment on account of interest than would have been necessary had no such increase of capital been made.

In point of fact, however, these advantages are but inconsiderable, while the disadvantages inseparable from the practice of funding a large amount of stock at a low rate of interest are great and lasting. During war, especially if any considerable portion of its expenditure be defrayed by means of loans, the rate of interest uniformly rises, and

is usually much higher than during peace. If, therefore, loans were funded in stocks bearing a rate of interest equivalent to the market rate when they happen to be contracted for, the charge on their account might be reduced soon after the return of peace, according to the fall in the rate of interest; whereas, when loans are funded in stocks bearing a low rate of interest, with a corresponding increase of capital, it becomes impossible to take advantage of the fall of interest at the return of peace, and the country is burthened with the war interest in all time to come! It is not easy to exaggerate the injury we have sustained by overlooking this plain principle. In 1815, to specify only one of many similar instances, government bargained for a loan of 36,000,000*l.*, it being stipulated that every subscriber of 100*l.* should be entitled to 174*l.* 3 per cent. stock, and 10*l.* 4 per cent. stock, making the interest on the loan 5*l.* 12*s.* 4*d.* per cent. The great improvidence of this transaction is obvious. Had from 5*l.* 15*s.* to 6*l.* per cent. of interest been paid for the loan, it might have been obtained without funding any additional capital; and had that been done, we should have been able, within 4 or 5 years, in consequence of the fall of interest after the peace, to reduce the charge on account of the loan to 3 or 3½ per cent.; but, owing to the way in which the contract was made, we have not had, and will not have, any means of reducing the exorbitant charge on account of this loan, so long as the market rate of interest is above 3 per cent., except by paying 174*l.* for every 100*l.* originally received, exclusive of the 10*l.* of 4 per cent. stock! But this, as already stated, is only one instance out of many of the same sort. We believe, indeed, that we are within the mark when we affirm that, owing to this erroneous method of funding, the country is at present paying from 6,000,000*l.* to 7,000,000*l.* a year on account of the public debt more than it would have had to pay, had the same sums been borrowed and funded without any increase of capital.*

That this improvident system should have been so extensively acted on by our finance ministers during the American and French wars is the more surprising, seeing that experience had already demonstrated the advantages of funding limited capitals at a comparatively high rate of interest. Owing partly to the scarcity of capital, but much more to the supposed instability of the revolutionary establishment, the loans during the reigns of William III. and Anne were mostly contracted at a very high rate of interest. Luckily, however, this was not attempted to be disguised by assigning to the parties large amounts of stock bearing a low rate of interest. The stock created was the exact amount of the loans, the interest on it being increased according to the supposed insecurity of the government, the scarcity of floating capital, &c. Now, mark the consequences of this. So early as 1716, Sir Robert Walpole, availing himself of the greater facility with which money was procured after the treaty of Utrecht, and of the greater stability of the government, was able, by offering to pay off the creditors, to reduce the charge on account of the debt from 1,598,602*l.* to 1,274,146*l.*, being a saving of 324,456*l.*, or about ¼ part of the entire charge. In 1727, a farther saving of about 340,000*l.* a-year was effected by reducing the interest on the greater portion of the debt from 5 to 4 per cent. And in 1749, during the administration of Mr. Pelham, the interest was again reduced from 4 to 3 per cent., a measure which produced a fresh saving of 565,000*l.* a-year!

Happily the practice of funding in a 5 per cent. stock, was not entirely abandoned during the late war. In 1822 the total British and Irish 5 per cent. stock amounted to about 150,000,000*l.*; and, by offering to pay it off, a reduction of interest was then effected to the extent of about 1,200,000*l.* a-year! And, since that period, further savings have been effected by the reduction of the interest on the 4 and 4½ per cent. stock. But, unfortunately, by far the greatest proportion of the debt created during the late war, and that with the American colonies, was funded in the 3 per cents.; and, as already stated, the charge on that portion has, in consequence, been hitherto, and will, most probably, continue to be, for an indefinite period, unsusceptible of diminution.

* For a further and full discussion of this subject, see the 2nd edition of the *Treatise on Taxation* and the *Funding System*, by the author of this work, pp. 441—468.

An Account of the Principal and Interest of the Public Funded Debt of Great Britain and Ireland, and the Charge thereupon, in the Year ended 31st March, 1859.

Debt and charge thereon, 31st March, 1859	805,078,554	28,612,207

* This account has been made up partly from the table in Dr. Hamilton's work on the National Debt (3rd ed. p. 100.), partly from Price on the State of the Finances in 1784 (p. 8.), and partly from the Finance Accounts, and other official statements.

The above statement shows that a reduction of 35,772,037*l.* was effected in the principal of the national debt, and of 3,403,734*l.* in the annual charge on account thereof, between February, 1817, and the 31st of March, 1859. The diminution has been brought about, despite the loans effected during the interval, partly by the application of surplus revenue to buy up stock, but more by the reduction of the interest on the 4 and 5 per cent. stocks existing in 1817, and by that paid on the unfunded debt. The total annual saving by the reduction of interest on the funded debt between 1822, when the first, and 1844, when the last reduction was made (that of the 3½ per cent. annuities, mentioned in former impressions of this work), has been 3,051,800*l.*; and, considerable as this is, it would have been three times as great, but for the pernicious practice, previously pointed out, of funding large nominal capitals. We subjoin

A Return showing the Results of the Operations undertaken in 1822, 1824, 1825, 1830, 1834, and 1844, for reducing the Charge on account of the National Debt, and the Terms upon which such Reduction was made; also, showing the Annual Interest on the Funded Debt saved thereby.

We subjoin a brief notice of the different unredeemed funds or stocks constituting the public debt, as they stood on the 31st of March, 1859.

I. Funds bearing Interest at Two and a half per Cent.

New Annuities at 2½ per cent.—This is a stock created in 1853, under the 16 & 17 Vict. c. 23. Previously to the passing of this act, the existing stock of the once famous, or rather, perhaps, infamous South Sea Company, amounted to 3,662,784*l.* For many years previously the Company had been entirely divested of its commercial character, and the duty of the directors was restricted to the transfer of the Company's stock from one purchaser to another, and the payment of the dividends upon it, both of which operations were performed at the South Sea House, and not at the Bank. But in 1853, when the price of stocks was unusually high, it was proposed to create a new 2½ per cent. stock; and in this view the proprietors of the S. Sea Stock were offered for every 100*l.* of it subscribed into the new 2½ per cent. stock, 110*l.* of the latter, with a guarantee against the interest being reduced for 40 years, or till 1894. It is evident,

however, from this statement, that the interest on the sum transferred from the old S. Sea Stock was not really 2½ but 2¾, or 2*l.* 15*s.* per cent. The non-commuted portion was paid off on the 5th April, 1854.

There can be little or no doubt that but for the unforeseen change in the money market which began to take place about the period when the 16 & 17 Vict. c. 23. was passed, the whole, or by far the greater portion, of the old S. Sea Stock would have been converted into the 2½ per cent. stock. But the rise in the rate of interest, occasioned by the threatened disturbances on the continent, and the anticipations of a deficient harvest, hindered the conversion that would otherwise have taken place. Still, however, it is of great importance to have laid the foundation of a 2½ per cent. stock.

II. Funds bearing Interest at Three per Cent.

1. *Debt due to the Bank of England.* — This consists of the sum of 11,015,100*l.* lent by the Bank to the public at 3 per cent.; dividends payable on the 5th of April and 10th of October. This must not be confounded with the Bank capital of 14,553,000*l.* on which the stockholders divide. The dividend on the latter is at present, and has been for some time past, 9 per cent.

2. *Three per Cent. Consols, or Consolidated Annuities.*—This stock forms by much the largest portion of the public debt. It had its origin in 1751, when an act was passed, consolidating (hence the name) several separate stocks bearing an interest of 3 per cent. into one general stock. At the period when the consolidation took place, the principal of the funds blended together amounted to 9,137,821*l.*; but by the funding of additional loans and parts of loans, in this stock, it amounted, on the 31st of March, 1859, to the immense sum of 400,829,812*l.*!

The consolidated annuities are distinguished from the 3 per cent. reduced annuities, by the circumstance of the interest upon them never having been varied, and by the dividends becoming due at different periods. This stock is, from its magnitude, and the proportionally great number of its holders, the soonest affected by all those circumstances which tend to elevate or depress the price of funded property; and, on this account, it is the stock which speculators and jobbers most commonly select for their operations. Dividends payable 5th of January and 5th of July.

3. *Three per Cent. Reduced Annuities.*—This fund was established in 1757. It consisted, as the name implies, of several funds which had previously been borrowed at a higher rate of interest; but, by an act passed in 1749, it was declared that such holders of the funds in question as did not choose to accept in future of a reduced interest of 3 per cent. should be paid off;—an alternative which comparatively few embraced. The debts that were thus reduced and consolidated amounted, at the establishment of the fund, to 17,571,574*l.* By the addition of new loans, they now amount to 115,104,504*l.* Dividends payable 5th of April and 10th of October.

4. *New Annuities.*—This stock was formed in 1844 by the acts 7 Vict. c. 4 and c. 5., which directed that the following stocks, viz.: —

	£
New 3½ per Cent. Annuities, formed in 1830	157,243,517
Reduced 3½ per Cent. 1824	67,701,606
3½ per Cent. Annuities 1818	9,514,369
Old 3½ per Cent. Annuities and Debentures	13,401,171
	£248,860,663

should be converted into a new stock bearing interest at 3¼ per cent. till the 10th of October, 1854, when the interest was reduced to 3 per cent., with the proviso that it is not to be farther reduced till 1874. The new unreedemed stock created under this arrangement amounted on the 31st of March, 1859, to 212,661,739*l.* 17*s.* 8*d.* Dividends payable 5th of April and 5th of October.

III. Funds bearing more than Three per Cent. Interest.

1. *New 5 per Cent. Annuities.* — This stock was formed in 1830, at the same time with the new 3½ per cent. annuities referred to above, under the 11 Geo. 4. c. 13. This statute gave the holders of the then existing 4 per cent. stock, the interest on which was to be reduced, the option of subscribing into the new 3½ per cent. annuities, or into a new 5 per cent. stock, at the rate of 100*l.* 4 per cents. for 70*l.* 5 per cents. Few, however, availed themselves of the latter alternative. Amount, 31st of March, 1859, 430,604*l.*

2. *New 3½ per Cent. Annuities*, formed, as before stated, in 1853.

IV. Annuities.

1. *Long Annuities.* — These annuities were created at different periods, but they all expire together in 1860. They were chiefly granted by way of premiums or douceurs to the subscribers to loans.—Payable on the 5th of April and 10th of October.

2. *Annuities per 4 Geo. 4. c. 22.*—This annuity is payable to the Bank of England, and is commonly known by the name of the "Dead Weight" annuity. (See *antè*, p. 100.) It expires in 1867. It was equivalent to a *perpetual* annuity of 470,319*l.* 10*s.*

3. *Annuities per* 48 *Geo.* 3., 10 *Geo.* 4. *c.* 24., *and* 3 & 4 *Will.* 4. *c.* 14.—These acts authorised the commissioners for the reduction of the national debt to grant annuities for terms of years, and life annuities; accepting in payment either money or stock, according to rates specified in Tables to be approved by the Lords of the Treasury. No annuities are granted on the life of any *nominee* under 15 years of age, nor in any case not approved by the commissioners. Annuities for terms of years not granted for any period less than *ten* years. These annuities are transferable, but not in parts or shares. Those for terms of years, payable 5th of January and 5th of July; and those for lives, 5th of April and 10th of October.

Irish Debt. — It seems unnecessary to enter into any details with respect to the public debt of Ireland. The various descriptions of stock of which it consists, and their amount are specified above. The dividends on the Irish debt are paid at the Bank of Ireland; and, in order to accommodate the public, stock may be transferred, at the pleasure of the holders, from Ireland to Great Britain, and from the latter to the former.

Exchequer Bills are bills of credit issued by authority of parliament. They are for various sums, and bear interest (generally from 1½*d.* to 2½*d.* per diem, per 100*l.*) according to the usual rate at the time. The advances of the Bank to Government are made upon Exchequer Bills; and the daily transactions between the Bank and Government are principally carried on through their intervention. Notice of the time at which outstanding Exchequer bills are to be paid off is given by public advertisement. Bankers prefer investing in Exchequer bills to any other species of stock, even though the interest be for the most part comparatively low; because the capital may be received at the Treasury at the rate originally paid for it, the holders being exempted from any risk of fluctuation, except in the amount of the premium or discount at which they may have bought the bills. Exchequer bills were first issued in 1696, and have been annually issued ever since. The amount outstanding, and *unprovided for*, on the 31st of March, 1859, was 13,277,400*l.*

In 1853 *Exchequer bonds* were issued bearing interest at 2¾ per cent. for 10 years, and thereafter 2½ per cent. for 30 years, or till 1894, to such holders of S. Sea and 3 per cent. stock as chose to accept the same, a bond for 100*l.* being given for every 100*l.* stock subscribed. (16 & 17 Vict. c. 23.) On the 31st of March, 1859, the Exchequer bonds outstanding amounted to 5,000,000*l.*

India Stock and India Bonds are always quoted in the list of the prices of the public funds. The stock on which the East India Company divide is 6,000,000*l.*; the dividend on which has been, since 1793, 10½ per cent.; and is to remain at that rate during the continuance of the charter. India bonds are generally for 100*l.* and 1,000*l.* each, and bear at present 2½ per cent. interest, payable 31st of March and 30th of September. In selling them, the interest due down to the day of sale is, with the premium, added to the amount of the bills; the total being the sum to be paid by the purchaser. The premium, which is, consequently, the only variable part of the price, is influenced by the circumstances which influence the price of stocks generally, the number of bonds in circulation, &c.

The price of stocks is influenced by a variety of circumstances. Whatever tends to shake or to increase the public confidence in the stability of government, tends at the same time to lower or increase the price of stocks. They are also affected by the state of the revenue; and, more than all, by the facility of obtaining supplies of disposable capital, and the interest which may be realised upon loans to responsible persons. From 1730 till the rebellion of 1745, the 3 per cents. were never under 89, and were once, in June, 1737, as high as 107. During the rebellion they sunk to 76; but in 1749 rose again to 100. In the interval between the peace of Paris, in 1763, and the breaking out of the American war, they averaged from 80 to 90; but towards the close of the war they sunk to 54. In 1792, they were, at one time, as high as 96. In 1797 the prospects of the country, owing to the successes of the French, the mutiny in the fleet, and other adverse circumstances, were by no means favourable; and, in consequence the price of 3 per cents. sunk, on the 20th of September, on the intelligence transpiring of an attempt to negotiate with the French republic having failed, to 47⅝, being the lowest price to which they have hitherto fallen.

Agreements for the sale of stock are generally made at the Stock Exchange, which is frequented by a set of middlemen, called *jobbers*, whose business is to accommodate the buyers and sellers of stock with the exact sums they want. A jobber is generally possessed of considerable property in the funds; and he declares a price at which he will either sell or buy. Thus, he declares he is ready to buy 3 per cent. consols at 85½, or to sell at 85⅝; so that, in this way, a person willing to buy or sell any sum, however small, has never any difficulty in finding an individual with whom to deal. The jobber's profit is generally ⅛ per cent., for which he transacts both a sale and a purchase. He frequently confines himself entirely to this sort of business, and engages in no other description of stock speculation.

We borrow the following details from Dr. Hamilton's valuable work on the National Debt: —

"A bargain for the sale of stock being agreed on, is carried into execution at the Transfer Office, at the Bank, or the South Sea House. For this purpose the seller makes out a note in writing, which contains the name and designation of the seller and purchaser, and the sum and description of the stock to be transferred. He delivers this to the proper clerk *, and then fills up a receipt, a printed form of which, with blanks, is obtained at the office. The clerk in the mean time examines the seller's accounts, and if he find him possessed of the stock proposed to be sold, he makes out the transfer. This is signed in the books by the seller, who delivers the receipt to the clerk; and upon the purchaser's signing his acceptance in the book, the clerk signs the receipt as witness. It is then delivered to the purchaser upon payment of the money, and thus the business is completed.

"This business is generally transacted by brokers, who derive their authority from their employers by powers of attorney. Forms of these are obtained at the respective offices. Some authorise the broker to sell, others to accept a purchase, and others to receive the dividends. Some comprehend all these objects, and the two last are generally united. Powers of attorney authorising to sell must be deposited in the proper office for examination one day before selling; a stockholder acting personally, after granting a letter of attorney, revokes it by implication.

"The person in whose name the stock is invested when the books are shut, previous to the payment of the dividends, receives the dividend for the half year preceding; and, therefore, a purchaser during the currency of the half year has the benefit of the interest on stock he buys, from the last term of payment to the day of transfer. The price of stock, therefore, rises gradually, *cæteris paribus*, from term to term; and when the dividend is paid, it undergoes a fall equal thereto. Thus, the 3 per cent. consols should be higher than the 3 per cent. reduced by ¾ per cent. from the 6th of April to the 5th of July, and from the 10th of October to the 5th of January; and should be as much lower from the 5th of January to the 5th of March, and from the 5th of July to the 10th of October; and this is nearly the case. Accidental circumstances may occasion a slight deviation.

"The dividends on the different stocks being payable at different terms, it is in the power of the stockholders to invest their property in such a manner as to draw their income quarterly.

"The business of speculating in the stocks is founded on the variation of the price of stock, which it probably tends in some measure to support. It consists in buying or selling stock according to the views entertained, by those who engage in this business, of the probability of the value rising or falling.

"This business is partly conducted by persons who have property in the funds. But a practice also prevails among those who have no such property, of contracting for the sale of stock on a future day at a price agreed on. For example, A. may agree to sell B. 10,000*l.* of 3 per cent. stock, to be transferred in 20 days, for 6,000*l.* A. has, in fact, no such stock; but if the price, on the day appointed for the transfer, be only 58, he may purchase as much as will enable him to fulfil his bargain for 5,800*l.*, and thus gain 200*l.* by the transaction; on the other hand, if the price of that stock should rise to 62, he will lose 200*l.* The business is generally settled without any actual purchase of stock, or transfer; A. paying to B. or receiving from him the difference between the price of stock on the day of settlement, and the price agreed on.

* The letters of the alphabet are placed round the room, and the seller must apply to the clerk who has his station under the initial of his name. In all the offices, there are supervising clerks, who join in witnessing the transfer.

"This practice, which amounts to nothing else than a wager concerning the price of stock, is not sanctioned by law; yet it is carried on to a great extent: and as neither party can be compelled by law to implement these bargains, their sense of honour, and the disgrace attending a breach of contract, are the principles by which the business is supported. In the language of the Stock Exchange, the buyer is called a *Bull*, and the seller a *Bear*, and the person who refuses to pay his loss is called a *Lame Duck*; and the names of these defaulters are exhibited in the Stock Exchange, where they dare not appear afterwards.

"These bargains are usually made for certain days fixed by a committee of the Stock Exchange, called *settling days*, of which there are about 8 in the year; viz. one in each of the months of January, February, April, May, July, August, October, November; and they are always on Tuesday, Wednesday, Thursday, or Friday, being the days on which the commissioners for the reduction of the national debt make purchases. The settling days in January and July are always the first days of the opening of the Bank books for public transfer; and these days are notified at the Bank when the consols are shut to prepare for the dividend. The price at which stock is sold to be transferred on the next settling day, is called the price *on account*. Sometimes, instead of closing the account on the settling day, the stock is carried on to a future day, on such terms as the party agree on. This is called a *continuation*.

"All the business, however, which is done in the stocks *for time*, is not of a gambling nature. In a place of so extensive commerce as London, opulent merchants, who possess property in the funds, and are unwilling to part with it, have frequently occasion to raise money for a short time. Their resource in this case is to sell for money, and buy for account; and although the money raised in this manner costs more than the legal interest, it affords an important accommodation, and it may be rendered strictly legal and recoverable."—(Third ed. pp. 314—317.)

It would be foreign to the object of this work to enter upon any examination of the advantages and disadvantages of the funding system, which we have elsewhere discussed at considerable length.—(*Treatise on Taxation*, pp. 410—424. 2nd ed.) Perhaps, on the whole, the latter preponderate; though it is not to be denied that the former are very considerable. The purchase of funded property affords a ready method of investment; and as neither the Bank of England, nor any of the London private banks, allows interest upon deposits, it is plain that, had it not been for the facilities given by the funds, individuals unable to employ their savings in some branch of business, would, down to a late period, have derived no immediate advantage from them, unless they resorted to the hazardous expedient of lending upon private credit. But since the establishment of joint stock banks in the metropolis, which allow interest on deposits, the advantage of the funds as a means of commodious investment is not quite so obvious, though, probably, it is little less real; for, it may be doubted whether the banks in question, or even the Scotch banks, which have been long in the habit of allowing interest on deposits, could do so, or whether, in fact, they could be conducted at all, without the aid of the funds.

The subjoined account of the number of dividend warrants issued in the quarters ending with the 10th of October, 1851, and 5th of January, 1852, is a very important document. The large number (89,315) of holders of sums not producing above 5*l.* of quarterly dividend, is principally to be ascribed to the circumstances already mentioned as peculiar to the banking system of the metropolis; and there can be little doubt that their number would be materially diminished, did the Bank of England and the private banks allow a reasonable rate of interest on deposits. It is evident from this account, that the number of persons having a direct interest in the funds is much greater than it represents. The dividends upon the funded property belonging to the Equitable and other insurance companies, the different banking companies, &c. are paid upon single warrants, as if they were due to so many private individuals; whereas they are, really, paid to these individuals only because they act as factors or trustees for a vast number more. It is consequently quite absurd to pretend, as is sometimes done, that any interference with funded property would affect only some 270,000 individuals out of a population of 28,000,000. Any attack upon the dividends would really be destructive, not merely of the interests of those to whom dividend warrants are issued, but of *all* who depend upon them: it would destroy our whole system of insurance and banking, and overspread the country with bankruptcy and ruin. Not only, therefore, is every proposal for an invasion of the property of the fundholders bottomed on injustice and robbery, but it would, were it acted upon, be little less ruinous to the community than to the peculiar class intended to be plundered.

Account of the Number of Persons who were entitled to Dividends on the Portions of the Public Debt held by them which became due at the Quarters ended the 10th of October 1851, and 5th January 1852, arranged in Classes according to the Amount of Dividend paid to each.

* Dividends payable 10th of October. † Dividends payable 5th of January.

The following Table has been calculated, in order to show in which of the public funds money may be invested, so as to yield the greatest interest. It gives the prices, differing by 1 per cent. from 50 to 93 for 3 per cents., &c., at which they all must be to yield the *same* interest; so that, supposing the 3 per cents. to be at 80, a sum invested in them, or in the 3½ per cents., will yield the same interest, provided the latter be at 93⅓, if the 3½ per cents. be *below* this sum, it will of course be more advantageous, in so far at least as interest is concerned, to invest in them than in the 3 per cents.; while, if they be *above* 93⅓, it will be less advantageous.

To get the *true value* of the different funds at any particular period, in order to compare them accurately together, it is necessary to deduct from each the amount of interest accruing upon it from the payment of the last dividend.

Table showing the Prices the different Funds must be at to produce an equal Interest; and also the annual Interest produced by 100*l.* sterling invested at any of those Prices.

Foreign Funds. — Exclusive of the funded and unfunded debt due by the British government, more than 19-20ths of which is held by British subjects, our countrymen are also large creditors of foreign states. With the exception of Spain, the interest on the debts of most European states is paid with great regularity; and their funds form what may, on the whole, be reckoned, at least so long as peace is preserved, a pretty secure investment. Our countrymen are, also, large creditors of the new South American States, and of the U. States of North America. Owing, however, to the anarchy in which the former have been almost constantly involved, and the consequent want of power, and probably also of inclination, on the part of their rulers, to make any adequate provision for the payment of their debts, a large arrear of interest has, in most instances, been allowed to accumulate, with but little prospect of its being speedily reduced.

The public debt of the U. States, which amounted, at the close of the last war with this country, to 158,713,049 dollars, was entirely paid off in 1835. This proceeding, so honourable to the U. States, naturally tended to raise the character of American securities in the English market, and enabled the government to contract the loans required to carry on the late war with Mexico on very favourable terms. The debt of the Union existing on the 17th November, 1857, amounted to 25,165,155 dolls.; but it has since been somewhat increased.

But in addition to the debt of the Union, most part of the States, and several also of the principal cities, have contracted peculiar debts of a less or greater amount. In most cases these were incurred to promote the execution of some public undertaking, such as the construction of canals or railways, the excavation of docks, the erection of buildings, the establishment of banks or insurance companies, and so forth. We subjoin from the American Almanac (see next page)

Some of the debts so contracted have been advantageously laid out; but a large portion borrowed in 1835, and other periods of wild excitement, were contracted on very disadvantageous terms, and expended on projects some of which have turned out extremely ill. This, however, was the affair of the States themselves, and did not afford so much as the shadow of an excuse for the conduct of those States which have declined to provide for the payment of their debts. It was not, indeed, to be wondered at that in the distress into which the Union was thrown by the crash of 1837, and the depression following thereon, some of the States should have been compelled to suspend payment of their debts; but a necessity of this sort could be temporary only. The indebted States are all rich, and eminently flourishing and prosperous communities, and it might have been expected that they would have made every effort to resume payment in full of their debts at the earliest possible moment. But this we are sorry to say has not been the case with some of them, as will be seen from the

An Account of the Debts of the different States in January, 1858.

States.	Absolute Debt.	Contingent Debt.	Total Debt.	Annual Interest on Absolute Debt.

"These tables are believed to be accurate, being compiled almost exclusively from official reports made by the treasurers and auditors to the legislatures of the several States, near the 1st of January, 1858."

following statement, obligingly furnished to us for our last edition by a gentleman connected with the United States, and extremely well versed in these matters.

"The following States of the Union failed to pay the interest on the whole or a part of their debts during the period of depression which followed 1837, viz., Michigan, Pennsylvania, Indiana, Illinois, Maryland, Arkansas, Mississippi, Louisiana, Florida, and Texas. Of these, Pennsylvania has resumed payment of interest, and has funded the arrears thereof, which had accrued during the suspension, in stock bearing interest from the date when the respective dividends became due. The interest on this stock was 6 per cent.; but after it had remained unpaid for 3 years, the State, notwithstanding her wealth, was mean enough to oblige the holders to accept in exchange 5 per cent. stock, with the payment of the overdue interest at 5 instead of 6 per cent.; while she, at the same time, laid a direct tax of 5 per cent. on the dividends payable on her debt, including the portion held by foreigners. Maryland has, also, resumed payment of interest in full, and has paid off the dividends which had accumulated during the period of suspension, with interest upon them from their maturity; but like Pennsylvania, she laid a tax of 5 per cent. (recently reduced to 3 per cent.), on the dividends of all her debt, including that belonging to foreigners. The debt of Louisiana consisted of two parts, one comparatively small (about 1,500,000 dollars), which was the direct debt of the State, and which has always been punctually provided for; the other much larger (about 20,000,000 dollars), arising from the loan of the credit of the State to various banks as security for their engagements, and which became a charge upon the State in consequence of the inability of the banks to provide for the claims upon them. The State did not make any provision for this latter portion of debt from her treasury; but the various banks which suspended payments have, after a shorter or longer interval, themselves provided for their bonds guaranteed by the State; so that there is not at present any overdue obligations outstanding for which the credit of the latter is pledged.

"Michigan has repudiated the greater part of her debt, viz. the portion sold to the Bank of the United States, excepting a small proportion of the amount, for which she admits her liability. She has sold certain public works, receiving her bonds in payment to the extent to which she has acknowledged her liability, and has thus greatly reduced the amount outstanding, and has provided for the payment of interest on the latter, excepting the repudiated portion. The State of Indiana has a small proportion of her debt guaranteed by the Bank of Indiana, the interest on which has been regularly paid. The other, and much the larger portion, has been disposed of, after several years of suspension, in the following manner: one half of the principal has been funded in a new stock, bearing 5 per cent. interest, of which, however, only 4 per cent. was paid for a

certain time, the other 1 per cent. being funded in a deferred stock. One half of the arrears of interest was also funded in a deferred 2½ per cent. stock. For the other half of the principal and interest the State has declined to make any provision from its funds. But as the Wabash and Erie Canal, one of the works for which the debt was contracted, was in an unfinished state, the bondholders were offered the option of advancing the sum required for its completion, and receiving the nett income of the canal and the produce of the sale of certain public lands granted to aid in its construction, towards the payment, first, of their advances, and then of the half of the principal and interest of their State bonds not provided for by the State. A considerable part of the bondholders having acted upon this proposal by contributing the necessary sum, the canal has been completed. Its revenue, and the produce of the land sales, will be applied, first, to the repayment of the advances, then to the payment of the interest and principal of the bonds of the subscribers, and lastly, if there should be any eventual surplus, to the payment of the bonds held by non-subscribers. It is hoped that the bonds of the subscribing bondholders may in time be provided for by the canal and sales of land; but the prospect of benefit to the non-subscribers from this arrangement is remote and uncertain. Illinois has confined her provision for her debt to imposing a permanent tax of 25 cents in the 100 dolls. on all property in the State, and enacting that the produce of this tax, whatever it may amount to, shall be applied towards paying the interest on the bonds, applying it first towards the payment of the oldest overdue coupons, and then to those of more recent date in succession. The largest amount produced by this tax has only sufficed to pay about 1¾ per cent. per annum on the principal of the bonds. It is hoped that from the rapid increase of the wealth of the State, the tax will equally improve in productiveness, and that it may eventually equal the interest of the bonds, which is at the rate of 6 per cent. But until that shall be the case, the amount of the debt must increase every year by the difference between a year's interest and the produce of the tax for the year, which becomes an addition to the very large amount of interest now overdue. And as no provision is made for paying, either now or hereafter, the interest accruing on this very large and increasing arrear, the bondholders must, under the most favourable working of the law, be eventually considerable losers. Arkansas has not made any provision from the State funds towards her debt; but as the State bonds were issued to provide capital for a bank, its assets are liable for the payment of the bonds.

"The debt of Mississippi was contracted to furnish capital for the Union Bank and the Planters' Bank. She has repudiated the bonds issued for the benefit of the former, amounting to 5,000,000 dollars, and has made no provision either for these or for 2,000,000 dollars issued to the Planters' Bank, her liability for which she acknowledges. By a recent change in the constitution of the State, her courts of law have been allowed to take cognizance of the claims of individuals against the State, and under this law a suit was brought, which resulted in a decision of the supreme court of the State affirming the obligation of the State in the case of the Union Bank bonds, which had been repudiated. There has not been time to ascertain what effect will be given to this decision. But we cannot suppose that the State will be profligate enough to repudiate obligations the validity of which has been established by her own tribunals; though the fact that one of the judges who decided in favour of the bondholders, and who, having completed his term of service, became a candidate for re-election, has been rejected, because of his decision, by the vote of the people, is a very ominous circumstance. Florida has not provided for her debt from the State funds. Its amount has been greatly reduced by debtors of the banks, to whom the State bonds were issued, buying them up at low prices, and paying them into the banks in discharge of their debts.

"Texas has announced her intention of profiting by her own laches, that is, of settling her debt on the principle of only recognising the amount which the bonds have cost the bondholders, a principle which will operate a very great reduction of its magnitude. Only a part of the bondholders have submitted to this decision. 5,000,000 dollars paid to Texas by the Federal Government have been appropriated by her towards the settlement of her debt in the way now stated."

This is not a very favourable statement: but Michigan, Illinois, and those States which had made such ineffectual provision for the payment of their debts, have since been induced to adopt more efficient measures. A very small sacrifice on their part would enable them entirely to wipe off that foul stain on their honour and their credit under which some of them are even now suffering. Mississippi, we are afraid, continues her policy, if so we may call it, of repudiation. *We* cannot find fault with the policy of the States which have taxed some of their dividends due to foreigners; for, though such a proceeding be not easily justified on principle, it is unluckily in accordance with the example we have set in subjecting the dividends due to the foreigner to the income tax.

The total State debt of California amounted, as seen above, in January, 1858, to

$4,928,127; but this sum was raised by county and city debts to an agg. of $12,163,090. It is highly to the credit of the people of this new State that on a proposal for the repudiation of the debt being submitted to their consideration, it was rejected by 57,661 votes to 16,970 do.—(*American Almanac for* 1859, p. 336.)

Soon after Pennsylvania had been unwise enough to repudiate her debt, the following forcible appeal was addressed to Congress by the late Rev. Sydney Smith.

The Humble Petition of the Rev. Sydney Smith to the House of Congress at Washington.

"I petition your honourable house to institute some measures for the restoration of American credit, and for the repayment of debts incurred and repudiated by several of the States. Your petitioner lent to the State of Pennsylvania a sum of money, for the purpose of some public improvement. The amount, though small, is to him important, and is a saving from a life income, made with difficulty and privation. If their refusal to pay (from which a very large number of English families are suffering) had been the result of war, produced by the unjust aggression of powerful enemies; if it had arisen from civil discord; if it had proceeded from an improvident application of means in the first years of self-government; if it were the act of a poor State struggling against the barrenness of nature,—every friend of America would have been contented to wait for better times; but the fraud is committed in profound peace, by Pennsylvania, the richest State in the Union, after the wise investment of the borrowed money in roads and canals, of which the repudiators are every day reaping the advantage. It is an act of bad faith which (all its circumstances considered) has no parallel, and no excuse.

"Nor is it only the loss of property which your petitioner laments: he laments still more that immense power which the bad faith of America has given to aristocratical opinions, and to the enemies of free institutions in the Old World. It is in vain any longer to appeal to history, and to point out the wrongs which the many have received from the few. The Americans, who boast to have improved the institutions of the Old World, have at least equalled its crimes. A great nation, after trampling under foot all earthly tyranny, has been guilty of a fraud as enormous as ever disgraced the worst king of the most degraded nation of Europe.

"It is most painful to your petitioner to see that American citizens excite, wherever they may go, the recollections that they belong to a dishonest people, who pride themselves on having tricked and pillaged Europe; and this mark is fixed by their faithless legislators, on some of the best and most honourable men in the world, whom every Englishman has been eager to see, and proud to receive.

"It is a subject of serious concern to your petitioner that you are losing all that power which the friends of freedom rejoiced that you possessed, looking upon you as the ark of human happiness, and the most splendid picture of justice and of wisdom that the world had yet seen. Little did the friends of America expect it, and sad is the spectacle, to see you rejected by every State in Europe, as a nation with whom no contract will be made, because none will be kept; unstable in the very foundations of social life, deficient in the elements of good faith, men who prefer any load of infamy, however great, to any pressure of taxation, however light.

"Nor is it only this gigantic bankruptcy for so many degrees of longitude and latitude which your petitioner deplores, but he is alarmed also by that total want of shame with which these things have been done, the callous immorality with which Europe has been plundered, that deadness of the moral sense which seems to preclude all return to honesty, to perpetuate this new infamy, and to threaten its extension over every State of the Union.

"To any man of real philanthropy, who receives pleasure from the improvements of the world, the repudiation of the public debts of America, and the shameless manner in which it has been talked of and done, is the most melancholy event which has happened during the existence of the present generation. Your petitioner sincerely prays that the great and good men still existing among you may, by teaching to the U. States the deep disgrace they have incurred in the Old World, restore them to moral health, to that high position they have lost, and which, for the happiness of mankind, it is so important they should ever maintain; for the U. States are now working out the greatest of all political problems, and upon that confederacy the eyes of thinking men are intensely fixed, to see how far the mass of mankind can be trusted with the management of their own affairs, and the establishment of their own happiness."

FURS, in commerce, the skins of different animals, covered, for the most part, with thick fine hair, the inner side being converted by a peculiar process into a sort of leather. Furs, previously to their undergoing this process, are denominated *peltry*.

Beaver fur was formerly in very extensive use in the hat manufacture; but the introduction of silk and other hats has all but entirely superseded its employment in this way, and its value, though now

much scarcer than formerly, has, in consequence, fallen off very considerably. The fur of the middle-aged or young animal, called cub beaver, is most esteemed. It is the finest, most glossy, and takes the best dye. Fitch, or the fur of the fitchet or polecat, is principally imported from Germany: it is soft and warm, but the unpleasant smell which adheres to it depresses its value. Martin and mink (a diminutive species of otter) are principally imported from the U. States and Canada. The fur of the musquash or musk rat (a diminutive species of beaver) is imported in vast quantities from our possessions in North America; which also supply us with considerable quantities of otter skins. Nutria skins are principally brought from Buenos Ayres. The more valuable furs, as ermine, sable, &c., come principally from Russia.

FUR TRADE. We are indebted for the following details with respect to the fur trade to one of the most extensive and intelligent fur merchants of London.

"Though practically engaged in the fur trade, I fear I shall be able to say little with regard to it not already known to you; but were I to write on the subject, I should divide the trade into 2, or rather 3 classes.

"1. The 1st class would comprise articles of necessity; among which I should principally number an immense variety of lamb skins, varying so widely from each other in size, quality, colour, and value, that to most persons they would appear as the produce of so many different species of animals. These lamb skins are produced in all parts of the globe, and are every where consumed; but they form, in particular, an essential part of the dress of thousands among the lower classes in Russia, Poland, East Prussia, Hungary, Bohemia, and Saxony. In Russia and other cold climates, the skins of various other animals may be considered as articles of actual necessity.

"2. The 2d class would in a measure form part of the first, as it also comprises furs which through habit and fashion have now become articles of necessity. I should here enumerate all those different skins commonly called *hatting furs*. But the demand for these has, owing to the introduction of silk and straw hats, greatly fallen off, though it is still considerable. The furs used for hat making were beaver, musquash, otter, nutria, hare, and rabbit; but each of these may be subdivided into 20 different sorts or classes.

"Neutria, or nutria, is comparatively a new article. It began first to be imported in large quantities about 1810, from the Spanish possessions in South America.—(See NUTRIA.) The skin is used for different purposes, being either dressed as a peltry, or cut (shorn) as a hatting fur; and if well manufactured and prepared, it bears some resemblance to beaver fur, and is used for similar purposes.

"3. Under the 3d and last class I should bring all those furs which, though continually sold, and used in immense quantities, must still be considered mere articles of fashion, as their value varies according to the whims and fancies of different nations. There are, however, exceptions among these; and many furs may be considered as standard articles, since they are always used, though their price is much influenced by changes of fashion.

"This class comprises an endless variety of furs, as under it may be brought the skins of most animals in existence; almost all of them appearing occasionally in the trade.

"Furs being entirely the produce of nature, which can neither be cultivated nor increased, their value is not influenced by fashion alone, but depends materially on the larger or smaller supplies received. The weather has great influence on the quality and quantity of furs imported from all quarters of the globe; and this circumstance renders the fur trade more difficult, perhaps, and precarious than any other. The quality, and consequently the price, of many furs will differ every year. It would be completely impossible to state the value of the different articles of furs, the trade being the most fluctuating imaginable. I have often seen the same article rise and fall 100, 200, and 300 per cent. in the course of a twelvemonth; nay, in several instances, in the space of 1 month only.

"Among the furs which always rank very high (though, like all the rest, they change in value) may be specified the Siberian sable, and the black and silver fox. These articles are at all times comparatively very scarce, and command high prices.

"The chief supplies of peltries are received from Russia (particularly the Asiatic part of that empire), and from North America. But many other countries produce very beautiful and useful furs; and though we are most indebted to Asia and America, Europe furnishes a very considerable quantity. Africa and Australia are of little importance to the fur trade, as, from their situation, they furnish but few articles, and consume still less. From the former we draw leopard and tiger skins (the most beautiful of that species), while the *only* production of the latter is the kangaroo; this, however, is never used as a fur, being chiefly consumed by leather dressers and tanners for the sake of its pelt.

"Besides numerous private traders, there are several fur companies of very old standing, who in various countries do a great amount of business. Among these, the Hudson's Bay Company (in London) deserves to be mentioned first, not only from the extent of their business, but because it is one of the oldest chartered companies in England.

"The American Fur Company (in New York) stands next. They chiefly trade to London, whither they send the produce of the U. States and other parts of North America.

"The 3d company is the Russo-American (in Moscow). They trade to the Russian possessions on the western coast of North America, whence they draw their supplies, which are chiefly consumed in Russia, and sent to China.

"The 4th and last company of any consequence is the Danish Greenland Company (in Copenhagen). They do but a very limited business; exposing their goods for sale once a year in Copenhagen.

"The principal consumption of the furs which I should bring under the head of the 3d class, is in China, Turkey, and Russia, and among the more civilised countries of Europe, particularly in England. Germany consumes a considerable quantity. The consumption of America is comparatively little. In Africa, none but the Egyptians wear fur. In Australia, none is consumed.

"Most of the companies sell their goods by public sale, and the principal fur fairs are held at Kiachta (on the borders of China); Nijni Novgorod, between Moscow and Casan, in Russia; and twice a year at Leipsic.—(See FAIRS.)

"It is a remarkable feature of the fur trade, that almost every country or town which produces and exports furs, imports and consumes the fur of some other place, frequently the most distant. It is but seldom that an article is consumed in the country where it is produced, though that country may consume furs to a very great extent."

The following details with respect to the North American fur trade may not be uninteresting: —

This trade was first practised by the French settlers at Quebec and Montreal; and consisted then, as now, in bartering fire-arms, ammunition, cloth, spirits and other articles in demand among the Indians, for beaver and other skins. In 1670, Charles II. established the Hudson's Bay Company, to which he assigned the exclusive privilege of trading with the Indians in and about the vast inlet known by the name of Hudson's

Bay. The company founded establishments at Forts Churchill and Albany, Nelson River, and other places on the west coast of the bay. But the trade they carried on, though said to be a profitable one, was of very limited extent; and their conduct on various occasions shows how thoroughly they were "possessed with that spirit of jealousy which prevails in some degree in all knots and societies of men endued with peculiar privileges."—(*European Settlements*, vol. ii. p. 268.) Mr. Burke has, in the same place, expressed his astonishment that the trade has not been thrown open. But as the company's charter was never confirmed by any act of parliament, all British subjects are lawfully entitled to trade with those regions; though from the difficulties attached to the trade, the protection required in carrying it on, and the undisguised hostility which private traders have experienced from the agents of the company, the latter have been allowed to monopolise it with but little opposition. In 1783-4, the principal traders engaged in the fur trade of Canada formed themselves into an association known by the name of the North-West Company, having their chief establishment at Montreal. This new company prosecuted the trade with great enterprise and very considerable success. The course of their proceedings in their adventurous undertakings has been minutely described by Mr. Mackenzie, one of the agents of the company, in his *Voyage from Montreal, through the Continent of America*. This gentleman informs us, that some of those engaged in this trade are employed at the astonishing distance of upwards of 4,000 miles north-west of Montreal! A very numerous caravan, if we may so call it, sets out every year for *Le Grand Portage*, on Lake Superior, where they meet those who have wintered in the remoter establishments, from whom they receive the furs collected in the course of the season, and whom they, at the same time, furnish with fresh supplies of the various articles required in the trade. Fort Chepeywan, on the Lake of the Hills, in lon. 110° 26′ W., used to be one of the most distant stations of the servants of the North-West Company; but many of the Indians who traded with the fort came from districts contiguous to, and sometimes even beyond, the Rocky Mountains.

The competition and success of the North-West Company seem to have roused the dormant energies of the Hudson's Bay Company. The conflicting interests and pretensions of the two associations were naturally productive of much jealousy and ill-will. Under the auspices of the late Earl of Selkirk, who was for a considerable period at the head of the Hudson's Bay Company, a colony was projected and founded on the Red River, which runs into Lake Winnipec. The North-West Company regarded this establishment as an encroachment upon their peculiar rights; and the animosities thence arising led to the most violent proceedings on the part of the servants of both companies. At length, however, the more moderate individuals of each party began to perceive that their interests were not materially different; and the rival companies, wearied and impoverished by their dissensions, ultimately united under the name of the *Hudson's Bay Fur Company*, which at present engrosses most of the fur trade of British America. The most important part of the trade is still carried on from Montreal in the way described by Mr. Mackenzie.

The *North American Fur Company*, the leading directors of which reside in the city of New York, have long enjoyed the principal part of the Indian trade of the great lakes and the Upper Mississippi. But with the exception of the musk rat, most of the fur-clad animals are exterminated in the vicinity of the lakes. The skins of racoons are of little value; and the beaver is now scarce on this side the Rocky Mountains.

The following Table, extracted from the Report of the Jurors of the Great Exhibition of 1851, gives what is believed to be a pretty fair account of the average Imports and Exports of the Skins adapted for Furs.

	Total Importations into U. K.	Exported.	Consumed in U. K.		Total Importations into U. K.	Exported.	Consumed in U. K.
Racoon	525,000	525,000	None.	Otter	17,000	17,500	None.
Beaver	60,000	12,000	48,000	Fur seal	15,000	12,500	2,500
Chinchilla	85,000	30,000	55,000	Wolf	15,000	15,500	None.
Bear	9,500	8,500	1,000	Marten, stone and brown	120,000	5,000	115,000
Fisher	11,000	11,000	None.	Squirrel	3,000,000	100,000	2,900,000
Fox: red	50,000	50,000	„	Fitch	65,091	28,276	36,815
cross	4,500	4,500	„	Kolinski	53,410	200	53,210
silver	1,000	1,000	„	Ermine	117,104	None.	117,104
white	1,500	500	1,000	Rabbit	120,000	„	120,000
grey	20,000	18,000	2,000	Wolverine	1,200	1,200	None.
Lynx	55,000	50,000	5,000	Skunk	1,200	1,200	„
Marten	120,000	15,000	105,000	Sea otter	100	100	„
Mink	245,000	75,000	170,000				
Musquash	1,000,000	150,000	850,000				

The furs from our North American colonies are mostly all imported by the Hudson's Bay Company, by whom they are sold at public sales.

China is one of the best markets for furs. The Russo-American Fur Company are in the habit of carrying a considerable quantity of the furs taken by them in Kamtschatka and Russian America to Kiachta, where they are exchanged for tea and other Chinese products.

FUSTIAN (Ger. *Barchent*; Du. *Fustein*; Fr. *Futaine*; It. *Fustagno, Frustagno*; Sp. *Fustan*; Rus. *Bumasea*; Pol. *Barchan*), a kind of cotton stuff, wealed or ribbed, on one side.

FUSTIC (Ger. *Gelbholz, Fustick*; Du. *Geelhout*; Fr. *Bois jaune de Brésil*; It. *Legno giallo de Brasilio*; Sp. *Palo del Brasilamarillo*), the wood of a species of mulberry (*Morus tinctoria*), growing in most parts of South America, in the United States, and the West India Islands.

It is a large and handsome tree; and the timber, though, like most other dye woods, brittle, or at least easily splintered, is hard and strong. It is very extensively used as an ingredient in the dyeing of yellow, and is largely imported for that purpose. Of 10,800 tons of fustic imported into Great Britain in 1850, 3,395 tons were brought from New Granada, 2,076 ditto from the British West Indies, 1,639 ditto from Cuba, 945 ditto from the United States, 750 ditto from Mexico, and 669 ditto from Brazil. Fustic from Cuba fetches full 30 per cent. more in the London market than that of Jamaica or Colombia. At present the price of the former varies from 9*l.* to 9*l.* 10*s.* a ton, while the latter varies from 5*l.* 5*s.* to 6*l.* a ton. The consumption amounts to about 6,000 tons a year. The duty on fustic was abolished in 1845.

Zante, or *young* fustic, is really a species of sumach (*Rhus cotinus* Lin.), and is quite distinct from the *morus tinctoria*, or *old* fustic; the latter being a large American tree, while the former is a small European shrub. It grows in Italy and the south of France, but is principally exported from the Ionian Islands and Patras in the Morea. It imparts a beautiful bright yellow dye to cottons, &c., which, when proper mordants are used, is very permanent. It is conveniently stowed amongst a cargo of dry goods, as it may be cut into pieces of any length without injury. Only a small quantity of this species of sumach is imported. Its price fluctuates considerably.

G.

GALACZ or GALATZ, a town of Moldavia, on the left bank of the Danube, between the confluence of the Sereth and Pruth with that river, lat. 45° 25′ N., long. 28° E. It is ill built and dirty, though in these respects it has latterly been much improved. Pop. supposed to amount to 25,000. The trade of the town is chiefly carried on by Greek merchants; but, within the last few years, various English and other foreigners have formed establishments in it. Though at a considerable distance inland, Galacz is in the best position for becoming the port of the Danube. At present, however, it is little more than the port of Moldavia, Ibraila or Brahilow, about 12 miles farther inland, being the port of Wallachia. The commercial importance of these ports, and indeed of the Danube, dates only from the treaty of Adrianople in 1829. Previously to that epoch the trade of the principalities laboured under the most oppressive restrictions, and was principally carried on by land. But all articles of native produce may now be freely exported either by sea or land, on paying moderate duties; and the duties on imports are also, for the most part, comparatively moderate. The probability indeed seems to be that Galacz, "the Alexandria," as it has been called, "of the Scythian Nile," will at no very distant period become a first-rate emporium. The rescuing of Moldavia and Wallachia from Turkish misgovernment has been of signal advantage; and it is to be hoped that they may never again be subjected to its paralysing influence. The establishment of a regular intercourse by means of steam packets between Vienna and Galacz, and thence, by the Black Sea, with Constantinople and Trebizond, has already done a great deal, and will every day do more, to introduce a spirit of improvement into the vast and fertile; but long neglected, countries traversed by the Danube in the lower part of its course. The capacities of this great river as a commercial highway are certainly unequalled by those of any other European stream; and their full development would be of immeasurable advantage, not merely to the countries on its banks, but to all commercial nations.

Exports and Imports. — Moldavia and Wallachia are very productive provinces, being fruitful both of corn and cattle. The high prices of corn in France, Italy, and England, in 1846 and 1847, gave an extraordinary stimulus to the export trade of Galacz and Ibraila. The exports of wheat from both ports, in 1847, amounted to no fewer than 570,978 quarters, worth on board-ship 875,603*l.*; the exports of Indian corn during the same year were 937,720 quarters, worth 1,172,150*l.*; and among the other exports were about 320,000 quarters of barley, and 42,000 cwt. of tallow, with a variety of inferior articles. The total value of the exports from the two ports during the above year amounted to the very large sum of 2,368,472*l.*, of which about two thirds were from Ibraila.

The quality of the wheat, which is partly hard and partly soft, was, a few years ago, very inferior, being generally damp, and having an earthy smell from its being kept in pits dug in the ground. Latterly, however, it has been much improved; and the finer samples now fetch, in Marseilles, Genoa, and Leghorn, within from 3 to 4 per cent. of the price of Odessa wheat. In 1852 we imported 86,140 quarters of Wallachian and Moldavian wheat, with no fewer than 626,714 do. Indian corn. Both provinces fatten large herds of cattle, particularly Moldavia, which annually sends great numbers to the Austrian states. Tallow may be had in large quantities, its annual produce in Wallachia only being estimated at about 3,000,000 okes, or 8,500,000 lbs. Until within

these few years the tallow shipped at Galacz was burdened with a heavy export duty, which checked its sale, and consequently, also, its growth. Happily, however, that duty is now reduced to 3 per cent., and the exportation is rapidly increasing. The quality of the Danubian tallow is excellent. Among the other articles of export are wool, timber, hides, and skins, lard, butter, bristles, bones, jerked beef, linseed, barilla, yellow-berries, coarse cheese, &c. Timber of the finest quality may be had in any quantity; but as it can only be advantageously exported in large ships, which cannot when laden make their way over the bar, the trade in it has hitherto been confined within comparatively narrow limits. One, however, would be disposed to think that this difficulty might be obviated by sending down the timber in rafts and loading outside the bar.

Notwithstanding the recent period at which the navigation of the Danube has been opened, and the barbarous state of the countries in the lower part of its course, the value of the exports from Galacz and Ibraila probably at this moment (1853) exceed 1,800,000*l.* a year, of which from 750,000*l.* to 800,000*l.* may be from the former. But, considerable as this is, it is nothing to what it certainly would be were civilisation to make any considerable progress in the countries traversed by the Danube after it leaves the Austrian dominions, and still more were the river to become, as it naturally is, the principal channel for the conveyance of products to and from Hungary and Transylvania.

The great articles of import are manufactured cotton goods, and cotton twist, principally from England, the demand for which is rapidly increasing; with sugar, coffee, and other colonial products; olives and olive oil, iron and steel, hardware, &c.

Entrance to Galacz.—Of the three principal mouths of the river, the Soulineh (middle) mouth, in lat. 45° 10′ 30″ N., long. 29° 41′ 20″ E., is the only one accessible by vessels of considerable burden. The depth of water on the bar, at its entrance, ½ mile from the shore, varies from 10 to 13 and 14 feet, according to the season of the year, and the direction of the wind. When the latter blows from the E. it is opposed by the current of water flowing from the W., so that the bar is rapidly increased by the deposit thereon of the mud brought down by the river; and when, on the contrary, the current and the wind coincide, the mud is carried out into the sea, and the depth of water on the bar is progressively augmented. The assistance of a powerful dredging machine, or machine fitted to stir up the mud, or other deposit forming the bar during the prevalence of westerly winds, would be of great importance; and it is believed that with its agency the channel might be very materially deepened. Great complaints have been made of the state of the navigation of the Danube during the present year (1853). It appears to have been occasioned partly by difficulties arising out of the disputes between Russia and Turkey, and partly by the prevalence of easterly winds. But it would be easy by erecting a light-house to mark the entrance to the river, and employing a dredging machine and steam tugs, to obviate the physical obstructions to the navigation. From the bar to Galacz and Ibraila, there is nowhere less than 18 feet water, and in many places from 60 to 70 feet. Vessels of 300 tons lie close to the quays at Galacz. The shores at the mouth of the river being low and bordered with reeds and shoals, vessels intending to enter the river generally make the small rocky islet of Phidonisi, or Serpent's Isle*, in lat. 45° 15′ 15″ N., long. 30° 10′ 30″ E., whence the Soulineh mouth bears W. by S., distant 23 miles. According to Mr. Cunningham, the first objects seen, on nearing the shore, are the masts of vessels in the river and the houses in the town of Soulineh, which, however, are very low. Hagemeister says that there is a wooden tower on the south shore at the entrance to the river; but, though the contrary has been often affirmed, and its position given in Arrowsmith's map, there is certainly no lighthouse. When a ship approaches the entrance, a boat from the Russian captain of the port goes off, and by waving a red flag indicates the course to be kept. Lighters are generally stationed without the bar, into which large ships discharge a part of their cargoes; and pilots may generally be obtained from them or other vessels. As the current is sometimes very strong, and difficult to stem, a proper establishment of steam tugs at the mouth of the river would be a great advantage. An E. S. E. wind carries a vessel from Soulineh to Galacz through all the different reaches of the river; but otherwise the navigation is difficult, and towing is in parts necessary.

Frost usually sets in on the Danube in the month of December, and continues till the month of March; in 1833, however, there was no frost. Freights in the ports of the Danube are always from 20 to 25 per cent. higher than in Odessa; premiums of insurance, on the contrary, are not higher than at the latter, except on such vessels as, on account of their size, are obliged to discharge outside the bar.

Money, Weights, and Measures.—These are mostly the same as at Constantinople, which see. Accounts are kept in piastres and paras. 1 piastre=40 paras.

Galacz.—Ducat blanc = pia. 44. Silver ruble = 15 pia. Spanish dollar = 19 pia. 32 paras. Turkish yermelik, old coinage = 19 pia. 32 paras; Turkish yermelik, new coinage,

* This island was famous in antiquity for its temple in honour of Achilles, to whom it was sacred. It was called *Leuce*, or the White Island, from the myriads of sea-fowl by which it was usually covered. There seems to be no good foundation for the modern notion of its being infested with serpents. It is singular, however, seeing that it is now annually passed by numbers of European ships, that it should not have been visited by any traveller. It may be expected to contain some remains of antiquity.—(See *Clarke's Travels in Russia, Turkey, &c.* 8vo. edit. vol. ii. p. 394—401

= 17 pia. 15 paras. Austrian swanzikers=3 pia. 5 paras. It is to be observed that when exchanges are so high that it is requisite to remit in specie, any of these coins may go to a premium, according as it suits better than others for the remittance; and just now, owing to the want of bills to remit to Austria, the ducat blanc = 44 pia. 20 paras.

Ibraila has two rates of currency; the one for charges, which is the same as in Galacz, and the other for the purchase of merchandise, as follows:—Ducat blanc = 32 pia.; Spanish dollar = 14½ pia.; Turkish yermelik, old coinage, = 1½ pia.; Turkish yermelik, new coinage, = 12 pia. 28 paras; swanziker = 2 pia. 12 paras. *Note.*—The same as in Galacz, any of these coins may go to a premium.

Galacz and Ibraila.—All duties are paid in both places, in the course of the Treasury, as follows:—Ducat blanc = 31½ pia.; silver ruble = 10½ pia.; Spanish dollar = 14 pia.; Turkish yermelik, old, = 1¼ pia.; swanziker = 2¼ pia.

The ducat blanc weighs 1 Turkish drachm.

Exchanges.—Bills can generally be sold on the following places, and the present (1842) rates are as noted: it must be observed, however, that these rates are very high; and when a great deal of paper is offering, they may go 4 per cent lower.

		Pias.	*Paras.*	
Vienna	3 m *f* date	9	16	per florin.
Trieste		9	13	florin.
Marseilles		3	26	franc.
Genoa		3	26	franc.

160 okes linseed	=	1 Imperial quarter.	
55 —	=	1 hectolitre.	
115 —	=	1 chetwert.	
1 kilo of Brahilow	=	2½ *Imperial* quarters.	

Note.—These measures generally measure out somewhat less.

Charges on Shipping, &c. in Galacz and Ibraila.

Port Charges.—In Galacz anchorage is 30 pia., and a guardian for 5 days' observation 5 pia. per day. In Ibraila anchorage is 17½ pia., and guardian for 5 days' observation 5 pia. per day.

Quarantine.—Vessels generally remain in quarantine during their stay, as little or no advantage is gained by taking pratique.

Vessels wishing to take pratique may obtain it in 14 to 21 days according to the state of health in Turkey, by taking a Health Office guard on board; or the captain alone may take pratique, the same as any passenger, by going into the lazzaret. During the last year, as the health was good in Constantinople and along the Danube, the quarantine was only seven days.

Note of Exports from Galacz by Sea in 1851, in English Weights and Measures, and Value of the same in Sterling Money, free on Board.

100 kilos. Ibraila = 232 imperial quarters.

* Tallow is here divided into two qualities, called tallow and chervice. The latter is the clean fat of the carcass and marrow boiled, and is much used in Constantinople for culinary purposes; tallow is the fat of the intestines, feet, &c. boiled. It is generally sold in parcels, consisting of ⅔ chervice and ⅓ tallow. For the Constantinople market chervice is worth 10 per cent. more than tallow, but for other European markets tallow is worth as much as chervice.—(*Cunningham on the Trade of the Danube*, p. 2.)

Duties.—An *ad valorem* duty of 3 per cent. is levied on all articles, except provisions, imported into, or exported from, the principalities of Moldavia and Wallachia. Government reserves to itself the power of prohibiting the exportation of any article, but it has to give a month's previous notice of any such prohibition.

Galacz is a free port; that is, a port at which all commodities may be landed, warehoused, re-exported, and consumed in the town, free of duty. Quarantine regulations are strictly enforced, unless performed previously to entering the river.

Ismail and Reni, ports of the Russian province of Bessarabia, are situated on the Danube, and are both, but especially Ismail, a good deal nearer its mouth than Galacz; but they are much less considerable in point of commercial importance. Having little importation, their trade is confined almost entirely to the exportation of corn, and even in this respect they are very inferior to Galacz and Brahilow. They are subject to the Russian duties and regulations.

We have gleaned these particulars from a variety of works, but principally from the valuable *Report* by Mr. Cunningham, now vice-consul at Brahilow, printed at Galacz in 1841; the work of Hagemeister, *On the Commerce of the Black Sea*, Eng. Trans. pp. 83—95, *&c.*; *Purday's Sailing Directions to the Black Sea*, p. 193, *&c.*

When the grain is shipped direct from the warehouse of the seller, without being transported to the warehouse of the buyer, then the charges will be less by the cartage and porterage passed for that purpose.

When the season is advanced and the streets in bad order, the charges of embarking will be something more.

An Account of the Exports of Wheat and Indian Corn from Galacz during each of the 10 Years ending with 1849.

Years.	Wheat.	Maize.	Total.
1840	230,568	189,037	419,606
1841	100,845	35,394	136,239
1842	154,675	93,531	248,206
1843	107,654	140,662	249,296
1844	166,535	174,023	340,558
1845	180,032	157,101	337,133
1846	110,902	336,627	447,529
1847	180,860	318,605	499,465
1848	113,605	143,727	257,332
1849	169,022	248,199	417,221

In 1849 there were also exported 62,113 qrs. of rye. In 1847 the total value of the exports from Galacz was estimated at 775,532*l.* During the same year, 662 loaded vessels left its port, of which 206 were

English. The value of the exports from Ibraila in 1847 was about double the value of those from Galacz.

We may avail ourselves of this opportunity to state that there has been an equal, or even greater, increase in the exports from Bulgaria, independently of those that come down the Danube to Ibraila. About eight or ten years ago, the entire exports of wheat from Varna and the other Bulgarian ports between the Gulph of Bourghas and Kustenjee, did not certainly exceed 200,000 quarters, whereas in 1847 they amounted to 896,000 quarters! And it is necessary to bear in mind that this is exclusive of the exports, which are very considerable, from Tulcha, a port of Bulgaria, on the Danube, about 40 miles W. of the entrance to the Soulineh mouth. We subjoin some statements in regard to the trade of Varna, the capital of Bulgaria, in 1847.

Account of the Quantities and Values of the principal Articles imported into and exported from Varna in 1847.

The port of Varna is situated on the W. coast of the Black Sea, at the bottom of a rather small bay, about 3 m. N.W. Cape Galata, the latter being in lat. 43° 10′ N., long. 27° 58½′ E. The ordinary anchorage is to the S.E. of the town, in 7 or 8 fathoms, bottom sand and oaze. It is open to all winds between E. and S.S.E. Vessels load and unload by means of lighters, it being dangerous to approach within less than ¼ m. of the shore.

Both hard and soft wheat are shipped from Varna, the value of the former being from 30 to 40 per cent. greater than that of the latter. An export duty is charged on wheat when exported, and being a fixed duty of about 2*s.* 8*d.* a quarter, it is high when prices are low, and low when they are high.

Mouths of the Danube. — There is a great discrepancy in the statements of ancient authors as to the number of channels by which the Danube poured its waters into the Euxine. — (*Cellarii Notitia Orbis Antiqui*, lib. ii. cap. 8.) A similar discrepancy exists at this moment; some authorities affirming that it has 4, others 5, and others 6 or 7 mouths. But, as stated above, there are only 3 of any considerable magnitude, viz. the Kilia mouth on the north, and successively the Soulineh mouth, and the Edrillis mouth. But, besides these, there are other channels of inferior importance, of which two, at least, are still more to the south than the Edrillis mouth. In antiquity, the most southerly channel was the deepest, and best suited for the purposes of navigation, and was thence called *Sacrum*. — (See *Cellarius ut suprà.*) It is not, however, to be wondered at, that, in the course of so many ages, very great changes should have taken place in the channels of the river. It seems probable that the *Ostium Sacrum*, or southern channel of the ancients, may have run between *Carsum*, now Hirchova, and the lake *Halmyris*, now Rassein, which communicates with the Euxine at Kara Kerman, formerly *Istropolis*, and at a point still more to the south. At any rate, there certainly was a channel in the route now pointed out — (*D'Anville, Abrégé de la Géographie Ancienne*, tom. i. p. 307.); and as it is a good deal more to the south than the Edrillis mouth, with which the *Ostium Sacrum* has been commonly identified, it would seem to have the best claim to the distinction of being synonymous with the latter. This channel is, in fact, still partially open, and it is stated that the Austrian government has seriously entertained a project for making it navigable. There can be no doubt, that if this could be effected, it would be of much importance to the trade with Hungary and the countries on the upper part of the river, by materially shortening the river navigation, and facilitating the transit of ships and goods to and from the Black Sea; but the marshy nature of the ground is said to oppose formidable obstacles to the construction of a canal.

Navigation of the Danube. — Steam navigation was first established on the Danube

in 1830, since which the undertaking has gone on prospering, so much so, that the communication between Vienna and Constantinople is now maintained by a line of 7 or 8 steam vessels. The Austrian steam company, which was the first in the field, have extended their scheme by starting vessels between Vienna and Linz, and a Bavarian company commenced in 1838 running vessels between Ratisbon and Linz.

At present (or, very recently) steam boats ply on the Danube as long as the river is free from ice (usually from February or March to November), from Ratisbon to Linz, once a week; Linz to Vienna, 10 hours, once a week; Vienna to Presburg and Pesth, twice; Pesth to Drencova, once a week; Gladova to Galacz, once a week; Galacz to Constantinople, once a fortnight.

The voyage from Vienna to Constantinople, including stoppages, is seldom performed in less than 14 days, and sometimes occupies 17; in returning against the stream it takes at least a month, including 10 days quarantine at Orsova. The fare was lately, first place, 134 fl., about 13*l.*; second place, 94 fl.

The navigation of the Danube by steamers is unfortunately interrupted for about 50 miles, between Drencova and Gladova, by rocks and rapids, the lowest and most considerable of which is a sort of cataract, called the "Irongate," about 3 miles below the Hungarian frontier. It is worthy of remark that the most illustrious of the Roman emperors, Trajan, alive to all the advantages to be derived from the easy navigation of the Danube, had with equal industry and sagacity formed a road, or towing path, along the river's edge, for facilitating the operation of towing, of which the remains are still extant, with an inscription commemorative of the completion of the works. It has been proposed to overcome the difficulties in the way of the navigation by renovating the old Roman road, and deepening the channel contiguous to it. But it rarely happens that attempts to improve the navigation in the bed of a river, under any thing like similar circumstances, are even tolerably successful. The better way undoubtedly would be, were it practicable, to construct a lateral canal, or rather a canal from the mouth of the Bereska to Palanka, which would not only avoid the rapids, but also shorten the navigation by getting rid of the bend of the river by Orsova. But the difficulties in the way of such an undertaking, from the nature of the ground, are said to be insuperable; and it is, therefore, probable that the distance of 50 miles along the rapids will continue, if not always, at least for some considerable time, *a portage*. The inconvenience, however, of this break in the navigation has been diminished, as far as possible, by the construction of an admirable carriage road, at great expense, by the Hungarian diet, from Moldova to Orsova. In the extent of excavations in the rock, and terraces of masonry, upon which it is carried, it is not inferior as a specimen of engineering to the finest roads over the Alps. Several steamers have been transported down these rapids at the season of floods, small barges pass them at all times, and little boats, laden with wax and wool, are towed up by men and oxen. The passengers and goods conveyed by the steamers are transferred from Moldova in row-boats, to Gladova, below the Irongate, where they embark on another steamer. — (*Geog. Dict.* art. *Danube.*)

Railroad is completed from Brunn, the capital of Moravia, to Vienna; another railroad diverges, from the Danube at Linz, north to Budweis in Bohemia, where it reaches the banks of the Muldau, and through it communicates with the Elbe.

Junction of the Danube and the Rhine. — The long projected canal to unite the Danube and Rhine, the favourite scheme of Charlemagne, having been undertaken by the Bavarian government, was completed and opened in 1846. It extends from Bamberg, by Erlangen and Nuremberg, to Neumark, joining the Danube at Kellheim, a few miles above Ratisbon. The distance between the Maine near Bamberg, and the Danube, is about 112 miles; but the actual extent of canal is less, the communication being in part effected by the Regnitz, a tributary of the Maine, and the Altmuhl, a tributary of the Danube. There is now, consequently, an internal communication by water throughout all the vast country, stretching from the shores of the Netherlands to the Black Sea; so that produce shipped at Rotterdam or at Galacz may be conveyed from the one to the other in the same vessel.

GALANGAL (Ger. *Galgant;* Du. and Fr. *Galanga;* Rus. *Kalgan;* Lat. *Galanga;* Arab. *Kusttulk;* Chin. *Laundon*), the root of the *galanga*, brought from China and the East Indies in pieces about an inch long, and hardly ¼ an inch thick. A larger root of the same kind (*Greater Galangal*), an inch or more in thickness, is to be rejected. It has an aromatic smell, not very grateful; and an unpleasant, bitterish, extremely hot, biting taste. It should be chosen full and plump, of a bright colour, very firm and sound: 12 cwt. are allowed to a ton. — (*Lewis's Mat. Med.; Milburn's Orient. Com.*)

GALBANUM (Fr. *Galbanum;* Ger. *Mutterharz;* It. *Galbano;* Lat. *Galbanum;* Arab. *Barzud*), a species of gum resin obtained from a perennial plant (*Galbanum officinale*) growing in Africa, near the Cape of Good Hope, and in Syria and Persia. It

is brought to this country from the Levant in cases or chests containing from 100 to 300 lbs. each. The best is in ductile masses, composed of distinct whitish tears agglutinated together by a pale brown or yellowish substance. It is generally much mixed with stalks, seeds, and other impurities. The separate tears are considered as the best. When the colour is dark brown or blackish, it is to be rejected. It has a strong peculiar odour, and a bitterish, warm, acrid taste. — (*Thomson's Dispensatory.*)

GALLIPOLI, a sea-port town of S. Italy, k. of Naples, prov. Terra di Otranto, on the E. shore of the Gulph of Taranto, on a rocky islet, at the W. extremity of a narrow peninsula, to which it is joined by a bridge, lat. 40° 3′ N., long. 17° 58′ E. It is fortified, has a castle, and is well built. Pop. about 7,000 (6,709 in 1843). It is the principal port of the Mediterranean for the shipment of olive oil, and has, in consequence, a considerable trade.

It is indebted for this distinction, partly to its being situated in a country where oil is produced in the greatest abundance, but more, perhaps, to the circumstance of the cisterns, cut in the limestone rock on which the town is built, being peculiarly well fitted for the preservation of the oil. They do not differ much in appearance from a common water tank. They are usually under the houses of the inhabitants; are arched over, with the exception of a circular hole, into which the oil is poured, and through which it is again drawn up. It will keep in these cisterns for an indefinite period; and is materially improved, not only in clearness, but also in flavour. When the oil is to be shipped, it is drawn off from the cisterns into *uteri* or skins, which are carried on men's backs to the shore, where the casks, being filled, are conveyed in lighters to the ships. — (See art. Olive Oil in this Dictionary.) Of 16,964 tuns olive oil imported into the U. K. in 1849, 9,661 tuns were from the k. of Naples, and principally from this port.

Gallipoli has no harbour, but a bay or roadstead N. E. of the town. The latter has from 10 to 12 fathoms water; but it shoals towards shore, and vessels of considerable burden should not come within less than a musket shot of the land. Those that come nearest to the shore moor, with their heads to the N.W. with 2 cables out a-head and 2 a-stern in from 16 to 20 feet water. The only danger in entering or leaving the roads is a blind rock at their entrance, about 500 yards N. N. E. from the fort. It has only about from 5 to 7 feet water; and as it is not marked by any buoy, pilots should be employed by foreigners. A tunny fishery is carried on inside the bay; but the nets are easily avoided. Winds from the N. and N. W. throw in a heavy sea.

About 1½ m. W. from the town is the low, flat island of St. Andrea. It is said in *Norries's Sailing Directions for the Mediterranean*, that there is a light-house on this island. But, though a light-house on it would be of great service to ships making the port, and though it be laid down in some of the charts of this sea, the truth is that none such really exists, nor is there even a tower on the island! There are some lesser islands between St. Andrea and the mainland. There is deep water between the former and the nearest islands, but not between the latter and the town. A dangerous shoal lies about ½ m. S. of St. Andrea.

Monies, Weights, and Measures. — Those of Naples, excepting the measure of oil, which in loading is measured in vats of 11 salme, 1 stajo, and 28 pignatti of Gallipoli. The salmas of Naples and Gallipoli are the same, each weighing 165½ rottoli of clear oil. The difference is in the subdivision: viz.,—

1 Salma of Naples	=	16 Staja, or 320 Pignatti.
1 Salma of Gallipoli	=	10 Staja, or 320 ditto.
1 Stajo of Naples	=	20 Pignatti.
1 Stajo of Gallipoli	=	32 Pignatti.
72 Staja of Gallipoli	=	1 Imp. Tun.

The quarantine regulations are the same as those of Naples; but as Gallipoli has no lazaretto, vessels laden with susceptible goods proceed to Brindisi to discharge and perform quarantine, Brindisi having the only lazaretto in the province of Terra di Otranto.

General Remarks. — Masters of vessels loading oil at Gallipoli are obliged to attend at the measurement of the oil, and inspect its quality. They receive for their attendance from the shipper, free of all charges on board, 2 staja, or 2 per cent. (Gallipoli measure), of oil for every 100 salme their vessel loads.

Bills of Lading for a cargo of oil are merely signed by the master with his name, *without any sort of clause*. He, consequently, affirms for the quantity and quality of the oil and casks. All bills of lading are made out in Italian.

In shipments for St. Petersburg, the number, tare, gross, and nett weight of each cask is endorsed on the bill of lading, which is signed by the master and shipper on both sides.

Besides the bills of lading, the master signs receipts in quadruplicate, specifying that a sufficient quantity of wood has been supplied to the stowers for the stowage of his cargo, and that he has received a certain number of empty casks for the purpose of transferring the oil to them, should any leakage take place during the voyage.

Another receipt is signed by the master stating that he has received the custom-house cockets, proving the duty to have been paid on his cargo. The cockets are of service should the vessel put into any other port of the Two Sicilies.

The *Port Charges*, of a public nature, are fixed by the tariff for the kingdom. But there are several port charges of a private nature, such as pilotage, mooring, unmooring, discharging of ballast, and watermen's or interpreter's attendance. These are only paid by foreign vessels, for the Neapolitan traders require no pilot, and having numerous crews, they moor and unmoor their own vessels, and discharge their ballast: and speaking the language of the place, do not require an interpreter, and merely have a person to assist them in getting their clearances from the different offices, whom they pay by private arrangement.

The charges for British vessels, are —

	ducats.	*grains.*
Pilotage, entering	4	50
ditto clearing	5	50
Mooring and unmooring	16	0
Interpreter's attendance	18	0
Discharging of ballast, for every ton	0	25

N. B. — Vessels of all sizes pay the same charges.

Supplies and Prices of Provisions. — Gallipoli is not a favourable place for obtaining supplies of fresh provisions, and is without any salt provisions, except salted cod, herrings, pilchards, and anchovies.

	grains.	
Bread (rather bad)	4 to 5	per rottolo.
Beef (not always to be had)	13 — 26	ditto.
Pork (not to be had in summer)	15 — 18	ditto.
Lamb and kid	10 — 12	ditto.
Fowls	20 — 30	each.
Eggs	12 — 18	per dozen.
Cheese	20 — 34	per rottolo.
Coffee	48 — 60	ditto.
Tea (very bad, and sold by apothecaries)	no price.	
Sugar (crushed)	36 — 48	ditto.
Butter (not to be had).		
Wine (good and strong)	2 — 6	per caraffa.
Biscuit	6 — 9	per rottolo.

Biscuit must be ordered, and is inferior. Vessels generally provide this article at Naples, where it is good and cheap.

Vegetables are not abundant at all seasons.

Water. The supply for shipping is copious and excellent, and is conveniently put on board. — (*Geographical Dictionary*, art. *Gallipoli*, with the authorities there referred to, and valuable private information.)

GALLON, a measure of capacity, both for dry and liquid articles, containing 4 quarts. By 5 Geo. 4. c. 74., "the Imperial gallon shall be the standard measure of capacity, and shall contain 10 lbs. avoirdupois weight of distilled water, weighed in air at the temperature of 62° of Fahrenheit's thermometer, the barometer being at 30 inches, or 277·274 cubic inches; and all other measures of capacity to be used, as well for wine, beer, ale, spirits, and all sorts of liquids, as for dry goods, not measured by heaped mea-

sure, shall be derived, computed, and ascertained from such gallon; and all measures shall be taken in parts, or multiples, or certain proportions, of the said Imperial standard gallon." The old English gallon, wine measure, contained 231 cubic inches; and the old English gallon, ale measure, contained 282 cubic inches. Hence the Imperial gallon is about $\frac{1}{5}$ larger than the old wine gallon, and about $\frac{1}{20}$ less than the old ale gallon. By the 6 Geo. 4. c. 58. § 6. it is enacted, that from and after the 6th of January, 1826, whenever any gallon measure is mentioned in any act of parliament relative to the excise, it shall be taken and deemed to be a gallon Imperial standard measure. — (See WEIGHTS AND MEASURES.)

GALLS, OR GALL-NUTS (Fr. *Galles, Noix de Galle*; Ger. *Gallapfel, Gallus*; It. *Galle, Galluze*; Lat. *Galæ*; Arab. *Afis*; Hind. *Majouphal*; Pers. *Mazu*), are excrescences produced by the attacks of a small insect, which deposits its eggs in the tender shoots of a species of oak (*Quercus infectoria* Linn.), abundant in Asia Minor, Syria, Persia, &c. Galls are inodorous, and have a nauseously bitter and astringent taste. They are nearly spherical, and vary in magnitude from the size of a pea to that of a hazel nut. When good, they are of a black or deep olive colour; their surface is tubercular, and almost prickly; they are heavy, brittle, and break with a flinty fracture. They are known in commerce by the names of *white, green*, and *blue*. The white galls are those which have not been gathered till after the insect has eaten its way out of the nidus and made its escape. They are not so heavy as the others, are of a lighter colour, and do not fetch so high a price. The green and blue galls are gathered before the insect has escaped; they are heavier and darker than the former, and are said to afford about one third more of colouring matter.

Galls are of great importance in the arts, being very extensively used in dyeing, and in the manufacture of ink, of which they form one of the principal ingredients. They are the most powerful of all the vegetable astringents; and are frequently used with great effect in medicine.

The ancients reckoned the gall-nuts of Syria superior to every other, and they still retain their pre-eminence. They are principally exported from Aleppo, Tripoli, Smyrna, and Said; those brought from the first come chiefly from Mosul, on the western bank of the Tigris, about ten days' journey from Aleppo. The real Mosul galls are unquestionably the best of any; but all that are gathered in the surrounding country are sold under this name. Those from Caramania are of a very inferior quality. The galls met with in India are carried thither from Persia by Arabian merchants.

It is not unusual to dye the whitish gall-nuts blue, in order to increase their value. The fraud is, however, detected by the deeper blue tinge that is thus imparted to them; and by their being perforated and lighter than the genuine blue galls.

The price of galls in bond varies in the London market from 50*s*. to 64*s*. a cwt. — (*Rees's Cyclopædia; Bancroft on Colours; Ainslie's Mat. Indica, &c.*)

GALVESTON, the principal sea-port of Texas, the most southerly of the U. States, at the N. E. end of the long, low, narrow island of the same name, on the north shore of the Gulph of Mexico, and on the channel forming the entrance to the bay of Galveston, an extensive inlet of the sea between the N. side of the island and the mainland, lat. 29° 16′ 37″ N., long. 94° 49′ 41″ W. Having only recently attained to any distinction, Galveston is yet of no great magnitude, its population not perhaps exceeding 6,000 or 7,000; but it is increasing; and if population and cultivation should increase in the interior, it will most probably become one of the principal *entrepôts* in this part of the world.

The bar outside Galveston harbour and bay, between the N. E. end of the island and Point Bolivar on the mainland, has not more than 13½ feet water at the highest springs, and but 10 feet at ebb: hence the smaller class of vessels, or those under 200 or 250 tons, are most suitable for the trade of the port, as well as for that of almost all the other ports on the N. and E. sides of the gulph, the deficiency of water being all but universal. Though the land be low, the houses of Galveston may be seen from the masthead at a distance of several miles. Vessels drawing 8 feet water and upwards should, however, not approach the bar nearer than 6 fathoms, without heaving to and making the signal for a pilot, which is promptly attended to. Vessels drawing less than 8 feet water may approach the bar till the water shoals to 4 fathoms before heaving to. Vessels making the port in the night should invariably anchor in 5 or 6 fathoms; and the holding ground being excellent, those who are well found in anchors and cables have nothing to fear. Pilot boats are constantly on the look-out; and ships should on no account attempt crossing the bar till they have got a pilot on board. In the harbour there is from 18 to 30 feet water. The bay, which stretches about 35 miles from N. to S., and from 12 to 18 miles from E. to W., has not generally more than 9 feet water, and is intersected by a bar, on which there is only from 5 to 6 feet water. — (*Kennedy's Texas*, i. 29.) Several very considerable rivers have their embouchures in the bay, so that the town has a considerable command of internal navigation.

The great articles of export from Galveston, and, indeed, from Texas, are cotton, provisions, cattle and other stock, hides and skins, furs, bullion from Mexico, &c. The articles of importation consist principally of cotton and other manufactured goods, hardware, agricultural implements and machinery, powder and shot, salt, coal, &c. But the foreign trade of the port is so very limited that the value of the exports from Texas, in the year ended 30th June, 1849, was only estimated at 82,791 dolls., and that

of the imports at 16,600 do. Some part, however, of the commerce of the state is carried on at second-hand through New Orleans. The shipping belonging to the port in 1849 amounted to 2,560 tons.

Monies, Weights, and Measures, same as those of the U. States, for which see NEW YORK.

Charges on Shipping in the Ports of Texas.

Tonnage Duty. — All sailing vessels entering any port of the state from any foreign port or place, are chargeable with a tonnage duty of 60 cents per ton, and steam-boats with 30 cents, according to registered tonnage.

Entrance. — Any ship or vessel of less than 100 tons burden pays 1½ dollars; of 100 and upwards, 2½ dollars.

Clearance. — For every clearance of vessels of the above-mentioned burden, the same fees respectively: —

	$ cts.
Port entry	2 0
Permit to land goods	0 20
Bond taken officially	0 40
Permit to load goods for exportation, that may be entitled to debenture or official certificate	0 40
Bill of health	0 20
For every document (registers excepted) required by any merchant, owner, or master of any ship or vessel not before enumerated	0 20

Rates of Pilotage at Galveston. — On all vessels drawing less than 8 feet water, 2 dollars 50 cents per foot. On all vessels drawing 8 feet and over, 3 dollars per foot.

Any pilot that may be detained waiting on any vessel bound for sea, or any vessel that may be prevented from entering the port by contrary winds or otherwise, shall be entitled to receive 5 dollars per day for each day he may be detained after the first 24 hours.

Any pilot taking charge of a vessel in distress from loss of anchors, spars, or rudder, shall receive such extra compensation as in the opinion of the collector of customs the circumstances of the case may require; the same to be awarded by the collectors after hearing the parties.

Any pilot speaking a vessel outside the bar, inward bound, or any vessel inside the bar, outward bound, and offering his services, shall be entitled to full pilotage, whether those services be accepted or not.

Any pilot speaking a vessel, inward bound, inside the bar, shall, if his services be accepted, be entitled to half pilotage; but, if his services be not accepted, he shall not be entitled to any pilotage.

Any vessel, after waiting outside the bar for four hours with a signal for a pilot flying, may enter port free of all pilotage charges.

Any pilot boarding a vessel 15 miles from shore, shall be entitled to 25 per cent. more than the regular rates for off-shore pilotage.

*** Consignees are, in all cases, liable for the pilotage of vessels consigned to them, and no vessel is permitted to go to sea, until all pilotage has been paid.

Pilotage Regulations at Galveston.—The collector of customs at Galveston is authorised to appoint as many pilots as may be necessary for the shipping, with power of suspension and dismissal, requiring bond with good security, in the sum of 10,000 dollars, for the faithful performance of duties; without which appointment it is not lawful for any person to exercise the calling of a pilot.

Each branch pilot may appoint two deputies, for whose acts he is responsible; these appointments are subject to the approval of the collector.

Any pilot or deputy taking charge of a vessel, while in a state of inebriety, forfeits his appointment. Any pilot wilfully or negligently losing any vessel, is to be dismissed, and is, with his sureties, liable to the party injured for all damages sustained by reason of his misconduct.

Any branch or deputy pilot, who fails to board with promptitude a vessel in need of his services, is, for the first offence, subject to the penalty of suspension for three months, and for the second, to forfeiture of his appointment; and any pilot, who for any cause whatever forfeits his branch, or appointment, is ever afterwards held incapable of filling any office of the kind.

The tariff in force in Texas is, of course, that of the U. States, and the rules and regulations observed in regard to the importation and exportation of goods in other parts of the Union are observed here.

Probable Progress of Texas. — Our anticipations of the future progress of this newly formed state are not so sanguine as those that seem to be generally entertained. The country, no doubt, is, speaking generally, highly productive, well watered, and well situated for commerce; but the climate, especially in the lower and more fertile districts, is too hot and relaxing, and the land too fruitful, to permit or require its cultivation being vigorously prosecuted by free labourers. Had the importation of slaves into Texas been permitted, its progress might, and most probably would, have been as rapid as that of the other southern states of the American Union. But their importation, except from the U. States, is prohibited; and if the supply from this quarter should fail, and the prohibition of their importation from other quarters be really enforced, its progress will, we apprehend, be comparatively slow. It is a contradiction and an absurdity to suppose that free settlers in such a country should exhibit any considerable portion of the energy and industry they would exhibit if they had to cultivate a less fertile soil, or were placed under a severer climate. Mexico and the Northern U. States may both be referred to in illustration of this principle: industry is, in the former, at the lowest possible ebb (see *Geog. Dict.*, art. *Mexico*), though it is needless to add, that the incentives to labour are there quite as great as in Texas. And does any one suppose that the cultivation of cotton and sugar would be carried to near its present extent in Louisiana, Alabama, &c., but for their all but unlimited command of slave labour? We, therefore, are well convinced that the future progress of Texas will depend principally on the fact, whether she can or cannot derive ample supplies of slave labour. If she can (whether with or without the sanction of the law is in this respect of no importance), the fair presumption is, that she will make a rapid progress; whereas, if she cannot, her progress will, most probably, be comparatively slow.

GAMBOGE (Fr. *Gomme gutte*; Ger. *Gummigutt*; It. *Gomma gutta*; Lat. *Gummi guttæ, Cambogia*; Arab. *Ossararewand*; Siamese and Cambojan, *Rong*), a concrete vegetable juice, or gum resin, the produce of the *Garcinia Cambogia*, a forest tree of the genus which affords the mangostein, the most exquisite fruit of the East. The districts which yield gamboge lie on the east side of the Gulph of Siam, between the latitudes of 10° and 12° north, comprising a portion of Siam and the kingdom of Camboja, whence its English name. It is obtained by making incisions in the bark of the tree, from which it exudes, and is collected in vessels placed to receive it. In these it assumes a firm consistence; and being formed into orbicular masses, or more frequently cylindrical rolls, it is at once fit for the market. It is of a bright yellow colour, opaque, brittle, breaks vitreous, has no smell, and very little taste. Specific gravity 1·22. When taken internally, it operates as a most violent cathartic. It forms a beautiful yellow pigment, for which purpose it is principally used. The Dutch began to import it about the middle of the seventeenth century. The greater part of the gamboge of commerce first finds its way to Bangkok, the Siamese capital, or to Saigon, the capital of lower Cochin China; from thence it is carried by junks to Singapore, whence it is shipped for Europe. Its price at Singapore varies, according to quality, from 30 to 80 dollars per picul. Dark-coloured pieces should be rejected. — (*Crawford's Embassy to Siam*, p. 425.; *Thomson's Chemistry.*)

GARNET, GARNETS (Fr. *Grenats*; Ger. *Granaten, Granatstein*; It. *Granati*; Lat. *Granati*; Rus. *Granatnoi hamen*; Sp. *Granadas*). There are two species of garnet, the precious and the common. The colour of the first is red; and hence the name of the mineral, from its supposed resemblance to the flower of the pomegranate; passes from Columbine red, to cherry and brown red; commonly crystallised. External lustre glistening, internal shining, vitreous; transparent, sometimes only translucent; specific gravity 4·08 to 4·35. The colour of the common garnet is of various shades of brown and green. Different colours often appear in the same mass: translucent; black varieties nearly opaque: specific gravity from 3·66 to 3·75. — (*Thomson's Chemistry.*) The finest varieties come from India, and some good specimens have been received from Greenland. When large and free from flaws, garnets are worth from 2*l.* to 5*l.* or 6*l.*, and even more; but stones of this value are of rare occurrence, and always in demand. — (*Mawe on Diamonds, &c.* 2d ed. p. 113.)

GAS COMPANIES, the term usually applied to designate the companies or associations established in most large towns for lighting the streets and houses with gas.

Every one must have remarked that most species of coal, when ignited, give out large quantities of gas, which burns with much brilliancy, yielding a great quantity of light as well as of heat. Dr. Clayton seems to have been the first who attempted, about 1736, to apply this gas to the purposes of artificial illumination; but his experiments were upon a very limited scale, and no further attention was paid to the subject till more than half a century afterwards. At length, however, Mr. Murdoch, of Soho, instituted a series of judicious experiments on the extrication of gas from coal; and, by his ingenuity and sagacity, succeeded in establishing one of the most capital improvements ever made in the arts. Mr. Murdoch found that the gas might be collected in reservoirs, purified, conveyed by pipes to a great distance from the furnace where it was generated; and that it affords, by its slow combustion, when allowed to escape through small orifices, a beautiful and steady light. This great discovery, which places Mr. Murdoch in the first rank among the benefactors of mankind, was first brought into practice at Redruth, in Cornwall. In 1802, it was applied to light Mr. Murdoch's manufactory at Soho; in 1805, it was adopted by Messrs. Philips and Lee, of Manchester, in the lighting of their great cotton mill; and is now employed in the lighting of the streets, theatres, and other public buildings, factories, &c. of *all* the considerable towns of the empire; and also in most considerable towns of the Continent and America.

Gas light is indebted, for its rapid diffusion, not more to its peculiar softness, clearness, and unvarying intensity, than to its comparative cheapness. According to Dr. Thomson (*Encyc. Brit.* art. *Gas Lights*), if we value the quantity of light given by 1 lb. of tallow in candles at 1*s.*, an equal quantity of light from coal gas will not cost more than 2¾*d.*, being less than a *fourth part* of the cost of the former.

Oil and other substances have been used in furnishing gas for the purpose of illumination, but none of them has answered so well as coal. Most of the oil gas establishments have been abandoned.

The construction of gas works on a large scale, and the carrying of pipes through the streets and into houses, &c., is very expensive, and requires a large outlay of capital. Hence most of the gas lights in the different towns are supplied by joint stock companies. Many of them have turned out to be very profitable concerns.

The subjoined Table contains a statement of the most important particulars connected with the principal gas companies, obtained under parliamentary authority in 1850.

A Return showing the Rates per 1000 cubical Feet charged for Gas by the principal Gas Companies in the United Kingdom in 1850, with the Amount of their paid-up Capital at that Date, the Rate per Cent. of Dividend payable on the Capital, and the Price of Coal per Ton used by the Companies.—(*Parl. Paper*, No. 399. Sess. 1850.)

Names of Companies.	Rates per 1000 Cubic Feet at which the Gas is supplied at the latest Date.	Amount of paid up Capital at the latest Date.	Rate per Cent. of last Dividend.	Price of Coal per Ton at the latest Date.

GENEVA (Du. *Genever*; Fr. *Genièvre*; Ger. *Gaud, Genever*; It. *Acqua di Ginepro*; Lat. *Juniperi aqua*; Sp. *Agua de Enebro*), a spirit obtained by distillation from grain, rectified with the addition of juniper berries. The latter gives to the spirit that peculiar flavour by which it is distinguished, and are also said to render it diuretic. Geneva is a corruption of *genièvre*, the French term for the juniper berry.

By far the best Geneva is made in Holland, where its manufacture is carried on to a very great extent. The distilleries of Schiedam have long been famous, and are at present in a very prosperous condition. Schiedam geneva is made solely of spirit obtained from rye and barley, flavoured with juniper berries. It becomes milder, and acquires, as it gets old, an oily flavour disliked by the Hollanders; hence nearly the whole of the "Schiedam" is exported, principally to the East Indies. There are no fewer than 100 distilleries in Schiedam, 200 in other parts of Holland, and not more than 40 in Belgium. The entire annual produce of the distillery in Holland is estimated at 2,000,000 ankers, or 20,500,000 wine gallons, of which about two thirds are exported. — (*Cloet, Description Géographique des Pays Bas*, p. 32.)

In nothing, perhaps, has the destructive effect of heavy taxation been so strongly exhibited, as in the trade of geneva. It appears from the *Parl. Paper*, No. 248. Sess. 1826, that during the ten years ending with 1786, when the duty on geneva was about 10*s.* the wine gallon, the average annual consumption in Great Britain amounted to about 80,362 gallons. But in 1786, Mr. Pitt reduced the duties to 5*s.* a gallon; and the effect of this wise and politic measure was such, that in the next decennial period the average imports for home consumption amounted to 444,891 gallons! From 1796 to 1806, the duties fluctuated from 7*s.* 6*d.* to 14*s.*; but as the taste for geneva had been formed, and as the duties on other spirits had been increased in about the same proportion, the consumption went on increasing, having been, at an average of the 10 years, as high as 724,351 gallons a year. This was the maximum of consumption. Mr. Vansittart soon after began his inauspicious career, and immediately raised the duty from 14*s.* to 20*s.* 8*d.*, the consequence of this increase being, that in the 10 years ending with 1816, the average consumption amounted to only 272,898 gallons. Since then the duties continued stationary down to 1846 at 22*s.* 10*d.* the Imperial gallon, on an article which may be bought in bond for 3*s.* 6*d.* or 4*s.* 6*d.*! The duties on rum and British spirits having been afterwards materially reduced, the consumption of geneva went on progressively diminishing, till it amounted, as appears from the subjoined official statement in 1843, to no more than 13,913 gallons; being only *one fifty-third* part of what it amounted to during the 10 years ending with 1806!

To make any lengthened commentary on such statements would be useless. Our policy, if we may apply this term to so revolting a display of short-sighted rapacity,

had no other effect than to lessen the public revenue and enjoyment of the people, to injure our trade with Holland, and to foster and promote the ruinous and destructive practice of smuggling. The exorbitant duties on geneva, brandy, and tobacco, led to the formation of the coast guard and the preventive water guard, costing together about 360,000*l.* a-year; and yet, notwithstanding this outlay, and notwithstanding the innumerable penalties and punishments to which he is exposed, the trade of the smuggler was not put down, but continued, on the contrary, in a peculiarly flourishing condition.

At length, in 1846, Sir Robert Peel did for geneva what he did for brandy, that is, he reduced the duty from 22*s.* 10*d.* to 15*s.* a gallon. And though insufficient, this wise measure has had the best effect, as will be seen from the subjoined table.

The regulations as to the importation, &c. of geneva are similar to those affecting BRANDY; which see.

An Account of the Number of Gallons (Imperial Measure) of Geneva entered for Home Consumption in Great Britain and Ireland, the Rates of Duty on the same, and the entire Nett Produce of the Duty, in certain Years since 1826.

GENOA, a maritime city of Italy, once the capital of the famous republic of that name, now of a province of the kingdom of Sardinia, at the bottom of the extensive gulph to which it gives its name; the light-house being in lat. 44° 24′ 18″ N., lon. 8° 54′ 24″ E. Population, in 1857, 119,610. Genoa is one of the finest cities of Europe. In general, the streets are inconveniently narrow; but some of the principal ones are moderately wide, and consist almost entirely of public buildings, and private palaces erected during the period of her prosperity. Being built on a rising ground, in the form of an amphitheatre, the appearance of the town from the sea is most magnificent, and justifies the epithet given to her of "*la superba.*"

Port.—The harbour is semicircular, the diameter being about 1000 fathoms. It is artificial, being formed by two gigantic moles having opposite directions. That on the east side, called the old mole (*molo vecchio*), projects from the centre of the city W. by S. It is about 260 fathoms in length, and has a battery near its middle. The new mole (*molo nuovo*), on the opposite side of the port, adjoins the southern extremity of the suburb of St. Pietro d'Arena, projecting about 210 fathoms from the shore in an E. S. E. direction. The moles heads bear from each other N. E. by E. and S. W. by W., the distance between them, forming the entrance to the harbour, being about 350 fathoms. The light-house is without the port, on the west side, near the extremity of a point of land, and contiguous to the bottom of the new mole. It is a lofty square tower; and as it stands on a high rock, and is painted white, it is visible in clear weather at a great distance. There is also a harbour light at the extremity of the new mole. There is no difficulty in entering the harbour; the ground is clean, and there is plenty of water, particularly on the side next the new mole; care, however, must be taken, in coming from the west, to give the light-house point a good offing. Moderate sized merchantmen commonly anchor inside the old mole contiguous to the *porto franco*, or bonded warehouses, having a hawser made fast to the mole, and an anchor ahead. Men of war and the largest class of merchantmen may anchor inside the new mole, but they must not come too near the shore. Ships sometimes anchor without the harbour in from 10 to 25 fathoms, the light-house bearing N. ½ W.; distant 2 or 3 miles. The S. W. winds occasion a heavy swell, but the bottom is clay and holds well. Within the town are two rather shallow basins designed for galleys and small trading vessels. There is also an arsenal.

Money.—Accounts were formerly kept at Genoa in lire of 20 soldi, each soldo containing 12 denari, and money was divided into *banco* and *fuori di banco*. But since the 1st of January, 1827, the ancient method of reckoning has ceased, and accounts are now kept in lire Italiane, divided into cents. The weight and fineness of the new coins are precisely the same as those of France: so that the par of exchange = 25·20 lire per 1*l.*, if estimated in silver at 5*s.* 2*d.* an oz., and 25·54, if estimated in silver at 5*s.* an oz. 6 old lire di banco are equal to 5 new lire very nearly.—(*Manuel de Nelkenbrecher.*)

Weights and Measures.—Those formerly in use in Genoa are described in the previous editions of this work. In 1847 the French system of weights and measures was introduced, the only difference being the substitution of Italian for French names. Thus, the *chilogramma* (kilog.) = 2·2 lbs. avoird. (50⅝ chilog. being very nearly equal to 112 lbs. avoird.); the *libbra* (livre), or pound = ½ chilog. = 1·1 lb. avoird.; the *quintale centinajo*, or cwt. = 220 lbs. avoird.; and the *ettolitro* (hectolitre) liquid measure = 22 imp. gall.; ditto, dry measure = 2⅘ imp. bush.; the *metro* (metre) = 39·37 inches, &c. A barrel of oil = 59½ chilog. = 14⅘ imp. gall. All tares of usage were abolished at the same time that the French metrical system was introduced.

The *Bank of Genoa*, or of St. George, was one of the most ancient and celebrated banks of circulation and deposit in Europe. Until 1746, when the bank was pillaged by the Austrians, it was customary to make all bills of exchange drawn upon Genoa payable in *banco;* but since then they have generally been made payable in money *fuori di banco*. In 1800, when the French were besieged in Genoa by the Austrians, they took the treasure of the bank to pay their troops. The establishment has never recovered from this blow; some warehouses, and a part of the town's revenue, were assigned to it, but they yield a very poor dividend. It is no longer used as a place of deposit for money.

In 1844, a new bank was established in Genoa, which being united in 1855 to a bank that had been established at Turin in 1847, has the title of National Bank (*Banca Nazionale*). Its capital amounts to 32,000,000 lire in shares of 1,000 lire each. It is authorised to issue notes of the value of 1,000, 500, 250, and 100 lire; the amount of its notes in circulation and debts payable on demand being limited to

3 times the amount of the coin in its coffers. It discounts mercantile paper, and transacts all kinds of ordinary banking business. Besides the great branch in Turin, it has inferior branches in Nice and Vercelli (*Calendario del Regno Sarao pel* 1857, p. 594).

Trade, &c.—Genoa is the *entrepôt* of a large extent of country; and her commerce, though inferior to what it once was, is very considerable, and has latterly been increasing. She is a free port; that is, a port where goods may be warehoused and exported free of duty. The exports consist partly of the raw products of the adjacent country, such as olive oil (an article of great value and importance), rice, fruits, cheese, rags, steel, argol, &c.; partly of the products of her manufacturing industry, such as silks, damasks, and velvets, (for the production of which she has long been famous), thrown silk, paper, soap, works in marble, alabaster, coral, &c.; the printed cottons of Switzerland, and the other products of that country and of the western parts of Lombardy, intended for the south of Europe and the Levant; and partly of the various foreign products brought by sea and placed in *porto franco*. The imports principally consist of cotton, cotton stuffs and yarn, iron and hardware, linens and woollens, machinery, copper, coals, &c., from England; cotton wool, mostly from Egypt; corn from the Black Sea, Sicily, and Barbary; sugar, spices, coffee, cochineal, and indigo; hides; naval stores from the Baltic; codfish, wool, tobacco, lead (principally from Spain), wax, &c. Corn, barilla, Gallipoli oil, cotton, valonia, sponge, galls, and other products of the countries adjoining the Black Sea, Sicily, the Levant, &c. may in general be had here, though not in so great abundance as at Leghorn. The abolition of the various duties and custom-house fees formerly charged on the transit of goods through Genoa and the Sardinian territories, has had a very beneficial influence on the trade of this port, particularly as regards the importation of raw cotton for Switzerland and Milan, as well as of the different descriptions of colonial produce.

Statement of the vessels that arrived in the port of Genoa from British dominions during 1858:—

British vessels (sailing)	192 ships.	38,067 tons.
British steamers	54	31,817
	246	69,884

Foreign vessels.	Ships.	Tons.
Sardinians	146	37,158
Swedish and Norwegian	40	12,239
Dutch	25	3,731
French	20	5,114
Prussian	13	5,063
Neapolitan	9	3,123
Russian	7	2,523
American	7	2,491
Various nations	26	7,859
Total	293	77,301

Total from British dominions, under all flags, 539 ships, 147,185 tons.

Fifteen or 20 years ago the number of British vessels annually arriving in that port from British dominions could not be reckoned at more than 100 to 120, most of them of small tonnage. Steamers now arrive from London and Liverpool with considerable regularity, generally about 2 or 3 a month, each steamer bringing from 800 to 1000 tons of merchandise.

The import from Great Britain of iron (wrought and pig) and coals and coke has greatly increased of late years, especially since so many railways have been made in Piedmont. The figures given above show a greatly increased substitution of steam for sailing power in the British merchant service.

Comparative Statement of the English Vessels that entered the Port of Genoa during the last 5 years:—

Years.	Sailing Vessels.	Tons.	Steamers.	Tons.	Total. Vessels.	Total. Tons.
1854	231	48,857	28	12,167	259	61,124

GENTIAN (Ger. *Enzian*; Fr. *Gentiane*; It. *Genziana*; Sp. *Jenciana*; Rus. *Enzian*; Lat. *Gentiana*), the roots of two alpine plants, *Gentiana lutea* and *Gentiana*

purpurea, found growing in Switzerland and Austria, the Apennines, the Pyrenees, and in North America.

Those brought to this country come from Germany. They are in pieces of various lengths and thickness, twisted, wrinkled on the outside, and covered with a brownish grey cuticle. They have no particular odour; and the taste is intensely bitter, without being nauseous. — (*Thomson's Dispensatory.*)

GEROPIGA, or JERUPIGA, a factitious liquor imported from Portugal, and used in the adulteration of wine.

A pipe (about 105 gall.) of this compound is said by Mr. Consul Johnston to contain about 35 gall. brandy at 25 degs. over proof, the other constituents being colouring and sweetening matters and unfermented grape juice. But the proportion of spirits and the description of the other ingredients which enter into its composition and which are sometimes of a very noxious character, vary very widely in different samples. Generally, however, Geropiga may be said to be strong, sweet, and high coloured. Besides being mixed with port, sherry, and other wines, it is substituted in various beverages, especially in the U. States, for spirits and sugar.

This villanous compound is allowed to be imported at the same duty as wine, provided the proof spirits in it do not exceed 33 per cent. of its quantity. It is, also, permitted to be mixed in the bonded warehouses in the docks with wine in the same proportions relatively to its strength as brandy, that is, when it is only half the strength of the latter, double the quantity may be used, and so on.

This licence has been much, and, as we think, justly objected to. There can of course be no check, and, perhaps, no good objection to the compounding of wines in Portugal. But one should think that the facilities for adulteration in the shops of the dealers are here quite enough without legitimating the practice in the docks. It is difficult, indeed, to see what purpose can be served by this indulgence, unless it be to excuse and facilitate the commission of fraud.

Geropiga being confounded in Portugal with brandy and here with wine, the quantity exported from the former and imported into the latter is not easily ascertained. It appears, however, that in 1848, 481 pipes were shipped from Oporto for England, and 1063 do. for the U. States. (See Parl. Paper, No. 314, Sess. 1855, &c.)

GHEE. See Butter.

GIBRALTAR, a famous fortress, in the possession of Great Britain, near the southernmost extremity of Spain, and contiguous to the narrowest part of the strait, to which it gives its name, joining the Atlantic and Mediterranean, lat. 36° 6′ 30″ N., lon. 5° 21′ 12″ W.

It is situated on the west side of a rocky mountain or promontory, the *Mons Calpe* of the ancients, projecting into the sea, in a southerly direction, about 3 miles, being from ½ to ¾ of a mile in width. The southernmost extremity of the rock is called Europa Point. Its northern side, fronting the isthmus which connects it with Spain, is almost perpendicular, and wholly inaccessible; the east and south sides are so rugged and precipitous as to render any attack upon them, even if they were not fortified, next to impossible; so that it is only on the west side, fronting the bay, where the rock declines to the sea and the town is built, that it can be attacked with the least chance of success. Here, however, the strength of the fortifications, and the magnitude of the batteries, are such, that the fortress seems to be impregnable, even though attacked by an enemy having the command of the sea. It was taken by the English in 1704, but the fortifications were then very inferior to what they are at present. Towards the end of the American war, it was attacked by a most formidable armament fitted out jointly by Spain and France; but the strength of the place and the bravery of the garrison defeated all the efforts of the combined powers. Population about 16,000, exclusive of the troops, which usually amount, in time of peace, to about 3000.

The bay of Gibraltar is spacious; and being protected from all the more dangerous winds, affords a convenient station for ships. Two moles have been constructed at a vast expense, for the protection of the shipping. The old mole projects from the north end of the town, N.W. by N., 1,100 feet into the sea: the new mole is 1¼ mile more to the south, extending outwards about 700 feet: it has an elbow formed by the shore, and in winter large vessels anchor inside; the farthest out in from 5 to 6 fathoms. The plan on the opposite page gives a better idea of the position of Gibraltar, as well as of the Straits, than could be derived from any description. It is taken from Captain Smyth's beautiful chart of the Mediterranean.

Trade, Political Importance, &c. — Gibraltar is of considerable consequence as a commercial station. Being a free port, subject to no duties and few restrictions, she is a convenient *entrepôt* for the English and other foreign goods destined for the supply, principally through illegitimate channels, of the contiguous Spanish provinces. Its importance, in this respect, increased rapidly during the 10 years ending with 1840; so much so, that while the declared value of the various articles of British produce and manufacture exported to Gibraltar in 1833 amounted to only 385,460*l.*, they amounted to 1,053,367*l.* in 1841. But since a more liberal system began to be introduced into Spain the exports of British products to Gibraltar have declined. In 1857 they were valued at 655,661*l.* We also send to Gibraltar considerable quantities of foreign and colonial merchandise, most part of which are destined for the supply of Spain.

Gibraltar is also of great importance to Great Britain in a military and naval point of view, being, in fact, the key of the Mediterranean, and affording a convenient and secure station for the outfit, refreshment, repair, and accommodation of our ships of war and merchantmen. The revenue collected in the town amounts to from 30,000*l.* to 40,000*l.*, which is about sufficient to defray the public civil expenditure of the place. The expense annually incurred in Great Britain on account of the garrison, in time of peace, amounts to about 200,000*l.* — a small sum compared with the important political and commercial advantages it is the means of securing.

Money.—The effective or hard dollar=4*s.* 6*d.*; the current dollar being estimated at ⅔ hard dollars=2*s.* 10½*d.* Reals and quartos of both hard and current dollars are the same, being, the former=4½*d.*, and the latter=1$\frac{1}{20}$*d.*

Accounts are kept in current dollars (pesos), divided into 8 reals of 16 quartos each; 12 reals currency make a cob or hard dollar, by which goods are bought and sold; and 3 of these reals are considered equal to 5 spanish reals vellon.

Gibraltar draws on London in effective dollars of 12 reals, and London on Gibraltar in current dollars of 8 reals.

The exchange of Gibraltar on Cadiz, and other cities of Spain, is in hard dollars at a percentage, which varies considerably, and mostly in favour of Gibraltar.

Weights and Measures are those of England, excepting the arroba=25 lbs. English: grain is sold by the fanega, 5 of which make 1 Winchester quarter; wine is sold by the gallon, 100 of which are equal to 109·4 English wine gallons.

Port Dues.—An Order in Council, 5th of June, 1858, altered the port-dues payable on vessels arriving at Gibraltar, which are now levied according to the subjoined schedule: —

			Spanish dollars.
For every vessel from	1 to 20 tons inclusive		2 0 0
,, ,,	21 — 50	,,	3 0 0
,, ,,	51 — 100	,,	4 0 0
,, ,,	101 — 150	,,	6 0 0

GILD, OR GUILD, a company of merchants or manufacturers, whence the halls of such companies are denominated Gild or Guild Halls.

GILL, a measure of capacity. See WEIGHTS AND MEASURES.

GIN. English geneva, or gin, is made of spirit obtained from oats, barley, or malt, rectified or redistilled, with the addition of juniper berries, oil of turpentine, &c. All spirits manufactured in England, and most of the Scotch and Irish spirits imported into England, are subjected to the process of rectification. English gin is said to be one of the most wholesome spirits. — (See SPIRITS.)

GINGER (Ger. *Ingwer*; Du. *Gember*; Fr. *Gingembre*; It. *Zenzero*; Sp. *Jenjibre, Agengibre*; Rus. *Imbir*; Lat. *zingiber*; Pers. *Zungeveel*; Arab. *Zingebeel*), the roots of a plant (*Amomum Zingiber*), a native of the East Indies and China, but which was early carried to and succeeds very well in the West Indies. After the roots are dug, the best are selected, scraped, washed, and dried in the sun with great care. This is called *white ginger*; while the inferior roots, which are scalded in boiling water before being dried, are denominated *black ginger*. Preserved ginger is made by scalding the green roots, or the roots taken up when they are young and full of sap, till they are tender; then peeling them in cold water, and putting them into a thin syrup, from which they are shifted into the jars in which they come to us, and a rich syrup poured over them. Dried ginger has a pungent aromatic odour, and a hot, biting taste. It is imported in bags, each containing about a cwt. The white brings the highest price, being more pungent and better flavoured. The external characters of goodness in both sorts of dried ginger are, soundness, or the being free from worm holes, heaviness, and firmness; the pieces that are small, light, and soft, or very friable and fibrous, should be rejected. The best preserved ginger is nearly translucent; it should be chosen of a bright yellow colour; rejecting that which is dark-coloured, fibrous, or stringy. — (*Milburn's Orient. Commerce*; *Thomson's Dispensatory.*)

The consumption of ginger did not formerly exceed 10,000 cwt. a year. This was most probably owing to the too high duties with which it was burdened down to 1842. But these being then reduced to 10*s.* 6*d.* per cwt. on foreign, and 5*s.* 3*d.* per do. on colonial ginger, the consumption has since considerably increased, having amounted to 18,691 cwt. in 1852. During the same year 117,472 lbs. preserved ginger were admitted to consumption.

GINSENG (Du. *Ginseng, Ginsem*; Fr. *Ginseng*; Ger. *Kraftwerzel, Ginseng*; It. *Ginseng*; Sp. *Jinseng*; Chin. *Yansam*; Tart. *Orhota*), the root of a small plant (*Panax quinquefolium* Lin.), growing in China, Tartary, and several parts of North America. The latter is what we generally see in England, and is an article of trade to China, which is its only market. Large quantities were formerly exported from this country; but it is now carried direct to China by the Americans. It is sometimes exported crude, and sometimes cured or clarified. Within these few years, it has been discovered in the Himalaya mountains, and small quantities have been thence sent to Canton; but the speculation has not succeeded. It is only about 40 years since it began to be sent from America to China. Previously to the present century, the Chinese drew their supplies from the wilds of Tartary, and the root brought an exorbitant price. Crude ginseng now sells in the Canton market at from 60 to 70 dollars per picul, and prepared at from 70 to 80 dollars. In 1852, there were sent from the United States to China, 158,455 lbs. ginseng, valued at 102,073 dollars. — (*Papers laid before Congress*, 1st January, 1853.)

GLASS (Ger. and Du. *Glas*; Fr. *Vitre, Verre*; It. *Vetro*; Sp. *Vidrio*; Rus. *Steklo*; Lat. *vitrum*), a transparent, brittle, factitious body. It is formed by mixing together some sort of siliceous earth, as fine sand, or pounded flint, with an alkali, such as soda, potash, or pearlash, and subjecting them to a strong heat. By this means they are melted into a transparent, soft, tenacious mass, that may, when hot, be formed into thin plates, bent and shaped in every possible way. When cool, it becomes brittle, and is denominated glass. Litharge, minium, borax, the black oxide of manganese, &c. are sometimes used in the manufacture of glass, according to the purposes to which it is to be applied.

The kinds of glass, and their ingredients, are stated by Dr. Ure as follows: —

"There are 5 distinct kinds of glass at present manufactured:—1. Flint glass, or glass of lead; 2. Plate glass, or glass of pure soda; 3. Crown glass, the best window glass; 4. Broad glass, a coarse window glass; 5. Bottle, or coarse green glass.

"1. *Flint Glass*, so named because the siliceous ingredient was originally employed in the form of ground flints. It is now made of the following composition:—

Purified Lynn sand	100 parts
Litharge, or red lead	60 —
Purified pearlash	30 —

"To correct the green colour derived from combustible matter, or oxide of iron, a little black oxide of manganese is added, and sometimes nitre and arsenic. The fusion is accomplished usually in about 30 hours.

"2. *Plate Glass*. — Good carbonate of soda, procured by decomposing common salt with pearlash, is employed as the flux. The proportion of the materials is —

Pure sand	45·0
Dry subcarbonate of soda	25·5
Pure quicklime	4·0
Nitre	1·5
Broken plate glass	25·0——100·0.

About 70 parts of good plate glass may be run off from these materials.

"3. *Crown, or fine Window Glass*. — This is made of sand vitrified by the impure barilla manufactured by incineration of sea weed on the Scotch and Irish shores. The most approved composition is—

	By Measure.	By Weight.
Fine and purified	5	200
Best kelp ground	11	330

"4. *Broad Glass.* — This is made of a mixture of soap-boilers' waste, kelp, and sand. The first ingredient consists of lime used for rendering the alkali of the soap-boiler caustic, the insoluble matter of his kelp or barilla, and a quantity of salt and water, all in a pasty state. The proportions neces sarily vary. 2 of the waste, 1 of kelp, and 1 of sand, form a pretty good broad glass. They are mixed together, dried, and fritted.

"5. *Bottle Glass* is the coarsest kind. It is made of soapers' waste and river sand, in proportions which practice must determine according to the quantity of the waste; some soap-boilers extracting more saline matter, and others less, from their kelps. Common sand and lime, with a little common clay and sea salt, form a cheap mixture for bottle glass."

1. *Historical Notices with respect to Glass.* — The manufacture of glass is one of the very highest beauty and utility. It is most probable that we are indebted for this wonderful art, as we are for the gift of letters, to the Phœnicians. According to Pliny (*Hist. Nat.* lib. xxxvi. c. 26.), glass had been made for many ages, of sand found near the mouth of the small river Belus in Phœnicia. "The report," says he, "is, that the crew of a merchant ship laden with nitre (fossil alkali) having used some pieces of it to support the kettles placed on the fires they had made on the sand, were surprised to see pieces formed of a translucent substance, or glass. This was a sufficient hint for the manufacture. Ingenuity (*astuta et ingeniosa solertia*) was immediately at work, to improve the process thus happily suggested. Hence the magnetical stone came to be added, from an idea that it contained not only iron, but glass. They also used clear pebbles, shells, and fossil sand. Indian glass is said to be formed of native crystal, and is on that account superior to every other.* Phœnician glass is prepared with light dry wood, to which copper and nitre are added, the last being principally brought from Ophir. It is occasionally tinged with different colours. Sometimes it is brought to the desired shape by being blown, sometimes by being ground on a lathe, and sometimes it is embossed like silver." Sidon, he adds, is famous for this manufacture. It was there that mirrors were first invented. In Pliny's time, glass was made in Italy, of fine sand on the shore between Cumæ and the Lucrine bay.

Glass was manufactured at Rome into various articles of convenience and ornament. Pliny mentions that Nero gave 6,000 sesterces (50,000*l.* according to the ordinary method of reckoning) for two glass cups, each having two handles! These, however, must have been of an immense size and of exquisite workmanship; for glass was then in common use for drinking vessels, and was used even in the form of bottles in which to keep wine. — (*Mart. Epig.* lib. ii. 22. 40., and lib. iv. 86.)

There is no authentic evidence of glass being used in windows previously to the third or fourth century; and then, and for long after, it was used only in churches and other public buildings. In this country, even so late as the latter part of the sixteenth century, glass was very rarely met with. In a survey of Alnwick Castle, made in 1573, it is stated — "And, because throwe extreme winds, the glasse of the windowes of this and other my lord's castles and houses here in the country dooth decay and waste, yt were good the whole leights of everie windowe, at the departure of his lordshippe from lyinge at any of his said castels, and houses, and dowring the time of his lordship's absence, or others lyinge in them, were taken doune and lade up in safety: And at sooche time as ather his lordshippe or anie other sholde lye at any of the said places, the same might then be set uppe of newe, with smale charges, whereas now the decaye thereof shall be verie costlie and chargeable to be repayred." — (*North. Housh. Book*, xvii.) Sir F. M. Eden thinks it probable that glass windows were not introduced into farmhouses in England much before the reign of James I. They are mentioned in a lease in 1615, in a parish in Suffolk. In Scotland, however, as late as 1661, the windows of ordinary country houses were not glazed, and only the upper parts of even those in the king's palaces had glass; the lower ones having two wooden shutters, to open at pleasure, and admit the fresh air. From a passage in Harrison's *Description of England*, it may be inferred that glass was introduced into country houses in the reign of Henry VIII. He says, — "Of old time," (meaning, probably, the beginning of the century,) "our countrie houses instead of glasse did use much lattise, and that made either of wicker or fine rifts of oke in checkerwise. I read also that some of the better sort, in and before the time of the Saxons, did make panels of horne instead of glasse, and fix them in wooden calmes (casements); but as horne in windowes is now (1584) quite laid downe in everie place, so our lattises are also growne into disuse, because glasse is come to be so plentiful, and within verie little so good, cheape, if not better than the other." Glass is now introduced into the windows of almost every cottage of Great Britain; and in this cold, damp climate, it ought rather to be considered as a necessary of life, than as the most elegant and useful of conveniences. What Dr. Johnson has said as to glass deserves to be quoted: — "By some fortuitous liquefaction

* If this be a correct description of the glass of India in the age of Pliny, it has since fallen off very much; Indian glass being now about the very worst that is made. At present, the Hindoos manufacture it of fragments of broken glass, quartz sand, and impure soda, — an article found native in many parts of India, particularly in the south. The furnaces are so bad that they cannot melt our common bottle glass. — (*Hamilton's Mysore*, vol. iii. p. 370.) The glass of China is much better than that of India, though still very inferior to that of Europe.

was mankind taught to produce a body at once in a high degree solid and transparent, which might admit the light of the sun, and exclude the violence of the wind; which might extend the sight of the philosopher to new ranges of existence, and charm him at one time with the unbounded extent of the material creation, and at another with the endless subordination of animal life; and, what is of yet more importance, might supply the decays of nature, and succour old age with subsidiary sight. Thus was the first artificer in glass employed, though without his own knowledge or expectation. He was facilitating and prolonging the enjoyment of light, enlarging the avenue of science, and conferring the highest and most lasting pleasures; he was enabling the student to contemplate nature, and the beauty to behold herself." — (*Rambler*, No. 9.)

Venice, for a long time, excelled all Europe in the manufacture of glass, but was subsequently rivalled by France. The manufacture was early introduced into England; but it was not carried on to any extent previously to the sixteenth century. The first plates for looking-glasses and coach windows were made in 1673, at Lambeth, by Venetian artists under the protection of the Duke of Buckingham. The British Plate Company was incorporated in 1773, when it erected its extensive works at Ravenhead near St. Helen's, in Lancashire. The manufacture was at first conducted by workmen from France, whence we had previously brought all our plate glass. But that which is now made at Ravenhead, at Liverpool, and London, is equal or superior to any imported from the Continent.

It is difficult to form any precise estimate of the value of the glass annually produced in Great Britain. We believe, however, that it cannot amount to less than 2,600,000*l.*; and that the workmen employed in the different departments of the manufacture exceed 45,000.

Duties on Glass. — Considering the vast importance of glass, and the various necessary, convenient, and ornamental purposes to which it is applied, it might have been supposed that it would be exempted from all taxation; and that, at all events, if the public exigencies made its taxation indispensable, that the duties on it would be kept within reasonable limits, and imposed in the way least likely to be injurious. We regret, however, to state that these apparently obvious considerations were all but wholly lost sight of in the taxing of glass in this country; the duties on it having been carried to a most exorbitant extent, and imposed in the most oppressive manner. After successive augmentations, the duties were raised in 1813 to the amount of 98*s.* a cwt. on flint and plate glass! And the consequence was, that despite the increase of wealth and population in the interim, the consumption of both these sorts of glass was less than it had been in 1794, when the duty was only 32*s.* 2½*d.* a cwt.! The progress of the manufacture and of the duties since 1813 is exhibited in the subjoined tables, the influence of the various modifications of the latter on production being too obvious to require being pointed out.

We do not know whether it was possible materially to vary the mode in which the duties were assessed, without opening a still wider door to fraud than that which existed. But they not only augmented the price of a most indispensable article by their entire amount, but they farther augmented it, and that in no inconsiderable degree, by fettering the operations of the manufacturers, and preventing them from making experiments and improvements, and introducing new processes. In this respect the duties were especially injurious. Nor can any one acquainted with the facts entertain any doubt that the Commissioners of Excise Inquiry were fully justified in expressing their conviction that "*no tax can combine more objections, or be more at variance with all sound principles of taxation, than this duty on glass.*"

Had it been impossible otherwise to get rid of the duties, they might have been advantageously commuted for an increase of the house duty. The greater cheapness of glass would have more than compensated to most householders for the increase of the house tax, at the same time that the manufacture would have been increased and improved.

But any commutation of this sort was rendered unnecessary. The imposition of the income tax having supplied Sir Robert Peel with the means of effecting those great financial reforms which will ever distinguish his administration, the glass duties were repealed from the 5th April, 1845. The beneficial influence of this liberal and most judicious measure is obvious in the improved quality, the increased cheapness, and greater variety of descriptions of glass in the market; and there can be no doubt that its advantages will become still more and more obvious from the facilities it gives for the introduction of improvements, and, consequently, for ameliorating the fabric as well as reducing the cost of one of the most useful and admirable of the products of art and industry.

The annexed tables show the state of the manufacture previously to the abolition of the duty.

The duties on foreign glass are specified in the Tariff.

I. A Return of the Rates of Duty on Glass in 1813, with the Quantities of each Kind of Glass retained for Home Use, and the aggregate Nett Revenue in each Year, from 1813 to 1842, both included, noting the Periods when any Alteration of the Duty took place, and the Amount of such Alterations.

GLOVES (Ger. *Handschuhe*; Fr. *Gants*; It *Guanti*; Sp. *Guantes*; Rús. *Rukawizii, Pertschatki, Golizii*), well known articles of dress used for covering the hands, usually made of leather, but frequently also of cotton, wool, silk, &c. The leather used in the manufacture of gloves is not, properly speaking, tanned, but prepared by a peculiar process that renders it soft and pliable. Some sorts of leather gloves admit of being washed, and others not. Woodstock and Worcester, but particularly the former, are celebrated for the manuf cture of leather gloves of a superior quality; in which a great number of women and girls, as well as men, are employed. Besides Worcester and Woodstock, London, Yeovil, Ludlow, and Leominster are the principal seats of the leather glove manufacture. It is, however, impossible to obtain any trustworthy accounts of the numbers produced. Gloves are sometimes sewed by machinery; but this is done only to improve the work by rendering the stitches more correctly equidistant, as it is not cheaper than manual labour. Limerick used to be famous for the manufacture of a sort of ladies' gloves, called chicken gloves. Large quantities of cotton gloves are made at Nottingham and Leicester.

Influence of Repeal of Prohibition of Importation.—The importation of leather gloves and mitts was formerly prohibited, under the severest penalties. This prohibition had the effect, by preventing all competition and emulation with the foreigner, to check improvement, and to render British gloves at once inferior in quality and high in price. This system was, however, permitted to continue till 1825, when the prohibition was repealed, and gloves allowed to be imported on payment of duties, which, though high, are not prohibitory. This measure was vehemently opposed; and many predictions were made of the total ruin of the manufacture; but in this, as in most other instances, experience has shown that the trade had not been materially benefited by the prohibition. The wholesome competition to which the manufacturers now felt themselves, for the first time, exposed, made them exert all their energies; and it is admitted on all hands, that there was a more rapid improvement in the manufacture during the dozen years after the trade was opened than in the previous half century. There was, no doubt, a great deal of complaining of a decay of trade among the leather glove manufacturers, and large quantities of gloves are imported; but the check given to the trade was probably owing more to the growing use of home-made cotton gloves than to the importation of foreign leather gloves; and had it not been for the improved fabric, and greater cheapness of British leather gloves, that has grown out of the new system, it is abundantly certain that cotton gloves would have gained still more rapidly on them. In point of fact, however, it does not appear, taking the smuggling that formerly existed into account, that there has been any considerable falling off in the leather glove trade. At all events, there has been no serious falling off in the number of skins brought from abroad to be used in the manufacture, and consequently in the number of pairs of gloves produced from such skins; and there is no reason for thinking that it is different with the other departments.

Account of the Number of Lamb and Kid Skins entered for Home Consumption in the undermentioned Years, with an Estimate of the quantity of Gloves which such Skins would produce, on the Supposition that from each 120 Skins there would be manufactured 18 Dozen Pairs of Gloves.

Years.	Number of Lamb Skins.	Number of Kid Skins.	Total Lamb and Kid.	Doz. Gloves produced each Year.	Years.	Number of Lamb Skins.	Number of Kid Skins.	Total Lamb and Kid.	Doz. Gloves produced each Year.
1821	1,202,029	242,996	1,445,025	216,756	1840	1,552,528	697,012	2,249,540	337,431
1825	2,098,553	771,522	2,870,075	430,506	1844	1,549,203	537,351	2,086,554	312,985
1830	1,859,850	1,086,209	2,946,059	441,900	1850	1,917,213	491,518	2,411,731	361,759
1835	2,287,046	956,628	3,243,674	486,551	1851	1,591,275	615,412	2,206,687	331,003

At an average of the years 1850 and 1851, 2,805,123 pairs of foreign leather gloves were entered for consumption, producing an annual average revenue of 42,958*l*. The duties, which vary from 2*s*. 6*d*. to 4*s*. 6*d*. per doz. pairs, are specified in the Art. TARIFF.

GOLD (Ger. *Gold*; Du. *Goud*; Da. and Sw. *Guld*; Fr. *Or*; It. and Sp. *Oro*; Port. *Oiro, Ouro*; Rus. *Soloto*; Pol. *Zloto*; Lat. *Aurum*; Arab. *Tibr* and *Zeheb*; Sans. *Swarna*; Malay, *Más*), the most precious of all the metals, seems to have been known from the earliest antiquity. It is of an orange red, or reddish yellow colour, and has no perceptible taste or smell. Its lustre is considerable, yielding only to that of platinum, steel, silver, and mercury. It is rather softer than silver. Its specific gravity is 19·3. No other substance is equal to it in ductility and malleability. It may be beaten out into leaves so thin, that one grain of gold will cover $56\frac{3}{4}$ square inches. These leaves are only $\frac{1}{282000}$ of an inch thick. But the gold leaf with which silver wire is covered has only $\frac{1}{72}$ of that thickness. An ounce of gold upon silver is capable of being extended more than 1,300 miles in length. Its tenacity is considerable, though in this respect it yields to iron, copper, platinum, and silver. From the experiments of Seckingen, it appears that a gold wire 0·078 inch in diameter, is capable of supporting a weight of 150·07 lbs. avoirdupois without breaking. It melts at 32° of Wedgwood's pyrometer. When melted, it assumes a bright bluish green colour. It expands in the act of fusion, and consequently contracts while becoming solid more than most metals; a circumstance which renders it less proper for casting in moulds.—(*Thomson's Chemistry.*)

For the quantities of gold produced, and the places where it is produced, see PRECIOUS METALS.

GOMUTI, OR EJOO, a species of palm (*Borassus Gomutus*), growing in the Indian islands.

A valuable product is obtained from this palm, resembling *black horse hair;* it is found between the trunk and branches, at the insertion of the latter, in a matted form, interspersed with long, hard, woody twigs of the same colour. When freed from the latter, it is manufactured by the natives into cordage. Its fibres are stronger and more durable, but less pliant, than those of the cocoa nut, or coir — (see COIR); and is, therefore, fitter for cables and standing rigging, but less fit for running rigging. The native shipping of the Eastern islands of all kinds are chiefly equipped with cordage of the gomuti; and the largest European shipping in the Indies use cables of it. It undergoes no preparation but that of spinning and twisting; no material similar to our tar and pitch, indispensable to the preservation of hempen cordage, being necessary with a substance that, in a remarkable degree, possesses the quality of resisting alternations of heat and moisture. The gomuti of Amboyna, and the other Spice islands, is the best. That of Java has a coarse ligneous fibre. Gomuti is generally sold in twisted shreds or yarns, often as low as 1 dollar a picul, and seldom more than 2. Were European ingenuity applied to the improvement of this material, there seems little doubt that it might be rendered more extensively useful.—(*Crawfurd's East. Archip.* vol. iii. p. 425.)

GOOD HOPE, CAPE OF. See CAPE TOWN.

GOTTENBURG, OR, more properly, GOTHABORG, on the south-west coast of Sweden, at the head of a fiord near the Cattegat, which receives the river Götha, lat. 57° 42′ 4″ N., lon. 11° 57′ 45″ E. Population 29,000, and increasing. Vessels do not come close to the city, but lie in the river or harbour at a short distance from the shore, goods being conveyed from and to them by lighters that navigate the canals by which the lower part of the town is intersected. The depth of water in the port is 17 feet, and there is no tide, bar, or shallow. A vessel entering the Götha must take a pilot on board, whose duty it is to meet her ½ league west of Wingo beacon. After Stockholm, Gottenburg has the most extensive commerce of any town in Sweden. Iron and steel, the former excellent, but the latter inferior to that made in England, form the principal articles of export. They are brought from the rich mines of Wermeland, distant about 200 miles; being conveyed partly by the lake Wener, partly by the Tröllhætta canal — (see CANALS), — and partly by the river Götha. The exports of iron, in 1847, amounted in all to 27,447 tons. The original cost of iron is supposed to be increased about 5 per cent. by the expense of its conveyance to Gottenburg; and the shipping charges, inclusive of the export duty, are about 10 per cent. additional. The next great article of export is timber, particularly deals, which are also furnished by Wermeland. Of these, the exports, in 1847, were 22",000 doz., but this is above the average. The other articles of export are linen, sail-cloth, tar, copper, alum, glass, cobalt, manganese, linseed, oak bark, bones, juniper berries, cranberries, rock moss for dyeing, &c. Grain is sometimes imported and sometimes exported. The principal articles of import are sugar, coffee, tobacco, cotton yarn and twist, salt, indigo, and dye woods, South Sea oil, rice, herrings, wine, spices, &c. There belonged to the port in 1847, exclusive of river craft, 126 vessels of the aggregate burden of 13,254 Swedish lasts, or about 30,000 English tons, and ship building has since been going on briskly. The opening of the Götha canal by which Gottenburg communicates with a large portion of the interior of Sweden, has exercised a powerful and beneficial influence over her commerce. She carries on an extensive trade with England, and English is generally understood. Steamers run once a week between Gottenburg and Hull for 8 months of the year; but in winter the intercourse with England is kept up by the tedious route of Lubeck and Hamburg.

Herring Fishery. — Gottenburg used, at no distant period, to be one of the principal seats of the herring fishery; but at present this branch of industry is quite extinct, and it has always been very capricious. From 1556 to 1588, great quantities of herrings were taken; from 1588 to 1660, they left the coast; during the next 15 years they were again abundant: but from 1675 to 1747, they entirely disappeared. From 1747 to 1770, they were abundant, 186,614 barrels being taken in 1763, and 151,483 in 1768. From 1786 to 1799, the fishery was very good, from 110,000 to 190 000 barrels being annually exported. In 1804, the export was 79,512 barrels. In 1808 and 1809, fish were very scarce; and in 1812 they entirely disappeared, and have not hitherto returned; so that Gottenburg, instead of exporting, at present imports considerable supplies of herrings.

Both iron and timber pay duties on exportation, but they are not heavy.

Custom-house Regulations and Port Charges.—On arriving in port, no person is allowed to board or to leave a vessel till she be in custody of the officers; who, having inspected the manifest and papers, send them to the Custom-house. An officer is appointed to superintend the unloading and also the loading. The public charges of all sorts on a Swedish ship and on a foreign ship not privileged, each of 300 tons burden, unloading and loading mixed cargoes at Gottenburg, would be, on the former, 24*l.* 5*s.* 7*d.*; on the latter, 49*l.* 5*s.* 7*d.* On a privileged foreign ship the charges are the same as on a Swedish ship.

Warehousing System. — Goods may be bonded for any length of time, on paying ½ per cent. *ad valorem* for the first 2 years, and ¼ per cent. annually thereafter.

Commission, Credit, &c. — The usual rate of commission is 2 per cent. Goods are commonly sold on credit. Raw sugar at 9 months, with 3 months' interest to the seller. Other goods at 3, 4, and 6 months.

Banking, &c. — There are no public or private banking establishments at Gottenburg for the issue of notes; but the national bank has two offices here which advance limited sums of money, at 5 per cent. on the security of goods, and in discount of bills. Some of the English insurance companies have agents here, who do a good deal of business.

Sea Stores, Water, &c. — These may be had here of excellent quality and cheap. Beef, 1½*d.* per lb., best rye bread, 2½*d.* per lb., and butter, 6*d.* per lb.

Money, Weights, Measures, &c., same as at Stockholm, which see.

In compiling this article, we have made use of consular returns, *Coxe's Travels in the North of Europe*, vol. iv. pp. 267 — 275.; and some valuable *private communications.*

GRACE, DAYS OF. See EXCHANGE.

GRAPES (Ger. *Trauben;* Fr. *Raisins;* It. *Grappoli, Grappi;* Sp. *Ubas, Racimos;* Lat. *Uvæ*), a well known fruit, produced from the vine.

France, Spain, Portugal, and Italy, as well as some parts of Germany and Hungary, produce grapes which yield wines of various qualities and flavour, many of them excellent. We import green grapes from Lisbon, and other parts of Portugal, Malaga, &c.: they are brought packed in jars, and secured from damage by means of sawdust, plentifully strewed between the layers of fruit. The grapes grown in Great Britain in the open air are much smaller, and by no means so luscious, as those of foreign countries; but those raised in hot-houses are quite equal, if not superior, to the latter. Grapes are imported not only in their natural state, but dried and preserved, in which latter state they are denominated RAISINS; which see.

GRINDSTONES, flat circular stones of different diameters and thickness, mounted on spindles or axles, and made to revolve with different degrees of velocity, employed to polish steel articles, to give an edge to cutting instruments, &c. Grindstones not in constant use are commonly turned by winch handles; but at Sheffield and other places, where polished articles and cutlery are extensively manufactured, large numbers of grindstones, being mounted in buildings appropriated to that purpose, called grind or blade mills, are turned by straps, acting on their axles, the moving power being either water or steam. The stone best suited to form grindstones is what is called a sharp-grit; it being chosen finer or coarser grained according to the purposes for which they are destined. The principal grindstone quarry in England is at Gateshead Fell, in the county of Durham; where they are produced in vast numbers, not only for home use, but for exportation to all parts of the world. But those principally in use at Sheffield are mostly quarried at Wickersley, in Yorkshire.

They are classed in eight different sizes called *foots*, according to their dimensions, as in the following table: —

Denominations.	Diameter.	Thickness.	No. in a Chaldron.	Denominations.	Diameter.	Thickness.	No. in a Chaldron.
	Inches.	*Inches.*			*Inches.*	*Inches.*	
1 foot	10	2	36	5 foots	35	5	5
2 foots	14	2½	27	6 foots	42	6	3
3 foots	20	4	18	7 foots	50	6	1½
4 foots	28	4	9	8 foots	56	8	1

A grindstone foot is 8 inches; the size is found by adding the diameter and thickness together. Thus, a stone 56 inches diameter by 8 thick, making together 64 inches, is an 8 foot stone, of 8 inches each foot.

Besides the above sizes, grindstones are made, when ordered, of any intermediate dimensions; many are made much larger than any of the above sizes; some as large as 76 inches diameter, and 14 or 15 inches thick, which are a great weight, a cubic foot weighing 1 cwt. 1 qr. 14 lbs. — (*Rees's Cyclopædia; Bailey's Survey of Durham*, p. 43.)

Grinding is an unhealthy and dangerous employment. For some purposes, the stones are made to revolve with an extreme degree of velocity, which makes them occasionally fly in pieces. But the greatest annoyance to which the grinder is exposed is from his inhaling the minute particles of stone, and of iron and steel, that are always flying about, particularly in the process termed dry grinding. Contrivances have been suggested for obviating this serious inconvenience; but whether it be owing to their unsuitableness, or to the carelessness of the workmen, none of them has succeeded in practice. — (*Treatise on Iron and Steel, Lardner's Cyclopædia*, p. 293.)

GUAIACUM, OR LIGNUM VITÆ (Fr. *Gayac, Bois saint;* Ger. *Pockholz;* It. *Guajaco;* Lat *Guaiacum, Lignum vitæ;* Sp. *Guayaco*), the wood of a tree, a native of Jamaica, Hayti, and the warmer parts of America.

It is a dark-looking evergreen, growing to from 40 to 50 feet in height, and from 14 to 18 inches in diameter. The bark is hard, smooth, and brittle; the wood is externally yellowish, and internally of a blackish brown colour. Lignum vitæ is the weightiest timber with which we are acquainted, its specific gravity being 1·333. It is exceedingly hard, and difficult to work. It can hardly be split, but breaks into pieces like a stone, or crystallised metal. It is full of a resinous juice (*guaiac*), which prevents oil or water from working into it, and renders it proof against decay. Its weight and hardness make it the very best timber for stampers and mallets; and it is admirably adapted for the sheaves or pulleys of blocks, and for friction rollers or castors. It is extensively used by turners.

The *guaiac*, or gum, spontaneously exudes from the tree, and concretes in very pure tears. It is imported in casks or mats; the former containing from 1 to 4 cwt., the latter generally less than 1 cwt. each. Its colour differs considerably, being partly brownish, partly reddish, and partly greenish; and it always becomes green when left exposed to the light in the open air. It has a certain degree of transparency, and breaks with a vitreous fracture. When pounded, it emits a pleasant balsamic smell, but has scarcely any taste, although when swallowed it excites a burning sensation in the throat. When heated, it melts, diffusing, at the same time, a pretty strong fragrant odour. Its specific gravity is 1·229. — (See *Veget. Sub., Lib. of Entert. Knowledge; Thomson's Chemistry*, &c.)

GUANO, OR HUANO (the Peruvian term for manure), a substance used as a manure found on certain small islands off the coast of Peru and Bolivia, and on parts of the shore of the mainland. It is friable and easily reduced to powder; its colour varies from a dull red to a dirty white, and it has a strong smell, and a fat, unctuous feel. At an average it may weigh from 50 to 60 lbs. a bushel. Humboldt was either the first, or one of the first, by whom this important substance was brought to Europe; but it was described at a much earlier date by Ulloa (*Voyage au Perou*, i. 481.), and has been used as a manure by the Peruvians from the age of the Incas downwards. Very different opinions have been entertained as to its nature and origin. Many have supposed that it was a peculiar mineral or earth. Ulloa, however, was clearly of opinion that it consists

of the excrements of the sea-birds which are found in prodigious swarms all along the Peruvian and Bolivian shores; and there is no longer any doubt that such is the case. The localities where the deposit is principally met with being within a rainless region, it is accumulated with a rapidity of which we have no idea. Guano is of very different qualities: some authorities give the preference to the whitish varieties, which are believed to be more recent, while others prefer the red. According to Klaproth, a quantity of guano represented by 100 contained, urate of ammonia 16 parts, phosphate of lime 10 do., oxalate of lime 12¾ do., silica 4 do., common salt ½ do., sand 28 do., and water, organic and combustible matter, 28¾ do.; but its composition is found to differ very materially. The best is that which contains the greatest proportion of ammoniacal salts.

Guano has not been long introduced into England; and there is a good deal of discrepancy in the statements that have been put forth as to its operation. There can, however, be no doubt that it is a most efficient manure, and that about 2 to 2½ cwt. per acre of average guano mixed with about two-thirds the usual quantity of farm-yard manure (which is required to keep the soil loose) will produce, when applied to land that is well drained, nearly double the ordinary quantity of potatoes. In turnip husbandry, splendid crops are produced by the agency of guano only; but in this case from 4 to 5 cwt. per acre should be applied. It has, also, a powerful influence in improving crops of corn and the pasture following such crops. The effect of guano is very materially increased by its being covered up to some considerable depth as soon as it is laid on the soil; and top-dressing is certainly the most wasteful way in which it can be applied.—(*Private information.*) It is, in fact, the most valuable of manures; and under such circumstances it becomes of importance to learn the probable supply of the deposit, and the price at which it may be imported and sold in Europe.

Unfortunately, however, our information on both these points is less complete than might be desired. Since it began to be largely exported to this and other foreign countries, an apprehension began to gain ground in Peru, that the deposits would in no very long time be wholly exhausted; and as this would occasion the ruin of those estates along the coast of Peru, and the department of Arequipa, in which guano is extensively used as a manure, government has been called upon to avert this catastrophe by prohibiting its export. We are, however, well convinced that this apprehension is in great measure unfounded. At present (1859) guano is principally obtained from the Chincha islands, opposite to Pisco, in Lower Peru, in about lat. 13° 25′ S., and long. 76° 30′ W., and the Lobos islands, opposite to Lambayeque, in Upper Peru, lat. 5° to 7° S., and long. 81° W. But in addition to the deposits in these islands, very large quantities are found at Pavellon de Pica, Iquique, and other points along the coast of Upper and Lower Peru. As might be anticipated, the estimates of the guano accumulated in these deposits differ very widely. On the whole, however, we have no difficulty in coming to the conclusion that the estimates contained in the paper on this subject published at Lima in 1852* are the most to be depended on. And they give the following results, viz.:—The coast deposits 7,921,407 tons, those of the Chincha islands 18,250,000 do., and those of the Lobos islands 853,086, do., making in all 27,024,493, tons. And supposing that under a liberal system the exports were to amount to 400,000 or 500,000 tons a year, here is a supply that would last in the one case for nearly 70, and in the other for more than 50, years. But it is stated in the paper referred to, that the coast deposits are greatly underrated in the above estimate; and that were the shores and the adjacent rocks and islands properly explored, from 6° to 23° S. lat., many more deposits would certainly be met with. And hence we may conclude that for practical purposes the supply of guano may be said to be all but inexhaustible.

The islands where the guano is found being uninhabited except by those employed in its shipment, it would, but for the interference of government, cost nothing save the expense of putting it on board and the freight home. But the governments of Peru and Bolivia were either so little aware of the value of the article, and of their duty to their constituents, or so corrupt, that they sold in 1839 to private parties (Messrs. Quiros, Allier, and Co. of Lima), for a mere trifle (40,000 dollars), the sole right to ship guano for the term of nine years; so that these parties had it in their power to exact any price they pleased for the article! This contract was, however, too ruinous to be allowed to continue; and was cancelled by the Peruvian government in 1841, on the ground of enormous public lesion, and of ignorance of the value of the privilege that had been conceded. For some time after this the trade was comparatively free, and large quantities of guano were imported in 1844 and 1845. But the monopoly system has been again revived. Messrs. Gibbs and Sons, of London, who act as agents for the Peruvian government, are now the sole inporters of guano. They sell it at the same fixed wholesale price, whether freights be high or low. For a while this price was 9*l.* 5*s.* a ton, minus 2½ per cent. dis. But it was subsequently raised to 13*l.* a ton;

* Translated and published in papers on guano (pp. 51—76) laid before parliament in 1852

and since June, 1858, has been fixed at 12*l.* per ton, both here and in the United States. But these prices are quite excessive, and furnish one of the most glaring instances of the abuse of monopoly to be found in the history of commerce. Being a gratuitous product, the necessary cost of guano is that of its shipment and freight to the destined port. The first of these items is estimated at from 12*s.* to 20*s.* a ton; and taking it at 20*s.*, and adding thereto 3*l.* 10*s.* or 4*l.* 10*s.* a ton for the freight to England, its price here should not exceed 5*l.* or 6*l.* a ton. We should not, however, object to the Peruvian government laying a reasonable duty of 20*s.*, or even a high duty of 30*s.* a ton on guano when exported; and with such a duty it might be advantageously imported and sold at 6*l.* 10*s.* or 7*l.* 10*s.* a ton. Under a free system of this sort the imports would be vastly increased. When return cargoes could not be obtained from the W. coast of America, or when freights were low, the importation of guano would furnish ample employment for shipping; and the comparatively low price at which it would then be sold would, by extending its use, contribute as much to the benefit of agriculture as of shipping. But under the present artificial plan, if the agents be tempted, as is sometimes the case, by the lowness of freight, to import an unusually large quantity, they are not permitted to realise a profit by selling it at a reduced rate, so that it becomes a dead weight on their hands, and proportionally lessens the imports in subsequent years.

The Peruvian government would, we believe, gain by throwing the trade in guano open under an export duty like that suggested above. And we do not know that anything could be devised that would be more likely to prove advantageous to our agriculture and shipping than the carrying out of such a plan. Perhaps the best way to effect an arrangement of this sort would be to purchase one or more of the guano islands from the Peruvian government. And if the latter should perversely decline to agree to such sale, or to modify the present monopoly system, the question of her right to appropriate such valuable deposits, and to deprive others of any equitable participation in their advantages, may, perhaps, force itself on the public attention. Should such be the case, it will probably be found that the claim of the Peruvians to the exclusive possession of the guano islands is of a very questionable description; and that in grasping at all they may not improbably lose all.

Lobos de Afuera is fully 50 m. from the nearest point of the mainland. And it seems rather too much for a government like that of Peru, without anything worthy of the name either of a mercantile or a warlike fleet, to pretend to hinder others from carrying away the dung of wild birds from an unoccupied rock at so great a distance from its territories.

Guano is very apt to be adulterated. So long, however, as the present system lasts, it is quite plain that genuine Peruvian guano cannot be sold by retail in limited quantities for less than 12*l.* 15*s.* or 13*l.* a ton.

No guano has ever been imported at all equal to that from Peru. And unless it come from a rainless region it is worth comparatively little; for otherwise the ammoniacal salts, which are its most valuable portion, are either partially or wholly washed away by the rains.

Guano is found in the caves frequented by swallows, pigeons, bats, &c., in Java, Sumatra, and other places in the Eastern Archipelago. And not being exposed to the rain it may probably be of good quality. We subjoin an

Account of the Quantities of Guano imported into and exported from the U. Kingdom in each of the 8 Years ending with 1858.

	1851.	1852.	1853.	1854.	1855.	1856.	1857.	1858.

Remains for consumption . .	212,595	93,642	82,229	184,857	257,559	127,117	264,621	333,909

Of the 288,362 tons guano imported in 1857, 264,230 were from Peru, and 6,005 from Chili. The trifling imports from other places brought comparatively low prices. The deposits of guano on the west coast of Africa were speedily exhausted.

The reader will, perhaps, be surprised to learn that large quantities of guano have, of late years, been imported into Spain. It is principally employed in manuring the *huertas*, or low rich grounds of Murcia and Valencia. Hitherto it has been mostly sent at second-hand from England. But recently the Peruvians have begun to export it on their own account to Alicant, Valencia, &c., and have established agents in these towns for its sale.

GUAYAQUIL, a city and port of Colombia, on the western coast of South America, lat. 2° 11′ 21″ S., long. 79° 43′ W. Population, 20,000? The town is situated on the banks of the river of the same name, about 6 or 7 leagues from the Isla Verde, or 9 leagues from the Isla Puña, in the Gulph of Guayaquil, opposite to the mouth of the river. Ships bound for Guayaquil generally call at the Isla Puña, where expert pilots may be had, who carry them up to the town by night or by day, according to the state of the tides. The town is old; but as the houses are of wood, and it has frequently suffered from fires, much of it is comparatively modern, and has a

good appearance. There is a dry dock on the south bank of the river, where several ships of a superior construction have been built.

The district in which Guayaquil is situated, has for a considerable period formed a part of the republic of Ecuador or Æquator. Like the other S. American states, it has been subjected to perpetually recurring revolutions; but Guayaquil has, notwithstanding, continued to enjoy a considerable commerce. Its principal article of export is cocoa, of which large quantities are shipped; and next to it are straw hats, timber, tobacco, hides, bark, &c. The principal articles of import are British manufactured cottons and hardware, silks, wine, flour, &c.

Account of the Quantities and Values of the Principal Articles of Produce exported from Guayaquil, in 1855.

GUERNSEY. For the peculiar regulations to be observed in trading with Guernsey, Jersey, &c., see IMPORTATION AND EXPORTATION.

GUMS, RESINS, GUM-RESINS. In commerce, the term gum is not only applied to gums properly so called, but also to resins and gum-resins. But though these substances have many properties in common, they are yet sufficiently distinct.

I. *Gum* is a thick transparent fluid that issues spontaneously from certain species of plants, particularly such as produce stone fruit, as plum and cherry trees. It is very adhesive, and gradually hardens by exposure to the atmosphere. It is usually obtained in small pieces, like tears, moderately hard and somewhat brittle while cold; so that it can be reduced by pounding to a fine powder. When pure, it is colourless: but it has commonly a yellowish tinge; it is not destitute of lustre; it has no smell; its taste is insipid; its specific gravity varies from 1·3161 to 1·4317; it readily dissolves in water, but is insoluble in alcohol. Gum is extensively used in the arts, particularly in calico printing, to give consistence to the colours, and to hinder them from spreading. It is also used in painting, in the manufacture of ink, in medicine, &c.

The only important gums, in a commercial point of view, are gum Arabic and gum Senegal; but lac is popularly, though improperly, ranked among the gums.

1. *Gum Arabic* (Fr. *Gomme Arabique*; It. *Gomma Arabica*; Ger. *Arabische gummi*; Arab. *Tolh*), the produce of the *Acacia vera*, a tree growing in Arabia, and in many parts of Africa. The gum exudes naturally from the trunk and branches, and hardens by exposure to the air. "The more sickly the tree appears, the more gum it yields; and the hotter the weather, the more prolific it is. A wet winter and a cool or mild summer are unfavourable to gum."—(*Jackson's Morocco*, p. 84.) It is in irregularly shaped pieces, hard, brittle, and semi-transparent. When pure, it is almost colourless, or of a pale yellowish hue; being insipid, inodorous, and dissolving completely in the mouth. Specific gravity 1·31 to 1·43. It is often mixed with gum Senegal. East India gum Arabic is, though a useful, a spurious article, not being the produce of the *acacia vera*, but of other species of plants. The best gum is either imported direct from Alexandria, Smyrna, Tripoli, Mogadore, Tangiers, &c., or at second hand from them through Gibraltar, Malta, and other Italian ports. The price depends principally on its whiteness and solubility, increasing and diminishing from 1*l.* 15*s.* to 8*l.* or 9*l.* per cwt., according as the article has more or less of these qualities.—(*Thomson's Dispensatory*, and *private information.*)

At an average of the 3 years ending with 1842, the gum Arabic entered for consumption amounted to 18,176 cwt. a year. Previously to 1832, the duty on gum Arabic from a British possession was 6*s.* a cwt., and from other parts 12*s.*; but the duty on it and all other gums was then fixed at 6*s.* a cwt. without regard to origin. In 1842 it was further reduced to 1*s.* a cwt., and was finally repealed in 1845. Of 46,032 cwt. of gum Arabic imported in 1851 Morocco furnished 5,362; Egypt, 20,312; Italy, 3,710; Cape of Good Hope, 521; the East Indies, 14,382, &c.

2. *Gum Senegal*, principally brought from the island of that name on the coast of Africa, is obtained from various trees, but chiefly from two; one called *Vereck*, which

yields a white gum; the other called *Nebuel*, which yields a red gum; varieties of the *acacia gummifera*. Gum Arabic is very often mixed with gum Senegal. The latter is nearly as pure as the former, but it is usually in larger masses, of a darker colour, and more clammy and tenacious. It is the sort of gum principally employed by calico printers.—(*Thomson's Chemistry, Thomson's Dispensatory, Ainslie's Materia Indica, &c.*) The trade in gum Senegal is principally in the hands of the French. We subjoin

An Account of the Imports and Re-exports of the principal Varieties of Gum known in Commerce in 1852.—(*Parl. Paper*, No. 504. Sess. 1853.)

II. *Resins*, for the most part, exude spontaneously from trees, though they are often obtained by artificial wounds, and are not uncommonly, at first, combined with volatile oil, from which they are separated by distillation. They are solid substances, naturally brittle; have a certain degree of transparency, and a colour most commonly inclining to yellow. Their taste is more or less acrid, and not unlike that of volatile oils; but they have no smell, unless they happen to contain some foreign body. They are all heavier than water, their specific gravity varying from 1·0182 to 1·1862. They differ from gums in being insoluble in water, whether cold or hot; while they are, with a few exceptions, soluble in alcohol, especially when assisted by heat. When heated, they melt; and if the heat be increased, they take fire, burning with a strong yellow flame, and emitting a vast quantity of smoke. Common *rosin* furnishes a very perfect example of a resin, and it is from this substance that the whole genus have derived their name. Rosin is, indeed, frequently denominated resin. The principal resins are *Animi, Elemi, Copal, Lac, Labdanum, Mastic, Rosin, Sandarach, Tacamahac, &c.*; which see under their respective names.—(*Thomson's Chemistry.*)

III. *Gum-resins*, a class of vegetable substances consisting of gum and resin. They differ from resins in this—that they never exude spontaneously from the plant, being obtained either by bruising the parts containing them, and expressing the juice, which is always in a state of emulsion, generally white, but sometimes of a different colour, or by making incisions in the plant, from which the juice flows. The juice, being exposed to the action of the sun, is condensed and inspissated, till it forms the gum-resin of commerce. Gum-resins are usually opaque, or, at least, their transparency is inferior to that of resins. They are always solid, and most commonly brittle, and have, sometimes, a fatty appearance. When heated, they do not melt as resins do, neither are they so combustible. Heat, however, commonly softens them, and causes them to swell. They burn with a flame. They have almost always a strong smell, which, in several instances, is alliaceous. Their taste, also, is often acrid, and always much stronger than that of resins. They are usually heavier than resins. They are partially soluble in water, but the solution is always opaque, and usually milky. Alcohol partially dissolves them, the solution being transparent.

The most common gum-resins are *Aloes, Ammonia, Euphorbium, Galbanum, Gamboge, Myrrh, Olibanum, Sagapenum, Scammony*, &c.; which see, under their respective names.—(*London's Ency. of Agriculture; Thomson's Chemistry.*)

GUNPOWDER (Ger. *Pulver, Schiesspulver;* Du. *Buskruid;* Da. *Krudt. Pulver;* Sw. *Krut*; Fr. *Poudre;* It. *Polvere;* Sp. and Port. *Polvora;* Rus. *Poroch;* Pol. *Proch;* Lat. *Pulvis pyrius.*) This well known inflammable powder is composed of nitre, sulphur, and charcoal, reduced to powder, and mixed intimately with each other. The proportion of the ingredients varies very considerably; but good gunpowder may be composed of the following proportions; viz. 76 parts of nitre, 15 of charcoal, and 9 of sulphur. These ingredients are first reduced to a fine powder separately, then mixed intimately, and formed into a thick paste with water. After this has dried a little, it is placed upon a kind of sieve full of holes, through which it is forced. By this process it is divided into grains, the size of which depends upon the size of the holes through which they have been squeezed. The powder, when dry, is put into barrels, which are made to turn round on their axis. By this motion the grains of gunpowder rub against each other, their asperities are worn off, and their surfaces are made smooth. The powder is then said to be glazed.—(*Thomson's Chemistry.*)

Dr. Thomson, whose learning is equal to his science, has the following remarks with respect to the introduction of gunpowder into warlike operations: "The discoverer of this compound, and the person who first thought of applying it to the purposes of war, are unknown. It is certain, however, that it was used in the fourteenth century. From certain archives quoted by Wiegleb, it appears that cannons were employed in Germany before the year 1372. No traces of it can be found in any European author previously to the thirteenth century; but it seems to have been known to the Chinese long before that period. There is reason to believe that cannons were used in the battle of Cressy, which was fought in 1346. They seem even to have been used three years earlier, at the siege of Algesiras; but before this time they must have been known in Germany, as there is a piece of ordnance at Amberg, on which is inscribed the year 1303. Roger Bacon, who died in 1292, knew the properties of gunpowder; but

it does not follow that he was acquainted with its application to fire-arms."—(*Thomson's Chemistry.*). For further particulars as to the introduction of cannon, see that article.

The manufacture and sale of gunpowder is regulated by several statutes. By the 12 Geo. 3. c. 61. it is enacted, that no person shall use mills or other engines for making gunpowder, or manufacturing the same in any way, except in mills and other places which were *actually in existence* at the time of passing the act, or which, if erected afterwards, have been sanctioned by a licence, under pain of forfeiting the gunpowder, and 2*s.* a pound. It is further enacted, that no mill worked by a pestle, and usually termed a pestle mill, shall be used in making gunpowder, under the above-mentioned penalty; and that no more than 40 lbs. of gunpowder, or materials to be made into gunpowder, shall be made at any one time under a single pair of mill-stones, on pain of forfeiting all above 40 lbs., and 2*s.* for every pound; nor shall more than 40 cwt. be dried in any one stove or place at any one time, under forfeiture of all above that quantity, and 2*s.* for every pound thereof. The powder mills erected at Battle, Crowhurst, Saddlescombe, and Brede, in Sussex, previously to 1772, are exempted from the above regulations so far as relates to the making of fine fowling powder.

No dealer is to keep more than 200 lbs. of powder, nor any person not a dealer more than 50 lbs., in the cities of London or Westminster, or within 5 miles thereof, or within any other city, borough, or market town, or 1 mile thereof, or within 2 miles of the king's palaces or magazines, or ½ a mile of any parish church, on pain of forfeiture, and 2*s.* per lb.; except in licensed mills, or to the amount of 300 lbs. for the use of collieries, within 200 yards of them.

Not more than 25 barrels are to be carried by any land carriage, nor more than 200 barrels by water, unless going by sea or coastwise, each barrel not to contain more than 100 lbs.

All vessels, except his Majesty's, coming into the Thames, are to put on shore, at or below Blackwall, all the gunpowder they have on board exceeding 25 lbs. Vessels outward bound are not to receive on board more than 25 lbs. of gunpowder previously to their arrival at Blackwall. The Trinity House have authority to appoint searchers to inspect ships, and search for gunpowder. All the gunpowder found above 25 lbs., and the barrels containing it, and 2*s.* for every pound above that quantity, are forfeited. Any person obstructing an officer searching for concealed gunpowder is liable to a penalty of 10*l.* The places of deposit for gunpowder are regulated by the 54 Geo. 3. c. 159.

The importation of gunpowder, arms, &c., may, at any time, be prohibited by proclamation, or by order in council, (16 & 17 Vict. c. 107. § 45.)

Gunpowder is of considerable importance in a commercial point of view. This will be evident from the following

Account of the Gunpowder exported in 1857, specifying the Countries to which it was sent, and the Quantity and Value of that sent to each.

	lbs.	£

GUNNY (Hind. *Tāt;* Ben. *Gūni*), a strong coarse sackcloth manufactured in Bengal for making into bags, sacks, and packing generally, answering at once the two purposes for which canvas and *bast* are used in Europe. The material from which this article is manufactured is the fibre of two plants of the genus Corchorus; viz. *Corchorus olitorius*, and *Corchorus capsularis* (Bengali, *pat*); both, but particularly the first, extensively cultivated throughout Lower Bengal. Besides a large domestic consumption of gunny, the whole rice, paddy, wheat, pulses, sugar, and saltpetre of the country, as well as the pepper, coffee, and other foreign produce exported from Calcutta, are packed in bags or sacks made of this article. There is also a large exportation of manufactured bags, each commonly capable of containing two maunds, or about 160 lbs. weight, to other parts of India, N. America, Singapore, Pegu, &c. In 1853-54 there were exported from Calcutta no fewer than 14,231,755 gunny bags, of the value of 1,696,706 rup. (169,670*l.*), and 228,706 pieces of gunny cloth, worth 798,634 rup. (79,863*l.*) (*Statement of the External Trade of Bengal, Calcutta*, 1854, p. 42.)

GYPSUM, OR SULPHATE OF LIME, is found in various parts of the continent, in Derbyshire and Nottinghamshire, and in Nova Scotia, whence it is largely exported. When reduced to a powder, and formed into a paste with water, it is termed *plaster of Paris*, and is much used for forming casts, &c. It is also used for laying floors, and has been advantageously employed as a manure.

H.

HABERDASHERY AND MILLINERY, closely allied, but vague and ill-defined terms which are used to designate a great variety of articles, but especially those which either form component parts of ladies' dresses or which are required to make or mend them. Dr. Johnson calls a haberdasher a "dealer in small wares, a peddler." But it is not easy to imagine a definition wider of the mark than this. It is true that a haberdasher deals in needles, pins, thimbles sewing thread, and such like petty articles; but he also deals in articles of first-rate importance, including all sorts of linen, woollen, silk, and cotton goods, &c. Indeed, as every body knows, the haberdashery and millinery business has become one of the most extensive internal trades. Inasmuch, however, as haberdashers are merely dealers in and not makers of the articles which they sell, their number is comparatively small, comprising in 1851 (hosiers inc.) only 6,231 persons in G. Britain, of whom about ⅔rds were males. But it is quite otherwise with milliners and dressmakers. They produce the articles which they offer for sale; and, in consequence, they are a very large class, amounting in G. Britain, in 1851, to no fewer than 267,791 persons, being the next most numerous handicraft class to shoemakers. While, however, females form only from ⅛th to ⅛th part of the latter, they may be said to be in the entire possession of the millinery and dress-making business, the males engaged in it, who are chiefly employed as book-keepers, being only 366! (*Returns of Census of* 1851.)

Besides this vast consumption at home the exports of haberdashery and millinery have lately increased to a very large amount. In proof of this statement we beg to subjoin the following

Account of the Haberdashery and Millinery exported from the U. Kingdom in 1857, specifying the Countries to which they were sent and the Value of the Articles sent to each.

HACKNEY CARRIAGES are carriages stationed in the streets or other public places, and bound to carry such persons as require their services, for certain rates of hire according to the distances travelled. They have generally been licensed by authority, and subjected to certain regulations, intended to prevent strangers and others using them from fraud and imposition. It may be doubted, however, whether these regulations have had any good effect; and whether the public would not be as well accommodated, at least in all large towns, by throwing the business open, and trusting to competition to rectify abuses. As respects London, nothing can be said in favour of its hackney coach establishment, which is, in truth, a disgrace to the city. Speaking generally, the carriages are dirty, disagreeable vehicles, the horses worn out, and the drivers ill clothed and uncivil, forming a striking contrast to the elegance and commodiousness of the private carriages, the excellence of the horses, and the neatness of the servants.

Hackney coaches were first established in London in 1625; but they were not then stationed in the streets, but at the principal inns. In the reign of Charles II. their number was considerable. Commissioners for licensing and superintending hackney coaches were established by the act 9 Ann. c. 23.; and successive acts have been passed, specifying the number of coaches that might be licensed, the duties payable to government, and the conditions under which licences were to be granted. But we cannot say that these acts reflect any credit on their authors; and the last (the 16 & 17 Vict. c. 33.) is, perhaps, the most objectionable of any. To say that all hackney carriages shall charge alike, without regard to their style or fitting up, is to offer a premium on inferiority; and if this were their object, these acts have been eminently successful. But in every other respect they have been complete failures; and the sooner they are repealed the better. Immense numbers of cabriolets are annually licensed in the metropolis.

Hackney Carriage Regulations, Fares, &c.—The regulations as to hackney carriages in the metropolis are governed by the acts 16 & 17 Vict. cc. 33. and 127., 13 Vict. c. 7., 6 & 7 Vict. c. 86., 2 & 3 W. 4. c. 120., and the 1 & 2 Will. 4. c. 22. The act 6 & 7 Vict. c. 86. provided for the appointment of a registrar of metropolitan public carriages, to grant licences, costing 5s. each, to the drivers and conductors of stage, hackney, and other carriages. This office was abolished and its duties transferred to Commissioners of Police, 13 Vict. c. 7. ss. 1. 2. & 7. The persons so licensed receive metal tickets or badges, which they are to wear conspicuously on their breast, and persons acting as drivers, conductors, watermen, &c., without such licences and tickets, are to be fined 5*l.*; and proprietors who suffer drivers, conductors, &c. to act for them shall forfeit 10*l.* for every such offence.—6 & 7 Vict. c. 86. §§ 8, 9, 10, &c.

The acts 16 & 17 Vict. cc. 33. and 127. regulate the licensing of carriages, the amount of fares, &c. We notice a few of the more important clauses of the various acts above mentioned.

Definition.—A hackney carriage is any carriage with 2 or more wheels, standing or plying for hire in any public street or road.—1 & 2 W. 4. c. 22. § 4.

Licensing Plates, &c.—A licence to keep a hackney carriage for hire is granted by the commissioners of inland revenue on production of a certificate by the commissioners of police that the carriage is fit for the purpose.—16 & 17 Vict. c. 33. § 1. This licence costs 1*l.*, and a weekly sum of 7*s.* has to be paid on every licence to hire such carriage every day in the week, and a weekly sum of 6*s.* on every licence to hire such carriage on every day except Sunday.—16 & 17 Vict. c. 127. § 2. A plate specifying the number of the licence is to be placed inside of the coach; and two other plates, on which are painted the names of the proprietor, or of one of the proprietors of the coach, are to be placed externally, one on each side.—1 & 2 W. 4. c. 22. § 20. Penalty on proprietor for letting or employing a hackney coach without having properly numbered plates properly fixed upon such coach, 10*l.*; ditto, on driver, if proprietor, 10*l.*; if not, 5*l.*—1 & 2 W. 4. c. 22. §§ 22, 23.

Obligation to ply.—Carriages standing on the streets with plates to be deemed hackney coaches; and, unless actually hired, shall be compellable, under a penalty of 40*s.*, to go with any person offering to hire the same.—1 & 2 Will. 4. c. 22. § 35. and 16 & 17 Vict. c. 33. § 7. No driver shall be compellable to hire his carriage for a fare *according to time* after 8 in the evening or before 8 in the morning.—Schedule A. to 16 & 17 Vict. c. 33.

Distance.—Drivers of hackney carriages compellable, under a penalty of 40*s.*, to go any distance not exceeding 6 miles from the place where they shall have been hired, or for any time not exceeding 1 hour.—16 & 17 Vict. c. 33. § 7. An extra charge of *one shilling* per mile for every mile driven beyond a circle the radius of which is 4 miles from Charing Cross, provided the carriage be discharged beyond such circumference.—16 & 17 Vict. c. 127., § 15.

Number of Passengers.—The number of persons to be carried by hackney carriages is to be distinctly painted on the same; and drivers are compellable, under a penalty of 40*s.*, to carry this number if required.—1 & 2 Will. 4. c. 22. § 46.; 16 & 17 Vict. c. 33. § 9.

Two children under 10 years of age to be considered as *one adult.*—16 & 17 Vict. c. 33. Schedule A.; 16 & 17 Vict. c. 127. § 14.

Rates and Fares.—These may be charged either by time or distance, at the option of the hirer, to be expressed at the commencement of hiring. If not *otherwise expressed*, the fare to be paid according to distance. The terms are, when charged by *distance*,

For every hackney carriage drawn by 1 horse, for any distance within and not exceeding 1 mile, 6*d.*; and for every distance exceeding 1 mile after the rate of 6*d.* for any part of a mile over and above any number of miles completed.

Where more than 2 persons are conveyed in a hackney carriage drawn by 1 horse, 6*d.*, in addition to the fare to be paid for each person above 2 for the whole hiring.—16 & 17 Vict. c. 127. § 14.

Fares when taken by *time* are—For any time within and not exceeding 1 hour, 2*s.*; and then after the rate and proportion of 6*d.* for every 15 minutes or part of 15 minutes above 1 hour.

Carriages with 2 horses are entitled to one-third above the rates and charges above mentioned.—16 & 17 Vict. c. 33. schedule A.

The driver of a hackney carriage *hired by distance*, when required by the hirer to stop 15 minutes, or any longer time, shall be entitled to 6*d. extra fare for every* 15 *minutes completed* during such stoppage.—16 & 17 Vict. c. 33. § 4.

Luggage.—The driver of every hackney carriage shall carry for the person hiring he same, in or upon such carriage, a reasonable quantity of luggage without extra charge.—16 & 17 Vict. c. 33. § 10. When more than 2 persons shall be carried inside with more luggage than can be carried inside, a further sum of 2*d.* for every package carried outside is to be paid by the hirer in addition to the fare.—Schedule A. to 16 & 17 Vict. c. 33.

Rate of Driving.—When any driver *hired by time* shall be required to drive more than 4 miles per hour, he will be entitled to demand in addition to the fare for time, *the fare regulated by distance* for every mile beyond the 4.—16 & 17 Vict. c. 33. § 7.

No back Fare to be taken or demanded.—16 & 17 Vict. c. 33. § 4.

Table of Fares to be put up distinctly both inside and outside hackney carriages, and drivers to produce a *Book of Fares* when required.—16 & 17 Vict. c. 33. § 5.

Driver, when hired, to deliver to the hirer a ticket on which shall be printed the number of the plate affixed to the carriage.—16 & 17 Vict. c. 33. § 8.

Coaches waiting are entitled to a reasonable deposit, to be accounted for in the fare. Penalty on drivers refusing to wait, or to account for deposit, 40*s.*—1 & 2 W. 4. c. 22. § 47.

Refusal to pay fare, or defacing or injuring any hackney coach, may be punished, unless reasonable satisfaction be made for the same, by imprisonment for 1 calendar month.—1 & 2 W. 4. c. 22. § 41.

Drivers exacting more than legal fare liable to a penalty of 40*s.*—1 & 2 W. 4. c. 22. § 42.; 16 & 17 Vict. c. 33. § 17.

Agreement to pay more than legal Fare, not binding; sum

paid beyond such legal fare may be recovered back, and driver be liable to a penalty of 40*s*.—1 & 2 W. 4. c. 22. § 43.

Drivers demanding more than sum agreed upon, though distance be exceeded, or it be less than the legal fare, forfeit 40*s*. for each offence.—1 & 2 W. 4. c. 22. §§ 44, 45.

Drivers to hold check strings, under a penalty of 20*s*.— 1 & 2 W. 4. c. 22. § 48.

Property left in hackney coaches to be carried within 24 hours to the nearest police station, under a penalty of 10*l*. If not claimed within a year, to be sold by order commissioners of police, and proceeds carried to public account.—16 & 17 Vict. c. 33. § 11.

Offences may be tried and disputes settled either by one of the police magistrates, or by any justices of the peace for the county, and in case of dispute *the hirer may require the driver* to drive to the nearest police court.—16 & 17 Vict. c. 33 § 18.

Standings for carriages in metropolitan districts to be appointed by police commissioners.—13 Vict. c. 7. § 4.

Commissioners of Police to appoint from time to time *fit men to enforce good order* at the standings for hackney carriages.—16 & 17 Vict. c. 33. § 12.

No printed bill to be put on carriage so as to obstruct the light or ventilation.—16 & 17 Vict. c. 33. § 15.

A Proprietor of a carriage must give 10 *days* notice to police commissioners of his intention to *withdraw his carriage from hire*.—16 & 17 Vict. c. 127. § 16.

A proprietor or driver using or letting a carriage not in fit and proper condition, liable to a penalty of 3*l*.—16 & 17 Vict. c. 33. § 5.

HAIR, Human (Ger. *Haare, Menschen-haar*; Du. *Hair*; Fr. *Cheveux*; It. *Capelli umani*; Sp. *Cabellos*; Lat. *Capilli*). "Human hair makes a very considerable article in commerce, especially since the mode of perruques has obtained. Hair of the growth of the northern countries, as England, &c., is valued much beyond that of the more southern ones, as Italy, Spain, the southern parts of France, &c. Good hair is well fed, and neither too coarse nor too slender; the bigness rendering it less susceptible of the artificial curl, and disposing it rather to frizzle; and the smallness making its curl of too short duration. Its length should be about 25 inches; the more it falls short of this, the less value it bears."—(*Ency. Brit.*)

Hair of Beasts (Ger. *Haare, Huhaare*; Du. *Hair*; Fr. *Poil*; It. and Sp. *Pelo*; Lat. *Pelles*). The hair of horses is extensively used in the manufacture of chairs, sofas, saddles, &c.: while the hair or wool of beavers, hares, rabbits, &c. is much employed in the manufacture of hats, &c.
